birds are hunted for food in the south. One can see strings of small birds in the game-stalls of the vendors, especially among the colored classes. But, the most important of all agencies affecting the decrease of our birds is that of the sacrifice of birds to fashion, for hat ornamentation and personal decoration. Fortunately, perhaps, the supply of bird skins for decorative purposes is not all drawn from a single country, the whole world being laid under tribute. But, on the other hand, it is well known that our own birds are exported in immense numbers to Europe; but whether the exportation exceeds the importation it is impossible to determine, from lack of proper statistics. One writer says, "Birds, considered æsthetically, are among the most graceful in movement and form, and the most beautiful and attractive in coloration of nature's many gifts to man. Add to this their vivacity, their melodious voices and unceasing activity,—charms shared in only a small degree by any other forms of life,—can we well say that we are prepared to see them exterminated in behalf of fashion, or to gratify a depraved taste? A garden without flowers, childhood without laughter, an orchard without blossoms, a sky without color, roses without perfume are the analogues of a country without song birds. And the United States is going straight and swift into that desert condition. Here and there bird protective associations are being formed, and more care is taken to secure proper bird protective legislation. The public at large is still too apathetic or too ignorant of the real state of the case, to insist upon, and support by proper public sentiment, the enforcement of legislative acts already on our statute books."

In order to save our beautiful native birds from extermination it is not only necessary to instruct our children in the family circle to regard and love the birds, but this should also be done in all our schools. The attention of the rising generation ought to be called to the beautiful colors of the birds, to their fine forms, their flight, their delightful song, their happiness, their departure to southern climes and their return to their natal haunts and to their great usefulness in the household of nature.

The Committee of American Ornithologists' Union on Bird Protection has drawn a law which should be passed in the legislature of every State of the Union and Canada. This specifies as to what shall be killed, purchased or offered for sale after it is killed. It also says any person who shall take or destroy the nest eggs of any wild bird shall be subject to a fine or imprisonment or both. The English or house sparrow is not included among the birds protected by this act. Permits may be granted to any properly accredited person, permitting the holder thereof to collect birds, their nests or eggs, for strictly scientific purposes. In England, Germany, Norway, Sweden and especially in

Japan, birds are found everywhere, and are regarded by the people as valuable gifts of nature to man. Shrubs, trees and vines are often planted for the sole purpose of providing nesting places for certain species. The laws for the protection of the birds are backed by a strong public sentiment, and are stringently enforced by the proper officers. In our own country we should closely follow these examples.

FLORENCE NIGHTINGALE.

IN considering their deserts—and they are many—and the gratitude owed such women as Clara Barton, Mother Bickerdyke and others, there is danger of forgetting the pioneer in army nursing, Florence Nightingale, now 84 years old and long an invalid. She has always been much beloved by all sorts and conditions of people. It appears, however, that her taking up her mission during the Crimean war was the result of the revelations of William Howard Russell, the famous London *Times* correspondent, who wrote from the seat of war: "The commonest accessories of a hospital are wanting. There is not the least attention paid to decency or cleanliness, and for all I can perceive the men die without the least effort to save them. Are there no devoted women among us, able and willing to go forth to minister to the sick and suffering soldiers of the East?" Sidney Herbert, head of the War Department, said there was "only one person in England," and he wrote to Miss Nightingale, asking her if she would undertake the work, and at the same time she wrote him, offering to take up the task. The letters crossed.

She was then a charming young woman, living a quiet life in a country place, not strong and never having dreamed of such a call as this that must be answered. She had indeed interested herself in nursing and nurses, for they were of the commonest type of women, such as Dickens paints, drunken and ignorant, and Miss Nightingale had set herself the task of educating a band of nurses. To this end she had journeyed about and acquired all the knowledge of nursing as a profession that was procurable. Now she was to put this knowledge to a severe test. Appointed by the government as superintendent of the nursing staff in the East, she took up her duties at the hospital at Scutari fifty years ago the fourth of last November.

The next day after her arrival the wounded from the battle began to pour in. The story of the masterly manner in which she organized such forces as she could command is known by all. She set the example of good nursing to the world. Before that literally nothing had been done, save what surgeons could do in the way of amputations and bandages and what men who were not desperately wounded could

accomplish in the way of waiting on dying men. It is a wonder that before the day of Florence Nightingale any seriously wounded soldier survived. That was fifty years ago and Florence Nightingale, 84 years old and a hopeless invalid, has the consciousness of having done well in her day and generation and of being beloved not only by her own people but by the world at large.

* * *

FACTS ABOUT CHOCOLATE.

IN the United States the taste of chocolate is growing with the greatest rapidity. In twenty years the importation of cocoa (the chocolate bean), has grown from 9,000,000 pounds to 63,000,000 pounds. Right here is a good place to settle the difference between the words cocoa, cacao and coca. Cocoa is the name of the palm tree which produces the cocoanut, a fruit too well known to everyone to need description.

Cacao is the fruit of another tree, which grows in tropical America, and in some parts of Asia and Africa. It is from this tree that we obtain chocolate.

Coca is the name given to a shrub of South Africa, the leaves of which are used by the natives to allay hunger and thirst and to deaden pain. From these we get cocaine.

Having once tasted the thick, delicious chocolate grown, made and brewed in Central America you cease to wonder at the early enthusiasts who named the plant "Theodromo" (the nectar of the gods). One reason why our chocolate is inferior to that of other countries is that ours is adulterated with pipe clay. Pipe clay is cheap and heavy, weighing five times as much as the cacao, and Yankee manufacturers are not above using as much of it as they can without being discovered.

The finest cacao bean in the world comes from Luzon in the Philippine Islands. These beans grow in a very odd fashion, in large, pear-shaped pods from five to ten inches in length. They are attached to the trunk of the tree by short stems. Ripeness is indicated by a delicious aroma of chocolate that pervades the orchard. The pods are cut off with sharp shears, or with a keen-edged hooked knife, fastened on the end of a bamboo pole. These are thrown into heaps and within twenty-four hours are opened. Each fruit is cut in half to remove the mass of pulp and seed. The beans are separated according to size, the largest bringing the highest price in the chocolate markets of the world.

Monkeys, rats, and parrots are the enemies the cacao farmers have to fear. All three of these animals cut open the pods and eat the beans, being quite as fond of chocolate as boys and girls.—*Arrow*.

NOT to know me argues yourself unknown.—*Milton*.

THE BOX ON THE MANTEL.

"No, I don't want her to come. I suppose she can't bear boys, and we'll have to keep still all the time," declared Ned.

"She'll be wanting errands done every day," said Joe, who was inclined to be lazy on other people's business.

"But papa is her brother, and she hasn't seen him for ten years," ventured Stephen, who had always tried to find some excuse for everybody.

"She'll tell me when my hair isn't smooth and my apron strings are tied crooked, I know she will." This was Amy's complaint, who knew her failings and did not like to be reminded of any of them.

The parents of these children did not hear this conversation, but they knew the feeling of their family in regard to the coming of Aunt Eliza to make them a long visit. They wisely concluded, however, to say nothing.

Aunt Eliza arrived in due time. She was neither fussy nor nervous, and the children soon enjoyed her company very much. She was always good-natured and jolly, but there was one thing she did that puzzled them.

A few mornings after her arrival she brought down a covered box and placed it on the corner of the mantel. Several times during the day she would take something from her pocket and drop it in a slit in the cover.

"What did you put in that box, Aunt Eliza?" asked Joe one day, after he had pulled the tail of Amy's cat till she mewed piteously, and Amy had begged him to stop. He had seen his aunt walk to the mantel and drop something in the box; somehow it made him feel uncomfortable.

"That's my secret," was the reply; and this was all the satisfaction the children could get.

"I believe it has something to do with us," said Amy to her brothers. "When mamma asked me to go upstairs and get her thimble, and I went right off, I saw her go to the box; and when Stephen didn't want to go to bed, and fussed, I saw her go again."

But the matter remained a mystery till one day Aunt Eliza said:

"Children, I am going home in a few days, and tomorrow morning I will open the box on the mantel."

The next morning all the children were dressed early and in the dining-room before breakfast was on the table. You may be sure that they looked anxiously at the box in Aunt Eliza's lap, as she sat in the big willow rocker, which was none too large for her to fill. The three boys crowded around her, while Amy, who had a suspicion of what was coming, remained at the end of the table. Lizzie Martin, Amy's particular friend and next door neighbor, who had heard of

the mysterious box and its expected opening, had taken the occasion to run in for an early call. They all felt somewhat disappointed to see nothing but some square bits of paper neatly tied in bundles. On looking closer these bits of paper were seen to have letters written on them—"A," "N," "S," and "J." Before taking out the bundles, Aunt Eliza took from her pocket a pretty pocketbook and held it in her hand.

"When I came here, children, I thought I would try an experiment. This box, you see, has two compartments. In this side every time I saw one of you do a kind act or obey promptly I put a slip of paper with the initial of the name; and the same on the side for the cross words and unkind acts. I find that for some of you the bundles on the two sides are nearly equal, but the bundle marked "S" on the first side is much larger than that on the other. "S" stands for Stephen, and I am going to give him this little purse, not because I love him more than the rest, but in memory of his many kind words. And now, children," she continued, "remember that your old auntie is not the only one who has kept a record of your actions, but there is One who knows all your thoughts as well. And let this help you to be kind and loving to each other, even when there is no box on the mantel."

The children all regretted Aunt Eliza's departure, and often thought of her box when tempted to disobey or speak an unkind word.—*Presbyterian*.

PETROLEUM USED AT SEA.

LIQUID fuel is now largely used by the Dutch steamers of the Royal Packet Company, plying between the different islands of the Netherlands Indian archipelago. It is residue from the petroleum wells in Netherlands India, the greater part being from the Asiatic Petroleum Company's wells in Borneo.

The total consumption of this liquid fuel by the Royal Packet Company's steamers was 11,700 tons and 16,500 tons for 1902 and 1903 respectively, with an estimated consumption for 1904 of 26,000 tons. The company has contracted for a supply for the years 1905 to 1907 with the Asiatic Petroleum Company to the extent of 32,000 tons per year. The ton is calculated at about 265 gallons. The fuel sells at about \$7.50 per ton, but it is understood no such price is paid by the Royal Packet Company when contracting for large quantities. At the present time there are seventeen of the company's steamers using liquid fuel, and it is found much more economical than coal, better for the boilers, cleaner in every way and fewer men are required to work the furnaces.

MEN find it more easy to flatter than to praise.—*Jean Paul Richter*.

THE BOY WITH A GOOD HEAD.

ALONG the hillside the boys followed a broken-down and grass-grown embankment which resembled, in some respects, a miniature railroad grade.

"Wonder who took all the trouble to make such a path as this?" muttered John, half to himself; "I wouldn't have done it."

"Ho! I guess you wouldn't," retorted James; "you're not that fond of making paths. But you see it doesn't happen to be a path; it's the old mill race."

The boys were cousins and John was on a visit and did not know the exact lay of the land as well as James. There was another difference between John and James: both were bright and capable, but where James was full of push and activity, John was indolent and slothful.

"I don't need to be poking over that book," he said to James only that morning, "I'll be all right in some way when I come to recite. Haven't I heard people say that I have a good head, and I guess a boy with a good head will come out all right."

"John, you are getting very careless about your hands," his mother had said to him; "I want you to be a gentleman if you are in the country."

And John had answered: "Oh, I'm all right; I am away ahead of every boy in the school in mathematics; the teacher said I had the best head for arithmetic of any boy in the school."

"Are you sure you are telling the exact truth about the matter?" his grandfather had been obliged to ask him of a certain report he was giving that morning.

And John's answer had been, in rather a careless tone, "Oh, I guess that's near enough, maybe I imagined a part of it; you know Mr. Williams said once I had imagination enough to make a success as a story writer. He said I had a good head on me."

And every day John had grown more and more arrogant about his good head, until things had gone about as far as grandpa thought they ought to go.

"Where's the mill?" John asked his cousin after they had gone a little farther.

"Tumbled down long ago; they have a steam mill over in town that does twice the work in half the time."

"But it isn't as cheap, 'is it?" suggested the other boy.

"Cheaper, because the water mill didn't have head enough."

"Head enough! What do you mean?"

"Why, I mean that there wasn't fall enough in the water: the stream didn't come from high enough up, and so there wasn't head enough, you see."

John did see after a little more explanation, and he went home thinking about it, and asked lots of questions about the water mills of days gone by.

"Why, yes," said grandpa by the fireside that evening, "there are some watermills that are a success, but a watermill is like a boy; it takes a good head to run it to make it pay."

"Haven't I a good head?"

"No! I do not mean the kind of a head that is carried around under the hat; but I mean rather the head that gives strength and persistence to every good purpose—the power that comes from on high."

"From 'on high,' grandpa?" questioned John?

"Yes, it's only the streams that rise away up in the mountains nearest the clouds that can afford a good head of water to turn a mill wheel."

"But couldn't the Mississippi do it, or the Hudson?"

"No, they have water enough, but they have not the head. It has to come from above: that is the only way."

John was silent the rest of the evening, but by and by when he was ready to go to bed, he stopped a minute by grandpa's chair and said:

"Do you think, grandpa, that I could get that kind of a head that I don't wear under my hat—the head that comes from 'on high,' I mean?"

"I am sure you could, boy," said grandpa; "and it's better than being a smart boy—having a good head under your hat. Remember, a small stream that has the head is better than a river without it."—*Sel.*

LITTLE WIND AND BIG FIRE.

FIVE little people were in high glee in the playroom. It was very snowy and blowy outside, and the rag-carpeted room was warm and snug.

All the come-at-able chairs and stools were ranged in a tandem row, and lo, a train of cars bound for California.

Mamma sat at work in her room smiling to herself at the sounds of glee from the would-be travelers; but suddenly the sounds changed.

"Willie Ray, you horrid boy; you've torn my dress!"

"Well, I didn't mean to do it, Miss Spit-fire Jane."

"Janie ain't a Spit-fire at all; it's just you old rough boys that make things disagreeable."

"O, yes, you are little angels, made of sugar and spice and all that's nice; that's what makes you look so sweet just now."

And so angry words flew about like bomb-shells, exploding on every side. Mamma laid down her work and went to the playroom door.

"Come here, little travelers, I want to show you something."

They crowded noisily into her room. She gave them seats, and told them to be very quiet and watch what would happen. Then, going to a little closet,

she brought out a basket full of chips and kindling wood and shavings. She laid them in a high pile on her pretty grate, where the children hardly ever saw a fire made, and with a pair of tongs brought a coal from the nursery fire, and dropped it in the midst of this pile.

"Now, Rosy-posy," she said to the wee-est of the little ones, "blow that coal."

Rosy got off her chair with a rather solemn face, and pursing up her lips, blew as hard as such a little girl could. In an instant a very pretty red flame started, and while the children looked and wondered what mamma meant, the whole pile caught, and a great, roaring brightness flashed up the chimney.

"Now, all of you together blow that fire out," said mamma.

All five pair of little cheeks were puffed in an instant, and they blew and blew till there was no breath left in them.

Did the fire heed their blowing? Not a whit. On it went, roaring and snapping and sparkling, looking almost as if it were laughing at their red faces.

"O, mamma, we can't blow it out," they all cried.

"No, I see you can't," said mamma; "and there is another fire that one little breath can start and fan, until it gets so hot that all together you can't blow it out. What is it, little daughter?"

"I 'spect it's getting mad," said Jane with downcast eyes.

"Then go back to your play," said mamma, "and O, be careful not to start that blaze by any ugly word."
—*Elizabeth P. Allen.*

PEARLS FROM FISH SCALES.

PEARLS are more in fashion to-day, and command a higher price, than ever before—a fact which may have something to do with the increased demand for artificial pearls.

For a long time the process of manufacturing artificial pearls was a secret, but recently it has become known. It was well understood that the pearly stuff used for coating the inside of the glass globules employed was obtained from the scales of a little fish called the "bleak," but the rest of the business was a mystery. It is explained that these scales, twenty thousand of which are required to make an ounce of the imitation, are first carefully washed, and then ground very fine in a porcelain mortar. The grinding rubs off from the scales their pearly particles, which, when the mass from the mortar is mixed with water and poured on a linen cloth stretched over a tub, pass through the delicate mesh of the fabric, leaving the rest of the material behind.

The liquid is drawn off into glass bottles, and left standing until the pearly stuff has settled to the bottom. Then the water is poured off, and there remains

only a silver-white substance of high glitter. On drying, it shows as a soft silver-gray powder. This, then, is the material that is to be used for converting the globules of glass into pearls.

The workman mixes the pearl powder with a small quantity of colorless liquid gelatine, and introduces it into each glass globule by sucking it up into a glass tube drawn to a point, allowing a drop to fall into the globule, and turning the latter this way and that until its inner surface is quite covered with the solution. Then he allows it to dry; but to prevent the pearly inner coat from becoming detached from the glass, and also give the artificial pearl greater weight, he fills the globule with melted wax.

Real pearls, unfortunately, are very perishable, and that is one reason why the imitations find such favor.
—*Selected.*

RESOURCE.

BEFORE the discovery of natural gas, a company was drilling for petroleum in Murrysaville, Pennsylvania. Having reached a depth of nearly fifteen hundred feet, the drills suddenly were thrown high into the air, and the derrick blown into pieces and scattered around by a tremendous explosion of gas, which rushed with hoarse shriekings into the air, alarming the population for miles around. "A light was applied, and immediately there leaped into life a fierce, dancing demon of fire, hissing and swirling around with the wind, and scorching the earth in a wide circle around it." It was regarded as a mere temporary outburst preceding the oil, and the men allowed their valuable fuel *to waste for five years.*

Because the youth do not recognize their possibilities, their responsibilities; because they do not know the day of their visitation, oftentimes for long years their energies, their powers, are dissipated almost beyond the hope of recovery. Of infinite value is every God-given talent.

THE RUSSIAN ROYAL HOUSE.

THE Russian reigning house has, it is said, greater wealth than any other royal family in the world.

It is estimated that the revenue which the Czar derives from the crown and state domains is not less than \$7,500,000 a year, or more than three times as much as the allowance made to King Edward VII.

In addition more than forty members of the imperial family draw large incomes from property set aside by the state for that purpose.

The jewels in possession of the Russian royal family are also unequaled in value and splendor among all the reigning houses of the world.

TITLES are but empty names.—*O. W. Holmes.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglebook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

REFORMS.

REFORMS are needed everywhere. A clamor for reform reaches the ear from every quarter of the earth. For a great many years the temperance workers have been calling long and loud for reform in that line. Thousands of men were induced to sign the pledge, others were induced to break off their evil habits, and thousands of lives were virtually saved through this medium of reform. Besides the original

Temperance Society,

through the efforts of the W. C. T. U., the Y. M. C. A., the Y. W. C. A., the L. T. L. and kindred societies a work has been begun the results of which will never be known this side of eternity. We are happy to know that the army is constantly increasing, and statistics show most flattering results. But there are other reforms needed which heretofore have been more or less neglected, but are now occupying the public mind. For example, the young people of our country need a series of trainings against extravagance. The prosperous nation that we are, successful in our undertakings, we have allowed

Extravagance

to grow upon us until it has become appalling.

Under a flag of freedom, with plenty of room, of fertile soil, and unlimited opportunities, we, as a nation, have not only grown wealthy but independent. The natural resources of our country, as a matter of course, have made it almost impossible for us to have many poor people in one place very long at a time. In our country when a man is dissatisfied he finds a better place, or at least another one, but the undesirable part of it is that in becoming possessors of wealth we have learned the art of extravagance. We think that our wishes are our needs. Had we the ability to save our earnings as did our forefathers, each of us could spon be independently rich; but to-day so many things attract our attention and appeal to our nature that we

cannot resist the temptation to spend our money for them. We have the desire, we have the money, and the temptation is placed before us and we yield.

Both sexes of all ages are found in this extravagant class of people. There ought to be some method provided by which

Economy

might be taught. One of the greatest enemies that economy has to-day is the suicidal act of labor unions; inch by inch they are levying taxes upon their own life's blood. It is impossible to be economical and live in a place where every department of labor is controlled by them.

Another thing which to-day assists a man in getting rid of his money, as well as of his time and lots of his brain, is our daily

Literature.

The postal service has become so ample that almost every man in the republic will soon be supplied with daily mail. This naturally invites the rural man as well as the man of the city to subscribe for one or more daily papers. He finds out that they are not only helpful in a way, but soon become a thing almost

Indispensable,

in fact, he is surprised how he ever got along without them. The demand thus created, the publisher is under obligation to furnish these dailies to the public. Competition soon enlarges the daily; with the increase in size of the paper comes an absolute demand for more material. The news must come. The markets and current events will not occupy all the space. The business man is awake to his best interests, and, knowing as he does that hundreds and

Thousands of Farmers

are taking this paper, uses a great deal of the remaining space for advertisements. But this does not yet fill all of this enlarged paper; so in order that no white paper goes to the public, the sheets are literally filled with sensational stuff, such as wars and rumors of wars, murders, suicides, robbery, burglaries, riots, lynchings, electrocutions, detective stories, police court news,

Divorce Cases

whose name is legion—stuff that is poisonous to the soul, the morals, society and even the body of man. This kind of extravagance has unconsciously forced its way in upon the people, and is an evil, which, if not arrested, will assist materially in the corruption of our nation.

It is a fact recognized by all that the social

Entertainments

of to-day are not, by any means, what they were a few years ago. Things have come to such a pass to-day that a person cannot entertain his friend without a

formal notice, perhaps costing several dollars for printed matter, and, in some cases, the proverbial reception suit has found its way back through the long aisles of time, which is an additional expense.

Aristocratic

receptions demand uniformed waiters, metal service, the daintiest viands and the most elaborate courses. There are three evils arising from this. First, the needless expenditure of money; second, the immense amount of time and talent that is worse than wasted; and third, a great number of people must be

Ostracized

from society because they cannot afford such receptions. Since they cannot give such it is quite impossible for them to accept invitations to such. Thus ostracized, they are compelled to recognize the fact that they are divided into castes, and the caste system once installed means farewell to education and Christianity.

It only requires a glance at history's pages to see what the caste system has done for other nations. When the

Castes

have been carefully graded the lower ones are sure to be flooded with superstition, which is the best precursor in the world for idolatry.

As stated above the evils of the social entertainments will readily be observed. What they have done for the home the public entertainments have done for society. Not a single one of our large cities to-day can be referred to but that has a dozen or more special trains besides a great quantity of street cars all of which are to accommodate the people who attend theatres whose exercises extend into the small hours of the night. Thus thousands and hundreds of

Thousands of People

all over our land spend from a dollar to five dollars a night, calculating very conservatively, for a thing that is demoralizing in its very character, making the mind wholly unfit for anything better and making the body unfit for next day's work. Besides all this, the lives of thousands are endangered as has been exemplified in the Iroquois disaster. It also makes an excellent rendezvous for all sorts of

Pickpockets,

with which in many cases the policemen are pals. There can be no question but that these places and similar ones are the worst places in the world for men and women to be alienated from domestic relationship. Every sober-minded man and women who will stop to think along these lines will acknowledge that reforms are needed.

It is hardly within the scope of this editorial to speak of the reforms needed in

Politics.

This has been talked over and written about until the minds of men have been deluded to that extent that the ballot box to-day does not give expression to the public mind. Municipal governments especially are rotten to the core. Every form of vice and sin is well protected by an agent of the devil, who is duly appointed to wirework and lobby his cause. When it is found that no other way is possible for rottenness to reign, some man of extraordinary good character is selected in a political caucus to stand at the head of one of the tickets, who, in many cases, is ignorant of the amount of wickedness being perpetrated, concealed by the platform upon which he stands. When solicitations are being made for the support of the platform the man of character is invariably referred to, which, in many cases, leads the public astray. So long as the

Love of Money

is the root of all evil you may rest assured that reformers will have plenty of work to do. Advantage is often taken of the circumstances of a poor man and sometimes men are brought into measures almost by force in order to reach a certain end.

The purposes of such a clique having been attained, the municipality must suffer from an enormous levy of taxes to feather the nest of the occupant of some office who is wholly unworthy of the

Salary

he gets; and until every true American becomes a reformer and presses the claim of his people, not much will be done along this line.

Last, but by no means least, reforms are needed in religion. The time has come when the majority of church attendants are ladies. The various societies and clubs have stolen the hearts and minds of men; besides, the

Ministry

has destroyed its own great power in a measure by divorcing itself from the original purity of the Gospel, and in its place have given to the people dry, theological discussions of the topics of the day, mingled with politics and set in a background of romance, which, instead of winning the people, has driven them away from the house of God. They can get such stuff elsewhere. You hear it on the street corners, on the train and in the factory; the dailies are full of it. The souls of men have been left to hunger for the unadulterated words of Jesus Christ.

What we Need

to-day in the way of reform along religious lines is a band of young men who are willing to fight against popular opinion which has been created by this distorted method and feed the people the Gospel of God in its primitive purity, regardless of persecution.

Current Happenings

A COLLISION AT SEA.

AN exciting scene was witnessed recently at the harbor of Philadelphia. The steamship *Parisian* left Liverpool, England, for Moville and thence to Halifax. When she was making her passage between the latter places, she crossed the path of the *Albano*, sailing from Hamburg to Philadelphia, and the vessels collided. The vessels were both very badly damaged and the water simply poured in by the ton. Both vessels started for the harbor at once, and both whistled for help. Every tug in the harbor responded and their assistance was very helpful and timely. The passengers begged that the tugs would take them off, but the captains stood together in the matter and provided each of the passengers with life preservers and compelled them to stand upon the end of the boats which were most out of the water. Together with the help of the tugs, the service of the great pumps, and the cool-headed captains the excited passengers were finally brought alongside the wharf, lines thrown out, gang planks lowered, and a thousand passengers rushed ashore. This shows what can be done by cool-headed men in case of emergency.

THE Columbia University has of late been remembered by one of her loyal graduates, Ernest K. Adams, who has given \$50,000 as a supplement to the Ernest K. Adams Fund for Physical Research, established by his father.

THE new armored cruiser *Washington*, most powerful in the armored class, was launched at Camden, N. J., March 18. The vessel was christened by Miss Wilson, daughter of ex-Senator Wilson, of Washington.

DELAWARE needs to be thinking seriously about her present condition. The division of opinion among the state officials regarding a senator was so prominent that at a recent meeting of the Delaware Joint Assembly, after many unsuccessful ballots, the Assembly agreed to separate without having elected United States senators. It might have been well for Colorado to have followed this plan in the gubernatorial election recently.

AGAIN is the public reminded of the fact that Mr. Andrew Carnegie has found two more places where a donation of several of his thousands can profitably be used to aid the intellectual development of the less fortunate. At his expense a \$100,000 library is to be added to the equipment of Tufts College, also a \$50,000 library for Washington and Lee University.

A NEW steamship, *La Provence*, which will ply between Havre and New York, was launched at St. Magier, France, quite recently. She is 620 feet long, has a tonnage of 19,160, and is said to be fitted out in luxurious style.

THE jury of the Society of American Artists has awarded prizes for the twenty-seventh annual exhibitions, as follows: To Louis Loeb, the Carnegie prize of \$500 for the best oil painting by an American artist; to Emil Carlsen, the Webb prize of \$300 for the best landscape by an American artist; to Mrs. Charlotte B. Coman, the Julia A. Shaw Memorial prize of \$300 for the best work of art by an American woman.

RUSSIA is threatened with an epidemic of cholera. The Russians seem determined to get something that the Japs won't try to take away from them.

A SYSTEM of electric road locomotives is now running very successfully at Mannheim, Germany. The locomotive travels upon the main road, without rails, and takes the current from two overhead wires. A type of car resembling an omnibus and containing twenty-five places is also used. It carries a thirty horse power electric motor. A special form of trolley brings the current into the car. This is a useful means of conveying a limited amount of traffic. Different lines of this kind are now running in Germany and France.

MR. H. H. ROGERS, the Standard Oil man, has again remembered his native place, Fairhaven, Mass., with a gift of \$500,000 for the erection of a schoolhouse.

AT a recent meeting of the Maryland Court of Appeals a decision was unanimously carried in favor of the constitutional amendment adopted by the last legislature for the disfranchisement of negroes. In consequence of this Gov. Warfield (Republican) will be compelled to proclaim the amendments so that they can be voted on at the fall election. The Democratic organization regard this as their victory.

THE illness of Secretary of State Hay is more serious than what was generally known. He sailed from New York March 18 for an extended trip through southern Europe, but was so weak that while on the pier he fainted away and had to be assisted to his state room. Secretary of War Taft is to be the head of the cabinet during his absence.

VENEZUELA has emphatically refused to honor the demand of the United States for arbitration of questions at issue, denying that there was any dispute pending. On the same day, however, the agreement between Venezuela and German bondholders shows the exterior debt of the country to be not less than twenty-eight million dollars. This, they claim, did not tend to improve the situation from an American point of view.

REAR ADMIRAL CHESTER, superintendent of the Naval Observatory at Washington, has in mind to make some definite investigations in regard to the sun's eclipse. He is arranging to send observers of the total solar eclipse, which is to occur August 29, 30, to three stations; one near the central line of the eclipse on an island off the coast of Spain, one near Valencia, Spain, and one between Tunis and Algiers, Africa. It is to be hoped that this scientific research may prove profitable and of much value to students who are interested in the study of other inhabited bodies.

THE cry for peace has steadily increased throughout the Russian empire, as the knowledge of Kuropatkin's overwhelming defeat at Mukden becomes generally known despite press censorship. News also has reached the interior of the hopeless retreat of Linevitch, Kuropatkin's successor. In the face of these conditions, and with a knowledge of the internal condition, the Czar still insists that a final stand be made at all hazards at the railroad crossing below Harbin. The success of the Russian internal loan removes the financial embarrassment temporarily, but the best diplomats say that the end is in sight.

A JAPANESE newspaper reports that Yi-Hyeung, the 52-year-old emperor of Korea, has lately been converted to the Roman Catholic faith, and will be received into said church through the Catholic mission at Seoul. It is to be remembered that the Korean religion is a sort of nature worship.

ONE of the most daring schemes of fraud has been plotted lately in Cincinnati. Some conspirators have planned a run on the Union Savings Bank by mailing seven hundred postal cards to depositors, advising them to withdraw their money. The telephone was also used for the same purpose. Crowds rushed into the bank to claim their deposits and some were injured in the attempt to reach the teller's window. The bank, however, has on hand two and a half millions in cash, nearly eight million dollars in securities that can immediately be converted into cash, besides other assets, sufficient to cover the eighteen million dollar deposit. More than that, offers have come from Chicago and

New York to support the bank with several million more in case of need. When the bank proved herself able to take care of her deposits, the patrons didn't want their money nearly so badly. Detectives are on the track of the conspirators.

THE Turkish Minister of War has ordered reinforcements against the Arabian rebels in the province of Yemen as soon as ships can be obtained. Already the casualties number 5,000, and Sana, the capital of the province, has fallen into the hands of the insurgents.

ASSISTANT SECRETARY OF STATE LOOMIS has gone to California on leave of absence, and it is understood that he will soon succeed Mr. Conger as Ambassador to Mexico.

THE records for this year show that out of 1,771 cases of typhoid fever only 141 have proved fatal. The number of cases are more than in the corresponding period of last year, but the mortality from the disease has not been nearly so high.

IN the great city of Chicago a few days ago occurred the collision of two trolley cars, in which twelve persons were injured. A State street cable car ran into a Thirty-first street electric car, while the latter was crossing State street. The impact threw the electric car from its tracks and the passengers were cut and injured by flying pieces of glass. The cause seems to be due to a misunderstanding of signals.

THE great revival in London, conducted in Alberta Hall, under the direction of the Rev. Reuben A. Torrey and Charles M. Alexander, has just closed with wonderful results. It is stated that more than 5,500 persons publicly announced their conversion, while thousands of others had done so privately and were already leading a different life. Dr. Torrey said that thousands had to be refused admittance during the time of their mission. Many Roman Catholic priests, prominent business men and leading society women of all creeds gave their greatest assistance. The Bishop of London thinks a new atmosphere has struck the city.

A WEIGHING machine, said to be the most powerful in the world, is being made in Birmingham. It is capable of registering a load of 220 tons.

MISS ANNA CAULFIELD, a graduate of Radcliff, who has a fortune in her own right, is promoting a project to bring before the public the masterpieces of the world's art, scattered in museums and private homes by means of stereopticon slides.

HOME DEPARTMENT

HIS OLD YELLOW ALMANAC.

I left the farm when mother died, and changed my place
of dwellin'

To daughter Susie's stylish house, right in the city
street,
And there was them, before I came, that sort of scared
me tellin'

How I would find the town-folks' ways so difficult to
meet.

They said I'd have no comfort in the rustlin' fixed-up
throng,

And I'd have to wear stiff collars every weekday right
along.

I find I take to city ways just like a duck to water,

I like the racket and the noise, and never tire of shows;
And there's no end of comfort in the mansion of my
daughter,

And everything is right at hand, and money freely
flows;

And hired help is all about, just listenin' for my call,
But I miss the yellow almanac upon my kitchen wall.

The house is full of calendars from attic to the cellar;

They're painted in all colors, and are fancy-like to see.
But just in this particular I'm not a modern feller,

And the yellow-covered almanac is good enough for me;
I'm used to it, I've seen it round from boyhood to old age,
And I rather like the jokin' at the bottom of each page.

I like the way the "S" stood out to show the week's
beginnin'

(In these new-fangled calendars the days seemed sort
of mixed),

And the man upon the cover, though he wasn't exactly
winnin'

With lungs and liver all exposed, still showing how we
are fixed:

And the letters, credentials that was writ to Mr. Ayer,
I've often, on a rainy day, found readin' very fair.

I tried to find one recently; there wa'n't one in the city.

They toted out great calendars in every sort of style;
I looked at 'em in cold disdain, and answered 'em in pity:

"I'd rather have my almanac than all that costly pile."

And, though I take to city life, I'm lonesome, after all,
For that old yellow almanac upon my kitchen wall.

—Ella Wheeler Wilcox, in the Century.

WOMAN AND HOME.

It must ever be a reproach against English women that they have systematically injured their organisms by means of stays and high-heeled boots. The civilized woman of a hundred years hence will read with amazement that at the outset of woman's emancipation in this nation the feminine pioneers of the movement still clung to the habit which perhaps more than any other stood in the way of their advance. A race of men begirt with steel and whalebone would be

scorned of all civilized countries. Is there, then, an imperious physical necessity that women cannot escape? Are they structurally deficient that they must make to themselves false ribs of metal and bone? Is the malformed waist the type of civilization? It may be protested that the woman who laces her waist injures no one save herself.

This is an obvious fallacy. It is the duty, the chief responsibility, of every individual to maintain the highest possible standard of health. The ill health or debility of one affects others. Invalidism, malaise, waste of muscle through inaction—these are the banes of the majority of women, and there is hardly a family in England that does not suffer through every individual member because of the weakness and recurrent indispositions of its women. I ask again, Is it an arbitrary and inequitable law of nature that the proportion of feeble and ailing human beings shall be much larger in one sex than in the other?

Another highly important consideration is that of women's diet. Many women eat five unsubstantial meals instead of taking three adequate meals a day. There is no economy, but, on the contrary, waste in this way of recuperating the losses of the system. The human stomach is not like that of the fowl, and it is imperative that the organs of digestion shall have a due share of rest. In this, as in all other matters of health, there should be no hard and fast rules. Life on a rational plan is not one of penance and asceticism, but of full enjoyment in the performance of function and the gratification of sense. In order to derive the satisfaction of the palate, which is essential to sound digestion, there must be healthy hunger. Too many women eat without normal appetite and are compelled to tempt hunger by eating dainty but innutritious and indigestible dishes.

A common female trouble is a feeble circulation of the blood. Women, and especially those of inert physical habits, appear to suffer unduly from the rigors of our climate. The chief reason of this susceptibility to cold is the lack of proper exercise during the winter months, when, for the greater number of women, all outdoor recreation is suspended. When the thermometer registers several degrees of frost, you may often see men working without coats in the open air, while within the houses women are shuddering with wraps about their shoulders and their chairs drawn close to the blaze of an immense fire. This dormouse hibernation is not conducive to vigor.

Why does the winter "pull down" so many wom-

en? Because at the very season when the maximum of bodily exertion is necessary to maintain warmth they sedulously abstain from outdoor exercises and live in the fetid air of unventilated rooms. A woman who wishes to live wholesomely will not wait for a fine day upon which to saunter on the warm side of the street. She will go out every day, regardless of wind, rain and slush.

Concisely, my theses are these: 1. Women are physiologically capable of attaining the same standard of health and ordinary power of resistance as men. 2. To meet the present demands upon their strength in the struggle for existence women must aim at the cultivation of all their powers. 3. Without this preparation the women of the future will not secure true social equality. The present superiority of staying power in men gives them the advantage in the greater number of professions and trades. 4. The reputed "arrested development" of women is the outcome of custom and not a law of nature. Thus men and women start with an equality of chances, but the chances are lessened for women by a difference of environment.—*Geoffrey Mortimer, in Humanitarian.*

* * *

CHOCOLATE CAKES.

VERY dainty chocolate cakes, suitable for a reception, or with fruit, particularly berries, are made of a pound of chocolate, the same of brown sugar, half the quantity of blanched and pounded almonds, a tablespoonful of cloves, cinnamon and nutmeg mixed, and the yolks of ten and the whites of two eggs. After the ingredients are mixed the batter must be beaten for an hour. This is a trying task, taxing the strength of the stoutest arms, and relays of beaters are called for. Bake the cakes in patty pans and ice. An old cook, looking with disapproval at the materials and noting the absence of butter and flour, remarked, "Elbow-grease is the main thing in these new-fashioned cakes."

* * *

MOLASSES WAFERS.

MOLASSES wafers are pretty and usually much enjoyed, but can be made in cold weather only. Mix thoroughly and roll into balls three ounces of molasses, two each of butter, flour and brown sugar, adding ginger to taste. Bake on hot tins; the dough will spread so must be rolled at once. Keep the cakes in a very cold place till served.

* * *

ORANGE FRITTERS.

PEEL sweet, juicy, oranges, remove as much of the white skin as possible, divide into the natural divisions; put into a soup plate, sprinkle well with sugar, and let

stand until an hour or so before they are required; then take the pieces from the liquor, dip into a thick batter and fry in boiling fat until they are golden brown; drain on a paper, and serve on a doily with powdered sugar sprinkled over them. They may also be served with an orange pudding sauce.

* * *

SOMETHING FOR THE FUTURE.

HERE are some topics for discussion in the Home Department by the readers of the INGLENOOK. The columns are thrown open wide, and all are invited to participate in the discussions. Of course it is to be understood that we reserve the right to use or reject any or all articles submitted; you have the right to write upon either side of the question, and may exchange views, but in no case will unkind statements be tolerated. Select the subject you wish to discuss, write your thoughts in simple terse language, and when you have done, quit; use one side of the paper only.

After some one has written and the views set forth do not suit you, say so, and give your reasons for so doing. We are sure to have a very interesting department, and it will be so only as you make it so. Do not wait for the other person to write first, but you write now. Here are the subjects:

Parlor	Economy
Dining Room	Extravagance
Kitchen	Pleasure
Library	City Life
Bedroom	Country Life
Cellar	Town Life
Attic	Frontier Life
Bathroom	Mountain Life
Pantry	Life on the Deep
Sewing room	Care of Vegetables
Premises	Care of Stock
Garden	Care of Fowls
Orchard	Care of Property
House plants	Baking Day
The Barn	Cooking Day
Implements	Washing Day
Utensils	Ironing Day
Conveniences	Scrubbing Day
Amusements	Sewing Day
Literature	Shopping Day
Entertainments	The Lord's Day
Visiting	Care of Money
Gossip	Property Insurance
Household pets	Life Insurance
Neighbors	Savings Banks
Education	Building and Loan
Religion	Stock Companies
Little Leaks	Real Estate Purchases

WE cannot use the mind aright when we are filled with excessive food and drink.—*Cicero.*

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

THE SYSTEMATIC GIVING.—2 Cor. 9.

For Sunday, April 16, 1905.

I. Advantages of.

1. It Constantly Reminds us of God's Gifts,Psa. 103:2
2. His Blessings are Ceaseless,Isa. 45:15-17
3. System is an Element of Success,Mal. 3:10
4. It Soon Becomes "Second Nature."
5. It Keeps us Reaching.
6. It Teaches True Economy.

II. Plan for.

1. Give as the Lord has Prospered,1 Cor. 16:2
2. Give Regularly; say, every Lord's Day.
3. Try a Tenth of the Net Earnings.
4. Think of Everybody Doing this Well,2 Cor. 8:13-15
5. Create a Sinking Fund or Bounty,2 Cor. 9:5-8

III. Results that would Follow.

1. Our Consciences would be Easier,Mark 14:8
2. More Souls would be Saved,1 Cor. 9:9-13
3. God would Pour out More Blessings, Acts 2:44-47
4. Our Prayers Would be More Effectual.

Text.—Every man according as he purposeth in his heart, so let him give; not grudgingly, or of necessity: for God loveth a cheerful giver.—2 Cor. 9:7.

References.—Luke 3:10, 11; Luke 12:33, 34; Matt. 25:34-40; Prov. 112:9; Psa. 41:1-3; Haggai 1:8; Prov. 31:20; Prov. 21:26; Prov. 19:17; Prov. 11:24; Mal. 3:10; 1 Cor. 16:1-3; 1 Tim. 6:17-19; Luke 21:2-4; Acts 2:44, 45; Luke 8:2, 3; 1 John 3:17, 18.

Our Resources.

The church has increased in worldly goods. In 1898 Robert E. Speer estimated that the share of Christians in the wealth of America was \$20,000,000,000. The examples of what is being given in different countries by single congregations, Sunday schools and young people's societies prove conclusively that the financial possibilities of the church are practically limitless. Dr. Strong says, "There is money enough in the hands of church members to sow every acre of the earth with the seed of truth." Let us come down to our own church; we are not poor, most of us could give far more if we were careful to follow Paul's instructions. But we hold the little we possess with such a tight grasp that if possible the Lord shall not see how much we are keeping back, at least our brethren shall not know how much we are withholding from the Lord's treasury.

. Give—Live.

In order to live we must give. The streamlet that loses itself in a pool, and there remains, hoarding each drop of water, will soon dry up, while the little rivu-

let flowing onward and spending itself on the flowers and grasses along its banks lives, and goes on its way to join the larger river.

There is a universal law that action and reaction are equal and in opposite directions. When our hearts and our thoughts and our money go out to others, then inevitably there comes to ourselves new life. And the opposite is equally true; when we forget the needy and spend selfishly for ourselves, the decline in spiritual life and power is certain, the descent is as sure as a stone dropped from a precipice. There is no law in the physical or spiritual world more sure than this. Unless you and I are willing to give cheerfully, all the blessings of God will become a curse to us. Not to give means to live at a "poor, dying rate." The way to live and grow is to give.

As He Purposeth in His Heart.

Ay! there it is. Is your heart in the work? Are you hoping, praying and believing that God's love should be made known to the ignorant souls to whom no one has been sent? Then purpose to give so much towards this cause. A systematic giving of money to the Lord is an expression of your loyalty to him. It was the one talent man who in the parable hid his Lord's money because he was afraid. The poor are afraid to give because they cannot do much. Their withholding of that little may be as much an act of pride as the pretentious gift of some rich person.

We Give so Little.

We are told that forty cents a year per member is the average gift for foreign missions in Christendom. Amos R. Wells writes thus:

"Instead of what the martyrs bore through many a conflict drear;

Instead of bitter fightings, homeless wanderings, cruel fear,

Ah, the shame, we modern Christians give just forty cents a year.

"Christians, have you heard the story how the basest man of men

Flung his foul, accursed silver in abhorrence back again? Thirty pieces was the purchase of the world's Redeemer then.

"Now it's forty cents in copper, for the Savior has grown cheap;

Now to sell our Lord and Master we need only stay asleep; Now the accursed Judas money, is the money that we keep!"

One Church that Did not Give.

Down in the highlands of Moab there once was a Christian church. Where now the Bedouin herds his

wandering flocks and pitches his black tents, there had been cities and villages and beautiful churches and palaces. But now the land is all desolate, under the rule of the Turk. Why? The same old story, the same causes that will work ruin in any church to-day. They received the Gospel and became rich; then they failed to preach it to other nations. From this followed what always follows to-day, selfishness, critical faultfinding, quarreling among members—the most barren and fatal of all quarrels. Then because they failed to send evangelists to the heathen, God let fall upon them the scourge of their sins. The very nations they neglected, the fierce Saracens, came down upon them with fire and sword and swept them away.

Our Young People Must Give.

The responsibility for forming right habits of systematic giving rests with the young. We cannot stir the old, their habits are formed. You have seen some good old brother in your church listen with folded arms and clouded brow to an appeal for money. Afterward you heard him say, "Too bad to spoil such a sermon by bringing in the money question." Now he would give his life for his faith in Jesus, but he was not trained right when he was young. We like to think of our Circle members as a growing body of young people who will give, and give liberally of their money to the Lord. And we pray that they will not withhold even themselves, but that in their ranks the missionaries of the future will be found.

1. What did Jesus say about our giving? Matt. 6: 1-4.

2. If we give but little, what shall be our reward? 2 Cor. 9: 6; Prov. 21: 26.

3. There is a great reward for the liberal giver. Isa. 32: 8; Prov. 11: 25; Eccl. 11: 1.

4. What law did Christ lay down about giving? Luke 6: 38.

5. What is promised to those who give to the poor? Prov. 28: 27; 14: 21; Eccl. 11: 1.

EMPLOYMENT BUREAU.

SISTER Rebecca A. Bowman, a very earnest Circle worker, says: "I have not failed to speak a word for the Circle wherever opportunity afforded. We have been reading steadily on and out of the thirty names I have secured in the last two years, thirteen have completed the prescribed course, while the remainder are getting on nicely and have but a book or two to bring them through. We have some excellent books on missions, aside from the old ones which are being read with interest, *Rex Christus* among the number. We feel thankful for the interest so far, and trust that the efforts we have made to extend this work may continue to grow and increase to the praise of our Lord Jesus Christ."

Brother M. B. Knop, of Waterloo, Iowa, who has been a good Circle worker for years, writes for his certificate. He says what we hope to hear from many others: "I have enjoyed the course very much and hope to do more reading along that line in the future."

Sister Mary E. Shickel, of Broadway, Virginia, is doing excellent work for the Circle this winter. She sends in six new names making fourteen in all and says their work is growing in interest as well as in numbers.

Brother D. Owen Cottrell has been sending in lists of new names for a number of years. He used to send them from North Manchester, Indiana. Now he writes from Union Bridge, Maryland, where he is one of the teachers in our school there. He sends us twelve new names, and so the good work goes on. One faithful worker here and another there, and so the Circle is widening.

We have received so many assurances lately that our Circle is to be brought to the attention of our Sunday schools that we are very hopeful for the future. We will say more about this later. We are anxious to induce our children to read on missions; then they will carry on the work we have started in our weakness.

NEW NAMES.

- 2708 Ira Layman, Daleville, Va.
 2709 W. C. Halteman, Williston, N. Dak.
 2710 Sara Garber, Harrisonburg, Va.
 2711 Katie L. Bowman, Harrisonburg, Va.
 2712 D. J. Grabill, Lemasters, Pa.
 2713 H. L. Long, Williamsport, Md.
 2714 Margaret A. Roop, Taneytown, Md.
 2715 Mrs. L. Kate Ogle, Union Bridge, Md.
 2716 Wm. E. Sanger, Cordova, Md.
 2717 Elizabeth Eppley, Union Bridge, Md.
 2718 M. Edith Naff, Union Bridge, Md.
 2719 Anna M. Hoover, New Oxford, Pa.
 2720 Sara E. Price, Westminster, Md.
 2721 Velma Grimes, New Windsor, Md.
 2722 W. S. Myers, Union Bridge, Md.
 2723 W. S. Whitmore, Welsh Run, Pa.
 2725 J. S. Wampler, Broadway, Va.
 2726 D. S. Wampler, Broadway, Va.
 2727 Nellie B. Myers, Broadway, Va.
 2728 Mamie Myers, Broadway, Va.
 2729 A. F. Kline, Broadway, Va.
 2730 W. C. Hoover, Broadway, Va.

RECEIVED CERTIFICATES.

- Anna Wampler, R. D. No. 7, Harrisonburg, Va.
 Ira Layman, Daleville, Va.
 M. B. Knop, Waterloo, Iowa.

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XXII.

Paris, France.

Dear Mr. Maxwell:—

The next day after I wrote you the last letter we spent the entire day contracting and establishing our itinerary with our guide who is to go with us through the foreign countries. You see, we are, in one sense, at the end of the world. While it is true we have been in a foreign country ever since we left New York, yet we have been among English-speaking people, but we can be there no longer. Henceforth our tongues will be unable to master the vernacular. Circumstances necessarily compel us to have an interpreter. It is true one can get along after a fashion without either guide or interpreter, but if one wants any comfort, or wants to gain instruction without loss of time these are necessary auxiliaries. According to our itinerary we are to pass through France, Holland, Belgium, Germany, Denmark, Sweden, Switzerland, Italy, Greece, Turkey, Asia Minor, Syria, Palestine and Egypt.

From London to Hamburg our ticket cost 4 Sovereigns, 13s., 10d. From Naples to Beirut 14S., 10s., 5d., and from Beirut to Cairo 30 Guineas. I tell you it makes one take a long breath when he sees the effect this day's work had on our American Express cheques and when he takes a glance at the map and sees where all he has to go. Ross is looking over my shoulder as I write this and he says, "Yes, but tell them to think of what all we are to see on the trip."

The next day after, we left the world's largest city amid satisfaction and dissatisfaction. We are satisfied with the well-spent time, but very much dissatisfied with the length of time. We left London over the Southwestern Railway from New Haven, on one of their best trains; it required a good half-hour to get out of the city; we crossed the beautiful Thames, had a splendid view of London bridge, and shooting through a couple of long tunnels, we thundered along amid factories, gardens and residences, and were soon out in the farming country. The men were harvesting, threshing, plowing and making hay. While we were drinking in the splendid sights all at once Oscar exclaimed, "Look there, Ross!" and he pointed his finger toward the field where we saw three yoke of oxen hitched to a large wagon, with sheaf oats piled high, and in another field near by we saw three horses hitched to a load of rye, not abreast, but instead, they were one ahead of the other.

We saw many interesting sights. We passed by the great chalk quarries and within an hour and a half from the time we left London we were hustling aboard the French transport, "France," and were upon the dreaded water, "The English Channel." You remember this is the neck of water that mother always dreaded so, and tried to get us to promise we would not cross it, but when it was explained to her that we could not avoid it, she finally consented. It was with no degree of easiness that we started across this neck of the ocean, but to our surprise we had a very smooth voyage. The usual amount of hustle and shuffle for the different classes of passen-

gers and the arrangement of baggage prevails. The bells ring, the whistle blows, the gang plank is drawn in, we weigh anchor, and are once more tossing upon the bosom of the waters. The sailors carefully canvass the baggage hatchway and we scringe for fear of a rough sea; but, I think we never enjoyed three hours and a half on the water more than we did this time. We met a congenial Bostonian and family. We were in the open sea about an hour, and passed most of the time on the upper deck. Ere long Miss Merritt, by the aid of her field glasses, caught the first glimpse of the great French republic, then each in turn took a look at the great chalk cliffs in the distance. A few moments more of hustling baggage amid a jargon of French and English and a babel of confusion, we again put our feet on free soil.

The usual form of inspection of baggage was a part of our introduction to the French language. We soon learned that half a franc (ten cents) aided materially in gaining time during this baggage inspection. In a very few moments we were seated in a fast train for Paris (Pah-reé) via Rouen. Who can guess the first sight we saw in France? It was the cross of Christ planted on the landing dock. What a change! Only three and a half hours of time have elapsed since we left England, but apparently we are in a new world, amid a new people, with a new costume, strange customs, and a foreign language. What was the first thing we did in France? Bought four bunches of grapes, and when we went to pay for them we inquired the price and the answer was, "Fifty centimes" (son-teems). By this answer we realized the fact that we were under obligations to learn a new system of money. Instead of guineas, sovereigns, shillings, pence and farthings, we now have to deal with Napoleons, francs and centimes. A franc is worth almost twenty cents so our four sacks of grapes, we found, cost us altogether ten cents and we ate them without further ceremony. In Ireland and England grapes have been worth from sixty cents to a dollar a pound and we were awfully afraid they were sour.

In the British Isles we saw some salmon three feet long and talbot weighing twenty-five pounds, but here in France the venders are sellings small ones like we have at home.

Now we have glided out into the country. The stone fence of Ireland and the hedge fence of Scotland have been supplanted by the Lombardy Poplar for line fences, and middle fences are painfully absent. The French seem to have too much sense to allow half of their farming land to lie under fence. There seemed to be as many women in the harvest field as men, and the pretty little French maidens waved a straw-hat welcome to us as we speed on. Large, beautiful valleys, full of well-kept, fertile fields fall back into gentle slopes and terminate into chalk deposits which are clever mountains. In many places planted groves surround towns, where all the people live. No farmhouses are seen, or at least very, very few. The boys called our attention to the shocks

(Continued on page 336.)

The Q. & A. Department.

Why does Easter Sunday vary so much and is never on the same date two successive years, and also how did the custom of eating eggs become associated with the day?

In the early church Easter was identical in date with the Jewish Passover, but the Council of Nicæa, 325 A. D., fixed a different date. It was decreed that Easter should fall on the first Sunday after the 14th day of the moon that happens to be reigning at the time of the vernal equinox. The equinox was arbitrarily made March 21, although in reality it sometimes comes a little earlier or later. For example, suppose the equinox moon is just fourteen days old on March 21 and that this day falls on Saturday. Then the next day would be Easter. Thus Easter may be as early as March 22, or as late as April 25. In 1761 and 1818 Easter fell on March 22, but this will not happen in this century. It will fall on March 23 in 1913. It fell on April 25 in 1886 and will again do so in 1943. From the remotest ages the egg has been looked upon as a symbol of creation or new birth. According to the Persians the world was hatched from an egg at the time of the vernal equinox and the Parsees exchanged gifts of colored eggs at that time in celebration of the new year. Among the Jews the egg entered into all the mysterious ceremonies called Apocalyptic, and occupied a prominent position on the household table during the paschal season. Christianity invested the paschal egg with a new significance—the resurrection of Christ—and it was colored red in allusion to his blood shed for sinners on the cross.

In what year and month, and on what day and date was America discovered?

About ten o'clock on the night of Thursday, Oct. 11, 1492, Columbus discovered a light on shore, but it was not until two o'clock the next morning, Friday, Oct. 12, that land was discovered. The first to see it was Roderick de Triana, a sailor on the *Pinta*, but the reward of thirty crowns a year offered by King Ferdinand of Spain for the first to discover land was awarded to Columbus because he had seen the light on the preceding night.

What is the name of the largest river on each continent and its length?

In North America, the Missouri and Mississippi, 4,575 miles; in South America, the Amazon, 4,000 miles; in Europe, the Volga, 2,300 miles; in Asia, the Yang-Tse-Kiang, 3,000 miles, and in Africa, the Nile, 4,100 miles.

What is the length of the largest tunnels in the world and tell where they are?

The longest steam railroad tunnel in Europe is the Simplon Tunnel, through the Alps Mountains, connecting Italy and Switzerland. It is over twelve miles long. The Metropolitan Railway of France, subway for railways, will comprise about forty miles of tunnel. The New York Rapid Transit Railway, as contracted for in 1899, comprises some 20½ miles of line, mostly tunnel. The Hoosac Tunnel, on the line of the Fitchburg Railroad, in Massachusetts, is four and three-quarter miles long. The aqueduct which supplies Chicago with water from Lake Michigan consists of a number of tunnels, with a total length of 21.97 miles under water and 15.92 miles under land. At Cleveland, Ohio, there is a tunnel 26,000 feet long to supply water. The Croton Aqueduct in New York is thirty-three miles long, and the Vrynyn Aqueduct at Liverpool, England, is seventy-seven miles long and has three tunnels, the largest of which is over two miles. A four-mile tunnel has just been completed to convey water to Cincinnati from California, Ohio.

To what persons or places do the following names apply: The Autocrat, the Hoosier Poet, Ossawatomie, the Learned Blacksmith, Cincinnatus, and the Superb?

Oliver Wendell Holmes; James Whitcomb Riley; John Brown, a celebrated American abolitionist, who defeated a superior number of Missourians at Ossawatomie in August, 1856; Elihu Burritt; Lucius Quinctius, a Roman legendary hero, born about 519 B. C., and Genoa, Italy.

Please give a short sketch of the Eads bridge across the Mississippi river at St. Louis?

It was built by Colonel James B. Eads at a cost of \$10,000,000. The work was begun in 1867 and completed July 4, 1874. It has three arches formed of tubes of cast steel and built out from the piers without scaffolding. The center span is 520 feet, the others 502 feet each. In its construction 2,200 tons of steel and 3,400 tons of iron were used.

How far is it from San Francisco to Manila by way of Honolulu and by way of Yokohama?

From San Francisco to Honolulu it is 2,089 miles and 4,917 thence to Hongkong, and 628 miles thence to Manila, or 7,634 miles altogether; from San Francisco to Yokohama is 4,791 miles, thence to Hongkong 1,490 miles and thence to Manila 628, making 6,909 miles in all.

MISCELLANEOUS

THE GEOGRAPHY CLASS.—Chapter XXII.

(Continued from page 334.)

of oats and rye, which are set up in single shocks like corn-fodder, without being tied in sheaves, but tied once around the top and the cap sheaf is not broken like ours, but divided symmetrically and set, butt up so as to cover the entire shock as a shield. All cereals are cut very close to the ground and every particle saved. After we thought all was gathered we were shown to be mistaken, for the gleaner maidens followed the reapers as in the days of Boaz, and straw by straw they saved a few bundles for their painstaking.

Beyond is the beautiful river Seine, like a silver thread in a ribbon of green, winding its way through the valley, turning here and there to avoid the snowy white chalk cliffs, crowned by green cedars and firs. Here and there a tug is seen pulling three or four barges heavily laden. The picturesque scene of Rouen is reached and passed, and ere long, from the carriage window, Agnes' ever-watchful eye caught the first glimpse of the wonderful Eiffel tower which tells us that we are nearing the capital of France. I must close this letter and get ready to get out of the train.

Good-bye,

Marie.

(To be continued.)

CLEVER ADVERTISING.

At a certain large public library there is a rule, which ought not to be necessary, that men and boys must remove their hats on entering. One Saturday afternoon, when the room devoted to the circulating department was crowded, a man of middle age came in and took his place in line. He had a book or two under his arm, as if for the purpose of making an exchange, but he did not remove his hat.

On the contrary, he had it jammed well down on his head, and there was a determined expression on his face that seemed to betoken a firm purpose not to take it off.

"No, sir," he responded, in a loud voice. "You have no right to make a man take his hat off. This is a free country."

"Certainly it is," rejoined the attendant, "but you can't get books at this library if you don't observe the rules."

"I'd like to know why not."

"Because it's the rule. That is sufficient."

"You insist on my taking off this hat?" asked the man in a still louder voice.

"Yes, sir. I do."

By this time the attention of everybody in the room had been drawn to the obstinate visitor.

"Well," he vociferated. "I'll take it off if you insist, but I want you to understand I do it under protest."

He removed the offending hat, disclosing a head as bald as a billiard ball, with this inscription painted upon it in black letters that could be read twenty feet away: "Use Smithby's shaving soap."

And he was the observed of all observers for the next half hour.—*Youth's Companion*.

"ONLY."

ONLY a stray sunbeam? Yet it cheered a wretched abode—gladdened a stricken heart.

Only a gentle breeze? It fanned aching brows, cheered many hearts by its gentle touch.

Only a frown? But it left a sad void in the child's heart—quivering lips and tearful eyes.

Only a word of encouragement—a single word? It gave the drooping spirit new life, and led to victory.—*Kind Words*.

THE PATH OF THE MOON.

The moon has dropped a bridge upon the sea,
Golden, yet pale with the strange silver light
That, melting midnight shadows, changes white
The yellowest rose and bleaches roof and tree.

The moon has made a path of mystery
From earth unto herself; the great sea's might
Is held in check, as when to maiden slight
The lion knelt, obeying love's decree.

Oh, whither do you lead, slim, radiant way,
A-trembling as the glistening billows turn
Like children in their sleep when mother's hand
Has gently touched them? By this dreamlike ray
Do you not tempt? For there are souls that burn
Through the dim sea to find an unknown land.
—Maurice Francis Egan, in *December Lippincott's*.

IT IS NOT SO MUCH

What you think, as what you say.
What you earn, as what you save.
What you say, as how you say it.
What you want, as what you need.
What you believe, as what you do.
What you give, as how you give it.
What you work, as how it is done.
What you possess, as how you use it.
What you learn, as what you remember.

—Paragon Monthly.

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,
Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground, others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

SAMUEL S. THORPE,
Cadillac, Mich.,
DISTRICT AGENT

or

BRO. JOHN A. MILLER,
Brethren, Mich.,
RESIDENT AGENT

Michigan Land Association.

Low Rates to California

Only \$33.00 to San Francisco and Los Angeles every day until May 15, 1905, similar low rates to Portland, Tacoma, Seattle and many other points in California, Oregon and Washington, via the

THE INFLUENCE OF A DREAM

We are all subject to dreams, humble and great, rich and poor alike. Many people attach considerable significance to them. Dreams have at times shaped the destinies of men and nations. In olden times, dreams were interpreted by the priests, and we read in the Old Testament the narrative of Joseph laying the foundation for his future greatness by interpreting Pharaoh's dreams.

Most every one has read the story of the wonderful dream of the Virginia girl, who saw old Dr. Fahrney in her dreams, and how she was cured by him after having lived the sad life of an invalid for years. In a letter from Mrs. Elizabeth Buening, of Purdy, Barry county, Missouri, the "dream story" is again brought vividly to mind. She writes under date of April 4, 1904:

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—We would rather be without money than your Blood Vitalizer. We have a large family and have had occasion to use it, and we certainly know if it is good or not.

I was just like the girl referred to in the "dream story." I had passed many years in misery and suffered, it seems, from all imaginable troubles. One night I dreamed that your Blood Vitalizer, of which I had heard so much, cured me. In the morning I related my dream to my husband. He said, "Haven't you spent enough money already. That 'stuff' will be just like the rest." I finally induced him, however, to send for a trial box, and as much as we needed our hard-earned money, it was a splen-

did investment. It not only cured me, but did my husband a great deal of good which can not be paid with money. He used to suffer terribly with neuralgia and rheumatic pains, which almost set him crazy. In the winter, as soon as the weather became cold and raw, he could not go outdoors and was unable to work. Since using the Blood Vitalizer this has never happened.

Here is another case which I must tell you about. Our thirteen-year-old daughter had the scald-head two years ago. Her head was a terrible sight, almost sickening to look at. Three bottles of the Blood Vitalizer cured her in a short time. I could write you a great deal more and relate many other happy instances where the Blood Vitalizer has done wonderful things, but this will have to do for this time.

Yours truly,

Mrs. Elizabeth Buening.

The wonderful phenomena of dreams may or may not be explained; their value or importance may be questioned, but the fact remains that DR. PETER'S BLOOD VITALIZER was again the medium of restoring health and happiness to an otherwise unfortunate home.

Unlike other medicines DR. PETER'S BLOOD VITALIZER is not to be had in drugstores. It is not an article of commercial traffic, but is supplied to the people through special agents appointed in every community. If there is no agent for the BLOOD VITALIZER in your neighborhood, you can obtain a trial box containing 12 35-cent bottles, just now, at the special price of \$2.00. Address

EXPLANATORY

The above statement of the corporation's affairs at the close of the fiscal year, Jan. 31, 1905, must be convincing evidence of the phenomenal growth of the business during the past year and attention is called to the fact that the statement is made out in the same manner as a bank statement and that every share of authorized stock is charged up as a liability.

The Company's attitude on financial questions is one of frankness and publicity, as should be the case with all public corporations. Such a showing as the above is only possible because of there being no "promoter's stock" and no "water" in the corporation, nor a sinister motive behind any move in connection with its organization and development. Are you a believer in such a policy?

Further explanation in regard to statement or any phase of the business cheerfully given.

References: Any mercantile agency, the Banker's National Bank of Chicago, or any of our thousands of customers.

A NEW BUSINESS HOME

A fine tract of land adjoining one of the city parks has been purchased and plans are now being drawn for a new and commodious business building to contain nearly 100,000 square feet of floor space. It is the purpose to occupy this **new business home** yet this year and erect additional buildings as rapidly as needed.

The volume of business is increasing fully 20 percent per month and Christian people are joining the ranks of coöperators at the rate of fully 100 per month, owing to the operation of the practical plans of scientific coöperation. Another catalog is now ready and will be sent free with goods or mailed free to Inglenook friends who do not have our large catalog. May we hear from you?

SCIENTIFIC CO-OPERATION

This term with the ideas and plan for which it stands has been protected by the registry laws of the various states and cannot be used by others unless duly licensed by H. P. Albaugh, the President of our company. Through the operation of scientific coöperation we have interested about 1,400 people financially and others are being added daily. Coöperation reduced to a science is the final step in business evolution and release from the thralldom of exorbitant prices.

Christian character is a prerequisite with our coöperators and it is the purpose to carry to a successful issue as large a mail order business as any in the country, same to be owned, controlled and managed at all times by Christian people,—a credit to the church as well as the commercial world. We thank the readers of the Inglenook for their part in pushing the good work along by their investments, orders and influence and while our fondest anticipations have been passed the last year, the present prospects indicate an even greater success for 1905.

ALBAUGH BROS., DOVER & CO., The Mail Order House, 341-33 Franklin St., Chicago, Ill.

"That's the Place"

THE UPPER PENINSULA LAND CO., Ltd.,

F. J. MERRIAM, Gen. Man., 935 First Nat'l Bank
Building, Chicago, Ill.

This is one of the sections of country you must see to understand. It is not like any other part. There's good hard wood to burn for a lifetime. The best artesian water you ever saw is to be had. The ground never freezes because of the early snow. Potatoes can be planted in the fall, or the summer crop dug in the spring. Seedsmen get their seed peas grown there. Hay is something wonderful. We have heard of a field being cut over for 23 years. It's an ideal stock country. Grass is green till snow and comes out green. There are no drouths. Sheep get fat readily. Strawberries are phenomenal in quality and quantity, and being the latest grown bring fancy prices. There are easily reached markets. There is no end of profitable work, if you want it, while you are getting your farm ready. You have to see the country to at all know it. Write us and we will tell you how to get there and maybe go with you. If you have a trade we will put you on a place where you can work at it. Address:

HOWARD MILLER,
Elgin, Ill.

UPPER PENINSULA LAND CO.,

(LIMITED.)

F. J. MERRIAM, General Manager,
935 First Nat. Bank Bldg., Chicago.

For years the writer has been looking for a place where the Brethren could find a good locality in which to settle. Every part of the country has been offered for sale, good, bad, and worthless, till it has become a serious question in the minds of those who have to do the buying.

In all this seeking there is one place that has been entirely overlooked. It is what is known as the Upper Peninsula of Michigan. Originally it was a land grant, and the native field of lumbermen, the delight of the summer camper, and now that it has passed into the market for agricultural purposes it affords an opportunity of a life-time to secure a home. About 800,000 acres are available for farming purposes:

It is unlike most other sections of country open to settlement. It has certain advantages utterly unknown to the great majority of localities open to settlement. One of these is that there is wood enough for fuel, good and cheap, for generations to come. Another is that the ground never freezes so as to injure root crops. The snow comes in the latter part of November, blanketing the grass, going in March, uncovering the growing crops of unequalled forage ready for immediate use. It is the greatest pea country in the world, forty bushels to the acre of shelled peas being better for all purposes than the same amount of shelled corn.

The ground is red with wild strawberries, certain cultivated ones yield from 6,000 to 7,000 quarts to the acre. All root crops run riot in size and quality. Hay is had for the cutting, and a timothy hay field has been cut for fourteen years and is as good now as when started.

Within easy railroad reach are the greatest iron and copper mines in the world, employing thousands of people, insuring the highest prices for all farm produce for many a year to come.

What does this land sell for? From \$5.00 to \$10.00 an acre, and four years to pay it in. You can buy a forty acre tract for \$10 down and \$10 a month. If you die before paying out, we give your money back.

Let us send you some descriptive literature. It's not what you think it is. It's not a chance that will last. Prices are going to be jumped before a great while. There is lots of work to earn money while your farm's coming on. We can't tell you a tithe of the story here. Let us send you the printed story of the land, and you ask any questions you want to, and we will give you the facts in the case. Address:

**HOWARD MILLER, Agent,
ELGIN, ILL.**

ART PICTURES

We have just received three new numbers of these "Fine Art Pictures" as follows:

No. 125--MARRIAGE CERTIFICATE

No. 123--FAMILY RECORD

No. 121--MEMORIAL

We have had a number of calls for the above numbers and are pleased to state that we are now prepared to furnish them.

The Memorial picture is printed on black paper, which makes it very appropriate, while the other two are printed on gilded paper in many beautiful colors.

No. 125.—Marriage Certificate.

We have sold more than **5,000** of these Pictures in the last two months and are still receiving many orders each day. A great many order from 12 to 25 at a time, and a number of orders are received for 40 and 50. Our customers are so well pleased that it is no uncommon thing for the same person to send us two or three orders. Size of picture, 16 x 20 inches. **Former price, 25 cts.**

No. 123.—Family Record.

These numbers are all exceedingly fine. Send us an order and we are sure you will be delighted with them.

TWENTY SUBJECTS

Besides these we have 20 other subjects that are very popular.

OUR SPECIAL PRICE

For one or more and less than six, each,	15 cts.
For six or more, each, - - - - -	12½ cts.
One dozen or more, each, - - - - -	11 cts.

SEND FOR OUR ILLUSTRATED CIRCULAR OF 20 SUBJECTS

AGENTS WANTED No previous experience necessary. **Quick sellers. Good Commissions.** Our agents who are already at work are reporting excellent returns. **Write to-day for terms.**

C. S. Morey Makes Remarkable Prediction in Regard to Beet Growing Here.

"Colorado as a beet sugar producing state will soon leave Michigan far in the rear, if the present developments continue."

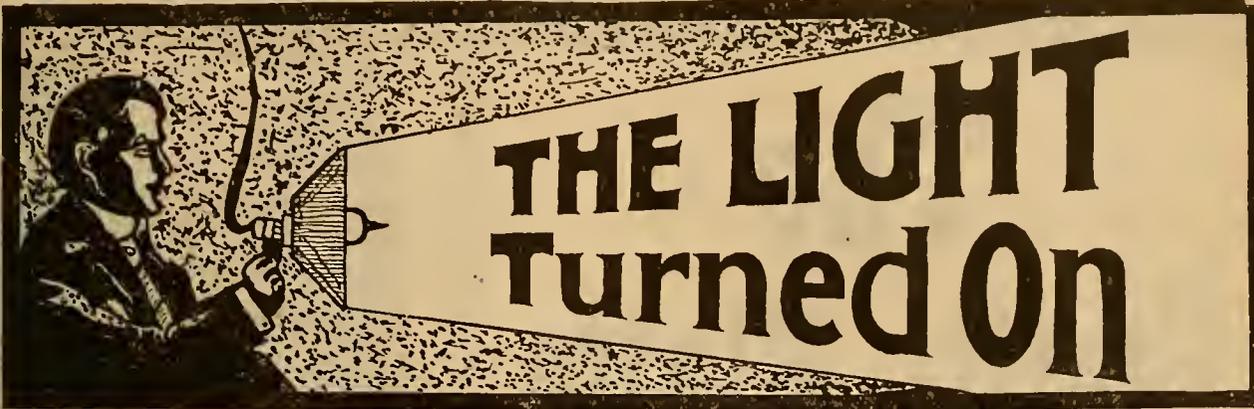

This assertion was made this morning by C. S. Morey, head of the Morey-Boettcher syndicate. He has just returned from a trip to the East. While there he made arrangements for the transfer of one of the largest Michigan factories from Saginaw to Sterling, Colo. The new factory will have a capacity of 600 tons and will give employment to hundreds of men.

This will make the seventh beet sugar factory in the South Platte Valley owned by this syndicate.

The Union Pacific Railroad

Which is known as "The Overland Route," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line. EXPLANATORY

The above statement of the corporation's affairs at the close of the fiscal year, Jan. 31, 1905, must be convincing evidence of the phenomenal growth of the business during the past year and attention is called to the fact that the statement is made out in the same manner as a bank statement and that every share of authorized stock is charged up as a liability.

The Company's attitude on financial questions is one of frankness and publicity, as should be the case with all public corporations. Such a showing as the above is only possible because of there being no "promoter's stock" and no "water" in the corporation, nor a sinister motive behind any move in connection with its organization and development. Are you a believer in such a policy?

Further explanation in regard to statement or any phase of the business cheerfully given.

A NEW BUSINESS HOME

A fine tract of land adjoining one of the city parks has been purchased and plans are now being drawn for a new and commodious business building to contain nearly 100,000 square feet of floor space. It is the purpose to occupy this new business home yet this year and erect additional buildings as rapidly as needed.

The volume of business is increasing fully 20 percent per month and Christian people are joining the ranks of coöperators at the rate of fully 100 per month, owing to the operation of the practical plans of scientific coöperation. Another catalog is now ready and will be sent free with goods or mailed free to Inglenook friends who do not have our large catalog. May we hear from you?

SCIENTIFIC CO-OPERATION

This term with the ideas and plan for which it stands has been protected by the registry laws of the various states and cannot be used by others unless duly licensed by H. P. Albaugh, the President of our company. Through the operation of scientific coöperation we have interested about 1,400 people financially and others are being added daily. Coöperation reduced to a science is the final step in business evolution and release from the thralldom of exorbitant prices.

Christian character is a prerequisite with our coöperators and it is the purpose to carry to a successful issue as large a mail order business as any in the country, same to be owned, controlled and managed at all times by Christian people,—a credit to the church as well as the commercial world. We thank the readers of the Inglenook for their part in pushing the good work along by their investments, orders and influence and while our fondest anticipations have been passed the last year, the present prospects indicate an even greater success for 1905.

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,

Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

SAMUEL S. THORPE,

Cadillac, Mich.,

DISTRICT AGENT

BRO. JOHN A. MILLER,

Brethren, Mich.,

RESIDENT AGENT

Michigan Land Association.

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime.

(Signed) E. L. Dotson.

No. 15.

A BIRD SONG.

BY L. MARGARET HAAS.

Spring lingered, loath to leave the land
Of sunny clime where flowers luxuriant blow,
The gift of Nature's own fair lavish hand
Which God has blessed, his bounties to bestow.

Upon a mossy couch where violets grew,
Sweet violets by her best loved of all
That sprang to greet her as near she drew,
She, sleeping, dreamed, and dreaming heard a call

From the northland, and starting up she gazed
Toward the land whence came the voice she heard,
With graceful head inclined and hand upraised
She listened, hearing naught but song of bird.

Curious to see the author of such notes,
She followed northward where the sweet strains led,
Nimbly undoing Winter's icy bolts,
Wide swung the prison doors, the captives fled.

Grim Winter saw his vassals one by one
Desert him for the beauteous maiden's side,
He raved and stormed till all his strength was gone,
Then heaving mighty sighs the monarch died.

His hapless fate called forth no sob nor moan,
No loyal subject mourned the tyrant's end;
Fair Spring was placed upon the vacant throne,
And every knee in homage true did bend.

Camp Hill, Pa.

SEED-THOUGHTS FOR THE HEART'S GARDEN.

BY JOSEPHINE HANNA.

Opportunity is dumb, and man, too often, blind.

The easiest thing in the world to make is a promise.

Carry happiness to others and obtain your own free.

After all, the best coöperative association is man and wife.

If self were canceled from our motives, what would there be left?

If anyone is small enough to offend you, be great enough to overlook the offense.

Not every Saul misses aim: zeal has often been wounded and disabled by Envy.

It is a pity to deny, for a cloud, the sun on high, while its tryst remains unbroken with the day.

Men would not have so many battles to fight with Satan if they would not venture into his territory.

After all, the busybody does not have much to show for his time,—he devotes so much of it to others.

We should not mistake the mist which sometimes gathers in our eyes for a cloud upon the face of our sky.

If earth were true, could its treasures buy that to which the heart so often turns for consolation, when bereft of them?

The writers of the best old songs are dead. The writers of some of the new ones ought to be. That is, dead to the music world.

Some persons, thinking to prove their sympathy, are but reminders of misfortune; if you are in doubt, let undoubted kindness suffice.

There are several advantages that men have over women; an important one is, that they are not expected to kiss each other when they meet.

The noblest question in the world is, "What good may I do in it?" Reader what beautiful thing hast thou done that will live when thou art gone?

We have rather a poor opinion of the man who is so afraid of doing something wrong that he never undertakes to do right.

THE HARMONY OF PHRENOLOGY AND
THE SCRIPTURES.

BY H. B. MOHLER, F. A. P. I.

Part One.

IN this day of revival interest there seems to be every agency employed relating to reform.

The time has come when emotionalism and sentiment are supplemented by *reason, thought* and deep *spiritual interest* through faith and prayer, so that from every part of the United Kingdom men and women are being impelled to inquire, "*What must I do to be saved?*" The greatest problem of human life and eternal happiness is the "*conversion* of men from sin to holiness."

This is generally believed to imply the immediate operation of the "*Holy Spirit,*" acting independently, *i. e.*, without the responsive activity of his (man's) moral and religious faculties. If any reader should take this view of conversion, he then denies the "*free moral agency*" of man and thus ignores the function of his religious faculties which God directly designed for his "*glory and honor.*"

The regenerative work in its formative period is decidedly a moral one and in its very nature *must* be effected through moral causes, *i. e.*, by bringing religious thought, Bible truths and object lessons, naturally relating to his moral faculties, to his recognition and so stimulating his moral feelings and enlightening his intellect as a natural means in attaining to the "*higher life.*" The Bible throughout does *not* appeal to our emotions or feelings, but is a book that appeals to law, ethics, principles, duty and truth, which demands us to "*search the Scriptures*" and "*Study to show thyself approved unto God.*"

The science of phrenology indeed shows us the relation, function and superiority of our spiritual and intellectual nature which Paul in Eph. 2: 3 compared to his sinful nature. Here he says: "*We all had our conversation in times past in the lusts of our flesh, fulfilling the desires of the flesh and of the mind; and were by nature the children of wrath, even as others.*" At this time his feelings and desires were under the dominion of his *animal faculties.*

There are two distinct "*laws*" embodied in the regenerative work. Bishop Butler tells us that "*natural religion is the basis of Christianity,*" and we cannot conceive of spiritual life and power except through natural agencies. *Reason, study, observation* and *experience* all prove the immutability of these laws in physical, animal and human nature. Although Christ was the *Son of God* he conformed to the "*law of sin and death*"—"Who his own self bare our sins in his own body, on the tree that we being dead to sins, should live unto righteousness." I Peter 2: 24. It behooved Christ to take the form of flesh, to act, walk,

talk, to feel, desire, think, love and be subject to all the laws governing our natural body and natural mind in order that he could be "*the true light, which lighteth every man that cometh into the world.*" John 1: 9.

In Rom. 7: 21 Paul says, "*I find then a law, that, when I would do good, evil is present with me.*" And in verse 23 he says, "*But I see another law in my members (animal propensities), warring against the law of my mind (conscience and judgment), and bringing me into captivity to the law of sin which is in my members.*" Paul was conscious of his "*dual nature*" for here he expressed his personal experience, showing that his former conduct was induced by his unrestrained "*animal faculties.*" Paul tells us about the two great laws, previously referred to in Gal. 5: 17: "*For the flesh lusteth against the Spirit, . . . and these are contrary the one to the other.*"

When *combativeness* and *destructiveness* are not subdued by *conviction, reason* and the higher faculties of our nature, could we expect anything more or less than what Paul did in Acts 8: 3, where "*he made havoc of the church, entering into every house, and haling men and women committed them to prison.*" He even consented to the death of Stephen, and the persecution of the church at Jerusalem, which was only intensified when he (Saul) "*yet breathing out threatenings and slaughter against the disciples of the Lord, went unto the high priest.*" Acts 9: 1.

After his conversion, however, he no longer yielded to the abuses, emanating from his cruel faculties, although he felt their solicitations. His moral faculties under the natural stimulus of religious influence had now assumed the supremacy and he converted his destructive energy into supplemented spiritual power.

Here he exemplified a coöperative divine and phrenological principle, *viz.*, That God designed every human faculty for a good purpose and, when they are normally exercised in harmony with and obedience to the intellectual and moral forces, they *must* contribute to our moral and spiritual growth and influence. It is conclusive that *DESTRUCTIVENESS, COMBATIVENESS, SECRETIVENESS* and *FIRMNESS* gave Paul the energy, force, courage, boldness, policy, tact and perseverance that later characterized his noble life.

God's laws in nature are fixed and the Christian religion in its internal and external relation is vividly compared in Gal. 5: 19-23. In the "*fruit of the Spirit*" he most strikingly sets forth the elements emanating from our "*higher faculties*" of *BENEVOLENCE, VENERATION, SPIRITUALITY, FRIENDSHIP, CONSCIENTIOUSNESS* and *HOPE*—which are "*love, joy, peace, gentleness, goodness, faith, meekness, temperance:* against such there is *no law;*" and phrenology says *why* there cannot be. Paul's conviction of offense against the moral or "*spiritual law*" instinctively and

involuntarily prompted spiritual action after he was "struck to the ground" in Acts 9: 4-19, which concisely shows that "God's Word" and our spiritual faculties emanated from the same Divine source, and therefore cannot be at variance with their dictates.

Paul to the Romans 2: 14, 15 explains in a remarkable way "when the Gentiles, which have not the law, do by nature the things contained in the law, these, having not the law are a law unto themselves." Here again phrenology accords with the Scripture and tells us that the Gentiles were endowed by nature with highly developed moral faculties so that in comparing their "propensities" with the dictates of reason and truth they have at once realized the opposition and their minds stood convicted in offending the law "written in their hearts."

Grand Junction, Colo.

(To be continued.)

PREHISTORIC MONUMENT

Built of Bricks Is the Only Example Found in America.

IN many respects Aztalan, in Wisconsin, is among the most remarkable prehistoric monuments in the Northwest. It is the only brick-walled town site found in this country. It is on the bottom land of the Crayfish river, about two miles from Lake Mills. The inclosing walls of the town site are about seven hundred feet on its flanks and fifteen hundred feet long. The river served to complete the inclosure of seventeen acres of land.

Within and without the inclosure there are round, truncated and oblong mounds. Just beyond the inclosing walls the land rises abruptly over twenty feet to the rolling tablelands of the surrounding country. From the bank above a stone could be tossed into the town site, within the inclosure, which would seem to be a good reason why this inclosure, which has been called a fort, could not have been intended for a defense against any human enemy.

Along the brow of the higher land is a row of more than thirteen round pyramidal mounds ranging from three to twelve feet in height. From the top of these mounds, or standing on the tableland, an enemy could command the whole town site. It has always been conceded that Aztalan was not inclosed for the purpose of defense. It has been supposed that it was walled for protection from wild animals, though the inclosure has never been high or abrupt enough since its discovery to keep out the panther, wild cat, wolf, bear, moose or buffalo, which were the only dangerous animals of the woods hereabouts.

The purpose of its inhabitants in constructing this inclosure over a half mile long still remains a mystery. The most remarkable art at Aztalan is its brick walls and walks. In this it is singular and alone, the only

example of bricklaying among all the monuments of the mound builders. These bricks, or bricklets, are not rectangular and regular in form and size, as are the modern brick. They are simply balls of plastic clay welded by the hand into small bricklets of irregular form about the average size of a snowball. The material used was the glacial yellowish red clay of the vicinity, and the color of the bricks is red or light yellow. Under the glass scrapings appear like a handful of crystal sand.

A NEW ALLOY.

"INVAR" is the name of a new alloy, of which more is likely to be heard in the near future. The expansion of metals on heating is well known to engineers as a trying experience, and to physicists as a special case of a property inherent in all matter. But general as it is, this property varies considerably in different substances, the change in quartz or sand being almost immeasurably small, while that in steel and brass becomes so great as to require special precautions for use in engineering or other purposes where constancy in length is required. The space required to be left between successive rails on a permanent way forms a familiar enough example. In alloys, however, the change with temperature is often found to be something quite different from a mere average of the constituent metals. The theory of such an anomaly is somewhat difficult to follow out, though it is curiously connected with magnetic properties. But the chief interest lies in the fact that by a considerable number of experiments an alloy of nickel and iron has been found containing thirty-six per cent of the former, whose expansion under heat is barely more than that of quartz. The discoverer, M. Guillaume, builds high hopes on the value of this new metal. Already it has found favor with the French authorities for use in instruments for survey work, where variations in climate often render accurate measurements difficult. A far more general application can be made of invar in the case of clocks. Other things being equal, the time of swing in a pendulum rapidly increases with the length of the latter. All clocks, therefore, would tend to be slower in the summer were not some compensation introduced. Such balance is usually made by arranging a strip of some highly expansible metal, such as brass, to increase upward from the bob on heating, so keeping the effective length constant. But the labor involved in the adjustment of such a pendulum must be considerable. Invar, of course, would relieve the difficulty altogether. In fact, by its substitution the discoverer claims to save thirty thousand pounds a year in the cost of the world's watch making.

GOD tempers the wind to the shorn lamb.—Sterne.

THE MORMONS.

BY J. G. FIGLEY.

WHAT I shall say about that peculiar religious sect known as "the Mormons," though they repudiate that name and declare their self-given name to be "The Church of Jesus Christ of Latter-Day Saints," so far as their early history is concerned, is, in chief, derived from an account given me at least twenty-five years ago by my paternal grandfather, who was personally acquainted with Joseph Smith, the founder of the Mormon church.

My grandfather was born in Washington county, Pennsylvania, March 1, 1794, and moved to Columbiana county, Ohio, with his father's family, in 1808, and remained there till 1836, when he moved farther west in Ohio. He was a close neighbor of the Poes, Adam and Andrew, who had the remarkable fight with the Indian, Big-Foot, recorded in our early history, though he said it was not Adam but Andrew who did the biggest part of the fighting. He was also well acquainted with the Vallandigham family, the father of the notorious C. L. Vallandigham of Civil War fame in Ohio, being the officiating minister at his marriage in 1819.

But to the Mormons: In the early thirties several young men came into Columbiana county preaching a new doctrine. True, they preached to a certain extent as other preachers did, but they went further after they had got interested congregations (just as they do now), and declared a new revelation, that a rather scrawny-looking individual they called Brother Smith, and sometimes even President, and who, they proclaimed, as the legitimate successor of Jesus Christ on earth, had had some visions over in York State, where he had been living a sort of hand-to-mouth existence, that bona fide angels had swooped down from the clear blue sky one day and given him two peculiar stones (crystals) called Urim and Thummim, with the aid of which he would be able to translate certain peculiar hieroglyphics from certain metallic plates he would find buried in a certain place, that this translation would be published and would prove a new revelation to mankind; and that God Almighty himself had delegated said Joseph Smith to do such work.

Continuing, these preachers declared that those strange plates were found, and that certain three men had positively seen and examined the plates and had seen the angels that had talked with said Smith, and had seen said Smith sitting behind a curtain looking at the plates through the strange stones and speaking aloud the words thereon, and which were written down by one Oliver Cowdrey, who sat on the other side of the curtain. These plates, claimed to have been written in "reformed Egyptian" characters, were all trans-

lated thus, except a few that were sealed together, and after the translating was done, were miraculously taken away apparently from under their very noses, and presumably by their celestial visitors, to be kept till it was time to have the sealed plates translated.

They further proclaimed that by use of the Urim and Thummim said Smith looked at the King James version of the Bible, and made "an inspired translation," wherein he corrected all discrepancies and errors made by the authorized translators, and which would also soon be for sale. They sold very many copies of "the book of Mormon," people buying it more as a curiosity than anything else, yet as was but natural, they gained quite a following, and increased in numbers till they numbered probably six or seven hundred at the time my grandfather left that part of the State.

He said that the Smith family was supposed to practice "the black art," searched after all manner of strange and supposed-to-be forbidden knowledge, dug for golden treasures they never found and began to live decently and to have some means when they located in the near-by county of Lake. He characterized Joseph Smith as "an ignorant, worthless cuss," and said that quite often when Joseph or his brother Hyrum, or some other Mormon preached, they would speak very profoundly "for an hour or more in some sort of goose-latin gibberish that no one could understand, and when asked afterwards what had been said, would reply that 'it was in an unknown tongue, and would be made known to them after awhile.'"

Smith was corpse-like and waxy in his complexion, and studied a grave and peculiarly sanctimonious bearing, and aimed to speak in sepulchral tones. He and Sidney Rigdon were tarred and feathered and rail-ridden out of Hiram, Ohio, by some people who thought of joining with Smith, but violently objected to transferring their property to Smith on the "Communitistic Father" plan. Rigdon was what in these days would be called a "religious crank," and was ready to take up with Smith and his sensational teachings.

As for their teachings, the Mormons baptized for the remission of sins by the once-backward method; they laid on hands for the gift of the Holy Ghost, and to heal the sick; they anointed with oil; they administered the sacrament kneeling, and preferred using water instead of wine; they took little children and blessed them; they held to what they claimed were all the original gifts of the Apostolic church, claiming there was no true church without them; and following out their new revelation, they claimed the power of speaking through the gift of the Holy Ghost in different tongues, sometimes interpreting for themselves, or getting others to act as interpreters, and also claimed to have communications with spirits, antedating the Spiritualists by some years.

Very soon it became noised about that "the book of Mormon" was in fact a somewhat garbled edition of an account written by one Solomon Spalding, and called "Manuscript Found," which had been left in a printing office in Pittsburg, and, becoming mislaid, was supposed to have been lost, but must have been discovered and carried away by Sidney Rigdon, who was engaged in a close study of the Bible for several years before the Mormon Bible came out. The brother of said Spalding declared it to be his belief that for the most part his brother's "Manuscript Found" was incorporated in "the book of Mormon," as they both endeavored to show that the American Indians are descendants of the Jews, giving a detailed account of their journey from Jerusalem, by land and sea, till they arrived in America, under the command of Nephi and Lehi. They afterwards had quarrels and contentions, and separated into two distinct nations, one of which was the Nephites, the other the Lamenites. Cruel and bloody wars ensued, in which great multitudes were slain. They buried their dead in large heaps, which caused the mounds so common in this country. Their arts, sciences and civilization was brought into view, in order to account for all the curious antiquities found in various parts of North and South America. Spalding began many sentences with the words "And it came to pass," which peculiarity is noticeable in "the book of Mormon" to the point of ridiculousness.

I shall pass over the history of the Mormons after their leaving Ohio, except to say that at Carthage, near Nauvoo, Illinois, June 27, 1844, a mob broke into the jail and killed Joseph and Hyrum Smith, incarcerated therein, and Brigham Young, taking upon himself the role of leader, went to Utah with the most of the adherents to Mormonism, where polygamy was grafted upon the church, and at the present time Joseph F. Smith, a nephew of Joseph Smith, is the President of the church. A branch called "The Reorganized Church of Jesus Christ of Latter-Day Saints" has its headquarters at Lamoni, Iowa, where Joseph Smith, a son of Joseph Smith, has been President of the church since 1860. This branch vehemently repudiates the doctrine of polygamy and all of Brigham Young's "revelations," and declares that Joseph Smith never thought of teaching any such monstrous doctrine as polygamy, which is repudiated by all their rules and regulations, doctrines and covenants. They deny that their "book of Mormon" was garbled from Spalding's "Manuscript Found," and publish and sell what they claim to be the latter, to bear out their contention.

"The book of Mormon" is a closely printed book of 545 pages, 3x7 inches in size, and contains the First and Second Books of Nephi, Jacob, Enos, Jarom, Omni, Words of Mormon, Mosiah, Alma, Helaman, Ne-

phi, Disciple Nephi, Mormon, Ether and Moroni. The book begins with the account of Nephi, son of Lehi, who gives in detail their departure from Jerusalem in the first year of the reign of Zedekiah, King of Judah, and their reaching the shores of "the promised land," supposed to be some part of the coast of America, some having decided that the coast of Chile was meant. "The book of Nephi, son of Nephi, son of Helaman" "recites" in detail the appearance of Christ among them, after his crucifixion, in proof of which I refer to the index of "the book of Mormon," page 11: "Sign of the crucifixion, cities destroyed, tempests, etc. Law of Moses fulfilled. Lamentation of the people. Christ shows himself; prints of the nails. Nephi and others called; baptism, words used. Christ's teaching. Doctrine. Treasures in heaven. Charge to the twelve. Enter the straight gate. End of Moses' law. Other sheep spoken of. Blessings to the Gentiles. Christ's teaching continued. Christ blesses children. Sacrament introduced; the rock. Teaching continued. Christ's ascension. Nephi's baptism; others baptized. The names of the twelve, who teach the people. *Jesus again ministers to them. Holy Ghost given; Christ blesses,*" etc., etc.

Indeed, I do not wonder that with a sort of spiritualistic glamour and mystic shrouding of the production of "the book of Mormon," given by the spirit of Moroni, a sort of guardian angel, in its apparent great religious tone, that there has been such a crowding into the fold of Mormonism. Of all sorts of cranks in the world, the religious crank is certainly the one with whom to be the most wary. It is not to be much wondered at that there are at least 350,000 Mormons in the United States, when there are other bodies just about as queer in their doctrines and philosophies; all of which may well be expected when it is claimed that the Bible and the teachings of Jesus Christ are of the past, and that new revelations, however fantastic or monstrous they may be, are necessary for the salvation of mankind. One well might take "the book of Mormon" as a blasphemous production were it not that it was from the first seriously taken by all Mormons, perhaps by its so-called earthly author, Joseph Smith himself.

The fourteenth article of the Mormon creed says, "We believe in being honest, true, chaste, temperate, benevolent, virtuous and upright; and in doing good to all men," and that "an idle or lazy person cannot be a Christian, neither have salvation," which certainly is not *bad* teaching. They also baptize for the dead (1 Cor. 15: 29), and declare most emphatically that "men must be called to the work of God by inspiration," but—CAN THEIR inspiration be from the Holy Spirit? SOME ONE is at fault in THE SOURCE of his inspiration.

Bryan, Ohio.

INDIAN SCHOOL.

BY I. J. ROSENBERGER.

THIS school was established twenty-four years ago. The enrollment this year has been 337 large boys, 185 small boys and 411 girls. Of these, hundreds of boys and girls are placed at labor with private families, the boys on farms and in shops, and the girls in kitchens and other places. Last winter 134 boys were put into families to do chores and go to school, and 117 girls were placed in the same way. With the Indian there seems happily to be but little or no race prejudice. During the past year there were applications made for 976 boys and 1,359 girls as inmates for the institution; 1,387 of these were rejected for want of room. There are sixteen white teachers and two Indian teachers in the literary department, and eighty white and sixteen Indian teachers in the different industrial departments.

The annual appropriation made by congress for the support of this institution is from \$150,000 to \$200,000. The cost, per capita, for the support and education for the year, as given me, was \$121.26.

An Indian boy of twelve took me around to the various industrial departments. All of the inmates who are large enough must work half of the day. I suppose a hundred were in a ditch, with pick or shovel, preparing to lay gas pipes to their part of the city. The harness shop, shoe shop, tin shop, blacksmith shop, paint shop and carriage shop had each a dozen or less at work. Their laundry work is done by machinery. About fifty girls were in a room sewing, in care of four women. Their bread looked fine, and was baked by three Indian boys. The chief baker was a North Carolinian—a young man of good social qualities.

I approached three boys, about ten years old, who were strolling on a street, and shook hands with them. They gave me their hands rather reluctantly. They were quite shy. I asked them where they were from, and they replied, "New York." My guide said, "Oneida, New York." I asked them if they would not rather be here at this nice place than at their home. They shook their heads. To their answer I was not surprised. "No place like home" is true of the Indian, even if his home is a wigwam. The inmates are all a hearty-looking, broad-shouldered lot. I looked at about fifty half-grown boys playing football. They were at it in a lively manner. They have about seven hundred acres connected with the school, which they cultivate with the labor of the students.

They have chapel exercises at 8:30 each morning. Many of them attend Sunday-school and preaching services in the city at various churches. They also have services in their chapel for those who do not attend in town.

The school publishes a paper, *The Arrow*. They handed me a copy, which contained several articles showing the marked success of some of the former Carlisle students, proving that the Indians are capable of taking on civilization if they have the opportunity. Years ago I visited an Indian school at Chamberlain, N. Dak., but this was much larger. In my judgment Uncle Sam is doing a good and a necessary thing for the red man.

Covington, Ohio.

TATTOOING.

SOME of the readers of these pages, I dare say, saw King Tawhian, the Maori chief who visited England in the summer of 1884. If so, they could not have failed to notice the curious designs that were traced upon his face. These scroll-like marks were the result of an operation which lasted for six weeks, and which was attended with extreme pain. The process is called tattooing, and a person who has undergone it is said to be tattooed. It is practiced very extensively among the natives of New Zealand and the South Sea Islands generally, women as well as men, whose bodies are covered with patterns of an elaborate or fantastic or picturesque description, though sometimes the design is of a comparatively simple sort. Nearly every British sailor has tattoo-marks on his arm—an anchor, ship, initials, or what not—and unless I am much mistaken, some of the lads now perusing these sentences have now and then ornamented (or disfigured) their hands and arms with similar signs.

In New Zealand the tattoo-marks run in unbroken lines, while in the South Sea Islands they are in dotted lines. The pain of the process in both cases is most acute, especially in the former. In New Zealand the figures are formed by driving little chisels, which have been dipped in some coloring matter, through the skin. In the South Sea Islands a series of punctures are made with a fish-bone, which is, however, sometimes used as a needle. Every variety of design is employed—trees, flowers, animals, weapons, and so forth. It is considered a disgrace for a person being tattooed to give way to any sign of suffering, but as the pain is so exquisite, cries of torture occasionally rise to the lips. In order, therefore, to drown such cries and so preserve the patient's reputation for bravery, it is usual for a number of his female friends to sing songs throughout the operation. Some tattooers acquire great skill in their art, and will form a design which shall be beautiful, elaborate, or otherwise, according to the fee. But in any case it is well to deal liberally with the artist, lest he should allow the chisel to slip "accidentally on purpose," and produce a permanent disfigurement instead of a fine design. The coloring matter in which the tool is dipped is a thick mixture

prepared by rubbing down charcoal in oil and water. The pattern appears black on a brown skin, and dark blue on the skin of a white man, and is of course indelible.

Since the process is so painful, why do the Maoris and others submit themselves to it? They look upon the tattooing as a kind of personal adornment; and, you know, there is no accounting for tastes. The ways of savage and uncivilized races are past finding out. Some wear articles in their noses, ears, and lips; others flatten the heads of their babies. Chinese ladies' feet are compressed to such an extent that they wobble when they walk. The Zulus and other peoples arrange their hair in the most extraordinary styles. These peculiar fashions are no doubt indulged in under the impression that they add to the beauty of those who adopt them. And so we find it in the case of tattooing, though the custom is also supposed—in the case of men—to mark the transition from youth to manhood, being performed usually at that period. To a small extent it is also believed to be employed as a badge of mourning or sign of respect for a departed friend. The tattoo is regarded as an honor, and is reserved for free men only, slaves in New Zealand not being permitted to undergo the operation. Oddly enough those who are accustomed to see tattooed people think that natives without it look bare and "unfinished." Tattooing is said to be on the wane. If it is so, it is quite possible that Macaulay's famous New Zealander may present none of those marks which distinguished the features of King Tawhian.—*From Little Folks.*

MILLIONS TOO MUCH.

THE State Department is facing rather an embarrassing situation in regard to the indemnity paid by China to this country on account of claims arising from the Boxer uprising. It is an embarrassment of riches, however. It will be recalled that the United States joined with the other powers in sending troops to Peking at the time of these troubles, and that it also joined with them in the claims which were made upon the Chinese government for indemnity. It will also be recalled that it proceeded upon quite a different basis from some of the other nations in making up the amount of indemnity demanded from a nation powerless to protect itself, with a government scattered and distracted and the allied soldiers of a half-dozen nations in its capital. It was rather forced, however, to unity of action with the other powers, and was awarded \$24,000,000 as its share of the amount, which was to be paid in annual installments. The adjudicators have discovered that the claims of citizens of this country do not amount to \$2,000,000, which have been paid in full from sums already received.

This being the case, the State Department is not inclined to accept the other \$22,000,000, and intends to return it to China, holding that China should not be compelled to pay the expenses of the military expedition to their capital, even though the Chinese government might have been in a sense responsible for the Boxer uprising. If our government made unjust demands through mistake upon a nation prostrate and powerless, there should be no question about righting the wrong by restoring the surplus. This would be the true ethics in the case of an individual, why not of a nation? The embarrassing feature arises from the fact that a return of the money may serve as a reflection upon the other nations participating in the hold-up, some of whom took even larger amounts, and, who show no indication that they made any mistake in their figures, and all of whom made the expenses of their military expedition a large part of their claim. It would not be the first time the United States had performed such an act. In 1885 it returned \$300,000 to China, and only a few years ago returned to Canada almost \$15,000,000 remaining from an indemnity she had paid because of damages to American fishing interests. If injustice has been done China we can afford to ratify it, even if some of the other governments do not like our policy.—*World's Events.*

GOING TO A FIRE IN CHINA.

"I WAS in Peking," said an American tourist, "when a fire broke out a few doors below the house in which I was lodging, and at the first alarm I rushed out and into the burning structure to see what could be saved. I was at once arrested and later on discovered the Chinese way of fighting fire.

"A policeman first required an affidavit of the head of the household to the effect that he did not deliberately set the blaze and for this purpose took him before an official half a mile away. A second was stationed to see that no one removed any furniture until the papers had been made out.

"After a lapse of forty minutes the firemen arrived. They looked at the burning house and decided that it was on fire. After much argument it was further agreed that it would be a waste of water to try to put out the flames. Two members who erected a ladder and climbed part way up were duly reproved for too much zeal, and after the name, age and habits of the owner had been taken, the fire department retired in good order.

"As the flames were unhindered, the house burned to the ground, and when the owner returned he was beaten by his neighbors for endangering their property. I was held in durance vile for two hours and then fined forty cents."

HOW COINS ARE MADE.

Who ever thinks of coming to Philadelphia without visiting the mint? asks the *Philadelphia Record*. Except Philadelphians, perhaps, there is no person who could stay long in Philadelphia without an overwhelming desire to see gold and silver being converted from molten masses into money for Uncle Sam's capacious pocket. Every one has heard about the people who "coin money." It is worth while to see money coined by the barrelful and thousands of dollars heaped up in the twinkling of an eyelash. No descriptions, however vivid, can quite supply the emotion that is created by a sight of these mighty mills as they grind out the alluring bits of gold and silver for which nations sacrifice their people and for which hundreds of weak mortals sell their souls.

There is little formal red tape about visiting the mint. A score of uniformed employés are in the building ready to show one through. The number of visitors who avail themselves of the courtesy of the mint varies every day. Sometimes there are as many as one thousand a day; sometimes only two or three hundred. Visitors to the mint, like the people in the Mother Goose melodies, come in a variety of costumes—some in rags, some in tags and some in velvet gowns. Last week a poor Italian woman who lives downtown wanted to see the mint. She had few opportunities to come without her offspring, so she brought them all with her—a lively, chattering, excited bunch of six, who kept the guards busy and almost drove the too curious mother to the verge of distraction. In the same party as the troublesome brood were a couple of treasury officials who had come to take a cursory view of the new building, some very intense New England school-teachers, a group of schoolboys and a couple of handsomely gowned society women—a typical mint party and such as can be seen any day of the week.

Molten Metal Made Into Coins.

With the exception of a few sacred places reserved for the conclaves of the dignitaries who dominate the affairs of the mint and a few of the women's apartments, there are no places in the building to which a visitor may not go. The beginning and the end of the coin is here. While you wait you can see the molten masses of silver and gold being turned into the legal tender. Every detail of the process except the mining and smelting of the raw articles takes place before one's eyes in this mint of Philadelphia. You can touch money, smell it and feel it in every process of the evolution.

To the vast majority of visitors there is no room in the mint quite so fascinating as the pressroom. In this room the unmarked pieces of gold and silver are stamped by the thousands. Twenty-four presses do

all the coining for the mint. Pieces of small denominations, like quarters and dollars, are coined at the rate of one hundred pieces a minute, while those of the larger denomination are coined at the rate of eighty a minute. The largest output of money in one day in the Philadelphia mint was \$600,000. There can be no calculating of an average daily output, as no two days are exactly alike in the kind of coining that is done. Sometimes all presses do not work at once, sometimes all work on silver or all on gold, so that there is nothing that will serve as the basis for calculation.

Cash Quickly Counted.

The counting board has attracted considerable attention from all the visitors to the mint. It is rather a unique device for counting money that has come into vogue within recent years. All the coins are placed upon the board, and when every niche is filled it is emptied. Some of the counting boards measure out as many as \$500 worth of quarters at a time. It takes only a couple of seconds to fill the board and then it is turned into a box, and \$500 more is added to the money stored up in the inaccessible regions of the mint's safe deposit vault. Nothing could be simpler, nothing could be quicker, than this modern device for counting money, yet for a great number of years the employés labored over the counting, which was done in a way that was both cumbersome and expensive.

Besides the mint here there are three other mints in this country, one in San Francisco, one in New Orleans and one in Denver, but Philadelphia leads them all. Of all four there is none that can compare with the mint here for the amount of work done. Last year, when the government demanded an unusually large output of money, all of the mints in the country were made to work at the highest pressure. It will gratify the citizens of this city to know that in this contest the Philadelphia mint was capable of doing better work in a shorter space of time than any one of the other mints.

Thirty million dollars in double eagles were coined by this mint during the month of May last. This is the largest amount of money that has ever been coined by the local mint, also the largest amount of money that has ever been coined at any single mint in the whole world. During the past fiscal year there was coined at the Philadelphia mint \$117,000,000—a sum that has never been exceeded by any mint.

Make Foreign Money.

A large source of the revenue for the maintenance of the mint here comes from foreign countries. In other words, Uncle Sam lets out his coining machines to people in other countries who are not so fortunate as to have these little conveniences. Nearly all the South American republics have had their money coined at

the local mint. When a small country like Costa Rica wants some money coined it advertises for bids. In most cases the United States has been fortunate enough to underbid the mints of Germany, France and England, and Uncle Sam, to drop into the vernacular of the politician, can nearly always "get the job."

Colombia used to have all her money coined here, but since our recent little unpleasantness with that fractious republic we have not been honored with her custom. Panama, on the contrary, gives us all its money in coin. Until the last year all the coining for Panama was done in France. The money for the Philippines is all made here now, with the exception of a little that is being turned out in San Francisco. The coins for the Philippines are made with a view to educating the Filipinos. Half of the money is in English and half in Spanish. What with making coins for the South American republics and other countries and our foreign possessions it would seem that work in the mint ought to be in itself a liberal education.

* * *

HE INTRODUCED BRAILLE.

THE *London Daily News* gives an interesting account of a system of shorthand for the blind, which has just been introduced into England by Mr. Knowles, who for so long labored in South India in connection with the London Missionary Society. It is said the new system will enable the blind to read quicker even than those with sight can read, and by using which as a shorthand they may take a verbatim note of a speech side by side with a practiced stenographer. Mr. Knowles first felt the needs of the blind laid upon his heart while in this land, and he then with the assistance of one of the education officials drew up a scheme on the Braille system applicable to all Oriental languages. This system has enabled the sightless to teach languages in the public schools of India with marked success, and at the time Mr. Knowles was accorded the thanks of Queen Victoria. His success in Oriental languages induced Mr. Knowles to consider what improvements could be made in the system in vogue in England and has resulted in his introducing what he calls the "London Point" system, to distinguish it from the "New York Point," a system common in America. Though the scheme does not proceed upon the purely phonetic principle, it does for the blind what Pitman's does for the sightless. It is said to be based on scientific lines and calls for less exercise of memory than the Braille or any other system. Mr. Knowles on being interviewed explained the London Point in detail. At present the Braille system is most commonly used. This consists of the use of dots for each letter of the alphabet. By a different arrangement of the dots and the use of strokes,

as in phonography, Mr. Knowles makes the writing stand for a combination of letters rather than for individual letters, and explained that in drawing up the system his knowledge of the Sanskrit, which he considers to be the most scientific alphabet in the world, was a great help. I begin with twenty-six simple tangible signs for the letters of the alphabet. Then by combining the points or changing their position I get signs for the diphthongs, compound letters, and for special series of letters." In the first stage the system follows the ordinary English spelling, but in advanced stages provides for any amount of condensation, and even the use of phraseograms. It is said that all is arranged in such an easy way that a child can understand and apply the method. It is claimed for the method that expert teachers of the blind have approved it, and that pupils can write English by the system in a shorter time, in less space, with fewer dots, and less tax upon the memory than by any other system, and that it will have the great and always longed-for advantage of cheapening books for the blind.

* * *

ABOUT THE INDIANS.

THERE are some good and some bad things connected with the work among the Indians. The enrollment in all the schools has been brought up to 29,478, an increase of 1,067 over the previous year. The average attendance is 25,104, an increase of 722. It is said that the great need for education in the Indian Territory is among the fifty thousand unschooled white children and thousands of freedmen. Sales of liquor to Indians go on with little check. Commissioner Jones of the Indian Bureau says that the blanket, the feathers and the long hair are fast disappearing, but that great evils still exist, the worst of these being the annual payment of large sums of money to the Indians by the government, inducing idleness, extravagance and other vices. The number of Indians has been decreased until there are now only about two hundred and sixty thousand in the United States.

* * *

RAILROAD MILEAGE.

GREAT BRITAIN has 22,380 miles of railroad track. About 100 new miles a year are built. The United States has 199,684 miles of track and 75,000 miles of siding. Roughly, we have more than eight miles to Britain's one mile. The per capita mileage in America is about 26 miles for every 10,000 of the people. In Great Britain it is about five miles for every such multiple of the population.

THE good are better made by ill, as odors crushed are sweeter still.—*Rogers.*

THE GOOD INSECTS DO.

BY HARRY FOGLE.

INSECTS do harm, but yet they do good, as God never created any creature or animal that was not intended for some good purpose.

Persons say insects do not do any good. What would the birds, toads and other animals live off of if it were not for the insects? The farmer would be alone if it were not for the birds, toads, etc., which feed off of these insects and worms that do harm.

Insects feed plants and carry nourishment to them which are a great benefit to man. They also produce things that are a great benefit to our country.

Insects rid the country of a great many other insects which injure orchards and crops; plant insects are always busy, they are not lazy. Insects also are food for fish and animals that, in their turn, become food for man.

The caterpillar is devoured by the carabus or Ichneumon fly, and these are eaten by insectivorous birds which either serve as food or enliven our gardens and groves with their melodious songs. Without the insects these birds could not exist, though they are not absolutely necessary.

Fishes also live almost altogether on animal food; the gnat and mosquito are taken from the surface of the water by the minnow, and this in turn is swallowed by some trout or pickerel, which next makes its appearance as a great delicacy upon our table.

Several animals eat insects and as will subsequently be shown, man himself has been glad to accept them as an article of diet both in the Old World and the New.

Insects are also of great use in the fructification of plants and trees by conveying the pollen from one flower to another, especially is this true in plants that are too far apart for the pollen to be wafted by the wind.

Insects are very useful in removing decayed vegetable and animal substance, which would otherwise taint the air and cause sickness and disease. Water larvæ purify the elements they live in by devouring the smaller animalculæ and the vegetable matter always abounding in stagnant water, which would otherwise create a noxious atmosphere.

Some insects are of great utility in the arts, for medicinal purposes, for dyes and coloring matter, and in producing silk; the honeybee yields wax and honey, and many other varieties are known in this country besides the common bee.

A species of ant in South America also produces a kind of honey or sweet substance so-called. The abdomen of the insect is distended like a small pea, and in it the honey is secreted; the ant, however, must be

crushed so as to rupture the body before the honey can be secured.

The cochineal insect is known as the coloring or dye matter. It is a native of South America. Those killed by dry heat and having the most white powder on them are said to be of best quality; these insects are money. It has been calculated that it takes seventy thousand of these small insects to make a pound. This useful insect was introduced into Florida a few years ago, but in 1865 no traces of the insect could be discovered.

In 1850, Teurnis states, 800,000 pounds of rough cochineal were imported from southern Spain to England, and in 1856 the product of the Canaries was estimated at 1,500,000 pounds. 807,646 pounds were imported into the United States in 1856, which was valued at \$343,668.

The red bug, or cotton stainer, so-called from its beauty, is also a producer of brilliant dyeing matter. We would be in a great mode without ink; it is gotten or produced by galls, which are a great benefit to us.

The silk worm is much the same as our common moth which produces silk. The silk worm or moth is of the most value to man. In 1856-58 there were 7,000,000 pounds of silk produced in England annually; in 1840, 2,200,000 pounds were consumed in Lyons, a silk manufacturing town in France.

In 1865 \$16,597,980 worth of silk was imported into this country, since which time this amount has probably been doubled. Mr. Prevost, of California, however, states in his "Silk Grower Manual" that the business is making rapid progress there, the climate being favorable to the growth of the silk worm; he has a growing plantation of 2,500 mulberry trees.

Union Bridge, Md.

A LITTLE STORY.

"DON'T tell mother. She'll go off into a catnip fit if you do. There is not a particle of danger; but she frets over nothing."

The speaker was a boy of about fourteen years of age; the audience several companions, and a lady who happened to be passing.

"Frets over nothing!" she repeated as she went her way, "how many mothers there are of whom that has been said by their children, and with truth."

The mothers who fret, unnecessarily, are not the ones who have the greatest influence over their children. By allowing themselves to fret over matters of very little consequence, they are apt to lose their power of influence in matters where it is really needed.

There is a wise little mother in this city who is continually at war with herself on account of her extreme nervousness. One day a lady visitor found her so

restless as to be quite unable to attend to her regular duties about the house.

"What is the matter?" she asked, "Is any one sick?"

"No," replied the mother, half laughing, half crying, "and I presume I am very foolish. The truth is, my boys have just erected a trapeze in the barn, and I am nearly wild with fear that one of them may be killed!"

"Why don't you compel them to take it down?" asked the visitor. "I should like to see myself worrying about a trouble that could be so easily removed. You are surprisingly weak and foolish about those boys of yours."

Her voice was so full of scorn that it aroused the mother's indignation, and taking her guest to the window she pointed to a group of boys whom she had just caught sight of.

"Isn't that boy in the brown cap yours?" she asked.

"Yes."

"Who are the other boys?"

"I don't know; why should I?"

"I do. They are ——" she mentioned the name of two boys who had a reputation of being young toughs. "It would hurt me," she continued, "to have my boys seen in their company. I prefer to run the risk of their falling from the trapeze; the danger is no greater."

The guest turned from the window with a very red face.

"You have taught me a lesson," she said, "yet, I do not see why in our endeavor to keep our boys at home, we should allow them to have amusements which are a source of worry to ourselves."

"Very nervous women cannot stand any sort of childish play," returned the mother, with a significant smile, "I know that I am naturally nervous and disposed to find danger in everything. I also know that it is perfectly natural for a healthy boy to enjoy play in which there is an element of danger, and that he will be very likely to engage in it sometime with or without consent. If my boys must perform on a trapeze, I would rather it should be at home where I can give them immediate attention in case of an accident, and as I have concluded to accept it as one of the lesser evils, I do not intend to spoil their enjoyment by letting them see how nervous it makes me."

"Your boys are wonderful stay-at-homes," said the visitor, thoughtfully.

"And I know that I have their confidence," replied the mother. "They call me a 'right good fellow' and say that I am as good as a boy any day! They would be surprised could they know how much trepi-

dation I have endured in my efforts to enjoy with them what they call 'jolly good fun.'"

This story needs no comment. There are surely some mothers who need and will make use of the lesson it teaches.—*Housekeeper*.

FISHING IN CHINA.

A DROLL and amusing account of the way cormorants are used to catch fish in China, is given by Mr. George Dean, an engineer, who passed several years in that curious country.

Mr. Dean was walking along the shore of the Min river, when he saw a Chinese fisherman on a bamboo raft, and, as the fisherman was about to begin his work, Mr. Dean halted, to become an interested spectator. The cormorants looked like ducks. They sat in a row at one side of the raft, while their master squatted at the other side by the water's edge.

As soon as the man held out his hand, a cormorant hobbled over, and hopped into the outstretched palm. The man kissed the bird, stroked his feathers, and talked to it as a mother talks to her babe. When the bird was placed on the edge of the raft, it dipped its bill in the water, snapped it loudly, turned its glittering black eyes on its master, and then slid beneath the surface without a sound, leaving scarcely a ripple behind it.

A quarter of a minute later the bird came up. In its bill was a fish. The bird swam straight to the raft, climbed upon it, and, jumping on its master's knee, held its head up for him to take the fish. The Chinaman pulled the fish from the bird's bill with one hand, while he stroked it gently with the other. The second dive was successful, also.

From the third dive, however, the cormorant came up without a fish, and it was much distressed. It swam frantically about, with its sharp eyes fixed pleadingly upon its master.

By-and-by the Chinaman raised his hand and pointed with his forefinger downward. Like a flash, the bird went under, and when it returned to the surface, it bore in its bill a large fish. Meanwhile, the other cormorants sat motionless on the raft.

Having petted the first bird, and placed it in the center of the raft, the Chinaman called out the second.

That bird acted badly. It came up three times without a fish—and it got a sound thrashing. Then two other birds were sent out together, and, to the joy of their master, they both brought fish to his basket.

WHERE flour and sugar are used together for dressings or sauce, mix before adding water to prevent the flour getting lumpy.

FOOTPRINTS OF FAILURE.

BY IVA C. METZGER.

WHAT if you and I should make a failure of life?

One of the facts about a failure is that it cannot be a blank, somebody or something suffers loss by it, because our failures strike backward and forward. Backward to those who hoped for our success and whose pain we cannot measure; forward to one's posterity who will never cease to be affected by it.

There are many ways in which failures may be avoided. If some one has gone over the road and placed danger signals to warn others, they should surely not neglect such signs.

While they have these examples there are only a few that succeed in life. For instance, take the United States, not one man in four at his death leaves enough property to require a will.

Is there a cause for these failures, or is a man to toil in vain? Some men talk of nature as being run only with what they call, "The survival of the fittest," and that the reward is to be given only to the few of mighty will who rightly swallow up the substance (if they do not the person) of the many.

Man was made for success, not failure, but, because many fail, we say success is the exception and failure the rule of life.

The reason so many men enter business and fail is because they ignore the laws of righteousness. This world was constructed according to righteousness and to forsake God is a sure way to lose its gold. All the world's great mines and vast resources of mineral wealth are in the hands of Christian nations.

At Port Richmond, Staten Island, an old man lay dying. He was poor, hopeless and friendless, so poor that for his last years he was dependent on the charity of a woman who had known him in other days.

This man's father was a man of wealth, and gave his son good opportunities for obtaining success. He was so brilliant of intellect that he entered college at eleven years of age. His father had been president of the institution, his mother was a daughter of the most renowned clergyman in New England.

This dying man himself had been vice president of United States and might have been president, honored in life and death had he not despised the laws of righteousness.

Perhaps you wish to know how he came to make so fearful a mistake. When a student in college his soul was stirred by a religious revival. He asked several noted men who cared nothing for religion, he believed them and forsook the faith of his parents. This caused his political party to forsake him.

Thus Paul wrote nature's law when he said, "Godliness has promise of the life that now is and of that

which is to come," and Solomon was right when he declared that "righteousness tendeth to life."

Rossville, Ind.

CLOCK RUNS FOR 2,000 YEARS.

RICHARD STRUTT, a son of Lord Rayleigh, has invented a clock that will run for two thousand years. The motive power is a small piece of gold leaf, which is electrified by means of a very small quantity of radium salt. The gold leaf bends away from the metal substance and keeps moving under this influence until it touches the side of the containing vessel. At the moment of contact it loses its electrical charge and then springs back and is again electrified, and the process is repeated. It is thought that a thoroughly reliable clock could be made with the use of radium salt for \$1,000.

BEST ASBESTOS MINES.

COMMERCIAL asbestos is a fire-resisting substance, composed of silky fibers up to six inches in length, which can be used for packing or woven into fabrics. Its value corresponds approximately with the length of the fiber. It is prepared from a mineral of variable color, which is usually found deposited in thin sheets in the seams of granite rock. The fiber is normal to the sheets, and its length is thus limited by the thickness of the seam. The most important deposits so far discovered in America are one of flesh-colored mineral in Arizona and a green deposit at Black Lake, in the Province of Quebec, Canada. In order to secure the asbestos mineral it is necessary to quarry the granite in which it occurs, and afterward separate the materials by crushing.

THE "PLIMSOLL MARK."

MANY a person has looked at a British ship lying in low water and wondered what was meant by a circular mark with a straight line running through it which is to be seen on the side of the vessel. This is known as the "Plimsoll mark." Samuel Plimsoll, the friend of seafaring men, devoted the best years of his life to furthering the interests of sailors. He noticed that overloaded and unseaworthy vessels were often sent on voyages, with great danger to human life. He tried to induce the British parliament to alter matters; but, failing to do so, he himself entered the house of commons in 1868 and succeeded in getting the merchant shipping act passed. By this act the board of trade was empowered to detain any vessel deemed unsafe. Finally owners were ordered to have a load watermark painted upon their vessels' sides.

A NEW MOON OF JUPITER.

PROF. PERRINE'S discovery of a sixth satellite or moon of Jupiter, announced from Lick Observatory on January 7, is another of the many advances in astronomical science accomplished by the aid of photography. The discovery was made by using the Crossley reflector, a telescope which has a three-foot reflecting mirror instead of the more usual lenses. This telescope has been at Lick Observatory for a number of years, and in 1899 was remounted, and soon after used with marked success in the photography of stellar nebulae. The new satellite of Jupiter was discovered in the course of a photographic investigation where an unknown body which changed its position was seen on the photographic plate. Subsequent investigation showed that this was a new satellite of Jupiter and was much farther away from the planet than the five others. It is interesting to record that the fifth satellite of Jupiter was also discovered at Lick Observatory, it being found by Prof. Barnard in 1892. The others date back to 1610 and first were seen by Galileo.

WORK IN GERMAN FACTORIES.

WORK commences in Germany at 6, 6:30 or 7 o'clock in the morning, and usually stops at the corresponding hour in the evening. The workman has a quarter of an hour for breakfast, from an hour to an hour and a half at noon for dinner, and a quarter of an hour in the afternoon for tea. Sometimes and in some factories the breakfast period is not authorized, sometimes afternoon tea is omitted. The average length of the day's work is ten hours. In the textile industry, it may be a quarter of an hour longer. The care of women and children has concerned the state far more than the hours of the male workers. Night work for women is prohibited, nor can they remain in the shops after 5:30 o'clock on Saturday afternoon, or on the eve of a holiday. The law fixes the maximum of the woman's working day at eleven hours, except on Saturday and the day preceding holidays, when it is ten hours. A midday rest of one hour is compulsory, and women with household cares may claim an extra half hour.

THE WAY TREES GROW OLD.

UNLESS the date of planting is known, a tree can keep the secret of its age as long as it lives. Only when it is cut down and the rings that then show on this cut surface are counted, can its exact age be told. Especially when a tree is sawed down, leaving the stump with a smooth, flat surface, is it easy to count its years. Such trees as the oak, chestnut, or pine add a thin layer just under the rough outer bark

each year. These layers harden into tough woody fiber, and one after another makes the tree larger and larger around. When the tree is cut down, these layers show, just as the layers in an onion cut in half. As each ring counts for a year, the age of trees that have grown straight and tall is very easy to determine, while in gnarled, wind-twisted trees the rings run into one another, and can scarcely be distinguished, and thus some of the famous old sentinels on the mountain tops hide the secret of their age forever. As the trunks of trees grow larger layer by layer, the rough outside bark which lasts from year to year cracks wider and wider in its efforts to fit the big round body it was not made for, and great fissures and furrows appear, such as are seen in the oak. Some trees, like the birch, change their bark year after year. The birch bark that peels off is almost as thin as paper, and split in a thousand places with the swelling of the live new wood just beneath it.—*Selected.*

WALKING FOR MALARIA.

OBSTINATE cases of malaria that have withstood the ocean voyages, mountain heights and quinine dosing are said to have been conquered by systematic and continued walking. What the malarial patient wants most to do is to sit indoors, nurse his aches and pains or to lie down and doze. Advocates of the walking cure maintain that fresh air is an antidote not only to the malaria itself, but to the blues, which usually accompanies it. Their advice to the sufferer is to dress up warmly if the weather is damp or rainy and go out to walk. Wear flannel next to the skin, stout shoes and simple hats. If it is warm, dress lightly, but carry a wrap to throw around the shoulders against drafts and too rapid cooling off. When one comes to think of it, there are few maladies on earth that fresh air and moderate exercise are not good for.

* * *

CUSTOMS AT SWISS FUNERALS.

SWISS funeral customs are most peculiar. At the death of a person the family inserts a black-edged announcement in the papers asking for sympathy, and stating that the "mourning urn" will be exhibited within certain hours on a special day. In front of the house where the person died there is placed a little black table, covered with black cloth, on which stands a black jar. Into this the friends and acquaintances of the family drop small black-margined visiting cards, sometimes with a few words of sympathy on them. The urn is put on the table on the day of the funeral. Only men go over to the churchyard, and they generally follow the hearse on foot.

Look before you ere you leap.—*Butler.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglebook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

SPRINGTIME.

By the time this number of the INGLENOOK reaches the subscribers it will find many of them enjoying the springtime. Already in many parts of our great country farmers are turning over the sod, the ladies are arranging their flower beds, carpenters have begun to plan for their summer's work, the green grass is showing itself along the hillside, many of the songsters of our forests are returning from the southland, the little lambkins are frolicking over the meadows, and the voice of the woodman's ax is ringing through the woodlands, saying that preparations are being made for the summer.

In a few days the barnyard, which has become a carpet of green, will be fairly alive with little chicks that look like little mushrooms in the green grass. The mother duck will take the little quacks down by the side of the brook and teach them the aquatic arts. Mother will hunt the old limber case knife in the drawer and the old dishpan that has only one ear and a dint in the bottom and send the children out along the old rail fence by the pasture field after a mess of dandelion greens. You will see father take the long-handled shovel and meander toward the corner of the orchard, garden or briar patch and dig some horseradish roots. The boys will climb the trees in the orchard and cut out the water sprouts and unnecessary branches, then in the evening time, after the brush has been carried together and the trash from the garden and truck-patch has been added to it, the family enjoy the usual springtime bonfire.

Some day at noon, while the horses are resting, father and the boys will have to make a leach for grandma; they gather some boards and after setting them on end in a sugar trough, in the shape of an inverted cone, and taking the ashes out of the ash house, one of the boys adds a bucket of water occasionally, while father vigorously applies the old knot maul so that the ashes may be well pressed. After the menfolks

have gone back to the woods and the field, grandmother carefully watches that the leach gets a drink very often, and ere long the four-gallon jar that has been placed beneath the sugar trough begins to receive, drop by drop, the necessary lye from which grandmother expects to make soap. When the jar is nearly full you may see grandmother totter over to the smokehouse, get the old long-handled spoon from which the tin has been eaten away, and securing the proverbial hen's egg, carefully lower it into the brown liquor, fairly holding her breath for fear it will not swim; but, lo, it swims; almost half of the egg is exposed, yet grandma assures us that she has another plan that is *sure*. She makes one more trip. This time she goes to the poultry house, gets a long turkey feather, and with a reassuring smile, removes her glasses from the top of her head and adjusts them to her eyes, dips the feather into the crock of lye with a sort of swinging motion, and bringing it up to the proper distance for correct vision, pronounces the lye to be all right. These precautions having been taken, soap-making really begins. The next morning she finds the large kettle full of good soap that will "sud" all right and her joy seems to be full.

THE WORLD'S PEOPLE.

WHAT would you give for a photograph containing a picture of all the people in the world, showing each one at his respective work? Have you ever stopped to think that while you are busily engaged in plowing your field that some miner may be beneath you hunting fuel with which you may warm yourself next winter? Up in the mountains some one is digging gold and silver with which you will pay your future bills. Among the distant forests are to be found lumbermen who are robbing earth of her dress and converting it into material with which your children will shelter themselves from the blasts of winter. Along the shores of the great country may be seen fishing smacks of men who are looking after the wants of the commercial world. Others are loading the great leviathans of the sea with thousands of tons of freight to be exported or imported.

Under the glass of some greenhouse some artist is patiently working to be able to decorate the hymeneal altar, the stand in the sick room, the minister's pulpit and the casket of the one who has gone to his long home. In the far-away barracks, daily the blue coats drill to keep themselves in readiness to the sound of the gun of a foreign foe. The rivers are not only carrying their continual message of superabundance to the sea that awaits it, but they are also the playground for thousands of little vessels which are useful mediums of commerce. Everywhere in the thousands of towns and cities, merchants, whether they be whole-

sale, jobbing or retail merchants, are arranging their goods in the most tasty manner awaiting the purchase of the consumer. In the rear of some building, by a blazing fire, covered with flour, with his sleeves rolled up, is to be found the baker who makes the bread for the city. Upstairs on a flat-topped table, cross-legged, sits the man who makes the clothing for the public.

In some little triangular corner between buildings is a few square feet of surface where sits a man on a low bench, with a strap over one knee, holding down a wooden last upon which your old shoes are half-soled. Thundering along the streets are the wagons of the draymen who assist in serving the public with all the commodities of life. After you have unhitched your team and carefully put them away for the night, and you are lying quietly upon your couch waiting for sleep to take possession of you, you hear a buggy passing the house at full speed; a moment's listening assures you of the familiar step of the family physician's horse on his way to relieve suffering humanity.

In the hospital the nurse sits by the bedside satisfying, if possible, the many wants of the invalid. The Salvation Army girl in the street is searching for the benighted souls of mankind. The lady of the Red Cross society is kneeling beside some dying soldier, taking note of the last few words to be sent to mother. Mother is at home getting the little ones ready for school, getting the meals ready for the laborers, visiting the sick neighbors, looking after the wants of grandpa and grandma, and making home what it is possible to make it.

You wonder who all the people are, what they are all doing, and where they are all going. Sometime when you are going somewhere and have nothing to do but go, or you are quietly resting in the hammock, let your mind wander to the ends of the earth and think what all the different people might be doing at that time. When you have studied the situation, let a stray thought enter your mind as to what you might be able to do to make some one better.

OUR READERS.

It is sometimes imagined by editors and other people that the periodicals are not very carefully read by the public, but a little incident happened a week or two ago which proves this is not always true in case of the INGLENOOK. Some one sent a query to the Q. & A. Department, wanting to know where the poem, "How big was Alexander, Pa?" could be had, and the editor, not being able to have it at his command, appealed to the INGLENOOK family for help. Inside of ten days twenty-five different copies of the poem came rolling into our office from different States in the Union, and in all probability more will follow. This shows several things to be true.

First, that the people are reading the INGLENOOK.

Second, that the Q. & A. Department is very helpful to our young people.

Third, that the INGLENOOK family is composed of such people as want to help each other.

Fourth, that the INGLENOOK family have libraries containing good literature.

Fifth, that the constituency are anxious to assist the editor when it is possible.

We have reason to believe that the other departments of our magazine are being read with the same interest as the Q. & A. Department. Several boys and girls are taking special interest in the visit the Mayville geography class is making to the European countries. They claim that it assists them in their school work very much, and makes the geography lessons seem with real life to them. Our sisters and mothers are taking quite an interest in the Home Department; as you will notice we have arranged for some special work in the near future in this department, and we hope that the readers will be as responsive as they were to the other department.

We have succeeded in securing the assistance of some able contributors for this year, and not a week passes any more but that letters come, saying that the INGLENOOK is getting better all the time. There are other reasons why we know that the magazine is growing in favor. On March 11 we wrote letters to all persons who had failed to renew their subscription, through neglect, and on the 21st of March, just ten days later, we had received three hundred thirty-three renewals and eighty-six new subscribers, besides one hundred twenty letters saying, "Please do not stop my paper, I will remit in a few days."

For the encouragement of all parties concerned, we will say here that after all the names have been taken out of the INGLENOOK list, who do not care to renew their subscription, we have many more names in the family than we had one year ago, and the names are coming in rapidly this time of year.

ONLY FIFTY CENTS.

LAST year we gained over two thousand subscribers by our twenty-five cent offer in the fall. It worked so well and so nicely and we secured from the list so many permanent subscribers that we are induced to make a similar offer earlier in the season this year. We are going to begin now. Any one who will send us fifty cents will receive the INGLENOOK from now to January 1, 1906. This is quite a reduction from the usual price, but we would rather give our patrons the money than to spend the money in advertising in some other way.

Current Happenings

FOR the purpose of developing its plants in the East, the Republic Iron and Steel Company, of Hammond, Ind., filed a mortgage at Crown Point for the sum of \$10,000,000. The First Trust and Savings Bank, of Chicago, is the holder of the mortgage.

A DINING car of the Missouri Pacific was overturned in a collision recently and ten persons injured.

DR. HARPER, of Chicago University, is convalescent. Rest and Roentgen rays are said to be the cause of his recovery.

MORE than fifty miners employed in the Leiter mines were entombed by a terrific explosion of gas or fire damp at Ziegler, Ill. Really one man out of more than a half hundred escaped. The explosion was followed by a burst of flame that set fire to all parts of the mine and the men who were not killed outright are believed to have been roasted alive in the death trap a hundred feet below the surface of the ground.

IN the schools of Prussia a change of stockings and shoes is provided for school children who arrive with wet feet.

THE Woman's Suffrage bill in California Senate was sustained twenty-four to eleven. In the assembly the votes stood thirty-eight ayes and thirty-nine noes.

AT Mankato, Minn., a large glass plant, occupying a block, was entirely destroyed by fire. Loss, \$150,000.

AN explosion in the mill of the Powder Company at Schaghticoke, N. Y., killed four men.

FOUR persons were drowned by the capsizing of a row boat during a squall at Rockledge, Fla.

SEVERAL hundred of the most prominent passenger officials in the United States, Canada and Mexico, will celebrate the founding of the American Association at Pittsburg, Pa., where the association was founded fifty years ago.

A NEW million-dollar bridge will be built across the Hudson river at Poughkeepsie.

BY an explosion in a colliery at Drenkova, Hungary, ten miners were killed and many others injured.

SECRETARY OF THE NAVY, MORTON, and his party, including Speaker Cannon, Senator Hale and Representative Meyer, of Louisiana, sailed for Guatanamo, Cuba, where they will inspect the naval station there and observe the maneuvers of the North Atlantic fleet.

A MEXICAN coasting vessel, recently arrived at Nuege, Lower California, carrying several empty cases that had been filled with Mauser rifles. The captain declared that he had passed more than one hundred cases floating on the water.

THE Chicago City railway, a corporation controlling ninety miles of street railway lines in the south and southwest portion of Chicago, is now without a franchise of any description whatever.

THE national commission of the Louisiana Purchase Commission met at Washington and former Senator Thurston, of Nebraska, was elected president, vice Senator Carter, of Montana, resigned.

THE Public Service Company, of New Jersey, has just completed a tourist trolley car for the use of wealthy people desiring vacation trips during the summer. It is finished with rosewood and plush, with tilting chairs, velvet carpets and plate glass observation windows.

AN investigation is to be made soon as to whether Prof. Hilprecht, of the University of Pennsylvania, really dug the clay tablets from the ruins of Nippur, or whether he purchased them from a collector, as is charged by Dr. Peters, of New York.

IN response to a message from Minister Powell, at Port-au-Prince, Hayti, that a revolutionary outbreak was imminent, the American cruiser *Brooklyn* was ordered to proceed there from Cuba.

THE American Baptist Missionary Union have decided to raise an endowment fund of half a million for its work in foreign lands. They have only begun and already have sixty thousand dollars pledged.

DURING a heavy spring storm an electric power wire was broken and fell across a door knob of the home of John McGovern, engineer at the insane asylum at St. Louis, and McGovern was instantly killed by the electricity as he opened the door.

THE old confederate war cemetery on Johnson's Island, near Sandusky, Ohio, has been sold to a lodge in Cincinnati for \$1,200, who intend to improve it and beautify it.

A PROJECT of connecting the railroad systems of Russia and America by means of a railroad and a tunnel under the Behring Strait is under contemplation.

IN addition to the government fish hatchery at San Marcos, Texas, steps have been taken recently toward establishing a large bullfrog hatchery.

THE most extraordinary freak of extravagance is a miniature Eiffel tower of diamonds, sold in Paris recently for nearly \$45,000.

INDIA has, perhaps, a greater variety of plants than any other country in the world, having fifteen thousand native species; while the flora of the entire continent of Europe only has about ten thousand.

THE largest loom in the world is one recently built in Germany for weaving artists' painting cloths. It is capable of weaving feltings forty-eight feet wide.

A BAND of Bulgarians commanded by the notorious chief Yovan was exterminated in the mountains of Livadia. One officer and three soldiers were killed, and one officer wounded.

POPE PIUS X expects to reopen the summer house of the Vatican this season, a thing which has not been done for a number of years. The summer house of the Pope is about fourteen miles south of Rome at Gandolfo. It was predicted when Cardinal Sarto was promoted to the papacy that the indoor life would be hard on him, but evidently he purposes to look after his health.

THE great revival meetings in London, by the American evangelists, Torrey and Alexander, closed last week. It is estimated that five thousand five hundred persons of all classes have announced their conversion publicly, while many others have done so privately. The revivalists intend to begin meeting in another part of the city and continue until June.

OVER three thousand men are idle, owing to the shutting down of the Havemeyer sugar refinery in Brooklyn, N. Y. No definite reason is known for the shutting down of the plant, but it is said that the decreased consumption of sugar, on account of the high prices, is the cause.

LARGE quantities of debased copper currency have been coined at Peking by the Chinese, thus threatening a financial collapse.

Gov. MICKEY, of Nebraska, signed the bill prohibiting the manufacture and sale of cigarettes and cigarette paper.

GREAT forest fires are raging in Hawaii, and valuable forests are being destroyed, as well as great numbers of cattle.

THERE is an old bell in China which has been kept ringing for one hundred years. A tax is levied on the unfortunate people to provide for the continuous relays of ringers, night and day.

Two women, disciples of Carrie Nation, smashed five saloons in a short time, a few days ago, at Olmutz, Kans. One of the women was the wife of an ex-saloonkeeper.

THIRTY-ONE obsolete British war vessels were sold at auction at Chatham docks, London, for \$680,000. The original outlay was fifteen million dollars.

NEBRASKA, imitating her sister State, has shouldered arms and started after a few trusts. The binder twine trust is the first victim. The trust will monopolize the trade no longer. The State will build a mill near the penitentiary and convicts will do the work. Let more States follow the example. It will be good for the convicts, the trusts, the government and the people.

THE city of Pisagua, Chile, S. A., with a population of twenty thousand, has been abandoned by the inhabitants, owing to fear of bubonic plague, from which several hundreds of people there have died.

IT is said that the Spanish government is giving Gen. Weyler a pension of \$2,000.

DAVID STROTHER, a very much respected citizen of El Paso, Ill., died recently. He was the first negro who ever voted in the United States. He cast his ballot about forty-one years ago.

A DEPARTMENT store, to be known as St. Luke's Emporium, is to be opened at Richmond, Va., by twenty-two negro women, headed by Maggie L. Walker, the negress prominent as president of St. Luke's Bank. A few men are on the Board of Directors. They start with a capital of \$25,000 and the shares are \$10 each, all of which are being purchased by negroes.

HOME DEPARTMENT

SPRING.

“When the sunshine’s streaming mellow,
 And you hear the old woodpecker
 Making music with his bill;
 When the honey bees come droning
 Past a fellow on the wing,
 Hunting flowers and so happy
 That they haven’t the heart to sting;
 When the dandelions are blooming
 Just like lumps of yellow gold,
 And the red squirrel in the white oak
 Stops to argue and to scold;
 When the nights are getting shorter,
 And the days are growing long;
 When the birds in trees and hedges
 Are breaking into song;
 When the grass is growing greener,
 And the buds are bursting through;
 When your heart’s so full of gladness
 That you cannot help but sing,—
 Then you know for sure and certain,
 That the time of year is Spring.”

THE BEDROOM.

OF all the rooms in the house the bedroom should be a sunny room. Every room is better to have the sunshine in it at least some part of the day. When a house is built it should be so planned that every room will have at least one sunny window.

But if you find yourself in a house where there is a sunless room, do not, if it can possibly be avoided, make a bedroom of this. Of course, it will not make a very cheery sitting room; in fact, it will not be a very pleasant room for any purpose, but above all things the bedroom should be a sunshiny room.

The bedroom is the room where you sleep all night, and it should be a well-ventilated room, thoroughly purified by sunlight through the day. The habit of some housewives of making up the beds the first thing in the morning is a very unsanitary one. The exhalations from the body have been going on all night, and the bed clothing should be taken off piece by piece and hung about the room to be thoroughly renovated by the sun and air. The mattress should be placed near the window and well sunned.

In the summer time it is a good idea to take the sheets, the pillows, the mattress, all outdoors, at least once a month, and let the sun and air get in their beneficent work on them for half a day or a whole day. In the winter time, of course, this cannot be done, but all the sun that shines in the room should be utilized.

A sunless bedroom in the summer time can be tolerated by hanging the bedding outdoors or in other rooms, but a sunless bedroom in the winter time is about as cheerless and gloomy and unhealthy as a Siberian dungeon.

Don’t clutter the bedroom up with a lot of needless furniture. The less in the bedroom the better. Matting or rugs makes the best covering for a bedroom floor. A delicate-tinted wall paper, with a few good pictures, the bed, a dresser, a chair or two, perhaps a small table with a few books or current magazines, will make a daintily furnished bedroom. The curtains at the windows should be of very sheer material, with blinds that may be drawn to shut out the sun in the hottest part of the day.

Keep the bedroom simple in its furnishings, pure and sanitary in all its appointments. A pleasant, cheery, sunshiny, well-ventilated room and your sleep will be sound and refreshing. In such a room as this your body will be recuperated during the night, the tissues built up, the fretting nerves soothed and rested, the mind refreshed and invigorated.—*E. P., in Medical Talk.*

WHO WILL SAVE OUR BOYS?

BY A FRIEND OF THE BOYS.

MOTHERS and sisters, where do our boys spend their time, especially their evenings? While we are engaged in public amusements, as balls, theaters and women’s clubs, perhaps we go to God’s house of prayer, without asking our boys to go with us; where are they? In their little bed, perhaps, until they are ten or twelve years old; then where are they? At some friend’s just across the street, then around the corner playing, then keeping out of reach of the night watchman, or police, where then? We spy them at last in some upper room playing cards for pennies, then playing for drinks, and at last they are playing for large sums, more than they have of their own; can’t pay back, then they must have money, can they wait to earn it? No, working is too slow. Do they steal it? God forbid that they should embitter their future lives; then they take to drinking all the vile stuff called beer and whiskey—going farther down the road to destruction.

Mothers and sisters, open wide the parlor door; invite all the boys, young and old, inside, read aloud to them. Let us give up our evenings of (self) pleasure

and sing for them, invite them to help you, go with them to places of innocent amusement and hold on to the power of keeping them at home, and away from the saloons. Remember—"Idle brains are the devil's workshop." It is good practice to teach boys to help in doors, begin young, at two and one-half years of age, have them hold the dust pan, wait on the table, let them read their lessons aloud to you while you sew and do fancy work in the long winter evenings. Then when spring comes, put them to work out of doors, helping to beautify the yard. Have a boy to think well of himself, give him praise when he deserves it, and that is quite often. Set a good example before them; use good table manners, and they will very likely do the same. Let us as an army of mothers and sisters work for our boys and the saloon-keepers then we may say of the drink habit—"Drive the monster from the nation, we have saved our boys."

CURIOUS THINGS ABOUT CHINA.

We bake bread; they steam it.
 In rowing a boat we pull; they push.
 We keep to the right; they keep to the left.
 We use a soft pillow; they use a hard one.
 Our sign of mourning is black; theirs is white.
 Our windows are made of glass; theirs of paper.
 We shake a friend's hand; they shake their own.
 Our language is alphabetic; theirs is ideographic.
 In building we put the roof on last; they put it on first.
 Our streets are wide; theirs are very narrow.
 We give special attention to our collars and cuffs; they direct it to their white socks.
 We speak of smallpox as a dreadful disease; they call it "opening heavenly flowers."
 In our books the running title is at the top of the page; in theirs it is at the edge of the leaf.
 Here physicians provide their own conveyance; there it must be provided by the patient.
 Here a father and son may feast at the same table; there it would be considered very improper.
 Our children stand facing the teacher to recite their lessons; theirs turn their backs to the teacher.
 The leaves of our books are single; the leaves of their books are double, being folded back to back.
 Here men cut and trim their hair; there they shave all but the crown of their head and grow a queue.
 Our clothing is close fitting and shows the figure; their clothing is loose and flowing to hide the figure.
 Here daughters share in inheritance; there sons only have a share.
 In sewing we draw the needle toward us; they push it from them.
 Our calendar is based on solar time; theirs is based on lunar time.

Here desserts are served at the close of a meal; there at the beginning.

Here the women are given precedence; there the men are always first.

We place our notes at the bottom of the page; they put theirs at the top.

Our shop signs are mainly horizontal; theirs are mostly perpendicular.

The needle of our compass points to the north; theirs points to the south.

Here the bridesmaids are young ladies; there they are old married women.

Here bracelets are worn only by women; there they are as often worn by men.

We read from left to right horizontally; they read perpendicularly from right to left.

Here brides are usually happy and bright; there they may properly weep and wail.

Here strong drink is a terrible curse; there it is the opium habit that blights millions of lives.

When our sons marry they set up homes of their own; when their sons marry they bring their brides to the parents' home.

We live in such a blaze of gospel light that ignorance is inexcusable and neglect is culpable; they live in dense heathen darkness, many not having even heard of the one true God, and of the only Savior, the Lord Jesus Christ.—*From a Leaflet by F. C. Dreyer, of the China Inland Mission.*

TO KEEP YOUNG.

KEEP in the sunlight; nothing beautiful or sweet grows or ripens in the darkness.

Avoid fear in all its varied forms of expression. It is the greatest enemy of the human race.

Avoid excesses of all kinds; they are injurious. The long life must be a temperate, regular life.

Don't live to eat, but eat to live. Many of our ills are due to overeating, to eating the wrong things and to irregular eating.

Don't allow yourself to think on your birthday that you are a year older and so much nearer the end.

Never look on the dark side; take sunny views of everything; a sunny thought drives away the shadows.

Be a child; live simply and naturally and keep clear of entangling alliances and complications of all kinds.

Cultivate the spirit of contentment; all discontent and dissatisfaction bring age furrows prematurely to the face.

Form a habit of throwing off before going to bed at night all the cares and anxieties of the day—everything which can possibly cause mental wear and tear or deprive you of rest.

BREVITY is the soul of wit.—*Shakespeare.*

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

TO-MORROW.—Isaiah 55.

For Sunday, April 23.

I. It Exists Only in Name.

1. It is One of Satan's Watchwords.
2. It is an Easing Powder.
3. It is a Conscience Killer.
4. The Holy Spirit says, "To-day."

II. It Promises but Never Pays.

1. By it the Sick are Comforted Falsely.
2. The Awakened Sinner Lulled Again to Sleep.
3. The Road to Hell Paved with Good Resolutions, and
4. The Unconcerned Bound with Chains of Iron.

III. So Near and Yet so Far Away.

1. An Unfulfilled Promise is a Step Backward.
2. Our "To-days" will soon be our "Yesterdays."

Text.—"And he said, To-morrow. And he said, Be it according to thy word: that thou mayest know that there is none like unto the Lord our God."—Ex. 8:10; Isa. 55.

References.—Prov. 27:1; Ezek. 11:2; Matt. 8:21; 24:48-51; 25:2-13; Acts 24:25; 1 Thess. 5:2, 3; Heb. 3:7, 8; Luke 14:18-20; 1 Kings 19:19-21; Deut. 30:11-14.

The King's To-morrow.

Moses had brought the plague of frogs upon the Egyptians; Aaron had stretched his rod over the rivers and the seas, and the frogs came up and covered the land of Egypt. Then king Pharaoh called for them and asked them to remove the plague of frogs. Moses answered, "When shall it be done?" And Pharaoh said, "To-morrow." And one plague after another was sent upon these people, and yet Pharaoh hardened his heart from day to day; even after the firstborn was slain in the palace he ordered his chariots and horsemen to pursue the fleeing Israelites, and they were drowned in the Red Sea. His "to-morrow" brought misery and pestilence upon his people, and death overtook the army and the king who were fighting against God.

The prophet Isaiah says, "Seek ye the Lord while he may be found, call ye upon him while he is near." What is your answer to this appeal? Are you ready now to enter the Lord's service; or do you turn away with the sad promise,—"to-morrow"?

"The Gift of Years."

We should remember that at each chance contact, each passing acquaintance, each conversation, we are giving away that which we can never recover,—the gift of our years which are spent as a tale that is told. Every word, every thought, every breath uses up human life. Where does waste time go? Who gathers

up the idle moments that slip away from us each day? One of the most serious problems we have to deal with is this one,—the use of time.

Each Day a Pearl.

The Latin poet tells us of a maiden who was idly drifting in a boat on the open sea. In her hands she held a string of pearls that were of fabulous value, and flawless beauty. She trailed the string in the water while the boat rocked on the billows. Suddenly she gave a cry of despair—the string had snapped and one by one her pearls had dropped to the bottom of the sea,—her treasure was lost forever. How many days that are of far more value than these pearls have slipped away, gone forever, and they are lost to you? Boys and girls should value time, look at each day as if life's great issues were staked upon it. Your neglect means a tragedy. It is always now or never.

Too Late.

A young artist had secured permission to paint Queen Victoria's portrait. It meant assured success, as other orders would quickly follow one as important as this. The hour for the first sitting was agreed upon. The queen was punctual, the artist was a half hour late. When he came into the room the queen was gone, and an attendant informed him that she would not return. His opportunity was gone by forever, and drudgery and poverty were his life companions. Jesus is waiting for you to-day, saying, "Son, daughter, give me thy heart," What are you going to do about it? Give it to him to-day, and life will be fuller, richer, its best gifts will be lavished upon you. Put it off until to-morrow, and you walk on barren plains, the skies are gray and cold above you, and near the end of the way you may stumble and fall to rise no more.

Now is the Accepted Time.

Now, when you are studying the great facts of history and nature, your memories are plastic, and retentive; what you learn becomes a part of yourself. When you grow old, you still have good memory, but it refuses to hold the facts you give it. Now is your time to put forth new activities, open new furrows, sow new seed. The to-morrows are few and short. Hillis said, "I am as one going once across this vast continent; I would lean forth and sow as far as hand can scatter my seed. Let the angels count the bundles." Now is the time to do all the good you can. Do not wait till to-morrow to do a kindness for your friend or ask forgiveness of your enemy, or to relieve want and

suffering; these things can all be done to-day. And then the blessed far-reaching result of doing one's best to-day is the ability to do better to-morrow; even so the one talent becomes two.

"Lift up thy head and rouse thee from thy dreaming;
Let go the past, whatever thou hast done;
Trust God for all that still may be before thee
In the fair realm beyond this present sun,
Lay by each weight, and bare thine arm and brow;
Hast thou a work to do? Up, do it now!"

A Bad Habit.

Some young people have formed a habit of never doing to-day what may be put off till to-morrow, and they accomplish but little. Home is not a pleasant retreat when late breakfasts and late dinners become an accepted innovation, when the house is cleaned at the wrong time, and our plans are interfered with because some one is behind time with housework that should have been done promptly. The Sunday-school teacher with an unprepared lesson, the leader of a Circle meeting who put off his work on the program until none of the members had time enough to study their subjects as thoroughly as they should have done, are to blame for being slothful servants.

Do Not Fear the Future.

"For we know not every morrow can be sad
So, forgetting all the sorrow we have had,
Let us fold away our fears
And put by our foolish tears,
And through all the coming years—just be glad."

Topics for Discussion.

1. We should obey God now. Deut. 30: 11-14.
2. When did the evil servant expect his lord? Matt. 24: 48-51.
3. Felix would not yield to the Spirit's pleading. Acts 24: 25.
4. If we do well to-day, we can do better to-morrow. Heb. 6: 1; Col. 1: 10.
5. A resolve. Heb. 12: 1-3.

* * *

EMPLOYMENT BUREAU.

One Man who Read a Book on Missions.

IN 1818 a Christian lady loaned a little book entitled, "Six Hundred Millions," to her physician, Dr. John Scudder. It presented the claims of the heathen in a clear, forcible manner and greatly interested him. He read and reread it, until he felt he could no longer stay at home, and gave up a lucrative practice in New York and sailed for India in 1819. Seven of his sons became missionaries and three of his grandsons medical missionaries. Imagine the writer of that little book and the one who loaned it and the one who read it and a great multitude of redeemed ones all rejoicing together in heaven. We pray that our Circle members will not

grow weary or discouraged; it is well worth your while to work on through good and evil report, knowing that God's richest blessings come to those who are faithful in a little. Our books in the present course are of unusual interest. Read them, and tell your friends to read them.

Redeeming the Time.

Some years ago the young people were somewhat in doubt about the possibility of making mission study attractive and profitable. But all doubt has passed from the minds of those who have tried the experiment, because in so many of our churches the young people and older ones, too, who are enrolled in our Circle and are to-day studying missions are having some of the most profitable and enjoyable times of their lives. If you do not have a Circle in your church, it is high time for you to be organizing one; there is no time to lose. It is a great thing for a young man or a young woman to acquire in a short time an intimate knowledge of another country and its people, as we do in the study of Rex Christus, our book on China. It is a great thing to become so identified with the life of another race that we can enter more truly into the heart-life of the people. It is a great thing to enter more truly into the lives of our own missionaries and thus to become fellow-laborers with God. It is no wonder that our new courses on missions are taking such firm hold on the young life of the church. Young people are attracted by the heroic, and the heroic appears on almost every page of missionary literature.

Zeal.

There are many faithful members who pour out their souls to God every day for the visitation of the Holy Spirit upon the church and the hearts of the unconverted. We know too little of the inner life of these faithful servants of Jesus. David Brainerd, the missionary, said, "I cared not where or how I lived or what hardships I went through if I could gain souls for Christ. While I was asleep I dreamed of these things; when I was awake the first thing I thought of was this great work."

Keep Pushing.

Keeping everlastingly at it brings success. Our church has been working for missions for some years. The beginnings were small. Well do we remember the earnest zeal of our brother, Christian Hope, who went to Denmark to teach his own people the Gospel. A more consecrated, self-denying missionary it were hard to find. He has gone to his reward; but to-day his influence lives and permeates our church. Keep working; if there are some in your congregation who are living selfishly, tell them of the sacrifices Brother Hope made, and persuade them to read some of the Circle books, that they may learn the blessedness of a life hid with Christ in God.

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XXIII.

Paris, France.

Dear Mr. Maxwell:—

On alighting from the train we were thrown in the midst of a babel of confusion. All the European languages it seemed were floating upon the air in a jargon of bad French.

Paris is the mistress of pride, the city of sin, the homeless city; the city where high life, as it is called, is found in full bloom. The orchards and trees around the town are simply loaded down with fruit, and the vineyards are full of luscious clusters. Many cultivated forests meet the eye of the observer. Along the river in the chalk cliffs are great holes dug where hundreds of families live.

To-day we had the pleasure of ascending Eiffel tower which pierces the sky to the dizzy height of nine hundred and eighty-five feet. From its top we can see far beyond the city. The beautiful Seine spanned by fourteen of Napoleon's bridges and many others of later date, one of which was built for the Czar of Russia, and, furrowed by many a boat, winds its way through the green valley toward the English channel. On yonder hilltop opposite are the exposition buildings of 1867. Farther down are buildings of the last Paris Exposition; here a museum and there a museum. Paris is full of them, and once having seen them we were constrained to believe that there is enough nude statuary in these museums, in the parks and along the principal rucs, or boulevards, to corrupt the morals of any nation and condemn it.

A study of the social condition of the republic of France is sufficient evidence as to what the results of this teaching are. It must be admitted, however, that with the evil there comes a great deal of good; some of the finest statuary in the world is found here. It is also true that many of the best paintings have been brought here for exposition. In the De Louvre museum we saw a painting of the "Miracle at Cana of Galilee." The painting is twenty-five feet square and is worth several thousand dollars. Another magnificent piece of art is a column from the temple of Artaxerxes at Shushan, 404 B. C., in model, with a column intact, with a beam and cross-beam of the original wood from the temple. We saw Cleopatra's Needle, the wonderful Egyptian obelisk, brought to Paris in 1826 by Napoleon, from Luxor, Egypt. Every direction we look, and everywhere we go, we see dozens and scores of statues of emperors, kings, presidents, artists and sculptors; even Joan of Arc has 300 statues in France while Napoleon is remembered by 1,600 of them.

Another important factor in French society is the hotel life. There are practically no homes, as we know homes in our country. The people have houses which they call homes, where they sleep as a rule, but in nine cases out of ten they eat their meals at a café, which, when weather permits, is on the broad pavement parallel with the boulevards. Hundreds and even thousands of small tables large enough to accommodate two persons, literally line the boulevard for miles; here the people take their meals two or three times a day. Members of the same family are

scarcely ever seen together, and when meals are over these members of the divided families pair off in couples for cab drives or a visit to the theater, and thus, family after family, is separated all the day long. The wife has scarcely any domestic cares, and domestic felicity is a thing entirely lost if it ever was possessed.

There are two hundred and forty schools, three hundred churches and forty-five thousand saloons in Paris. The Grand Opera house cost \$5,000,000 and nearly half that much to furnish it. This is where the wealthier class of people spend their time and money. It would be useless here for me to attempt to give you statistics, because I am satisfied that the people in America who are unaccustomed to these things would not believe our report.

Opposite the Grand Opera house is the New Grand Hotel, which is an immense structure. In this building are six hundred places where liquor is sold daily. This statement seems incredible as I put it upon paper, but if the word of our party is worth anything to you, you may use this statement as a fact. To-day we saw the home of fashion. I remember when we were at home we often heard it said that we got our fashions from Chicago, Chicago got them from New York, New York got them from Paris and Paris got them from the devil, and the more we see of it here, the more we are constrained to believe that the author is right.

Our boys were not very well impressed with the palace of President Loubet. It did not strike us as being either beautiful or imposing, being surrounded by a high, gray stone wall and was certainly an emblem of solitude. Of course you would recognize it as being a national building by the number of soldiers there on guard. The soldiers of Paris wear blue coats and white pants, while the soldiers of the country wear blue coats and red pants. We visited the church of Mary Magdalene which was a large, well-furnished Catholic church, where many people were continually worshipping.

One of the interesting things of the day's visit was the department store of Bon Marche, who has six thousand clerks and four hundred delivery wagons, each delivery wagon having a driver and a conductor. A very similar store in capacity and volume is the Louvre. There are many others, but these two are the largest.

This afternoon we came across another very interesting thing, and Agnes and I had a great deal of trouble getting Miss Merritt and the boys away from it. It was Napoleon's Monument made from the cannons he had captured in war; these cannons were melted and molded into pictures, representing battles where he had fought, and this mountain of iron is shaped like a cone, and is one hundred fifty feet high. It furnishes quite a review of the life of the great Napoleon. As we gaze upon this memento we wonder whether his fame will aid him materially in the great judgment day.

The contrast that we suffer here is so great, although it is very interesting. We probably will not remain here very much longer. However, we may write you again before we leave here.

Yours respectfully,

Marie.

(To be continued.)

The Q. & A. Department.

THE CHILD'S INQUIRY.

[The following is in answer to a query which appeared in Q. & A. Department of Inglenook No. 11. We take pleasure in publishing the entire poem for the benefit of the Inglenook family.—Ed.]

Alexander lived many hundred years ago. He was king of Macedon, one of the states of Greece. His life was spent in war. He first conquered the other Grecian states, and then Persia, and India, and other countries one by one, till the whole known world was conquered by him.

It is said that he wept, because there were no more worlds for him to conquer. He died at the age of thirty-three, from drinking too much wine. In consequence of his great success in war, he was called "Alexander the Great."

Son.

"How big was Alexander, Pa,
That people call him great?
Was he, like old Goliath, tall?
His spear a hundred weight?
Was he so large that he could stand
Like some tall steeple high;
And while his feet were on the ground,
His hands could touch the sky?"

Father.

"Oh no, my child: about as large
As I or uncle' James.
'Twas not his stature made him great,
But greatness of his name."

Son.

"His name so great? I know 'tis long.
But easy quite to spell;
And more than half a year ago,
I knew it very well."

Father.

"I mean, my child, his actions were
So great he got a name,
That every body speaks with praise,
That tells about his name."

Son.

"Well, what great actions did he do?
I want to know it all."

Father.

"Why, he it was that conquered Tyre,
And leveled down her wall,
And thousands of her people slew;
And then to Persia went,
And fire and sword, on every side,
Through many a region sent.
A hundred conquered cities shone
With midnight burnings red;
And strewed o'er many a battle ground,
A thousand soldiers bled."

Son.

"Did killing people may him great?
Then why was Abdel Young,
Who killed his neighbor, training-day,
Put into jail and hung?
I never heard them call him great."

Father.

"Why, no, 'twas not in war;
And him that kills a single man,
His neighbors all abhor."

Son.

"Well, then, if I should kill a man.
I'd kill a hundred more;
I should be GREAT, and not get hung,
Like Abdel Young, before."

Father.

"Not so, my child, 'twill never do;
The Gospel bids be kind."

Son.

"Then they that kill and they that praise.
The Gospel do not mind."

Father.

"You know, my child, the Bible says
That you must always do
To other people, as you wish
To have them do to you."

Son.

"But, Pa, did Alexander wish
That some strong man would come,
And burn his house, and kill him, too,
And do as he had done?
And everybody calls him GREAT,
For killing people so!
Well, now, what right he had to kill,
I should be glad to know.
If one should burn the buildings here,
And kill the folks within,
Would any body call him great,
For such a wicked thing?"

—E. Jones, in McGuffey's Reader.

* * *

Why is the central part of Asia a region of interior drainage?

The principal reason perhaps for it is that this large basin is bounded on the west by the Caucasus Mountains, on the north the Ural Mountains form a watershed, on the south the highest mountains in the world prevent its drainage from the Arabian sea, and on the east the Thian-Shan separates it from the great drainage system of China. When nature formed all of these high mountain ranges around it this immense basin would result as a matter of consequence. Hence since its drainage has no exterior gateway nature has supplied it with an interior drainage.

*

What substance is the least susceptible to heat?

Wrought iron, which requires a heat of 3,509 degrees Fahrenheit to melt it. Cast iron melts at 2,250 degrees, steel at 2,500, and platinum at 3,080 degrees.

MISCELLANEOUS

THE PATH THE CALF MADE.

One day, through the primeval wood,
A calf walked home, as good calves should;
But made a trail all bent askew,
A crooked trail as all calves do.

Since then two hundred years have fled,
And, I infer, the calf is dead.
But still he left behind his trail,
And thereby hangs my moral tale.

The trail was taken up next day
By a lone dog that passed that way;
And then a wise bell-wether sheep
Pursued the trail o'er vale and steep,
And drew the flock behind him, too,
As good bell-wethers always do.

And from that day o'er hill and glade
Through those old woods a path was made;
And many men wound in and out,
And dodged, and turned, and bent about
And uttered words of righteous wrath
Because 'twas such a crooked path.

But still they followed—do not laugh—
The first migrations of that calf,
And through this winding woodway stalked,
Because he wobbled when he walked.

This forest path became a lane,
That bent, and turned, and turned again;
This crooked lane became a road,
Where many a poor horse with his load
Toiled on beneath the burning sun,
And traveled some three miles in one.
And thus, a century and a half
They trod in the footsteps of that calf.

The years passed on in swiftness fleet,
The road became a village street;
And this, before men were aware,
A city's crowded thoroughfare;
And soon the central street was this
Of a renowned metropolis.
And men two centuries and a half
Trod in the footsteps of that calf.

Each day a hundred thousand rout
Followed the zigzag calf about;
And o'er his crooked journey went
The traffic of a continent.
A hundred thousand men were led
By one calf near three centuries dead.
They followed still his crooked way,
And lost one hundred years a day;
For such reverence is lent
To well established precedent.

A moral lesson this might teach,
Were I ordained and called to preach;

For men are prone to go it blind
Along the calf paths of the mind,
And work away from sun to sun
To do what other men have done.

They follow in the beaten track,
And out, and in, and forth, and back,
And still their devious course pursue,
To keep the path that others do.
But how the wise old wood gods laugh
Who saw the first primeval calf!
Ah! many things this tale might teach,
But I am not ordained to preach.

—Sam. Walter Foss.

LITTLE LEAKS.

LETTING a dead tree stand in the orchard.

Allowing that little leak in the roof of the barn to
spoil a portion of the hay year after year.

Cutting your shoestring instead of untying it.

Losing the keys belonging to the locks on the farm
buildings.

Burning your shoes while warming your feet.

Letting the INGLENOOK stop.

Allowing Canada thistles to go to seed on the farm.

Feeding more hay or grain at one time than will be
eaten.

Leaving rubbish piles near the hen house to harbor
poultry enemies.

Using the half-bushel or peck measure out of which
to feed grain or roots to the stock.

Leaving the saw out in the rain or dew to become
rust eaten.

IT IS VERY FOOLISH

To try to live a religious life without praying.

To be always hunting for an easy place.

To have no definite aim in Christian life.

To never do anything unless you feel like it.

To take any important step without asking God to
lead you.

To willingly remain an hour in sin, without repent-
ing.

To never think of religious matters except when
you go to meeting.

To make a practice of neglecting little duties and
expecting to be faithful in great ones.

To have no higher aim in preaching than to enter-
tain the audience.

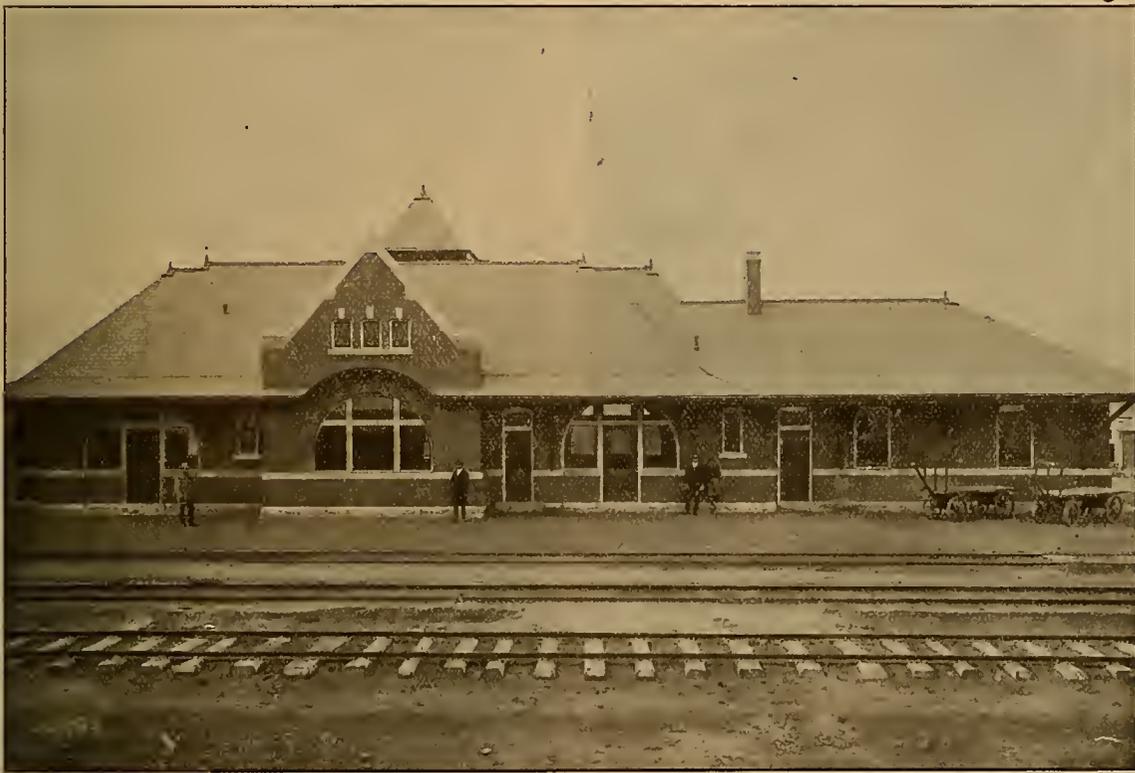

South Platte Valley

THE SOUTH PLATTE VALLEY.

ONE of the greatest auxiliaries to mission work in the Brethren church in the last twenty-five years has been emigration. Perhaps there is no other one thing that has done so much towards the scattering of our people and the organization of new churches in the north, south and west. Statistics could be furnished, showing the thousands of people that have found new

people who have made these changes nothing could be more natural than to suppose a number would become discouraged, discontented, disheartened and return home. Some who should have gone to colder climates have injudiciously chosen the south, and *vice versa*. Some have been so indiscrete as to contract for high-priced land when they had but little means for investment.

The western States, like the eastern States, have

UNION PACIFIC DEPOT, STERLING, COLO.

homes in this manner, which of their own magnitude would seem incredible. A tier of States bordering on the Mississippi on the west, and those adjacent, have been recipients of the influx from the eastern States. In the last decade the irrigated regions of the west have been an objective point to homeseekers.

Canada, the Dakotas, Idaho, Minnesota and Michigan, Kansas, Nebraska, Colorado, Oklahoma, Indian Territory, Arkansas, Missouri, Oregon, California and Washington have all been rivals in trying to offer pleasant and profitable homes to the people who have felt that they could do better for themselves and for the church in a new country. With the thousands of

their advantages and drawbacks. Countries and States are like people; no one of them possesses all the good things; if careful selections are made, often a very pleasant and permanent home can be obtained at a reasonable figure.

The Brethren in the South Platte Valley, Colorado, are anxious that our people know more of their country and, in order that no statement may be overdrawn or exaggerated, we have taken the precaution to make a trip to that valley and personally interview men who have lived there for twenty-five or thirty years; and in this sixteen-page notice of the South Platte Valley, you will find what these men have said to me person-

ally; and the accompanying illustrations are made from actual photographs, so that no fears need be entertained regarding their validity. As you will see in the picture, the Brethren have a nice, neat little churchhouse, and though the congregation is not large, we gave two Bible land lectures to an interested audience.

Long before you reach the State of Colorado you

A MONEY MAKER.

find that your train is gradually climbing a slope leading up to the Rocky Mountains, "The Backbone of America." The ground is surprisingly smooth and even and would be level except for this gentle slope, which makes it an ideal country for irrigation. Abundance of water is afforded by the great watershed beyond. Ditches, headgates and laterals have been abundantly supplied with which successfully to water the soil.

The accompanying interviews will tell for what purposes the soil is best adapted. Many of these statistics we received from the farmers, and have gone to the elevator and railroad station only to find them there just as they had reported.

Again, it is easy to follow the cheques of a dairyman, sugar factory man, and the grain merchant, through the banks and satisfy one's self that these statistics are just as represented. Great care has been taken to see that nothing has been exaggerated in this exposition of the South Platte Valley.

With the coming of the beet industry, the attention that is being given to dairying, the discovery of the quality of nectar in alfalfa for honey bees, and the

wide range of free pasture lands, there certainly can be no place east of the Rocky Mountains which affords greater opportunities for young men and women who want to get homes of their own and get them honestly and get them while they are young. The climate is good, the water is splendid, the weather ideal. Church and school privileges are unsurpassed by towns of the size of Sterling. Market is all that could be expected, not being far away from the State capital.

Sterling is a busy little town, with no saloons, which speaks well for the character of the inhabitants and their position on the liquor question. The Union Pacific railway, which is one of the best systems of the west, passes through the town.

You will notice in Brother Patterson's interview, that it was not their intention to make this valley their home, but conditions are so ideal that they have remained there ever since. The fact that he found herds of five thousand buffaloes in the early days ought to be sufficient evidence to the thinking man of the natural resources of the pasture land. Brother Patterson refused \$60 each for eighteen yearling mules the day before we visited him, which we thought was a mistake; but when he explained that he could keep them two years more at a total expense of seven dollars and a half each, at which time he could mate them and receive two hundred fifty dollars a pair, we began to realize that his experience in the South Platte Valley was worth something to him.

After interviewing these men personally in their own homes, eating at their tables, riding in their vehicles,

HARVESTING HONEY.

walking over their ranches, looking at the thousands of head of cattle, we feel like saying to the young man of the East what Horace Greeley once said, "Young man, go west."

EDITOR INGLENOOK.

❖ ❖ ❖

The number of sheep at present in the United States is estimated at 48,000,000. What a pity that so many people are shivering for the want of their coats.

UP THE SOUTH PLATTE IN 1874.

THIRTY-ONE years ago (April 1, 1874) we left our home in southern Wisconsin and started for Colorado. At that time we did not have fast through trains, and it took us just three days to reach Julesburg, Colo. The railroad up the Platte Valley was not built then, and as we were going near Buffalo (now Merino) we had to go in covered wagons. Other persons bound for

OLD PIKE'S PEAK ROAD THROUGH SO. PLATTE VALLEY.

the same place reached Julesburg on the train we did, so that there were more than twenty of us, mostly women and children, in the party which started a few hours later.

The first day we did not go far, and the main object that attracted our attention was the barren ground out of which grew unnumbered prickly pears and cacti. At night we stopped at the house of some cowboys. (Large cattle owners were then in practical possession of the valley, and every few miles had sod houses in which the men staid who looked after the cattle.)

When we reached the house, the cowboys walked out and told the travelers to take possession, showing where eatables were kept. And they staid out all night, while our party—tenderfeet indeed—slept in one room. In the morning when I went outdoors the men were lying rolled up in their blankets, with a heavy pole across the foot to keep the wind from blowing them off. It had snowed a little during the night. They did not offer to take possession of their own house until we were ready to leave. And I remember that when my father offered to pay them they were offended. Their generosity was one of their failings. Never have I met any men who were as generous as were the cowboys, and this does not refer merely to the one night's lodging and the things we ate there.

The next day at noon we stopped at a ranch near which fifteen hundred Indians were encamped. I do not remember any other time when I have felt quite so much in the minority. I was afraid to go among the tepees, though the Indians were as friendly as could be. The next night we stopped at another ranch, and the third night near what is now Sterling. We found a man and his wife living in a dugout. It was not large, but our family staid there. There was little choice then—the dugout or the prairie. At noon the following day we reached our destination.

We expected to find a board shanty erected for us, but it was not even begun, and the only vacant house—and even sod houses were few and far between then—we could find was a small sod one. It had one door, one little window, and a dirt floor, and it was redolent of "buffalo chips," which was the main fuel. It really was not a very inviting place to look upon as home, and it proved to be too much for the girls.

Our goods had not reached Julesburg, and at the end of our journey we had only such bedding as we carried with us. But the spirit of generosity was everywhere, and buffalo robes and blankets were loaned us for the few weeks until a trip was made to Julesburg—seventy miles away—and we had our own bedding. A small stove was in the house. We had flour and mother baked good bread. Buffalo meat was

POULTRY FARM NEAR STERLING.

plentiful and very cheap. I hesitate to say just how large an amount of these two staples we consumed, for it seems incredible. But we had what was called a "prairie appetite," and were well and happy.

As soon as possible lumber was brought from Greeley—nearly a hundred miles farther—and we had a house with a basement and in it a pump, which was a great relief to the two of us who had been carrying all the water used from the Platte, three-quarters of a mile away. Some ground was plowed, vegetables were planted, and for a time all went well. Then

AS THE FIRST DUNKARDS MOVED INTO SOUTH PLATTE VALLEY.

came talk that the Indians were becoming troublesome, and after a time a body of them, all decked out with feathers and war paint, and each well armed and with an extra pony, came to our house and ate everything in sight. They claimed to be good Indians having no desire to injure the whites. They were after the Utes.

But they did not hesitate to appropriate small articles when they could do so unseen. Other more alarming reports came, and finally it was decided that it was not safe for a man to keep a family there, and we started for Greeley.

Our experience on the South Platte is one to which

AS DUNKARDS NOW GO TO SOUTH PLATTE VALLEY IN VESTIBULE COACH ON U. P. RY.

I always look back with pleasure, and sometimes regret that we did not remain there. It was a wild free country. Deer, antelope, buffalo were all about us, and the latter could be seen by the thousand. We did not pretend to eat any of the meat except the ham, unless a buffalo calf was killed. When we got up in the morning we often saw buffalo feeding with the cattle within a few rods of the house. Travelers through the valley shot them down and let them lie and decay, just in order to be able to say they had killed a buffalo. It was a crime which soon received punishment, for it was not long until not a buffalo could be found in the valley.

One thing that surprised us when we got into the valley proper was to see the cattle, which had been out all winter, unfed by man, looking as plump as if it was fall instead of spring. And the buffalo were in fine condition. The grass growing there was just the kind that live stock needed. We were convinced that it was a land with great possibilities and would some day be very productive; and later observations have shown me that we made no mistake, as far as soil and climate are concerned, when we located in the South Platte Valley.

Some of those we knew there in the long ago did not leave, but are there now. They trusted the country, and the country richly rewarded them. It rewarded others who did not live through the hardships of pioneer life; and it is rewarding and will reward till others for all time to come, for it is a goodly land. Many improvements have come, and others will follow. And yet, in spite of several visits to the valley since 1874, it seems to me that the real valley is the one of those early days, for I lived in it at the most impressionable period of life. And I cannot help wishing that I might see it, even if but for a day, just as it was in 1874. But it lives only in memory, where it will continue to live until we go hence.

GRANT MAHAN.

Elgin, Illinois.

FROM THE FOUNDER OF STERLING.

I was born in southern Tennessee in 1849, and when I was six years old my father moved to Mississippi, from where I came to Colorado. We settled near Greeley, where I cropped one year and then came to this section, having entered a quarter section by proxy before, as was common in those days.

On the road here from Greeley we, myself and driver, met one person only, and that was a man on horseback, and upon inquiry found it to be Mr. Hatfield, who was then living here and was making a trip to Greeley, a distance of one hundred ten miles, to get a pitman rod of his mower welded so he could finish mowing his crop. Greeley was the nearest town where such repairs could be had those days.

In 1875 I cropped here and raised about two and a half acres of corn, and when husking time came I went to Greeley to help my father-in-law husk his corn, and when I came back the wild geese had eaten all my crop of corn, so that the first crop did not amount to much; but we did not become discouraged, for we saw that there were possibilities here if we only waited for them.

In those days the Indians were very plentiful here, not that they stayed here, but rather came here to hunt the thousands of buffaloes that inhabited this section. The government would give them a license to hunt here provided they were supplied with a sort of guardian, a white man who protected their rights and the

SHIPPING WOOL AT STERLING, COLO.

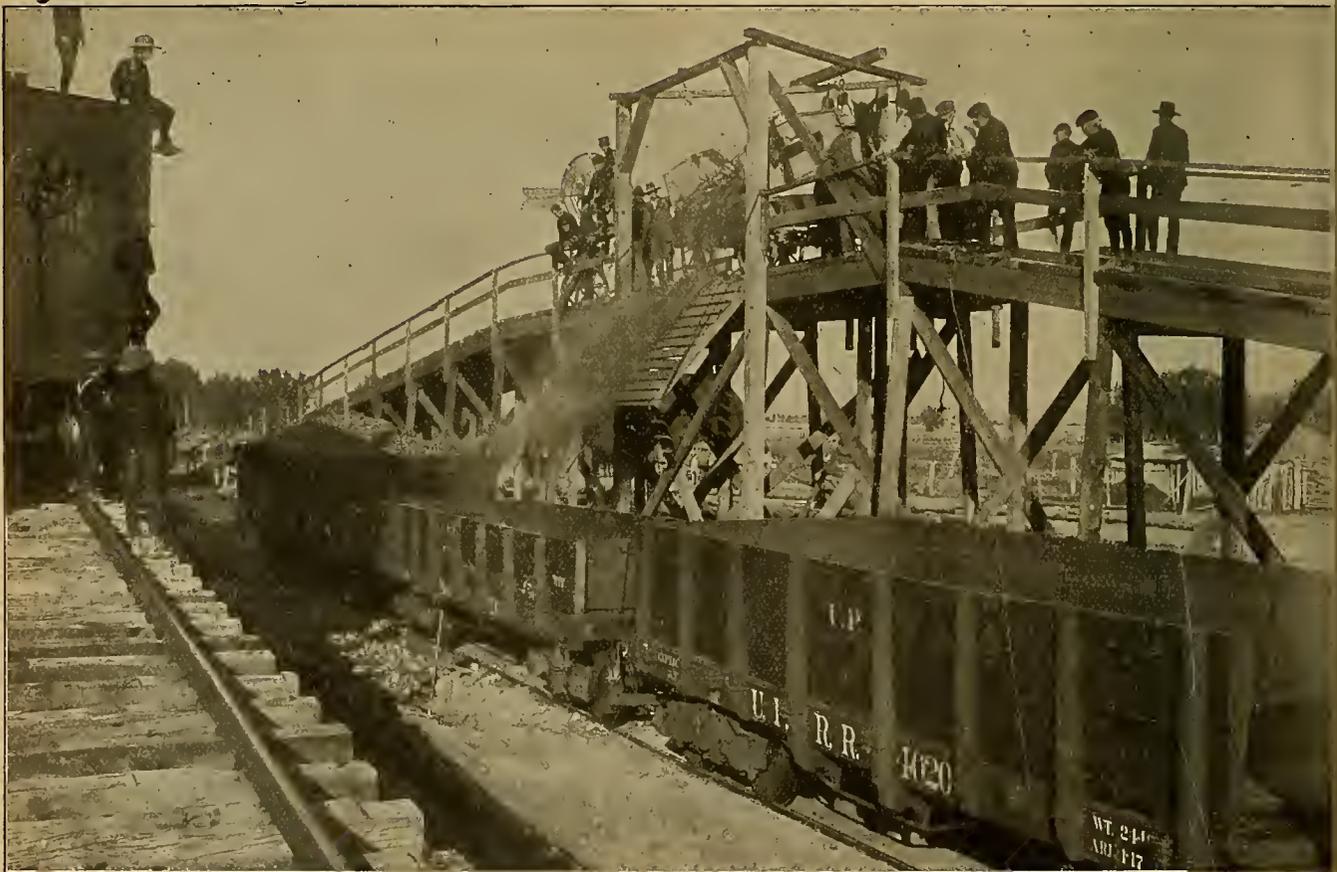

rights of the white people through whose territory they passed. They took the flesh of the buffalo and jerked it as they called it, and used it for food and the hides they took to the market and traded for food, drink and clothing. As many as five thousand buffaloes have been seen in a single herd in this valley in the early days.

A raid was made here in 1876 by the red men, and twelve horses were taken by them from the place where this town now stands. The next day they found a lot of cattlemen, who were getting ready for a round up, and when they saw a good opportunity they shot three of the men and took twelve more horses, and left the bodies of the men bleaching in the sun. I helped their comrades the following day to bury their unfortunate fellows. There were about thirty men in the round up, and they were all at my house the next morning for breakfast.

About a year before I came here, 1872, the Colorado Central R. R. Co. threw up a grade across the country, but it was abandoned the next year, and no more was done with it until some time in the early eighties, when the Union Pacific R. R. Co. renewed the grade, and with that prospect ahead the little town of Sterling sprang into existence; in 1882 I bought some hard-

BIRD'S-EYE VIEW (RESIDENCE PORTION), STERLING, COLO.

LOADING SUGAR BEETS INTO CAR, STERLING, COLO.

ware, and sold it from a tent for a while, and finally built a shanty for the purpose.

I was the owner of the land upon which the town now stands, and I sold a number of building lots for the small sum of ten dollars in order that the little town might grow rapidly, which it did, and now we have a brisk little business town of not less than sixteen hundred inhabitants. I bought this quarter section where the city of Sterling now stands of a young man who had become discouraged and was going back east, and said that there were no prospects ahead here for anyone.

That was in 1874. I paid him two hundred fifty dollars for the one hundred sixty acres, and to-day there is not a lot in that part of the town that can be bought for that money. One thousand dollars has been refused for a lot in the residence portion of the town, with one hundred feet front.

Our State is called the Centennial State, for it was admitted in 1876. At that time, Weld county, with Greeley as the county seat, covered a territory of more than ten thousand square miles; since then, it has been divided into seven counties all of which are good-sized counties.

Before the railroads came we had to haul barbed wire from Denver, a distance of one hundred and forty miles. I remember that I once sent seven wagons to that city for that purpose. We often took our farm produce to Sidney, Nebraska, a distance of forty miles, where there was a government fort and a railroad. There was a private freight line from there to the Black Hills country, where the miners had to be supplied with the necessaries of life. That made a good market for us. I used to raise watermelons and market them there. I recall the fact that one season I took the money which I received from my watermelons and purchased the material for a house. I made the house out of grouting and the house is standing to this day, and is in a good state of preservation. It is twenty-four feet square.

At one time the scare of the Indians was so intense that about twenty-five neighbors united their efforts in erecting a sod fort about four hundred feet square, six feet high and four feet thick. We are glad to say that we never had to use it as a protection against the Indians, although at one time we did have to send our families to Sidney, Nebraska, where they could be under the care of the government troops.

The first religious sect to occupy this territory was the Southern Methodists. They were soon followed by the Cumberland Presbyterians; both denominations worshiped in the only sod schoolhouse in the valley. The last-named sect were the first to erect a house of worship where Sterling is now situated. Since that many have come and are prospering as you will see in the accompanying illustrations.

During the money panic of 1873, when everybody

was discouraged and ready to return to the land of their fathers, but could not for lack of funds, and were at their wits' end, I remember a certain Mr. Meeker, the president of the Union Colony, called a meeting of the despondent men and told them that they had no reason to be so crestfallen, that every new country was subject to such things, and that the ones who proved loyal to the country and themselves would be the victors in the end, and that the ones that retreated

CUMBERLAND PRESBYTERIAN CHURCH, STERLING,
Reached via Union Pacific Ry.

would lose out finally. He said, "Inside of twenty-five years their land would bring fifty dollars in the market." To-day it is a bad piece of land indeed at that place that will not bring one hundred dollars instead of the price which he prophesied. Land was bought then at the rate of seven hundred dollars for eighty acres and lots of it now sell at two hundred dollars per acre.

Land around Fort Collins last season and this season rents for twenty-five dollars cash per acre to beet raisers. In some instances they give one-fourth of the crop, which is about the same. Many of them get twenty-six tons to the acre, and sell them at five dollars per ton.

Our land here at Sterling is just as good as the land at Greeley or Fort Collins, but we have not had a sugar factory here until this year; a factory is now under construction and several thousand acres of beets have already been contracted for, which will speedily increase the price of land. We have the quality of soil, we have the supply of water for irrigation purposes, we have the market, and a new era has again

dawned upon our quiet little village and the surrounding community. With the present indications of the beet industry, the marvelous alfalfa harvests, the unrivalled crops of honey, and the unlimited acreage of foothills where countless thousands of cattle graze at their own sweet will, without a cent of rent to the owner, what can there be to prevent the land here from becoming as valuable as the land anywhere else?

We have the soil, water, sunshine, and the room; what we want is a large number of industrious, energetic young men who want to make a fortune and make it honestly, and do it while they are young.

WHAT AN OLD PIONEER SAYS.

I WAS born in Franklin county, Virginia, in 1842; moved to Marion county, Iowa, in 1866; from there we came to Longmont, Colorado in 1873, and we have been residents of this immediate part of the South Platte Valley since 1879. When we came from Iowa to this State we came overland, my wife driving one team and my son the other, while my brother-in-law and myself drove the cattle.

We went by way of Cheyenne to avoid the Indians that were in this section of the country at that time,

BUNCH OF CATTLE NEAR STERLING, COLO.

As the founder of the town of Sterling some thirty years ago, I wish for it and its sturdy people a pleasant and prosperous future.

M. C. KING.

Sterling, Colo.

Editor "Inglenook."

Since my interview with you a few days ago I have purchased a farm of 172 acres, paying \$55 per acre for same. This shows whether or not I have faith in The South Platte Valley. You may add this to my interview if you wish.

Truly,

M. C. King.

Do they raise any other hay except alfalfa?

Yes. Good natural wild hay that sells for \$12 a ton.

What other towns are located in the beet country?

Snyder, Iliff, Brush, Crook, Ft. Morgan, Greeley.

and to accompany a gentleman who was going that way; as it was only about a hundred miles out of our way we calculated that we could do that in order to accommodate a neighbor, but the higher civilization has caused us, I am sorry to say, to lose some of those old-time generosities.

In 1878 some Sioux Indians, who had been moved by the government from the reservation in the north to one in the south, had become very much dissatisfied and wanted to go back to the north. The government refused to grant their request, upon which they said they would go and they did. They simply cut their way through, which caused a great deal of excitement and some loss of life; about thirty-six whites were killed in one of these battles near here. They never went back to the reservation in the south.

When we landed in the South Platte Valley in 1879

OLD SETTLERS' PICNIC OF LOGAN CO., SOUTH PLATTE VALLEY, STERLING, COLO.

there were very few settlers here, and things were pretty much as nature and the Indians had left them. We worshiped and had school in the old sod school-house near my ranch, which was the only one in the valley at that time. Our nearest market then was Syd-

ney, Nebraska, forty miles away, although we had a post station here at Sterling.

When we stopped here it was not with the intention of making this our home, but we stopped here rather for the purpose of schooling our children and making

a little money so we could buy a home elsewhere; but in the next year, 1880, the old railroad grade was renewed by the Union Pacific R. R. Co., and this step toward progress and the good fortune we had while here slowly but surely induced us to stay, and I suppose now that we will remain here as long as we live, for two reasons: one is, we are getting old, and the

FIELD OF ALFALFA.

other is that this is as good a place to live now as any place.

From the time we came here until 1883 we never attempted to raise a crop; during this time I made thirteen thousand dollars raising cattle on the range. At the time mentioned I sold my cattle to some cattle dealers and turned my attention to raising grass and grain. Since there was little or no market for wheat except as a feed for cattle, for there was not much of it raised, we gave more attention to oats and corn. We never aim to sell any grain or grass, but feed all the products of the ranch to the stock and sell the stock; this is our plan for farming, and we have always been able to make it pay.

The introduction of alfalfa about eighteen years ago was a boon to this country; no crop is so valuable to the farmer for stock raising as this crop. We make a common practice here of mowing our alfalfa crop three times each season; from the first crop we generally get two and a half tons per acre, the second, two tons, and the third crop one and a half tons—an aggregate, as a rule, of nearly six tons per acre.

The sheep men always try to get hold of the first mowing as it is considered better for the sheep; the second is nearly like the first; but the third cutting is saved for the milch cows and has a ready sale for that purpose. The first cutting sells from three to four dollars, the second much the same, and the third from four to five dollars per ton.

A new era has dawned upon this country; with the coming of the beet industry comes an inestimable mine of wealth to the farmer. There are men here who

own land worth from forty to sixty dollars per acre, who can clear above all expenses seventy-five dollars per acre per annum. Statistics can and will be furnished showing these statements to be true. Of course the land is increasing in value all the time because it is being utilized more and more, and is being used for purposes which are more profitable.

Beet crops are more valuable than cereals, therefore the price of land will advance as the sugar factories are planted in our midst. Three years ago there was not a sugar factory in the South Platte Valley, and now there are six and another one under construction here at Sterling. Many more are in prospect, and as the demand comes the factories will follow. The thing that is most needed is men to raise the beets. As our country raises but a small portion of the sugar it consumes nothing is surer than a demand for the manufactured product. Capitalists are ready to manufacture the sugar if the beets are raised. The land is here awaiting the man who wants to make a fortune while he is young.

Yours truly,
Sterling, Colo. R. J. PATTERSON.

THE SOUTH PLATTE VALLEY APIARY.

THE apiary business in the South Platte Valley is but four years old. The natural conditions are what brought the industry in our midst; alfalfa is one of the best honey producers in the world, and the South Platte Valley cannot be beaten for the production of alfalfa.

I am the apiarist of the Sterling Bee Company, and

STERLING BEE CO. LOADING CARLOAD OF HONEY,
STERLING, COLO.

I can testify that we shipped a carload of honey last season to Indianapolis, which means twenty-five thousand two hundred pounds, and this was made last season by our own five hundred colonies of bees. This honey is worth twelve and one-half cents in the market. It is not difficult to estimate that each colony of bees

averaged between fifty and sixty pounds of honey in one season. When it is remembered that the ordinary stand of bees is worth about three dollars in the market, and they will produce here in this alfalfa section fifty pounds of honey in one season that will bring twelve and one-half cents a pound, or six dollars and a quarter, it takes no philosopher to see that one hundred per cent can be allowed for expenses, which is not at all necessary, and then have one hundred per cent and more left as a clear profit on the investment; expenses in this business here are very meager in comparison with the profit.

Bee keepers calculate that one acre of alfalfa will amply support a good working colony of bees, and

DAIRYING IN THE SOUTH PLATTE VALLEY.

With the dawn of the new year's work are matters of great importance absorbing the time and thought of the people who supply the world's commerce; and with the great forward movement of the various branches of agriculture employed in the production of the world's great annual harvest, it is indeed the part of good judgment for the American farmer to review the past year's operations; to continue those branches which have brought the best results, and discontinue those which have yielded little or no profit.

Much depends upon the selection of such crops as are best adapted to the peculiar conditions of soil,

APIARY OF J. M. CORNELIUS, SOUTH PLATTE VALLEY, COLO.

every one who has been here knows that there are in the neighborhood of twenty thousand acres of it in the county, saying nothing of the South Platte Valley.

We with all the agricultural classes necessarily suffer from a late spring, and that is what we had last season. When there is a warm season the alfalfa is sure to secrete a better nectar than in a cool or damp season.

I am willing to tell you anything you want to know about the business, but I am not anxious that you tell everybody, for I am doing well enough as it is. Elsewhere in this issue will be found statistics that will show something of the work done by the bees in our section that ought to satisfy the inquirer.

Yours truly,

HARRY McCOMBS, Apiarist,
Sterling Bee Co.

climate and local necessities. The overproduction of certain products causes the price of such commodities to become so low that they cease to be profitable, and the producer cannot afford to grow them. Such conditions cause the farmer to long for some substantial branch of agriculture upon which he may depend, not only for a livelihood but as well to accumulate wealth.

Thorough investigation, statistics and the sentiment of a large per cent of the western farmers to-day all go to show that one of the most satisfactory lines to follow in our age is the "Dairy Business." Their motto is, "The cow, the enemy of all store accounts." The cow has been rightly named "The mortgage lifter of America." It is a fact that the dairy cows of the United States have paid off more mortgages, and prevented more unhappiness in the past five years than the combined wealth accumulated by America's great captains of finance. Every progressive dairyman should receive a copy of the report of the Secretary of Agriculture for the last five years; the great earnings

It is an ill wind that turns none to good.—*Tusser.*

of the dairy business is the best proof of the value of dairying.

Again, good judgment should be exercised in the selection of a location where the natural conditions are best for the proposed industry. With due attention, and the proper consideration, I know of no place in the Union so well adapted to dairying as the South Platte Valley of Colorado; with the most delightful climate in the world, with three hundred and thirty days of sunshine in the year, with a superabundance of alfalfa, the natural dairy food, with an almost inexhaustible supply of sugar beet pulp, and various

pound, and many individual cows are making from \$8 to \$12 per month. In Logan county the De Laval Separator plan is used, which adds to the value of the industry.

A Few Statistics.

Colorado creameries paid \$3,000,000 for dairy products in 1904.

They have made 15,000,000 pounds of butter.

They have bought the milk from 150,000 cows.

They have distributed cash among 30,000 farmers.

They have shipped 5,000,000 pounds of butter out of the State.

ALFALFA PLANT.

other choice foods for dairy cattle, who dare say that this section is not ideal for dairying? Logan county, Colorado, "The pride of the Irrigated Empire," invites you to come and enjoy the pleasure and the profits of combined farming and dairying.

The dairy business, though in its infancy, is proving a great benefit to our farmers. Many of them have made \$47.00 per head from their dairy cows in 1904; others show earnings of \$45.00 per head, etc. As yet not a single farmer who has taken up the dairy business in the South Platte Valley has discontinued it; on the contrary, the herds are increasing and the business is growing nicely. Logan county will soon be the banner county in the State for dairying. With the growing demand for dairy products there is no danger of overproduction; butter fat is now worth 28 cents a

The Littleton creamery alone has made 5,000,000 pounds of butter last year.

2,000,000 pounds of it was shipped to New York, San Francisco and Seattle.

This required 15,000,000 gallons of milk.

50,000 cows were milked twice a day for 365 days. 10,000 people on farms have handled the milk.

15 special cars gather the milk and bring it to Denver.

The railroads get \$200 a day for the hauling.

1904 is the first year that the dairy products have equaled the consumption.

1905 will have more exports than imports.

The South Platte Valley has undoubtedly unrivalled advantages in the line of dairying.

Sterling, Colorado.

C. P. GODDARD.

A CLIPPING FROM THE DENVER
REPUBLICAN.

IN the four indictments against M. Litch, of Sterling, charged with disposing of intoxicating liquors, the judgment of the lower court was affirmed on two counts and reversed on the two remaining. Litch was prosecuted for violating an ordinance prohibiting the

selling or giving away of intoxicating liquors within the corporate limits of Sterling. He was found guilty, fined \$300, and appealed to the county court where a jury trial resulted in a verdict of guilty. The case was then taken to the court of appeals.

It developed during the trial in the lower courts that Litch conducted a small fruit store at Sterling, and on his birthday, by way of celebration, he called several friends behind a curtain in the rear part of the building and "treated" them to beer from a keg. The four indictments resulted soon after, but in two cases Litch filed an affidavit to have the coroner draw the jury instead of the sheriff, alleging prejudice on the part of the latter official. This was not granted him, and those two cases were reversed by the court of appeals, which held it mandatory on the lower court to grant such a request.

In the two other cases, however, Litch made no requests to have the coroner draw the jury, and the judgment was affirmed on the ground that the ordinances of Sterling make it a strictly prohibition town.

How is Sterling from a social standpoint?

Well, they have six churches, no saloon, brick schoolhouses, free schoolbooks and a very intelligent social class of citizens.

A BRIGHT FUTURE.

Elgin, Ill., March 25, 1905.

Geo. L. McDonough, Col. Agt., U. P. R. R. Co.,
Omaha, Nebr.

Dear Sir:—

It was recently my pleasure to take a trip through the South Platte Valley, Colorado, in company with two others. On our way west we found snow most of the way, but when we came to the Valley of South Platte we found the farmers plowing and harrowing.

I had heard a great deal about the promising outlook for that country, but I do not hesitate to say that the conditions are better there than I expected to find them. Persons who have lived there a number of years say the climate is ideal.

There is no doubt about the fertility of the soil, which is adapted to diversified farming. The raising of sugar beets seems to be the best paying proposition. We saw farms there that are netting the owners \$25.00

GERMAN EVANGELICAL CHURCH, STERLING, COLO.

to \$100.00 per acre above expenses on a single crop of beets. A sugar factory is now being located at Sterling, and others are being talked of near there.

The country seems to be settling up quite rapidly. Some of the farmers who are wearing out their lives on the hillsides in the east might do well to settle in a country like this.

Our party had the pleasure of seeing this country by ourselves and were not guided, accompanied and inflated by any land agents, therefore we are in a position to form our own ideas of the country from an unbiased standpoint.

To say the least, I was well impressed with the country and believe that it has a bright future.

Very truly,
R. E. Arnold.

Average price for butter fat for the year was 22½ cents per pound.

Only common stock cows—not a dairy cow in the lot as yet.

EARTH'S CAPACITY DOUBLED.

THE conditions of the lands which are now open to the increase in population which has to be expected within two or three centuries may be taken approximately to show that, at most, there is enough to admit of something like a doubling of the present num-

METHODIST EPISCOPAL CHURCH, STERLING, COLO.

bers; that without any considerable engineering work in lands not available for tillage a total of about 4,000,000,000 can be supported in tolerable comfort.

The question arises as to the additional food-giving capacity of the earth which may be won by means of engineering and other scientific work, as in irrigating arid fields or draining those which are excessively watered, or by improving the methods of fertilizing soils now in use.

It is impossible, with the present lack of information, to determine accurately how extensive is the field which may be won to tillage by the work of the engineer; this winning from the excessively arid lands will be done by irrigation, and from the morasses, the fresh-water swamps and the marine marshes by drainage. In Europe the larger part of the land thus winnable has long been brought to use; it is not likely that an increase of ten per cent in the food-giving capacity of the soils can, by any known means, be realized. In the less developed continents the gain is likely to be much greater.

Thus within the limits of the United States the writ-

er has estimated that the fields improvable by drainage in the manner already applied in Holland would add to the tillable ground of the country an area somewhat exceeding 100,000 square miles in extent, with a food-giving value about four times that of the State of Illinois, wherein the soil would be far more enduring than that of any upland district. The complementary process, that of irrigation, promises to afford yet larger gains, including the area of the South

On the other continents the opportunities for winning good land from arid deserts are probably less than in North America, yet the possible gain is such that we may reckon that when his great work is done the engineer will have recovered land enough to feed the existing population of the earth. In Africa there is the magnificent problem of the Nile, a river which wastes to the sea in its annual floods water enough to fertilize tenfold the desert that it now makes fertile. There is the valley of the Twin rivers of Asia, where a realm once fertile has become a waste by the loss of its irrigation works. There are in all the great lands vast areas of lakes, swamps and marshes awaiting the skillful labor which has won Holland from the sea. The largest opportunity of profit is in such brave combats with the incomplete work of nature.

The problem of how we are to maintain the fertility of the soil when the earth is taxed by a population thrice as great as it now supports, depends upon our ability to restrain the excessive rapidity with which tilled soils pass to the sea and our ability to restore to the land the materials which the cultivated plants remove. We shall find that both these needs are fairly to be met by the resources of modern science; the first by a proper control of the movements of water from where it falls upon the land to its station in the ocean, and the second by a resort to the ocean and under the earth for the materials to renew the fertility of the ground when it is exhausted by cropping. There is much to do in order to make the earth fit to bear the life to come, but there is every reason to believe that our science is ready for the task and that within two centuries of peaceful endeavor we may prepare the place for it.

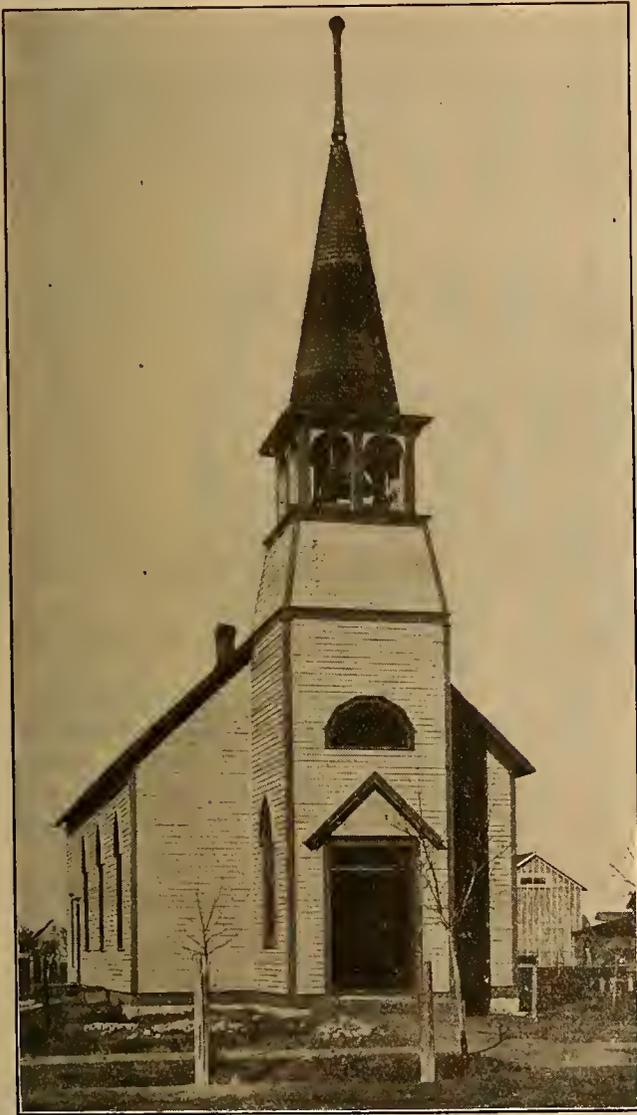

COLORADO.

COLORADO is an ideal place to live; if you want to live in the Switzerland of America you may do it by going up far enough among the Rockies; if you prefer the life of a herdsman you have unlimited range in the foothills, on free government land. If you are a farmer, you find your ideal home in the South Platte Valley. If perchance you are a gardener, the soil is all right anywhere, just get near enough to market.

The women vote in Colorado, so you may predict an early removal of the saloons. The pure, bracing mountain air makes it a delightful place to live.

and the Middle West, where the system would greatly increase the food-giving value of the soil; we may reckon the possible enlargement from it would be even greater than that afforded by a complete drainage of the morasses. Taking the continent of North America as a whole, it seems probable that the existing capacity of its soils for feeding men may be doubled by the work of the engineer through his skill in watering and unwatering its deserts and morasses.

Instead of waiting until you or your wife has the consumption and you are compelled to go to Colorado for your health, why not go now while you have good health so you can keep it. Health is the best property anyone can have. It is a property, however, once lost, seldom regained.

BAPTIST CHURCH, STERLING, COLO.

Some Other Things They Wanted to Know

Below are some questions with their answers which interested parties are continually asking about the South Platte Valley. If they are not satisfactory write again.—Ed.

❖

Is there plenty of water in the South Platte Valley for irrigation?

Yes. Besides the Platte river, they have a reservoir nine miles in circumference and twenty-five feet deep.

❖

How many railroads has Sterling?

The Burlington and Union Pacific.

❖

What is the actual cost of raising an acre of beets?

The breaking, furrowing, planting, seed, cultivating, plowing out, hauling to market, about fourteen dollars per acre; weeding and hoeing twenty-one dollars an acre. Total, thirty-five dollars per acre. This means that when you get seven tons of beets per acre your expenses are paid, above that it is clear profit.

❖

Is there any timber there?

None, except artificial growth.

❖

Do the farmers have any trouble in getting their turn at the irrigation canal?

No. Each farm is entitled to so much water; the way to get into trouble is to steal water that belongs to some one else just like any other personal property. The same thing would happen as if you stole money.

❖

Is there a large congregation of Brethren at Sterling?

No, not yet. It is a new undertaking, but there are good prospects for them in the near future. The church was dedicated November 8, 1903. They have a good substantial house of worship and an efficient pastor.

❖

What kind of buildings do the farmers have for sheltering cattle through the winter?

None, as a rule. The cattle stay out in forage all winter, and should it snow so they cannot get at the grass, the farmers haul alfalfa from the stacks and scatter it upon the field which they expect to plow in the spring, and let the cattle eat it there. Alfalfa is as green as the day it was put up.

Do they raise any hogs, and how?

Yes, they raise a great many, but not as many as they ought. They feed upon alfalfa hay and sugar beet pulp.

❖

How can the farmer afford to pasture such valuable land?

They can't; they just let Uncle Sam furnish it free. Near by are the foothills, where splendid grazing is found, which is government land and cannot be purchased by anybody.

❖

How far is Sterling from Denver?

One hundred forty miles, and four hundred thirty from Omaha.

❖

Who has care of the Brethren church at Sterling?

Eld. J. H. Gordon, formerly of Oklahoma.

❖

How many sugar factories in the South Platte Valley?

Six and another one under construction at Sterling.

❖

How is that country for potatoes?

Simply great. There are thousands and thousands of sacks of potatoes there now that the farmers would be glad to get ten cents for a hundred pounds, potatoes that in the East would bring the highest market price. Starch factories are being erected for the consumption of these enormous potato crops.

❖

How deep do they have to dig for water?

From six to eight feet, and get plenty of good water.

❖

What is the population of Sterling?

About eighteen hundred.

❖

How many tons of beets per acre are generally raised?

The acreage varies from ten to twenty-six tons, mostly depending upon the care they have. New ground is not so good as after it has been used one season.

❖

Do these western towns have any modern conveniences?

Sterling has electric lights and cement sidewalks.

After reading foregoing pages avail yourself of the

CHEAP RATES

(to Sterling, Colorado), South Platte Valley, and return, April 4th and 18th. From Minneapolis, \$22.90; from Chicago, \$20.00; from Peoria, \$18.00; from St. Louis, \$15.00; from Missouri River, \$15.00.

HEADGATE, POWELL AND BLAIR DITCH.—South Platte Valley on U. P. R. R. Colo.

The above is only one of the ditches that irrigate the land around Iliff.

ILIFF

As this townsite has recently changed hands, a few choice lots can be bought at reasonable prices. Also several choice farms adjoining the Townsite. These farms are partially set in alfalfa. The tenants have also been raising the far-famed Colorado potatoes. You can raise sugar beets for the factory now being built at Sterling, Colorado, only a few miles west.

This property has been held by an eastern syndicate for years, almost ever since the cattle king (Iliff), from whom this town took its name, ceased to graze his herds of thousands upon thousands of cattle on the rich natural grasses that this valley is noted for. Come and see for yourself.

Buy tickets over Union Pacific Railroad to Sterling, Colorado.

STERLING

Logan County

COLORADO

"THE NEW SOUTH PLATTE VALLEY."

We call it "NEW" because it has just started on a new era of development and enterprise and is attracting more attention than ever before.

Thousands of acres of alfalfa and hay land are now being plowed up and will be planted to sugar beets this spring.

Work has begun on the Beet Sugar Factory and this year's crop of beets will be made into sugar here.

Irrigated lands that we are now selling at \$35.00 to \$55.00 per acre should more than double in price during the next few months.

These lands will produce 20 tons of beets, worth \$100.00 per acre. One of our farmers raised 26 tons per acre last year, worth \$130.00.

If you want to double your money quick, now is the time to buy land.

Join the next cheap Homeseekers' Excursion over the Union Pacific R. R. to Sterling, Colo., and come prepared to invest.

If everything is not as represented we refund your R. R. fare.

If we sell you 80 acres or more land we refund your R. R. fare.

This is the opportunity of a lifetime, and if we were not giving you accurate information about the sugar factory and the possibilities of this country, we could not get our advertisement into this publication.

Write us for free advertising matter and full information about excursion dates and rates from your locality. We will be glad to hear from you and assist in locating you in this favored community.

THAT BOOK

**Pleases All Who See It.
Hear What Some of
Them Say:**

"It is a handsome volume."

"It is all right. The cuts are good; the material is good; it is nicely gotten out. I like it."

"It suggests many pleasant memories that otherwise I would never have enjoyed. Old acquaintances are renewed, and I lived years of the past over again."

"I am delighted with 'Bridgewater College: Its Past and Present.'"

Yes, that is the book they are all talking about. One says that the picture and biographical sketch of S. N. McCann are worth the price of the whole book.

There are 300 large octavo pages, lacking only two; there are 140 cuts from photographs; and the price is only \$1.50. Send for a copy to-day. You will be delighted too.

Order from the Brethren Publishing House, Elgin, Ill. Orders may also be sent to J. A. Garber, Timberville, Va.; or to W. T. Myers, Bridgewater, Va.

A SPECIAL TRAIN TO THE ANNUAL MEETING Leaves Chicago, Friday, June 2, 1905

For the accommodation of our many friends among the Brethren, we wish to announce that for the Annual Meeting at Bristol, Tenn., to be held in June, the Wabash Railroad will run a special train of high-backed coaches and chair cars, through from Chicago to Bristol without change of cars, leaving Chicago, Dearborn Station at ten o'clock A. M. We invite all living in the city, or in the vicinity, to purchase tickets via the following route in order to take advantage of this special service: Wabash Railroad Chicago to Toledo; Ohio Central Lines Toledo to Columbus, and Norfolk and Western, Columbus to Bristol.

This special train will run through the rich farming lands of northern Indiana, picking up our friends who live in this district, arriving at North Liberty about 12:30 P. M.; Lakeville, 12:50 P. M.; Wakarusa, 1:15 P. M.; New Paris, 1:30 P. M.; Millersburg, 1:45 P. M.; Topeka, 2:00 P. M.; Wolcottville, 2:15 P. M.; arrive Toledo 6:00 P. M.; Columbus, 9:00 P. M., and arrive Bristol 2:00 P. M., Saturday, June 3. It is our desire that train reach the meeting grounds as early as possible on Saturday, to enable our patrons to get comfortably settled before dark. A special train will also be run from Bristol to Chicago at close of the meeting. Representatives of the different lines will accompany this train through to Bristol, thus insuring kind treatment and a comfortable journey, in a train occupied only by the Brethren and their families. A low fare has been named for this meeting as usual. Inform your local ticket agent that you wish to accompany this special train, and he will see that your tickets read as per above route. For further information write to,

**Preserve
Your
Eyesight!**

Polk, Ohio, March 7, 1905.

Dr. J. L. Miller, Smithville, Ohio.
Kind friend:—

I want to say a few words in regard to the glasses I got from you a few months ago. I think they have done me a great deal of good, as I do not have headache now or the distress in the head that I had before wearing them. I was in bed four days in January with lagrippe which affected my eyes very much. I had to have the room darkened awhile, but after about ten days of your treatment, they were very much better again, and now I want to say to my friends, or to whom it may concern, that I feel I can recommend Dr. Miller for fair treatment and honesty, as he did just as he agreed with me, and I would say to any one in need of glasses, to write to Dr. Miller. He can do you good.

Yours very truly,

Annie E. Shoemaker.

Treatment sent on trial. Question sheet and testimonials free. Address,

DR. J. L. MILLER,
Wayne Co., Smithville, Ohio.

P. S.—Remember I never met Mrs. Shoemaker. This was all done by correspondence. See Nook of Dec. 13, page 2.

Safe and Convenient

If you want a good safe, conservative investment, write the Peoples State Bank, McPherson, Kans., about their "First Mortgage Bonds."

Ten interest Coupons with each bond. The interest is payable Semi-Annually. All you need do is to clip off the Coupon and send to them, and they will collect and remit to you "Free" of charge.

Have had eleven years experience in making First Mortgage Loans in McPherson County, Kans., and have never lost one dollar interest or Principal on any of these loans.

Customers are well pleased.

THE UPPER PENINSULA LAND CO., Ltd.,

F. J. MERRIAM, Gen. Man., 935 First Nat'l Bank
Building, Chicago, Ill.

Going to a new country to live there are some things one should be very sure of. How's the water, the matter of fuel, and the chances of being sick half the time? Well, up in the Upper Peninsula a good deal of the water is artesian, and it is a pleasure to see it, and drink of it even if not thirsty. It is liquid purity itself. As to fuel there is hardwood galore, as long as you will live, so cheap that it will hardly pay you to cut it yourself. You can sit around an open fireplace and never need worry where the wood will come from. As to health, of course the people get sick there, too, but that most pestiferous disease, malaria, is utterly unknown. A good many diseases come from malarial causes, and you will miss all that. Why thousands of people go there every Summer, and camp out, fishing, shooting, and lying around to get well of consumption. We often hear of a country's being a "lazy man's paradise." This Upper Peninsula is NOT such a place. There's work ahead, and the more you hump yourself the better home you will have. You ought to see it. I've been there, and you ought to go, too.

Howard Miller.

UPPER PENINSULA LAND CO.,

(LIMITED.)

F. J. MERRIAM, General Manager,
935 First Nat. Bank Bldg., Chicago.

For years the writer has been looking for a place where the Brethren could find a good locality in which to settle. Every part of the country has been offered for sale, good, bad, and worthless, till it has become a serious question in the minds of those who have to do the buying.

In all this seeking there is one place that has been entirely overlooked. It is what is known as the Upper Peninsula of Michigan. Originally it was a land grant, and the native field of lumbermen, the delight of the summer camper, and now that it has passed into the market for agricultural purposes it affords an opportunity of a life-time to secure a home. About 800,000 acres are available for farming purposes.

It is unlike most other sections of country open to settlement. It has certain advantages utterly unknown to the great majority of localities open to settlement. One of these is that there is wood enough for fuel, good and cheap, for generations to come. Another is that the ground never freezes so as to injure root crops. The snow comes in the latter part of November, blanketing the grass, going in March, uncovering the growing crops of unequalled forage ready for immediate use. It is the greatest pea country in the world, forty bushels to the acre of shelled peas being better for all purposes than the same amount of shelled corn.

The ground is red with wild strawberries, certain cultivated ones yield from 6,000 to 7,000 quarts to the acre. All root crops run riot in size and quality. Hay is had for the cutting, and a timothy hay field has been cut for fourteen years and is as good now as when started.

Within easy railroad reach are the greatest iron and copper mines in the world, employing thousands of people, insuring the highest prices for all farm produce for many a year to come.

What does this land sell for? From \$5.00 to \$10.00 an acre, and four years to pay it in. You can buy a forty acre tract for \$10 down and \$10 a month. If you die before paying out, we give your money back.

Let us send you some descriptive literature. It's not what you think it is. It's not a chance that will last. Prices are going to be jumped before a great while. There is lots of work to earn money while your farm's coming on. We can't tell you a tittle of the story here. Let us send you the printed story of the land, and you ask any questions you want to, and we will give you the facts in the case. Address:

**HOWARD MILLER, Agent,
ELGIN, ILL.**

CLEAN OUT THE SPRING!

While rustivating at a farmhouse one summer, the writer overheard a conversation between the farmer and his good wife which at once struck him as embodying a valuable lesson and suggesting many serious thoughts worthy of consideration. "John," said the woman, "you must find time to clean out the spring. The water does not taste right, and its use may make us sick. It has been rily and murky in color quite often lately." The water in the spring was used for cooking and drinking purposes; generally it was clear as crystal, cool and sweet; but things would get into it; dead leaves and rubbish would clog it up, making its taste nasty and use unwholesome. John went at it with a will, and was soon rewarded for his trouble, for, after clearing the outlet, the spring sent forth water again as clear as crystal and as pure as nature could brew it.

How easy to draw a parallel from this incident. That flow of water is to the earth and its inhabitants what the life blood is to the human body. Without pure blood we can not enjoy health; without an occasional cleansing of the life-spring we can not be strong and happy. Few persons are really healthy for that reason. Rheumatism, gout, malaria, liver and kidney trouble are results of an impure state of the spring of life. It is poisoned, full of impurities, and clogged up with waste matter. The vital organs all suffer more or less. There is no such thing as curing disease—we must drive the cause out of the system.

Nature has provided, out of its own storehouse, the means whereby we can cleanse and purify the life spring, DR. PETER'S BLOOD VITALIZER, a botanical remedy in liquid form, prepared of herbs culled from the garden of God's bountiful nature, is and has been known as a remedy of the highest standard for over a century. It not only eliminates the waste matter through the proper channels, neutralizes the harmful acid deposits and cleanses the system, but enriches, at the same time, the life sap, making healthy flesh, bone and muscle. No matter what your ailment may be, pure, healthy blood is essential to recovery.

THE DEMAND CONTINUES.

Franklin, Minn., March 21.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—There are a whole lot of medicine peddlers who are driving around through this country and neighborhood selling so-called medicines and liniments. The people are coaxed and almost forced to buy, and they can get these on almost any terms.

In spite of those conditions there is still a demand for Dr. Peter's Vitalizer here. My wife and I, who are now quite old in years, and naturally weakened by old age, find that we can hardly get along without it. An occasional dose of it seems to keep up our strength and vitality. It is the best medicine we have ever come across. All those who have tried it say the same thing.

Respectfully,

H. O. Boyne.

A FORMER SKEPTIC WRITES.

Golden Lake, N. D., Feb. 26.

Dr. P. Fahrney, Chicago, Ill.

Dear Sir:—I was a skeptic for years as to the merits of medicine and ready-prepared medicines in particular. The use of Dr. Peter's Blood Vitalizer has convinced me however, that there is one remedy which is a blessing to humanity. I have personally witnessed that this remedy has accomplished what doctors and other medicines have failed to do. I have reference to the case of my own mother. She had suffered for years with stomach trouble. Her sufferings were terrible. The medicines the doctors prescribed failed to give any relief, but the Blood Vitalizer brought about a complete cure.

Yours very truly,

O. N. Vik.

DR. PETER'S BLOOD VITALIZER has won over and made friends of many, who were skeptical and in doubt as to its merits. They have become its most enthusiastic supporters. The writers of the above letters are now the regular authorized agents for the BLOOD VITALIZER in their respective post-office districts and it goes without saying that they are enthusiastic in the work, owing to their own experience with the remedy.

DR. PETER'S BLOOD VITALIZER is not an article of commercial traffic. It is not a drugstore medicine, but one which is supplied to the people direct through special agents appointed everywhere. For further particulars address,

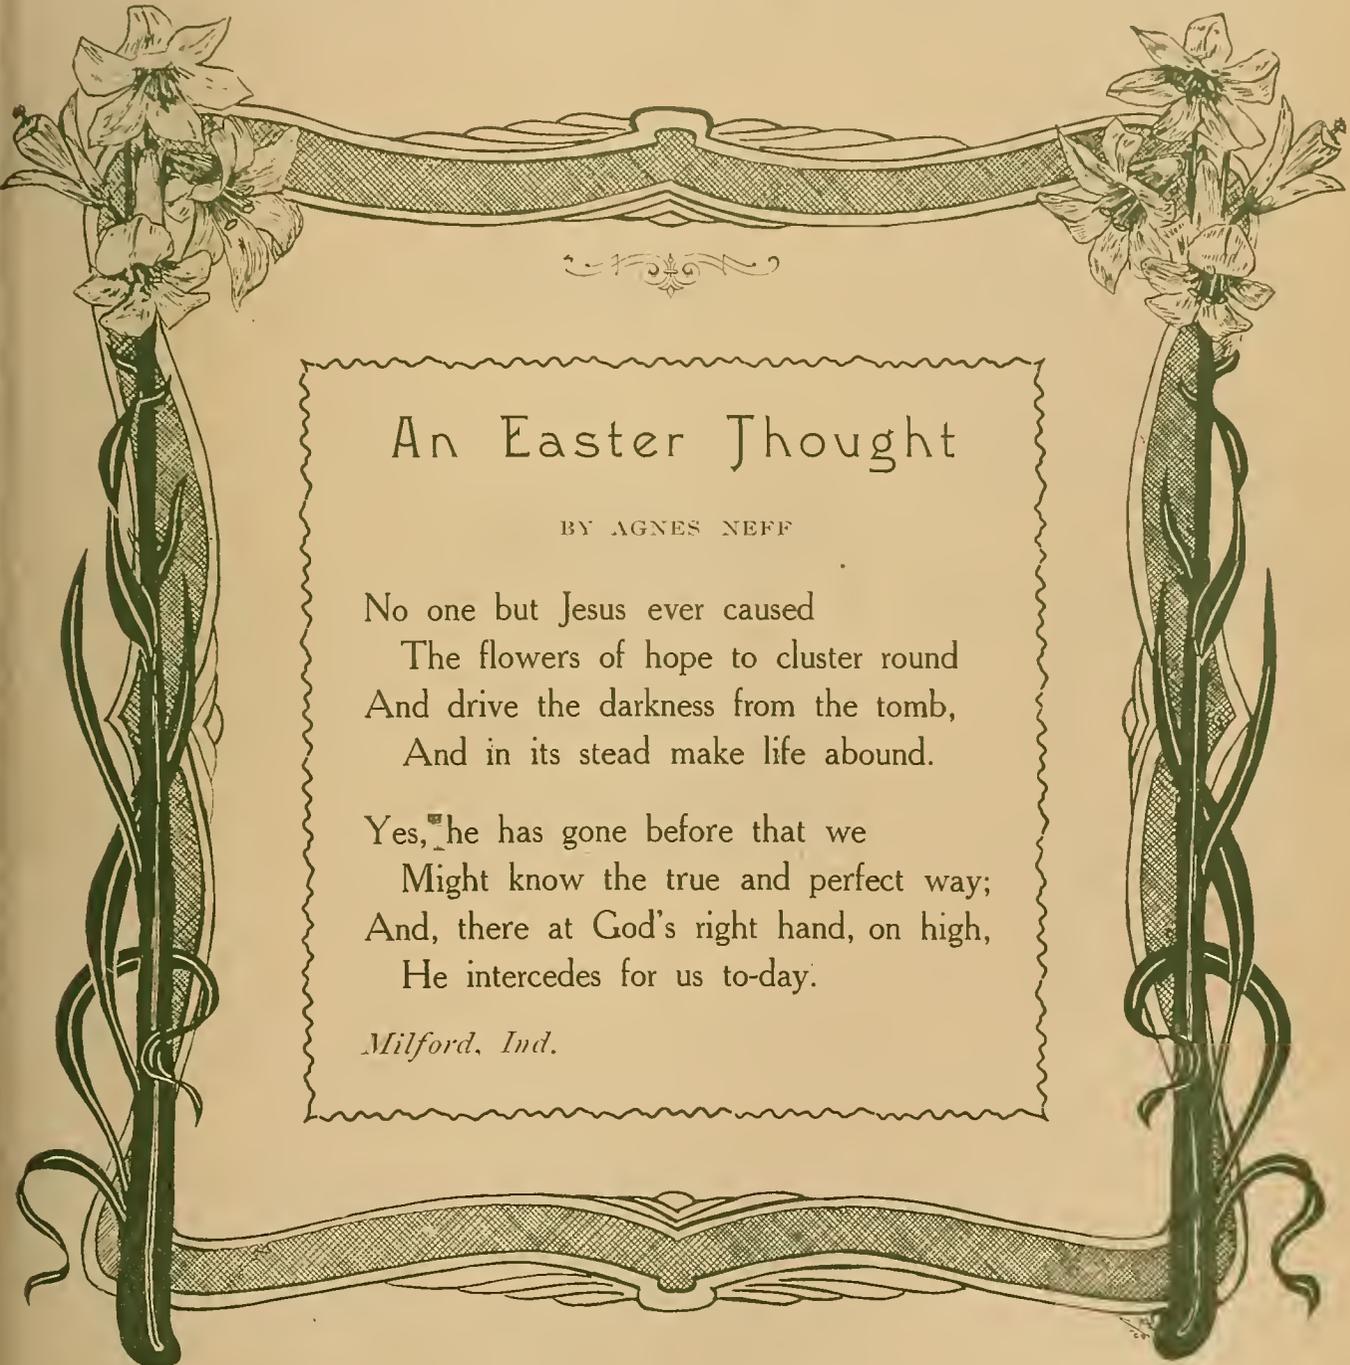

DR. PETER FAHRNEY & SONS' CO.,

112-118 South Hoyne Ave.

C. S. Morey Makes Remarkable Prediction in Regard to Beet Growing Here.

"Colorado as a beet sugar producing state will soon leave Michigan far in the rear, if the present developments continue."

This assertion was made this morning by C. S. Morey, head of the Morey-Boettcher syndicate. He has just returned from a trip to the East. While there he made arrangements for the transfer of one of the largest Michigan factories from Saginaw to Sterling, Colo. The new factory will have a capacity of 600 tons and will give employment to hundreds of men.

This will make the seventh beet sugar factory in the South Platte Valley owned by this syndicate.

The Union Pacific Railroad

Easter Cards

We have several designs of appropriate Easter Cards, which we feel sure will be enjoyed, especially by the children.

Sunday schools will do well to order enough to supply their primary and intermediate classes.

Numbers 7268 and 7004 are especially suitable for the little folks from 4 to 10 and 12 years old. Numbers 215 and 201 are very appropriate for larger children, and in fact would make very nice, inexpensive Easter Greetings for any one.

Our No. 201 are each placed in a separate envelope, are made up of four different designs and have the following Easter Greetings printed in silver: "Christ is Risen," "A Peaceful Happy Easter," "A Happy Easter-tide," "A Holy Easter."

7268 A substantial blue-tinted card. Embossed thereon are Chicks in their natural playful mood. One design shows the Chicks on the kitchen floor near a fireplace. On the other are two chicks holding a Basket of Beautiful Colored Eggs by a Cord of Blossoms. Beautiful colored effect. Two designs. Size, $3\frac{1}{2} \times 5\frac{1}{2}$. Six cards to a pack. Per pack, 10 cents.

7004 On these cards are Beautifully Embossed Chicks, emerging from Eggs with the shell only partly broken. Entwined about the Eggs and Chicks are Nasturtiums, Cyclamen and Poppies in natural colors. Embossed. This card will please the children. Three designs. Size, $3\frac{1}{2} \times 5\frac{1}{4}$. Six cards in each pack. Price per pack, 10 cents.

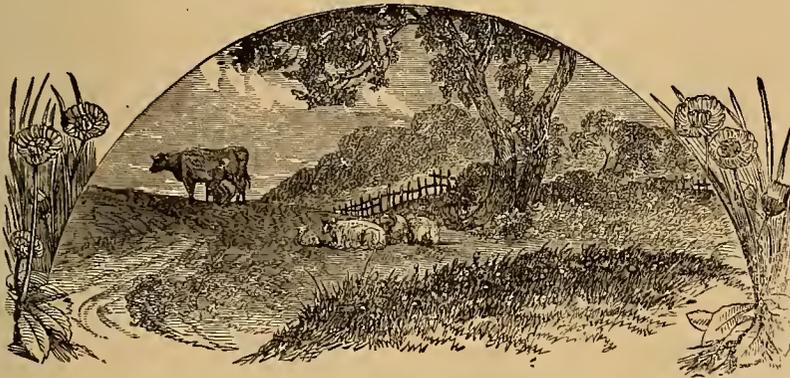

215 This dainty card has a deep embossed Scroll Border of Silver. In the center is a Beautiful Cross, printed in silver entwined about with Pansies, Violets, Easter Lilies and Lilacs in their natural colors. Each card has a suitable Easter Greeting printed in silver. Four different designs. Four cards in each pack. Size, 4x5. Per pack, 10 cents.

201 This attractive card is printed in a blue tint. The central scene is a Large Cross extending the full length of the card. The Cross is printed in Silver and Lavender and handsomely embossed in Scroll Designs and Flowers. In the center of the Cross is a Beautiful Angel. Four designs. Size, $5 \times 7\frac{1}{4}$. Price, 5 cents each.

Order cards by number. Packs not broken. No orders filled for less than 10 cents. Send your orders early, as our supply will not last long.

Happy as a Lark!

"Man's work lasts till set of sun; woman's work is never done," remarked a busy housewife the other day, as she heaved a sigh and sank down in a chair to rest.

A woman, as a rule, takes very little heed of her health. On her feet from morn till night, now looking after this, and now that, she rarely finds time to think of her condition. The constant worry and anxiety over household affairs, coupled with the cares of motherhood, soon leave their impress on the most robust women.

How many women are there not on whose faces the lines of worry are plainly marked and who are getting old long before their time, owing to neglect and indifference as to their health! They become nervous and irritable, a slam of the door upsets them. There is a continual drain on their vital forces. They lack in appetite, lose flesh, suffer with headaches, dyspepsia, constipation, pains in the back, bearing-down sensations, accompanied by sleepless and restless nights. Unless prompt attention is given to these early symptoms serious consequences are sure to follow, and they will develop into chronic invalids, a burden to themselves and others.

After the period of motherhood comes a most critical point in a woman's existence. Her delicate organism undergoes a mysterious constitutional change at this time, which makes her particularly susceptible to attacks of disease, unless her blood and system are in a healthy, normal condition.

In view of these facts it seems unnecessary to enlarge upon the importance of keeping a watchful eye on the state of the health, by giving the early symptoms immediate attention, for when health is gone everything is gone.

But there is no need of despairing, there is a way out of all these troubles—a highway to health. It lies in DR. PETER'S BLOOD VITALIZER, a vegetable remedy, mild, yet active in principle, which is especially adapted for woman's delicate organism. Thousands of happy mothers, healthy wives and sprightly matrons, bless the day when they first learned of this remedy.

HAPPY AS A LARK.

Bethlehem, Pa.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—My wife has been cured of sick headache and palpitation of the heart by the use of your honest herb remedy, the **Blood Vitalizer**. She had suffered for many years, and used to get up in the morning with a headache, hardly able to begin her daily duties. Now she is up early, working and singing. It has made a great change in her.

Very truly yours,

C. J. Steyers.

A LITTLE GIRL WRITES.

La Carne, Ohio, March 27.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—Perhaps you remember three years ago, when papa ordered a box of your medicine, the **Blood Vitalizer**, for mamma. She was so sick that she could hardly cross the floor, and in two weeks after using the medicine she was all right and able to do her own work. We would like to have some more of the medicine and keep it in the house. We send you _____ dollars in this letter. Send the box to Mr. Fred Gall, La Carne, Ottawa County, Ohio.

Yours truly,

Martha Gall.

Unlike other ready-prepared medicines, DR. PETER'S BLOOD VITALIZER is not to be had in drugstores. It is supplied to the people direct, fresh from the laboratory, through special agents appointed everywhere. Address:

DR. PETER FAHRNEY & SONS' CO.,

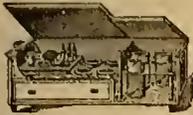

112-118 S. Hoyne Ave.

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime.

THE POET AND THE FLOWERS.

BY MARY A. WEBER SEARER.

The sun arose in splendor
With all his radiant beams,
And danced among the shadows,
Where the poet sat in dreams.

The birds their songs of gladness
Sent forth so pure and clear,
Inspired the mind of the poet,
Delighted his sensitive ear.

It was an aged birthday,
And friends had kindly brought
Him gifts of pretty flowers
From palace and from cot.

He raised the kindly emblems
Out from a box their dwelling place,
He noted some for beauty,
Some for their modest face.

"Those roses," said the poet.
"In showy dress arrayed,
Boughten at any florist's shop,
Mean nothing but the money paid.

"Their soul is on the surface,
No treasures rich can there abound,
That mine is far the deeper
Where purest gems are found.

"But that sweet bunch of daisies,
Tied up with wreaths of grass,
Were plucked beside the brooklet
Where happy children pass.

"They have original flavor,
A fragrance pure and sweet,
They have no boughten savor
To make their lives complete.

"They have a soul within them,
A value and a worth,
They have a power for goodness
For all the great wide earth.

"O, be not boughten roses,
With flourished outward show,
But have that soul within you,
Where saintly virtues flow.

"Oh, be a flower that's perfect;
Oh, be that which thou art;
So when life's toil is ended
Can'st say, 'I've done my part.'"

SEED-THOUGHTS FOR THE HEART'S GARDEN.

BY JOSEPHINE HANNA.

*The hand of justice falls swiftly on him who sins
against youth.*

✦

*However progressive the Present may be, it should
have no contempt for the Past, which reserved nothing
to give it a start.*

✦

*Ease may design life's pattern true, but Energy
must weave it with many different threads, which,
through the entire length, must not leave it.*

✦

*There are more opportunities than there are men
who know how to handle them; but these will arrive
—possibly while we are waiting for an opportunity.*

✦

*One may be perfect, as far as passive goodness is
concerned, and yet do little good: a reaper may be a
model machine, and never harvest a grain of wheat.*

✦

*Talk of having done our share of good! Who, then,
is to take the deserter's post—who, that of the fallen,
if charities are to be worked by shares? While Neces-
sity calls, duty is not determined by proportion, but
by ability.*

✦

*Do not think lightly of sin: it can only be blotted
out by the life-blood of God's own Son; between
friends, it may be forgiven, but this only means that
another unresentfully suffers it; in ourselves it may
be corrected but it will leave its effects; beware of it.*

✦

*Cannot see God in nature? Perhaps not,—though
he furnishes you eyes to see with, a mind to com-
prehend what you see, and light to distinguish it, put-
ting back of all life to quicken the faculties, and be-
fore it all his own clear hand-writing—creation,—
which none can counterfeit. All who can see an in-
ventor back of a pair of eyeglasses should see a Cre-
ator back of their own eyes—and before them.*

Flora, Ind.

EASTER.

BY RILLA ARNOLD.

It is strange that the word Easter, which is dear to every Christian's heart, as the name of the day when the resurrection of Christ is commemorated, is of heathen origin. It is supposed to be derived from the word Ostara or Eastre, the name of a goddess whom the ancient Saxons worshiped. They had a feast-day in her honor at the springtime of the year.

The early Christians also had a feast-day at this time of the year, but it meant something more to them than the mere bowing down and worshiping of an imaginary goddess. They were filled with awe and love and reverence for the Man of Galilee, whose wonderful life and death and resurrection they had heard so much about.

The day was kept by the Eastern or Greek churches in memory of his death, and by the Western or Roman churches as the day of his resurrection. At the Council of Nice, A. D. 325, the dispute was settled in favor of the Roman usage.

The next question which arose was whether the day should be a fixed day—the first Sunday after the 21st of March, or whether it should be determined by the moon. In deference to the ancient custom, the ecclesiastical authorities decided it should be determined by the moon, and that custom has been adhered to ever since. The earliest date it can occur is the 22nd of March and the latest is the 25th of April.

These historical facts and dates are of little importance. It is the event which occurred so many centuries ago, which this day is to commemorate, that is all important to all the people of the world. Without the memory of that day Christianity would die, as the religions of the ancients have died. Without that day there would be no plan of salvation. Christ's birth, life and death all help to prove his divinity, but the climax is reached in his resurrection, his glorious resurrection!

Let us be as happy in our own hearts this Easter day as the friends of Jesus were that resurrection morn when the women brought the joyful news: "The tomb is empty!" "The Lord is risen!"

They had seen him, torn and bleeding, die the ignominious death on the cross, just three days before. O, how sad they were! To think that their Master, the Holy One of God, should suffer death! They were as sheep without a shepherd, and of all people on the earth the most miserable. The news of the resurrection meant much to them and it means much to us to-day.

All nature is in a joyful mood at Easter time. The trees and flowers are here to remind us of the resurrection, and the birds are singing, "He is risen."

Milford, Ind.

POLLY'S EASTER SERMON.

ONCE, when Polly was a little girl, she preached a sermon, a sermon that four or five people always spoke of as "that little Polly's Easter sermon," though Polly never dreamed at the time that she was preaching at all. "I learned from that little Polly's Easter sermon, and I shan't ever forget it," one or another would say, "that we all have something we can lend!"

Early in the fall one year, that year that Polly was going on ten, her Sunday-school teacher had told her class that it would be beautiful if each girl would buy a bulb and tend it herself, and on Easter bring the plant to school, and then all go together to the Children's Hospital and make glad the holy day.

"And," she added, "we will choose out the loveliest flower to give to the sickest little child of all!"

Now Polly was poor as could be. She lived in a tenement house, and her mother, who did washing and sweeping, worked hard mornings and nights to keep their two rooms tidy and comfortable; and little Polly had learned that a patch of brightness will grow and spread in almost any place if you try for it. And once, too, little Polly had been "the sickest one of all" in the hospital, and she just longed to take a lovely flower there on Easter—she knew about the joy a flower can give.

"But I have only three pennies!" she sighed; "now what can I do with three pennies?"

Well, I will tell you what was done with Polly's three pennies.

Polly went to Mr. Smith, the florist, and she found him sorting bulbs. She asked him if he had a fine bulb for three cents.

Mr. Smith said, "No!" but tossed a crooked little brown knob at Polly's very feet.

"You can have that one for nothing!" he laughed, "and I'll sell you a pot of earth for your three cents."

Polly took the offering; and then she told Mr. Smith of her plan.

"I'll come in and tell you how it turns out!" she cried gleefully, and away she ran with her prize.

Now the window of Polly's back-room was always sparkling-clean, and the sun shone in every morning when it was clear. There, by and by, on a little stand, Polly stood the pot with the Easter bulb; and every morning before she went to school she paid the little pot a visit, and sprinkled the dark earth and breathed a wee prayer over it, and then left it to the sunbeams.

The warm sun always kissed the earth, and way down deep the little brown bulb stirred and dreamed.

And one day the little bulb straightened out and sent two small green sprouts up through the earth to tell Polly and the sun that it was doing its best.

Polly was wild with joy at this message, and that same day, full of fresh faith in the bulb and in the sun, she had an inspiration. She knew that the Queer

Lady, and old Daddy Nolan had the sunlight a part of the afternoon in their windows. Right after dinner the Queer Lady had it, and later came Daddy Nolan's turn. So, although she was almost frightened at her own daring she took her little pot in her arms and trotted across the dark passage to the Queer Lady's door.

Polly knocked softly. A cross woman opened the door. "What do you want?" she asked.

"Please," faltered Polly; "may I borrow your sunshine?"

"My—what?" Then the Queer Lady laughed roughly. "Come in and see if there is any here," she said.

Polly tripped in and looked about the dirty room.

"Oh! plenty," Polly replied, "if—if we could wash the window a little."

The Queer Lady was not angry at all, and after she had heard Polly's story she went to work and soon a part of the window fairly shone, and the surprised sun looked in and said as plain as could be. "I declare! there are Polly and that pot of hers. Did you ever?"

For a whole hour Polly and the Queer Lady worked and talked, and when the sun passed on, the little girl gathered the pot to her heart and thanked her new friend. "Bring it every day," whispered the Queer Lady. "I'll have the window bright."

With a brave heart Polly with her plant toiled along up to Daddy Nolan's room. He lived at the top of the house, and had quite a fine lot of sunshine until the day was gone.

Tap! tap! tap! Tap! tap! tap! very softly.

"Who's there?" cried a gruff voice.

"Just little Polly down stairs!" quivered the visitor.

"What do you want?"

"It's to know if you will please lend my plant your sunshine, Daddy?"

"Well, come in, then!" The gruff voice was softer.

Polly went in, all smiles and dimples, right over to Daddy where he was by the window caning chairs; and with the little pot in her arms she told her story.

Daddy got up and took the pot, and put it where the sun shone warmest; and then he and Polly had the time of their lives.

The little girl tidied the room, and sang as she pattered about. Daddy watched her, and his heart grew tender, and the sun shone on the pot with the little green sprouts.

So it was the days and weeks passed; and you should have seen that plant grow!

The Queer Lady's room became as neat as wax; and every afternoon, when the sun shone, she waited for Polly's step and knock with a glad warm heart.

The sky was grey some days and there was no sunshine to lend. none at all.

As for grave Daddy Nolan, he became too restless to work when the clock pointed to three and he would go again and again to the door to see if Polly was climbing up the stairs. If the sun had come over the roof, he was pretty sure to hear her light step and then to catch sight of her brown head with her shining face almost hidden by the rich green leaves that now stood firm and full upon the stalk. Among those leaves the dream of the brown bulb was hidden—closely locked in a dark covering.

At the rooms that had only sunless windows, Polly stopped every day on her way up to Daddy Nolan's, to let the inmates feel how warm and strong the leaves were!

The Saturday before Easter when Polly opened her eyes a wonderful sight greeted her.

There stood the plant on the window ledge—with its dream come true! A glorious white lily shone in the dim room, a lily with a heart of pure gold!

Polly knelt before it like a little saint before a shrine, and the sun, peeping in just then, sent a blessing down in long warm rays of light.

Polly's mother was standing there, in her shawl and bonnet, ready dressed to go to her day's sweeping. "I can hardly bear to leave it," she said; "only that *you* will have it all day, dearie!"

And then Polly went up the stairs, bearing the plant in her arms, and calling with her little knock at every door. "Come out and see the lily! Come see our lily!"

And what an Easter Sunday that was on the morrow! Polly, carrying the lily, went through the grimy streets toward the Sunday school, and after her followed her mother, the Queer Lady, and Daddy Nolan, and the others, all in their Sunday best, to celebrate the blooming of Polly's lily.

Then Polly's teacher said, "Now, Polly, tell the school the story of the little crooked bulb—we shall all hear an Easter sermon by and by, but little Polly has a story too precious to miss."

Forgetting herself, and still holding her lily close, Polly began with the little crooked bulb and went on to the sunshine she borrowed of the Queer Lady and old Daddy.

"They all helped," she ended radiantly; "they lent me their sunshine, so that my lily had sunshine all day long! Just see it now—and it was such a helpless little bulb!"

And then—oh! you should have seen that joyous procession, going on to the Children's Hospital—the whole class with their flowers. With glowing face, standing by the snowy bed of the "sickest child of all," Polly called softly to the little boy lying there. He heard, and coming back from his shadowy dreams, he saw the glorious lily, and then the flower was placed by his bed, and he lay and looked at it with a

smile. And, as if it were almost an Easter resurrection, from that very moment he began to get well.—*Harriet T. Comstock, in Little Folks.*

THE HARMONY OF PHRENOLOGY AND THE SCRIPTURES.

BY H. B. MOHLER, F. A. P. I.

Part Two.

THERE is considerable difference of opinion as to whether the Holy Spirit is an innate identity in our nature, or whether it is the *Spirit of God* separate and apart from human nature. Seemingly this question should for all time be settled when we recognize the inherency of both laws and the mighty conflict they induced in Paul's life.

Apart from this, we believe that because we are born in God's image we assuredly possess all the divine attributes in embryo, and if we stop to survey our own experience in our Christian warfare, as did the Gentiles, we will at once recognize the two gigantic opposing forces—the "*flesh against the spirit*" that so furiously waged in old Brother Paul.

It is undeniably true that this warfare alludes to the strife between the religious and animal faculties of the human mind. It is impossible to look at the *form, size, heredity, quality, temperament and mental developments* of any two individuals—the one having all the above essential conditions very favorable and the other *not* so,—and not be absolutely convinced how precisely revelation, human nature and phrenology all coincide.

The study of the *Will of God* written by human hand, through the channel of inspiration and revealed in the Scriptures as a power influencing the human mind, MUST be in harmony with the laws governing our mental and physical organization for God is a *God of law and order*,—with him indeed "*there is no variableness nor shadow of turning.*" James 4: 1 asks: From whence come wars and fightings among you?—come they not hence, even of your lusts that war in your members?" (propensities)

The study of phrenology emphatically proves this truth, for it explains the relative and absolute functions of our moral and selfish faculties, and further, this science and the Bible say that war and strife cannot exist between the moral and religious faculties of our nature, for among them there is perpetual peace and harmony that God designed MUST EXIST between the different attributes of the divine mind.

When we read the frequent appeals Paul makes to his Roman and Galatian brethren concerning the irregular and excessive action of their *animal faculties* we, at once, recognize from observation the "*works of the flesh*" alluded to in Gal. 5: 19—"which are

these: *Adultery, fornication, uncleanness, lasciviousness.*" Now these are altogether the abnormal and excessive action of but the one faculty of amativeness. No sin, indeed, is so appalling in its power, so wide in its range, so debilitating to the nervous system, so depraved in its results and so demoralizing to virtue and Christian manhood as this "*sin of the flesh.*"

Matt. 15: 19 says: "For out of the heart (which clearly means our animal and selfish faculties), *proceed evil thoughts, murders, adulteries, fornications, thefts, false witness, blasphemies,*" which are uncontrolled activities of amativeness, destructiveness, combativeness, secretiveness, acquisitiveness, alimentiveness. Taking them up in order with reference to their excessive activities let us look at (1) destructiveness: This leads to war, bloodshed, murder, etc., recorded in Acts 9: 1; 8: 1.

2. Combativeness: This faculty when not controlled leads to contention, quarrels, wrath, hatred, etc., and when acting with the above faculty causes malice, revenge and contemptibility, as recorded in Titus 3: 9; 2 Tim. 2: 14; Eph. 4: 26, 27-31.

3. Secretiveness: This faculty when not subdued by conscience and regulated by reason induces *slyness, cunning, strategy*, and DECEIT which Paul asserts that evil men are guilty of, in 2 Tim. 3: 13; Eph. 4: 14; 5: 6; Matt. 27: 63, and many other places referred to.

4. Acquisitiveness, when left to run riot alone, using a keen intellect as its agency, will produce *forgery, embezzlement, larceny, highway robbery*, which Paul reproves in Eph. 4: 28; John 10: 10.

5. Alimentiveness is universally over-indulged and should be controlled by *will* and judgment; but over-eating, *gluttony, drunkenness*, and gormandizing Christ himself was accused of in Luke 7: 34. All the dyspepsia and indigestive troubles arise from the perversion of this faculty.

Thus we see that every sin, transgression, or disobedience results from the abnormal activity of human, God-given faculties through an innate Satanic influence which had its origin in the "*fall of Adam.*" How clear to the phrenologist Paul vindicates the morbid action of thought and feeling through human faculty!

Now turning the picture from darkness to light, listen to Christ's language in Matt. 5: 6: "*Blessed are they which do hunger and thirst after righteousness; for they shall be filled.*" No man was ever so well told the real function of conscientiousness, for this faculty, in its blind instinctive way, wants the right, the truth, is dutiful, honest, and its conviction always is "*to do the will of God,*" if not mangled and torn by perverted criticisms, false doctrine or agnostic philosophy.

See Matt. 5: 7 and read: "*Blessed are the merciful; for they shall obtain mercy.*" This is a direct appeal

to the faculty of benevolence, which, when active, impels men to *mercy, kindness, good deeds, sacrifice* and help to the needy. The "*Good Samaritan*" and all mission workers, philanthropists, etc., are largely endowed with this. What a spiritual power this faculty means to the Christian!

Verse 5: "*Blessed are the meek for they shall inherit the earth.*" This meekness evolves wholly from the sacred faculty of veneration—its function being to induce *prayer, reverence, humility, obedience, etc.* How essential to spiritual guidance, for

"Prayer is the upward glancing of an eye
When none but God is near."

Turning to the blessed faculty of *hope* Paul in Rom. 8: 24 says: "*For we are saved by hope: but hope that is seen is not hope: for what a man seeth, why doth he yet hope for?*" How beautifully this statement expresses its functions, and science shows us its location, function and relation to this life and the life beyond, how it *expects, cheers, anticipates*, and keeps life bright and buoyant—it lifts the veil and with spirituality enables man to look and behold the beauty of a life that is "*hid with Christ in God.*"

Here we see the moral philosophy of phrenology and it is *only* by adopting its classification of our mental faculties in a primitive way that we gain a clearer insight of much of the metaphysical language of the sacred writers. Horace Mann told a great truth in stating that "*phrenology is the guide to philosophy and the handmaid of Christianity.*"

Grand Junction, Colo.

(To be continued.)

CESSIONS OF TERRITORY.

SEVERAL recent events call attention to the various modes in which territory has been transferred, in the course of time, from the dominion of one nation to that of another.

The Behring Sea fishery dispute between this country and Great Britain is the result of the cession of the great northwestern territory of Alaska by Russia to the United States. The giving up of the small island of Heligoland, in the German Ocean, by Great Britain to Germany derives its chief importance, perhaps, from the fact that it is the first cession of territory made by Great Britain for many years.

The partition, moreover, of vast tracts of territory in Eastern Africa between Great Britain and Germany is an event fraught with large results to the civilization of the world in the not distant future.

The transfer of territory, by one method or another, from nation to nation, has been customary from very early times. The most frequent means of these changes, down to the more enlightened period of modern times, was by conquest.

If we read the history which is the most interesting to us next to our own country—that of England—we shall find that the English rulers for centuries were bent on conquering and annexing to their own crown different territories on the European continent, especially France.

At a later period the English have sought the possession of territory in more distant parts of the globe, securing it by conquest of arms. By this method the British Empire has grown to its present vast size, and includes great communities in every continent.

In quite recent times, however, the only acquisition of the territory of a highly civilized country, by sheer force of arms, was that of Alsace and Lorraine, taken from France by victorious Germany in 1871. Germany also intended to keep for herself the great fortress of Belfort, in southeastern France, but was persuaded not to do so.

A more frequent modern method of acquiring territory is that by which we have obtained Alaska—namely, by purchase. Alaska was almost useless to Russia, while it was believed to be of great use to us. Our government therefore made a mutual bargain with Russia by paying her a little over seven million dollars for it.

In the same way, in the early part of the present century, the United States made what was called the Louisiana purchase from France. This purchase included a vast area of territory, stretching from the Mississippi to the Rocky Mountains, which we, near at hand, could much better utilize and develop than could France, three thousand miles away, and with heavy wars on her hands.

Another means by which territory is sometimes transferred from one power to another is by treaty agreement, resulting from a service done by one nation to another, or from the manifest mutual benefit of making a "swap" of territory.

When the Emperor Napoleon III aided the Italians in their war of independence in 1859, he asked as a recompense for his assistance that Italy should cede to France the two provinces of Savoy and Nice. But it was then agreed that this should only be done with the consent of the people of the provinces themselves.

The people voted on the question and by a large majority assented to their transfer to France; and to that country they were accordingly annexed, and they still remain a part of it.

This method would seem to be far more in accordance with the modern idea than the passing of territory over from one nation to another without the consent of the people dwelling upon it being asked. The people of Alsace and Lorraine were not consulted when they were taken into the German Empire, and the result has been that they have been restive and difficult to govern for twenty years.

THE HONEY BEE.

BY JASON B. HOLLOPETER.

DID you ever stop to think when you ate honey that it takes two thousand bees, working hard all day, to gather a single pound from the flowers? A bee can carry a load of nectar to equal half the weight of its body, but usually it carries about one-fourth its weight, or the size of a large drop of water, and it is mostly water.

Let us follow a bee from the flowers to its home, see where it lives and learn something of its life. Its home may be in some hollow tree, or it may be in some hive if it is not a wild bee. But if we wish to learn anything of the bee's home life we must have a modern patent hive, which is so arranged as to permit a view of the interior of the hive, the combs of which can be taken out without injuring either bees or honey.

Such a colony of bees contains from 20,000 to 100,000 inhabitants. This vast multitude of insect life is divided into three classes. The first class comprises the queens, which are sometimes improperly called "King Bees." Usually but one queen is found in a colony, and, during her long life of three or four years, Her Royal Highness is supreme ruler in her domains. The queen is capable of laying from 2,000 to 3,000 eggs a day in summer time.

The next class and next in size are the drones. They do not sting for the very good reason that they have no "stinger." All they can do is to eat and be at ease; it is impossible for them to gather honey, as they have no sucking tubes fitted for that work. On account of their idleness they are very often killed by the working bees, but if left to die a natural death it is usually at the age of from four to six months. In the summer time there may be several hundred drones in a colony, but at any other time there are about that many dozen.

The last class are the working bees, which comprise almost the entire population of the colony. As the name indicates they are the workers, and their life history may be written in one word, "work." The few weeks of a working bee's life are spent in incessant toil. In the early morning it starts out in search of nectar, and keeps working all day until sunset. It has no "Labor Union" and observes no "working" hours, never strikes, never grumbles, but is always humming and busy until it gives place to another. Is it any wonder that the honey bee will defend, with such valor, its hard-earned stores?

There are many races of honey bees, differing in many minor details, but in all you will find the above three classes present. The queen stands first in size and importance, and the working bees next in value, with the drones second in size, but least in value.

Union Bridge, Md.

THE FIRST ART.

By its intensely practical nature we are daily reminded that "life is real, life is earnest;" that it is more than theory. And since millions have lived in ignorance of philosophy, it must be more than philosophy. Other thousands have never known science. It must be more than both of these since both ignore some of the most essential elements of human nature. The philosopher, with his cold, logical reason, defies emotion, while the great scientist, Darwin, sadly confessed his lack of love for music and poetry. True, there is a science of living. We would not underestimate that, for it is the basis. "Science is the root of the tree of life, of which art is the fruit and flowers."

Without the science of painting, our eyes had ne'er beheld the beautiful masterpieces of our great artists. It is evident, however, that it is not all of art to paint. Nor is it all of life to live, to exist.

To contemplate that wonderfully significant movement in the evolution of man, when God breathed into him the breath of life and he became a living soul, is truly awe-inspiring. And yet, as we behold, with ever-increasing astonishment, the growing intelligence and power and beauty of man, made possible by this God-infused spirit of development, we stand gazing in mute admiration until our souls are so overwhelmed that we involuntarily cry out, "How beautiful is life! How vastly more grand to him than merely to exist!"

To many men, however, these glorious visions are hidden. In their reverence for the "old," and under the inertia of custom, they set themselves crosswise of the current of progress and since the essential difference between the savage and the civilized man lies between unconscious and conscious progress shall we conclude that something of the savage yet remains in the modern conservative who ever clings to precedent, and will never accept an amendment to either his politics or religion? All the progress of the past unites in protest against such conservatism. Far better suited to this progressive age is he who scales the heights of Pisgah, and from that ideal plane, views the landscape o'er. He holds the key to the situation. For in the light of higher conceptions and better ethics, only truth will stand, while all these merely supposed-permanent things, though crystallized into laws and creeds, or forms and symbols, will perish before the irresistible on-sweeping tide of advancing consciousness.

As applied to all life, society, education, culture, government, and religion, progress is the key to the cabinet to all true living. In fact, it is by this progressive spirit coupled with the capacity for untiring labor, together with the ability to adapt the lessons of his predecessors, that man has demonstrated his power to make living itself the finest of the arts.

An artistic life, then, does not come by leaps and bounds. Just as the genius does not come into existence spontaneously, but is a compound of brains and toil, so the art of living is the gradual blending of the real with the ideal.

These two elements form the basis of two stages of development in the individual. And while no intelligent person, perhaps, would care to be labelled by any exclusive tag, yet it is true that the real or scientific temperament predominates in some, while in others the ideal or artistic temperament prevails. Owing to the fact that society is composed of individuals in these two stages, it is necessarily divided into two classes,—those who live in the world of things, who are materialistic in their views; and those, on the other hand, who live in the world of ideas, who treat things as Emerson treated a load of wood, just as if it were real, while the atmosphere of ideas in which he lived was infinitely more tangible. It is in this realm that living, to my mind, first becomes not only an art but a fine art.

No doubt we all agree with Henry George that "mind, not muscle, is the promoter of progress." Once in possession of this basic principle, this golden key, man almost invariably sets about to unlock the guarded vaults of his mind. A well-rounded, harmonious development is the all-absorbing purpose of his life. He wishes not to become a mere intellectual giant. Hence he seeks, not only scientific truth, but also the æsthetical and ethical. His search for truth is not only broad, but deep. Whether in the field of science or art, of history or philosophy, he endeavors to disrobe the facts from all the verbiage of men's opinions, that he may behold them in the true light of their own inherent radiance. For the sunlight of God's truth has often been obscured by the dense mists of human embellishment. He also cherishes and cultivates the eclectic spirit, and with an unprejudiced mind gathers truth from all sources.

The purpose of all this search for truth is not utility alone. True this is an utilitarian age, when practical education is the popular demand from the pulpit and platform down to the professional thief, and even to that other thief, the manipulator of monopolistic industry, or still worse, the "plain political boss" who not only steals men's principles, but robs the nation itself of the highest type of government.

A man must be educated by all means; but are there not higher considerations than office-holding, money-getting, and those things which constitute so-called practical utility?

That education, it seems to me, is vastly more practical which supplements utility with beauty. Indeed, no soul is capable of any high type of culture that does not possess, in some measure, an innate perception and love of the beautiful. The great World Artist has in-

fused this element into all his created work. It unfolds in the blossoms of springtime and colors the autumnal leaf. It waves in the towering tree-tops and the tiny blades of grass. It haunts the depths of earth and sea, and roams the meadows of the celestial world. The ocean, mountains, clouds, and sunset o'erflow with beauty. Then there are the beauties of painting to please the eye, of poetry to delight the mind, and of music to feast the ear. No man can claim true culture whose soul does not respond to these artistic creations of God and man. No great poem was written except in defense of a great truth or a noble cause. No impure hand ever sketched an immortal painting. No brain, discordant with itself and the world, could possibly conceive the harmonies of a great symphony or an oratorio. The highest thing art has ever done is to set before the human soul the image of a noble being. And only the pure soul can respond to its lofty inspirations; for æsthetics and ethics are inseparable.

Do these conditions appeal to you as being too ideal, too ethereal for any practical use? But have you ever thought that ideals themselves are the most practical things on earth? The ideal world is the soul's art gallery. Here are the models it seeks to realize in itself. Here it embodies in itself that creative, life-giving impulse so indispensable to all fine arts; and without which man could not even conceive ideal relations, much less realize them.

All progress is but the adjustment of institutions to ideals. This is true in the development of government from despotism to democracy; in the evolution of religion from fetichism to Christianity; and of Christianity itself from human dogma to divine doctrine.

Every relation in every line is started by some idealist. In such men as Emerson, Luther, Ruskin, idealized thought has been presented to the world. Christ himself is the greatest of all idealists in government and religion, as also in every other line and the world is slowly adjusting itself to his standards.

These idealists have introduced new world periods, when with much pain and struggle the world has sought to be born into higher life. And from these epochal periods, society, with "Hiawathian strides and Herculanean strength," marches out from the barren wilderness of ignorance and superstition and takes up new burdens for man's betterment. Whenever the world has thrown overboard her past errors and sailed out on some unknown ideal sea, with an idealist at the helm, she has never failed to discover some X-ray, or law of metaphysics, or principle of brotherhood, or larger Christ.

We are, to-day, out on an ideal sea. We do not think of our golden age as past, nor do we seek in the Nirvana of the future. We are coming more and

more to realize, as we labor to fulfill our ideal, that our golden age is in the present, and that it will contain just what we put into it, no more.

And though as Herbert Spencer says, "There is no political alchemy by which we can get golden conduct out of leaden instincts," there is plenty of chance for golden instincts—for high ideals.

The ideal art of living, as exemplified in the lives of all great men, is the art of being true to the home, the social circle, state, business, to the church. The man of culture, the thinker, the artist, is true to all these relations. And while he lives deeply in his own age, partaking of its warmth and vitality, without its narrowing influences, he is able, on the other hand, to stand aside from the vital movement and take the student's view of the drama's imperfections, to see its relation to all ages, yet without becoming cold and critical.

As we look out upon the world, endeavoring to understand our time and its needs, let us neither be appalled by its problems, on the one hand, nor indifferent to its shortcomings, on the other. For life is measured more by endeavor than by attainment. We shall at least have begun to live nobly if we exercise every faculty in the service of the true, the beautiful, and the good, and the result will be the finest of the fine arts. As a help to this end, let us take with us this motto from Goethe:—

"Faithful work, this only helps the growing life;
When in love we labor, serving noble arts,
Life's horizon broadens, deepens with the strife,
Freely, then, may nature glow within the heart;
So, by conversation, is our culture wrought."

MANUFACTURE OF POSTAL CARDS.

THE general process of producing postal cards is doubtless familiar to the great majority of our readers, but improvements have recently been made in rotary-cutting machines, for producing them with extreme rapidity, that are worthy of especial treatment. The machines utilized in the process of manufacture were supplied by Charles Beck, Philadelphia, and are of the Brown type, and embody ingenious improvements suggested by the first-named gentleman, by which the rapidity was increased and the work improved.

Owing to inferior stock or board used on the first run of postal cards, the government rejected many millions, and in order to fulfill the contract it became necessary to work the machines night and day. The postal cards are manufactured at Birmingham, Conn., and are made under private contract to the government inspectors who remain in the factory continually.

The cards are printed one hundred in a sheet, and in the process of cutting the latter is first passed through a rotary slitting machine, which separates them into strips containing ten cards each. As these

strips leave the machine, they drop upon a division platform, which collects them in ten separate packs. The capacity of this machine is such that the number of strips cut in ten hours will make 3,000,000 of single cards. The sheets are laid upon the broad table of the machine one at a time, and pushed forward to the knives which draw the strip in, and deposit it on the opposite side of the machine upon the receiving platform. The machine is usually operated by a man.

The strips are then taken through the cross-cutting rotaries, each of which has a capacity of half a million cards every ten hours, to be separated into single cards. These machines have an automatic feed-motion which carries the strip to the knives after it is placed upon the table against the guide-plate. While the strip is being carried to the knives by the automatic feeding device, it comes in contact with a delicate lever, which it moves forward and acts upon a registering wheel, which it slightly turns; after the wheel has been moved the required number of times, a projecting pin on its side strikes the hammer of a gong, the ring of which denotes a certain number of cards that has passed through the machine. The cards drop into a receiving box, so made that it can revolve, and which is divided so that one card drops into each division, there being four compartments so divided. At the sound of the gong the registered number is twenty-five cards which have fallen into each division of one of the compartments; at that moment an operator turns the box, bringing up an empty compartment to be filled by the machine, while the cards are being removed that have fallen into the first division.

The strips are laid against the guide-plate two at a time. This feature of the operation requires special training on the part of the operator, who must be very expert from long experience. By the feeding of two strips into the machine at a time the output is almost doubled. It was at first denied that two pieces could be picked up every time, but an operator was procured from Castleton, N. Y., who not only demonstrated the plan to be a success, but, later, instructed all the operators to perform the same feat. The sense of feeling in the hand is so trained that mistakes rarely, if ever, occur.

There are three cross-cutting machines in operation at the postal card factory, and two of the operators are females who were educated in the work of operating these special machines at Castleton, on the Hudson river, where the cards were manufactured previous to the present contract.

In a working day of nineteen hours, from 7 A. M. to 4 A. M., with two hours out, the three machines have a record of cutting 2,675,000 cards, which is equivalent to cutting 141,000 per hour for the entire number of machines, or 47,000 per cutter, giving a record of 783 cards per minute; ten of these being cut

to a strip, and two strips to one feed-motion, the operator will thus have to perform thirty-nine separate motions per minute, a feat which is certainly unequalled in card cutting where accuracy has been aimed at.—*Selected.*

LEAFAGE OF PLANTS.

ALL trees and plants that spring from two-lobed seeds, that is, from seeds that can be split like peas or acorns, have their leaves veined irregularly. They cannot be torn across except by a broken line. On the contrary, the leaves of such plants as spring from a kernel that will not split—a grain of corn, for example—can be split lengthwise into tapering strips. In this way we can distinguish plants that grow from seeds that have two cotyledons from those whose seeds have but a single cotyledon.

The leaves of cotyledonous plants, as they are called, are of great variety of size, shape, texture and finish. They are not a simple membrane, but are made up of many layers of cells. The interior of the leaf communicates with the external air by millions of little mouths. These are mostly on the under surface of the leaf. This is to protect them from the sun, and to secure uniform evaporation.

The surface of the leaf is in some cases protected by a coat of varnish. The upper side of an oak or a birch leaf will show this finish plainly. In other cases the same object is gained by an increased thickening of the sap. In Australia, it is said, the leaves of some trees take a vertical position, so as to present a smaller surface to the sun. Fleshy leaves are protected by their thickness.

Another mode of protection is by the growth of woolly hairs. Plants of the desert are frequently covered with a felt of hair. The cactus often grows in this way. Some species of plants which are smooth in the North become woolly in the South.

The uses of hair are various. They serve to check too rapid evaporation. They protect the breathing-holes, and as these are on the under side of the leaf, it is the under side that is hairy. This fact is strikingly noticeable in the case of the white poplar, for as the leaves of this tree are in almost constant motion, the turning from one side to the other produces a shimmering effect.

In other cases the use of the hair is to throw off water, and to prevent the breathing-holes from becoming clogged as they would otherwise be with fog or dew. This is important in some mountain and marsh plants. Nature resorts to the same contrivance for protection against too much moisture that she uses against too little.

The hairs also serve to shade the leaf from excessive light and heat. More than this, they protect the leaf against insects, which would otherwise feed

upon it. The stinging hairs on the common nettle save the plant from being fed upon by the larger animals. A coarse, woolly hair is equally distasteful.

Most leaves are glad of as much sunshine as they can secure, and are arranged with reference to this end. If we cut off a beech twig below the sixth leaf we find that the leaf area which it carries is about eighteen square inches. This is determined by the distance between the buds. If the leaves were broader, they would overlap; if they were narrower there would be a waste of space.

The area on the one hand and the width on the other being thus determined, the length is fixed, because, to secure an area of eighteen inches with six leaves which are about one and three-fourth inches in width the length must be about two inches.—*Selected.*

FACTS ABOUT MONEY.

PROBABLY the most interesting fact about money would be a description of just how to get it; but this is one of the hard things to tell, and there are certainly some other things quite interesting and well worth knowing about it, and not the least of these is a history of the word itself and some of the other words connected with it:

The Roman "money" comes from the word *Moneta*, and this comes from the inscription "*Juno Moneta*" on the Roman coins, struck in a temple of that name. *Moneta* is derived from the Latin word, *Monere*, to warn, because this temple was built on the spot where Manlius heard the Gauls approaching to attack Rome. The root idea of the word, therefore, is a warning. Among the ancients, cattle were used as we use money in trade, and as such some uncivilized people still use them. Thence our word "pecuniary" is derived from *pecunia* or *pecus*, cattle. Our word "coin" comes from the Latin *cuneus*, a die or stamp. A British "sovereign" is a pound or a five-dollar gold piece, taking its name from the image of England's sovereign stamped on the coin. And a "crown" is a piece of English money with a crown on it, worth five shillings. A French "Napoleon" and a "Louis d'or" are names given to coins on which the images of these two rulers were stamped. A "guinea" is a British gold piece worth twenty-one shillings (\$5.15), so called after the country from which gold used to be brought. The British "pound" meant originally a pound weight of silver, divided into 240 pennies. In a Joachim Valley, Bohemia (Joachim's *thal*), certain coins were struck in the sixteenth century. At first they were called "Joachim's thaler." Later the first part of it was dropped, and the name shortened into the German "Thaler." From this comes our English "dollar."—*Selected.*

HENRY WADSWORTH LONGFELLOW.

BY M. KIZZIE HAYS.

HENRY WADSWORTH LONGFELLOW was born in 1807, in Portland, Maine, a beautiful town which had a wide outlook over the sea, and landward the landscape stretched away toward the White Mountains. Like most of the New England towns of that day, it was pervaded by the spirit of the most austere Puritanism,—the town meeting was ruled by the pulpit and the pew. There was a good deal of intellectual life in the town, but the social pleasures were few.

Longfellow's ancestors came from England. William Longfellow, the founder of the family in New England, settled in America in 1676. On his mother's side the poet could boast an even longer descent from that John Alden and Priscilla whose story is told in "The Courtship of Miles Standish." His father was a lawyer of cultivation and high standing, and his mother was a lover of poetry, with a sensitive and imaginative nature. With such parents and with exceptionally beautiful surroundings, all the conditions of Longfellow's boyhood were favorable to a full and natural development. He had ready access to books and turned to them with eagerness, but at times he loved to look across the gleaming bay, or to wander in the woods.

Not many details of his early boyhood days are known. He manifested a turn for poetry at a very early age. "As a trembling and expectant boy of thirteen he had found his way to the poet's corner of the *Portland Gazette*."

The first school that Longfellow attended was kept by "Marm Fellow" in a little brick schoolhouse. Later he went to the town school on Love Lane, and soon afterward to a private school of Nathanael Carter. Afterward he attended the Portland Academy under the same master. There he became prepared for college, and at the age of fourteen he entered Bowdoin College. There he was a classmate of many noble sons of New England, among whom was Nathanael Hawthorne. He was always a gentleman in his deportment, and a model in his character and habits. He gave diligent heed to all departments of his study and always stood well in his classes. While there he wrote a number of poems. In 1825 he graduated second in a class of thirty-seven.

Directly after leaving college he began the study of law in his father's office, but took little interest in his studies. One year after his graduation, he received an invitation to fill at Bowdoin College a chair which had been almost created for him, a professorship of modern languages and literature. He was offered that position with the understanding that he should first study in Europe to prepare himself for his duties. He was at that time only nineteen years of age; and at

once he set out for Europe, visiting and studying for nearly four years in Spain, France, Italy and Germany. In his "Oltre Mer," the first of his prose writings, he recorded his wanderings; and we can learn from it the ardent spirit in which he approached the Old World.

In 1829 Longfellow settled down to his work at Bowdoin College, working with his accustomed steadiness, and winning popularity as a teacher by his peculiar charms and gentleness of disposition.

Six years later he was invited to succeed George Tinknor, as professor of modern languages and literature at Harvard College, and again went to Europe for study, giving especial attention to Switzerland and the Scandinavian countries. He took with him his young wife, Mary Storer Potter, whom he had married four years before. She died during their first year abroad, and her death was his first great sorrow. We come near to his grief through some lines in his poem, "The Footsteps of Angels."

After spending two years in Europe he returned to Harvard, and entered upon the duties of his professorship, which he discharged for eighteen years. At the end of that period he resigned to devote himself more closely to literature, and was succeeded by James Russell Lowell.

In 1843 Longfellow married his second wife, Frances Appleton, and for nearly twenty years their married life was one of unmingled happiness. Five children blessed their household,—two sons and three daughters. Mrs. Longfellow was a lady of rare beauty and great dignity; her "deep unutterable eyes" have been sung by her husband. Through an accident she was burned to death. Longfellow never fully recovered from the shock, and ever afterward seemed an old man.

In 1868 he revisited Europe where he was received with marked honors. Among the numerous festive occasions that were made in his honor was one at which Gladstone was present.

Longfellow died tranquilly in 1882, at Cambridge, where he had made his home from the time he began his work at Harvard College.

"Of the American poets Longfellow is the most popular in England, and, at the same time, he is the most national. Men of the highest literary and social distinction sought his acquaintance, and were charmed by his dignified, kindly and unassuming deportment. The general verdict upon his poetry is that, while it fails to represent the deepest passions of human nature, it is always kindled by the broadest sympathies, and marked by a delicate appreciation of all that is beautiful in nature and noble in humanity. Keenly sensitive to the imperfections and misdoings of men, he is never censorious, but always gentle and persuasive, appealing to the sympathies and motives which

are common to people of every race, country and clime. He exhibits the fruits of a broad culture, not in strained allusions to things beyond the reach of common readers, but in the clearness and simplicity with which he interprets to them the noblest thoughts of the noblest men of every age and country." "His life and work together stand in our thought as a true poem, and we honor him as one who, while he may not have been a 'puissant singer,' yet left the world the 'sweeter for his song.'"

THE SIMPLON TUNNEL.

THE Simplon Tunnel is nearing completion. The machines that have been boring at each end of the tunnel have met in the middle. From now on the work will be much easier. In a few weeks the tracks will be laid, and the greatest tunnel in the world will be open to traffic. It is the greatest work of this kind ever undertaken; it is nearly twelve miles and a half long. Almost six years and a half have rolled away since the task was undertaken. It took thirteen years to perforate Mt. Cenis, though that tunnel is only seven miles long. Nearly ten years were spent in making St. Gothard what it is to-day, and yet its length is only nine and a half miles. The temperature was much greater in the Simplon Tunnel than in either of the others and a great deal more hard rock, but the improvements in drilling machinery have been to great advantage in this last undertaking. The fact is that the new tunnel is a double one, but only one of the passages will be used for the present. It will require a great deal of time to get the other ready for business. The one was made as a ventilation tube during the construction of the larger one. Several years must pass before a great practical benefit will be derived from the construction of the new tunnel.

A short tunnel under the Jura mountains must be made before the Simplon can do much in the way of shortening journeys. When the system is complete, the running between Paris and Milan will be shortened from three and a half to five hours; and there will be a saving of one hundred eighty miles, in the distance which the mail for India will have to travel on its way from London to Brindisi. The cost of the work will not be less than twenty millions. Thus do the men of to-day take posterity into partnership. The present generation will have the glory of the engineering accomplishment, but those who will receive a rich return in cash are probably yet unborn. The Simplon Tunnel adds to the wonders of the world, not all of which are natural wonders.

GOOD WATER.

GOOD water and an abundance of it is one of the prime necessities of modern civilization. It becomes

more difficult to obtain, both in America and Europe, as the population each year grows denser. Hydraulic engineers are just now wrestling with this problem in England. In France, Austria and Germany it is still unsolved. The medical faculties of these countries declare that the surface supply can no longer be relied upon for hygienic reasons. They suggest the sinking of very deep artesian wells as the best method of procuring an adequate supply of water that shall be perfectly pure.

The first experiment of this sort has just been tried in England, where the new London Water Company has completed a well eleven hundred feet deep and obtained an abundant flow of water, the analysis of which shows an entire absence of organic matter or any element deleterious to health.

Here in America the same cry comes up from nearly all our great cities. Philadelphia is seriously alarmed at the condition of the Schuylkill, which has supplied the Quaker City for one hundred fifty years. New York is complaining of the scarcity of the limpid element, and wants the lakes of the Adirondack region tapped for the benefit of the metropolis. Chicago, with Lake Michigan at her doors, should have a supply of good water if it is to be had on the continent, but Chicago declares that her crib and grand aqueduct must be carried ten miles farther out into the lake to insure a perfect aqueous supply that is unpolluted. So it goes. To the engineer who can devise some method of meeting this urgent demand there will inure great reputation and a corresponding fortune.—*Selected.*

IRON SHOES.

RARE instances have been mentioned of human beings having been compelled to wear iron shoes. In Sir Walter Scott's "Tales of a Grandfather," it is related that during the reign of James I., of Scotland, a highland robber chief named MacDonald plundered a poor widow of two of her cows, and that she in her anger vowed that she would never wear shoes again till she had carried her complaint to the king for redress. "It is a vain boast," replied the bandit; "I will have you shod myself before you can reach the court." To carry out his threat he caused a smith to nail shoes to the woman's naked feet, and then thrust her forth, wounded and bleeding, on the highway. The widow, however, faithful to her word, as soon as her wounds had healed, went to the king and told him of this atrocious cruelty. James heard her with mingled pity and indignation, and in righteous retribution caused MacDonald and twelve of his followers to be seized, and shod with iron shoes, as they had done to the poor widow. In this condition they were exhibited to the public for three days, and then executed.

GRANDMOTHER'S LESSON.

BY CHARITY BRUBAKER.

For the Little Tots.

THE white-haired grandmother sat busily hemming the new napkins, and if it were possible for anything to be busier than her fingers, her mind was, running over the cares and responsibilities of her widowhood.

All at once her attention was called for by the child Mary, who had come to show her latest accomplishments in doll dresses. Hastily untying the box and drawing out more than a dozen doll dresses the girl gleefully showed them and talked rapidly.

"See, I use anything I can get. Mamma gives me bright linings and left-over pieces of new cloth, and sometimes there are old trimmings and things I can use. Mamma helps me with patterns and the hard parts, but really I can do quite well myself. Don't you think these are nice? I made nearly all of them alone."

"Well, I do think! Oh! you don't say you, child, did all this sewing? Well, I just think they are fine. You certainly do well. How old are you?"

"I have just passed eleven," answered Mary.

"Half past eleven, how do you count?" asked grandma.

"I was eleven about a month ago," Mary explained, and then they both laughed at the misunderstanding.

Grandma soon settled back into her serious turn of mind that Mary had hoped had been turned away, for Mary was eager for a talk.

"Grandma, don't you think it is fine that I can sew? I already help in making my own clothes."

"Yes, dear, I think your mamma has been nice to you and is doing right to help you with your dolls. You certainly ought to be grateful. When I was about as old as you are my father had a large milling business. He kept several colored servants, but we children had our part of the work to do. There was little chance for play before that work was done. Our playhouse and doll-rags were in the attic. Sometimes, I, with my sisters Maurie and Ellen, would run away from our task, and mother always knew she would find us in the attic."

"Did you have many nice dolls, grandma?"

"No, dearie, we had one beautiful doll, but she was kept in the parlor, and we did not get to play with her often. She was our Sunday doll. We had to make our everyday dolls and it took a great deal of time and work."

"Oh! grandma, how did you ever manage to make dolls?"

"We made them of cloth and stuffed the bodies. We put on arms by rolling up a long piece of cloth and sewing this across the back, letting the arms stick straight out on either side. After putting on the legs

we would mark out the face. Sometimes we would sew beads on for eyes and the best dolls had ravelled yarn for hair. We thought they were very nice."

"Oh, dear! I wish I could see some of them. Did you save any?"

"No, dearie, and now comes something of which I never like to tell or ever think. We girls were sometimes not so dutiful as we should have been and I know we often tried our mother's patience. I remember one day we were especially anxious about our sewing, and every time possible we would slip away from our work and into the attic. Our mother finally came up there and straight to where we were at work with our dolls. She gathered her large apron full of dolls, dresses, and all our work, then she bade us to follow her. She went direct to the stove and put our treasures into the fire."

"Oh, grandma, how did you bear that?"

"I don't know, but I know there were three sad-hearted girls. I felt that my mother never could do anything that would seem good. We were very careful, though, after that and we had to sew as fast as we could for every doll left had to be put into mourning clothes, and then we built a graveyard and made a grave for each love-lost dolly. It took a long time to get all the sorrowful time out of our thought."

"But you did live over it and got happy again, grandma?"

"Yes. I am very much alive yet, especially as to how mothers treat little girls about sewing for their dolls. I have been able to make a great many little girls happy either in helping them myself or persuading their mamma to help and encourage them. My sorrowful lesson was well learned and I am glad to save any little girls such a trial."

"Grandma, your story has taught me another lesson. I shall try to help mamma all I can and she will then have more time to help me. I shall be able to make my own clothes bye and bye."

Zionsville, Ind.

MAN A CHEMICAL PRODUCT?

THE professor of physiological chemistry at the University of Chicago gravely announces that the present creation of life has been proven to be the result of purely physico-chemical reactions. "Certain chemical substances," he says, "coming together under certain conditions do and are bound to produce life. There is no getting away from facts, and the result of laboratory experiments in regard to the production of certain phenomena of life are convincing." Now this is not a new "discovery." Erudite chemists long before the Chicago professor's announcement satisfied themselves that certain very crude forms of life could be produced by chemical processes. The Chicago University pundit apparently eliminates divine and vital

force altogether. The tadpole and the most highly developed man are alike the products of physico-chemical reactions. The same chemical forces which make the brain of a Darwin, a Spencer, a Tyndall or Gladstone make the earthworm and the jellyfish. If this were true mankind would still hark back to the cry of the ages—Whence and whither? Who made the chemical constituents? That is a question which not even a Chicago University professor seems able to answer. If he could answer it he would doubtless find that all his speculations about the chemical origin of life are but vanity and vexation of spirit. If he is convinced of the truth of his discovery let him turn out a few men from his laboratory.

SPIDERS' WEBS.

SOME of the natives of New Guinea have found the webs of spiders, which infest that country, very useful in connection with a most ingenious contrivance possessed by them for catching fish. A kite is constructed of four leaves, each about one foot long and three inches to four inches broad. Two strings are attached to this; the one—varying from not less than one-third to a quarter of a mile in length (though for longshore fishing it may be shorter)—is held by the fisherman, and serves to regulate the motions of the kite. The second string is usually from one to three hundred yards in length, and terminates, instead of with a hook, in a small tassel about half an inch thick and three inches or four inches long, made of spiders' webs. The fisherman seats himself in his canoe and flies his kite, allowing the short string with its tassel to float, bobbing on the water. The inquisitive fish, making a grab at the strange bait, entangles its teeth in the loose, elastic web, from which it cannot disentangle itself, and is caught. The web which is used for this purpose is procured from a particular variety of spider; and the device described above enables the fisherman to angle in a large area of water around his canoe.

WHY A CLEAR NIGHT IS COLD.

WHO has not noticed that a very clear night in the winter time is very cold, while a cloudy night is warm? There is a reason for this, as there is for everything else that occurs in nature. During the day the sun's rays come down and warm the surface of the earth.

Even if there is snow on the ground, it absorbs much heat while the sun is shining. But at night, when there is no longer any warmth coming into the earth from above, it begins to cool off until it has lost all its heat.

Now, if the night is clear, if there are no clouds, the heat will rise and be lost in the upper air, just as

the heat from a stove placed in the open air would rise and be lost. That is, it would be wasted. But if there are clouds the heat cannot rise above them, and it is much the same as if a roof were built over the stove in the open air.

Hence when there are clouds it is as if we were in a very great room, of which the clouds themselves are the ceiling and the earth the floor from which heat is rising.

This is the reason that a clear night is cold and a cloudy one warm.—*Selected.*

OPAL FOSSIL OF SHARK.

SINCE they were first discovered the famous opal fields at White Cliffs, N. S. W., have yielded many curious fossils, particularly those of prehistoric marine life. But the latest discovery is a most extraordinary one, and will prove of the deepest interest to the scientific world.

It is that of a fossilized, or rather opalized, member of the shark family, which was found on block No. 9, at a depth of thirty-five feet from the surface. The Sydney press says that the specimen measures three feet six inches from the snout to the tip of the tail. The body is in seven sections, the circumference of the largest of which (the head and shoulder portion) is eighteen inches; each section is six inches in length.

The deeply indented eye sockets show plainly, "and thin veins of purple opal encircle the fish from tip to tip." At the mouth these veins make an oblong and clearly defined course, though the continuity is occasionally broken. No particulars as to weight are given, but as the fossil has been sent to London these and other matters of interest will soon be determined. It was purchased from the finders by an opal buyer.

NOVEL LIFE PRESERVER.

A NEW French life-preserver is attracting some attention on account of its simplicity and novel character. It consists of a vest with a double lining both water and air tight and susceptible of being inflated. This inflation is obtained by means of acetylene gas, which is produced automatically by the action of water on calcium carbide contained in four small pockets to which the water has access when the wearer is immersed. The gas is immediately generated and inflates the air chambers or pouches of the vest, which thus supplies ample buoyancy. The supply of water to the carbide is, of course, regulated, and support is furnished for some hours. The life-preserver is designed to be worn constantly while at sea, and does not take up any more space than an ordinary garment, becoming operative as soon as the wearer is in the water.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglebook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

EASTER.

WITH the coming of spring, when nature spreads her green carpet over the ugly gray earth, and with the appearance of the crocus, tulip and Easter lily, comes the thought of Easter day. There are many important and significant days. Some days are celebrated because they mark the birthday of some great man; other days are celebrated because they mark the anniversary of some great nation. Not a few days are looked for with anxiety, because they are of special interest to special people.

Two days are welcomed by the whole world,—Christmas and Easter. Of the two it is safe to conclude that the latter is the greater day. With the beginning of the Christian era begins the history of these two great days. While Christmas marks the birth of the Son of God, and keeps our memories alive to the fact that he was the propitiation for the sins of all the world, it remains for Easter day to annually remind the world of the breaking asunder of the bars of death, of the time when all hope was lost, the Savior had been killed, the disciples scattered, the tomb sealed, the guard set and every precaution taken to show the falsity of Christ's Gospel.

At the moment when the darkest clouds overhung the earth, when it seemed that the scheme of redemption hung on a thread, the great resurrection day revealed the facts that "all power in heaven and in earth" was given unto the Son of man as he said; that the tomb was made empty by superhuman power; that God had not only power to create, but to recreate, to resurrect; that all kingdoms and governments were subject to the higher powers; that Christ is able to fulfill all the promises he had made to the children of men.

What a glorious day was this resurrection morning! The birth of Christ was a great event, and brought with it great joy to the world, insomuch that angels sang praises to God, and the stars illuminated the

scene. The baptism of Christ was a wonderful demonstration; celestial credentials of his Sonship were given him in the presence of the world, but mankind has no hope in his birth, neither in his baptism. The great, pure, innocent life he lived was matchless; his character unquestionable; his fame marvelous; his authority illimitable; but with all where is the hope of man in his holy life? What unborn soul could be given such a marvelous birth? What child could live such a spotless, stainless life? Impossibilities!

Calvary's tragedy stands out in bold relief as the greatest event of the kind in the world. Men have died, men have been murdered, men have been martyred, men have even given their lives for their friends, but where, before, has man ever given his life for his enemies. And yet, with the shedding of his precious blood, with the willing sacrifice, with the great obeisance to the Father's will, yet is there no hope for us in the atonement. For who could die as he did? Who is able to bear the sins of the world?

Easter day alone carries the mind back to the great day when death, hell and the grave relinquished their hold on the first fruits of the resurrection; when Jesus demonstrated his power to come forth from the grave, and to bring us forth in his likeness in the great day that is to come. Herein lies the hope of a follower of the "meek and lowly Jesus."

When we have watched the old, gray chrysalis all through the long winter months and see no signs of life, but must wait for the Easter showers and sunshine to quicken the larva, open the tomb, and bring forth the beautiful butterfly, with its beautiful gauzy wings, that soars to the very dome of heaven, we are made to think of the time when our tabernacles of clay will moulder back to the dust of earth from whence they came, and lie dormant through the long winter months awaiting the great resurrection day of the just, when the spirit shall be borne away on angelic wings to the celestial abode above.

In the celebration of this great day not always the most profitable manner is observed. Some fitting emblems of the power of the resurrection have been well chosen, but, like other celebrations, we lose sight of the purpose of the celebrations and enter into the mere formal observance of certain festivities.

Let the INGLENOOK family give more attention next Lord's Day to the study of the great resurrection of our Lord Jesus Christ than to the giving of colored eggs and the relating of rabbit stories.

* * *

THINGS OF THIS CENTURY.

IN one of our large cities the other day a foreigner was enjoying a dinner at an up-to-date hotel. He had been studying American habits and customs for some weeks. Our systems of communication in this country especially interested him. In fact he had become

quite addicted to the telephone habit, and when the waiter asked him what he would have, he jokingly replied, "Bring me a telephone." The waiter immediately disappeared, while the foreigner expected some joke to be returned as a penalty for his foolishness. On the contrary, to his astonishment, the waiter produced the detached telephone to which was affixed a nickel-in-the-slot receptacle.

The waiter hastily connected the telephone with the world by inserting a plug in a wooden post near by, and the invisible central girl asked the foreigner to whom he wanted to talk. That was too much for the poor fellow. He expressed it by saying, "It was too strong." He said when he returned to his home he was going to tell his people that in America he could stick a wire in a post and talk to his friends miles away. He said he thought it would even surprise Moses. "Moses brought water from the rock by striking it, but my friends in America will bring a voice from a wooden column."

The foreigner was right. No doubt Moses was well pleased to know that God and nature responded to the wishes of the people, but had he been allowed the privileges of our century, he might have attached the wire to a palm tree and telephoned the rear guard and found out the facts concerning the approach of Pharaoh's hosts from which he was escaping.

Has it ever occurred to you that our modern conveniences would have saved the trip of the spies? A telephone message might have brought the desired information. The contrast that now appears between our age and the age of Moses will be insignificant as compared with the contrast between this century and the one that lies before us. Our network of wire and rails that is spread over our country will have been superseded by the wireless system, and our railroad collisions and the destruction of bridges by floods and train robberies will be avoided when the inventions of men take wings to transport human beings through the air.

It is as impossible for us to dream of the future as it was for the man with the reap hook in his hands to think of the self-binders and wind stackers, or for the young maiden on the ox-cart to paint, in her fancy, the automobile. Fifty years ago one might as well have talked of perpetual motion as of a bicycle, or an auger that would bore a square hole. Don't be guilty of saying "such things will never be."

* * *

I WAS WRONG.

THERE is a right way and a wrong way to make an apology. You often hear apologies that are really more annoying than the offenses from which they came. When the one making the apology seems more anxious to justify himself in his action than to repair

the wounded feelings of his fellow, the apology is nothing more than an insult.

Man is fallible; we all make mistakes; we make errors in judgment; we make misstatements, and sometimes our conduct is not even reputable. Unfortunately we are not always able to see our mistakes. When this is true we ought to be thankful to any friend who has enough manhood to kindly tell us of our wrongs, whether it is the injured party or not; and upon being apprised of these facts, a genuine gentleman or lady is only too glad to make reparation. It seems, however, that the majority of people have inherited from Adam, or some one later, an inclination to justify self in all their deeds. Of course we all understand our own feelings, perhaps, better than anyone else and therefore claim a right to place our own interpretation on things.

Society demands that a certain form of confession or apology be made when feelings are wounded; and how common it is to hear the expression, "If I have done anything wrong, I am sorry for it." One making this confession evidently gets more satisfaction from the miserable, detestable little sign of the subjunctive mode than from the apology that repairs the broken heart.

Another common form of apology goes like this: "Perhaps I was not right the other day. You see I thought you meant so and so, and I naturally concluded," etc. You see there isn't the first shadow of apology about the whole thing. It is nothing more than a hollow form without any depth of meaning. It is a coffee pot without any coffee in. The essence of confession is humility, and humility abides with entire manliness.

Nothing is more helpful to real soul culture and development than confession. Nothing could prevent one's saying, "I was wrong," except false pride, vainglory, or egotism. Even in the extreme when we really think we are not wrong, but have a strong desire to conciliate with an unreasonable friend who has been offended, is it not better to give real expression of sorrow for what has occurred than to enter into an elaborate self-defense? Depend upon it that genuine humility is so rare a virtue that it will be appreciated by all. In cases where apology is not really due, it often brings remorse of conscience and brings the apology from the right source. Therefore no one can afford to be haughty, high-minded or vainglorious; humility is worth more than them all.

* * *

Did you notice last week in this corner a notice saying that you could get the Inglenook from now till January, 1906, for 50 cents? If you enjoy reading the Inglenook and think your neighbor would enjoy it, why don't you tell him about this unprecedented offer?

Current Happenings

EIGHT members of a squadron of soldiers who went to the rescue of a woman who was buried by a landslide at Semlin, Hungary, lost their own lives, while fifteen others were injured.

A REPORT from St. Petersburg says that the revolutionists have marked thirty important personages for assassination, among them Grand Duke Alexieff, the czar, and the dowager empress.

THE Indiana legislature has passed a bill which will go into effect in June, forbidding any person to manufacture, sell or give away any cigarettes, cigarette paper, or cigarette wrappers. For the first offense a fine not exceeding fifty dollars may be imposed, and for a second offense a fine not exceeding five hundred dollars or imprisonment for six months may be imposed.

THE twenty-fifth anniversary of the Salvation Army in America was celebrated in New York, March 28, Miss Booth presiding over the exercises.

MORE than nine thousand bricklayers in New York City, by an agreement with the Master Builders' Association, have had their wages raised from sixty-five to seventy cents an hour, the highest wages ever paid to bricklayers in this country. Under this rate it will be possible for bricklayers to make \$67.20 a week, by working over time at double pay.

LETTERS and consular reports received in London from Van, and other parts of Armenia, state that the situation there is steadily growing worse. Business is at a standstill, few crops have been sown and continued raids on Armenia villages are unrestricted.

MAXIM GORKY, the Russian reformer and author, has been banished from St. Petersburg. He preferred a request that he be allowed to reside at Riga which was acceded to by General Trepoff. Riga is a city of the Baltic provinces, 363 miles from St. Petersburg, and in allowing Gorky to make choice of such a place for his exile, the St. Petersburg officials have shown unusual leniency.

OF six thousand samples of food products of sixty-one different kinds, examined last year at the Connecticut Experiment Station, more than two thousand were found to be adulterated.

THE Texas Legislature has passed a pure food law, including an alum amendment which applies especially to baking powder.

THE California Legislature has passed a resolution asking that governmental action, limiting further Japanese immigration, be taken.

It is announced that the Canadian government has decided to grant a bounty of \$6 per ton to encourage steel shipbuilding in that country. The city of Halifax and other municipal authorities, some time ago, offered a joint cash subsidy of \$300,000 to any company that would establish a shipbuilding plant at Halifax.

WHILE engaged in dike building operations on the Kansas side of the Missouri river, five men were drowned as they attempted to cross in a skiff.

MAXIM GORKY, the famous Russian writer who is in prison at Riga, is suffering with lung trouble and the doctors declare that his recovery depends on his being taken from Riga to South Russia.

A PARCELS-POST treaty between the United States and Great Britain has been completed and signed by both parties and is to take effect April 1. By the agreement the maximum weight allowed is four pounds and six ounces. The rate fixed is twelve cents a pound or fraction of a pound in this country and two shillings a parcel in England. All parcels sent under this arrangement are limited in value to fifty dollars.

THE Ohio Supreme Court has rendered a decision holding that Christian Science healers cannot practice without a State license, but it does not affect those who practice the doctrine purely as a religious belief.

THE Kaiser of Germany is again suffering with his throat. The best physicians in Germany have operated upon him for the malady, but it is feared, without success. He is at present on a pleasure trip.

EIGHT principal industries of Princeton, Ind., have closed down indefinitely on account of the demand of the unions that unskilled workmen get \$1.75 a day instead of \$1.50. Business of the city is paralyzed, and ought to be, until men are willing to deal fair with each other.

A NEW device for locomotives is being tested by the New York Central railroad. The device calls for an electrical attachment of horse shoe magnets to the drive wheels. These magnets are to be used to increase the adhesion, which will do away with the use of sand when the wheels slip badly.

* * *

A COMPANY of French capitalists is planning to build a railroad from Siberia to Alaska by bridging. Another syndicate proposes to tunnel the Behring Strait. Whether either, neither, or both will be carried into effect it is hard to say, but it does not take a prophet to see the advantage and the profit these would be to both countries.

* * *

A LARGE cantilever bridge has been finished across the Zambesi river, South Africa, for the Cape-to-Cairo railroad. It is the highest bridge in the world, being four hundred twenty feet above the river.

* * *

THE seventy-fifth anniversary of the founding of the Mormon church was celebrated at Salt Lake City last week. There is a strong sentiment by the younger members to abolish polygamy and its advocates from the church.

* * *

PROF. J. T. WILSON, of the University of Chicago, claims to have discovered a new organ of taste beside the usual gustatory nerve center in the tongue. He calls it the "taste bud," and says it is located in the larynx, just below the surface of the lining and is bud-shaped. He says this organ naturally repels foods and drinks having a sour taste, but it welcomes those having a sweet taste.

* * *

THE Emperor of Germany is visiting King Victor Emanuel of Italy.

* * *

THE Simplon Tunnel was finally opened on the second of April, when the first trains passed through. One started from the Swiss side and one from the Italian side, meeting at the center. The trains passed through amid great applause, with cries of "Long live Switzerland" and "Long live Italy." Bands played the Italian royal march and the Swiss anthem.

* * *

A NEW military service law in France has been passed which cuts down army service from three to two years. The law is extremely popular. It lessens the military burden that is imposed on French industries. However, under this law all able-bodied men will have to serve two years, there being no exceptions.

PLAGUE mortality in India is slightly decreasing, though 30,000 cases—ninety per cent of which are fatal—are occurring weekly. Over three million people have died since the beginning of the epidemic. The sufferers are callous, and the evil is everywhere regarded as being too widespread to eradicate.

* * *

THE Pennsylvania legislature has passed a bill providing for the annexation of Alleghany City to that State.

* * *

GENERAL BOOTH of the Salvation Army is in Jerusalem where he will hold open-air meetings on Mt. Calvary. Before returning to England he will go to Australia and New Zealand on a farewell visit.

* * *

THERE are twelve thousand dollars worth of cut flowers shipped from Genoa, Italy, to Paris every day.

* * *

PROFESSOR HILPRECHT has tendered his resignation as curator of the Babylonian section and his Clark professorship of Assyriology. After clearing himself of the false accusation brought against him, he expects to reside in Germany instead of America. It is said that the accusations against him were presented in writing.

* * *

THE great Halifax dockyard, established one hundred fifty years ago, is to be abandoned by the British admiralty. Its closing with only a week's notice threw 300 men out of employment. The chief reasons for closing were the expense, its pay roll amounting to \$50,000 a year, and the fact that, in the opinion of the admiralty board, its maintenance was no longer necessary in the new scheme of imperial defense.

* * *

THE famous Hospice of St. Gothard, at the summit of St. Gothard Pass, one of the best and most frequent routes across the Alps, has been destroyed by fire. The Hospice was 6,870 feet above sea level.

* * *

It has been officially arranged that the Prince and Princess of Wales shall visit India in November and stay until March, making a tour of the principal cities and native states.

* * *

RUSSELL SAGE, the great financier, is seriously ill at his home in New York.

* * *

GUGLIELMO MARCONI, of wireless telegraph fame, was married on March 16, in London, to Beatrice O'Brien, a half sister of Lord Inchiquinn. The couple will visit America and Italy on their honeymoon.

HOME DEPARTMENT

SPRING.

I saw a robin yesterday.
 Has spring been sprung?
 I saw the boys at marbles play.
 Has spring been sprung?
 I saw an Easter hat displayed;
 I saw a tramp hunt for the shade;
 I saw some flower beds newly made.
 Has spring been sprung?
 I saw a kite go sailing high.
 Has spring been sprung?
 I saw smoke in the alley nigh,
 Has spring been sprung?
 I saw some buds upon the trees;
 I felt a balm upon the breeze;
 Kerchew! Kerchew! O, hear me sneeze!
 Yes, spring's been sprung.

IMPURITIES AROUND THE HOUSE.

THE care of the sewerage of our bodies is of the utmost importance as related to health, though not one individual in a hundred gives particular thought to the subject. To understand how to disinfect the excretions of our bodies and render them harmless is one of the crying needs of the hour. This could easily be done with very little trouble or expense. Not only in our cities, towns and villages but in country places, open sewers run rampant and life is continually threatened. Typhoid fever, diphtheria and the whole brood of infectious diseases are generated freely and may be found wherever human beings exist. These diseases are a perpetual menace to health, as well as a serious reflection on our boasted civilization. Every farm place and town house has its vault or privy, and poisons the most deadly are thrown into the atmosphere. In our colleges, seminaries and private schools the presence of typhoid or other infectious disease is proof positive that the conditions are unsanitary.

The simplest and most obvious of health rules is not observed. The poisonous excrement in every privy or vault should be disinfected on the spot. The free use of dry earth will do this; it contains the animalculae or germs which eat up the offending substance and prevent atmospheric contamination. It is an easy matter, as shown by some of our writers on sanitary science, to do away with all this source of impurity; a keg of dry earth can be used for disinfecting, the matter so treated being removed at frequent intervals to prevent its accumulation. The

trouble is that the attention of our people has not been called to this particular subject. Unfortunately, it is not the atmosphere alone that is contaminated in these cases; the poison gets into our water supplies, the wells and cisterns, and epidemics of disease prevail in consequence.

In all our towns and cities and in every country district we should have sanitary boards (made up of intelligent people, of course) whose duty it is to look after these things; to find out where diseases prevail, and to discover their causes. These boards should be composed of men and women who have made a careful study of the subject in hand. There should also be State organizations, coöperating with the local ones. It should be the duty of such boards to correspond with each other and to devise methods for abating nuisances, whether in public places or private homes. They should also appoint teachers and lecturers to instruct the masses and drill the people in the rudiments of sanitary science. Moreover, there should be a national association which will receive and compare all the facts gathered by the State boards and try to aid them in disseminating the principles of sanitation.—*Susanna W. Dobbs, M. D.*

SPOILED CHILDREN.

SPOILED children are not all of tender years. Many of us continue spoiled children all our days. In fact, the worst spoiled children are grown up.

Most of us are spoiled because Providence and man have been too good to us. If we have desired this, that or the other, it has been given us; if our wills have clashed with those about us, we have prevailed; if our health has failed a little, there was much petting, pampering and nursing.

Many a loving husband has thus turned his young wife into a fretful, peevish and selfish spoiled child—often a confirmed invalid.

For in the fullness of love he has made efforts to grant every wish, buy every bauble, protect her from hardship and toil, and has asked after her health so often that she herself commenced to worry over it. So then when this spoiled child was fully developed the husband perhaps saw the folly of it, but it was then too late.

Then there is the earnest, striving, amiable wife who waits on her husband, kneels to receive his caresses and wearies him with honey-sweet demonstrations. Soon the man yawns and his thoughts go a-roving;

he expects the service as a right; he grows into a great and disagreeable spoiled child.

Insidious and very delicious are these courses of sweets. It is safe to presume that if any of us were offered the same we would promptly take it and demand more. It is not for any of us to judge until we have passed through temptation unscathed.

Selfishness sometimes is necessary; coldness is bracing; aloofness is invigorating. Even where perhaps we could find pleasure in serving, it is a good thing to hesitate and weigh well whether it is the best part of wisdom. The pleasure we find in serving is the most dangerous cause of overdoing.

Common sense in love is worth its weight in gold.

The doctrine and practice of unselfishness may be angelic, but its too zealous upholding is injurious to the rest of the family.

CARE OF THE CLOTHING.

THE best dressed woman is not the one who has the greatest number of dresses, but the one who is careful with them. Many do not realize the value of a clothes brush, and their dresses become soiled and shabby after wearing them a few times. The skirt should be carefully brushed every time it is worn, then hung up, the shoes wiped with a soft cloth, the gloves pressed out smoothly and put in the box, the veil and ribbons folded and laid away ready for use when they are needed. Do not crowd the garments into a closet with a half dozen or more on one hook. Notice how the ready-made suits and skirts are cared for at the dry goods store, then buy a number of coat hangers or have them made at home, and hang your dresses in the same way. Each hat should be kept in a separate box, so the trimming will not be injured by crowding. Damp or mud-stained skirts should be hung up where they will dry, then thoroughly brushed and shaken. Keep a cleaning fluid on hand and sponge the spots as soon as they appear.

It is a good idea to set apart one afternoon each week for mending and repairing. Tiny rents in woolen skirts may be darned with threads drawn out of a piece of the material, and hooks, eyes and buttons that have become loosened sewed on. As long as the skirts are worn in sweeping length, new binding will be needed frequently. When the skirt becomes faded or out of style, take it apart and dye it some pretty color or black with Diamond dye, and make it over for yourself or a little girl. If the material is suitable, cut it off to the proper length and make a rainy day skirt of it. Many pretty waists have been made from the best parts of dress skirts.

If the seams of kid gloves rip, turn the glove wrong side out and overcast it with cotton thread. If soiled, wash in gasoline.

THE PRESIDENT OF FRANCE AS KITCHEN MAID.

THE private secretary of President Loubet told me of one of his frequent visits to his mother," says Vance Thompson in *Everybody's Magazine* for November. "It was between two stormy sessions of the Chamber of Deputies. I suppose the destiny of France hung in the balance, for, in fact, the destiny of France always does hang in the balance. In the peaceful interval Loubet slipped down to Marsanne and walked out to the farm. The good dame was in the huge, brick-floored kitchen, kneading the bread for the fortnightly baking. She flung her doughy arms around his neck and kissed him.

"'Really, mother,' said the president, 'you should give over this heavy work.'

"'And trust some slatternly maid!' cried the old dame, 'no, no—but I admit it is not so easy as it used to be.'

"'Well, to-day you must trust me,' her son said, 'so sit down and fold your hands and talk to me.'

"He took off his coat, rolled up his shirt-sleeves, and kneaded the bread, while the good mother told him the news and gossip of the farm. This is the sort of thing that Emile Loubet would do quite naturally. Lincoln might have done it, too. Having kneaded the bread, Monsieur Loubet returned by special train to Paris and went on saving France."

WHERE BABIES ARE SALTED.

THE remarkable custom of salting new-born babies is still practiced in certain parts of Europe and Asia. The method varies with the differing nationalities of the people using it. The Armenians of Russia cover the entire skin of the infant with a very fine salt. This is left on the baby for three hours or more, and then washed off with warm water. A mountain tribe of Asia Minor is even more merciless than the Armenians. They keep their new-born babies covered with salt for twenty-four hours. The modern Greeks sprinkle their babies with salt; and even in some parts of Germany salt is still used on a child at birth. The mothers imagine that this will give children health and strength and keep evil spirits away from them.

MAPLE BUNS.

To a pint of bread sponge add one small cupful of grated maple sugar, two large eggs (well beaten), one-half cupful of soft butter, a little salt, and flour to make a soft dough. When light, shape into buns and let rise again. Bake in a quick oven, brush the tops with maple syrup and sift grated maple sugar and cinnamon over them. Nice for the children's lunch basket.

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

WORKERS.—2 Cor. 6:1.

For Sunday, April 30.

I. We are Workers.

1. The Work is Great,Neh. 4:19
2. The Time for Work is Short,John 9:4
3. Opportunities are Passing,Matt. 21:28
4. The Wages are Good,Rev. 2:10

II. Together.

1. In Union there is Strength,Matt. 18:19
2. Units in Responsibility,Rom. 14:12
3. Difference in Gifts,1 Cor. 12:4
4. United Purpose and Effort Count More than Numbers,Psa. 127:1; Judges 7:3-8

III. With Him.

1. Christ Never Lost a Battle,Philpp. 4:13
2. His Presence Lightens Toil,Luke 5:5
3. With Him Here—With Him "Over There,"
.....Matt. 19:28-30

Text.—We then as workers together with him, beseech you also that ye receive not the grace of God in vain.—2 Cor. 6:1.

References.—Matt. 21:28; Titus 2:15; Matt. 26:10; John 5:17; 6:28; 9:4; Rom. 2:10; 1 Cor. 4:12; Heb. 13:21; Ezek. 29:20; 1 Cor. 3:13; Col. 1:10; Titus 3:5; Rev. 3:2; 14:13; Rom. 13:10; 2 Thess. 2:17.

Workers With God.

Men like to be associated with some one who can command success; Christians who work with God have a guaranty of final success. But we cannot promise an easy victory or an easy task. God came to Gideon and to Moses with a task for each one of them that seemed far beyond their ability and their strength. They told the Lord of their unfitness for his work, but God overruled their objections, and they led the hosts of Israel at God's command. It may be that Moses supposed it would take him only a few weeks to lead the children of Israel from Egypt to the promised land, and as they kept on in their way round through the desert he may have felt that he was not succeeding in his work. But God was working with him, and he was doing the very best that could be done for those people. When we work with God, let us obey him implicitly, and accept discouragement and failure as a part of some grand plan that we do not understand.

"Be strong!

We are not here to play, to dream, to drift.
We have hard work to do, and loads to lift.

Shun not the struggle,—face it; 'tis God's gift."

—Maltbie D. Babcock.

Fidelity.

"What a man does," says Hamilton Mabie, "is an

authentic revelation of what he is." Do you realize that you reveal your character by your work? Let the task be ever so small or great, from the building of a stone wall to the making of a great cathedral, the man is revealed in the work. Whether a woman paints pictures, teaches school, or cooks a dinner, her soul qualities show forth in what she does. It is the spiritual quality in work that ennobles it, the working with God. How dare we slur the task when God is working by our side? How dare we complain and say that our part is too difficult, that we are tired, that we would like to give up working, when God with infinite patience listens to all our murmurings?

The Apostle of Work.

That was Paul: he led the strenuous life, he was ready to make tents when it was necessary. Most of the time he was preaching Jesus Christ and him crucified, and that, too, when tribulation, persecution, famine or nakedness, peril or the sword awaited him. I believe it is, after all, our one unhappiness,—that we cannot work, that we cannot fulfill our destiny. All else passes away with our days, but our work remains. Let us pray for strength to do our work, as Paul did, at the expense of our life, if need be. We can find so much to do, let us work with our might, bearing in mind that in idleness alone is there perpetual despair. Our boys and girls must find the answer to this question of Whittier's:

"What hast thou wrought for Right and Truth,
For God and Man,
From the golden hours of bright-eyed youth
To life's mid-span?"

"The People had a Mind to Work."

When we grow discouraged over the difficulties in the way of organizing church members into a band of faithful workers we like to read the story of Nehemiah's efforts to rebuild the city and the temple of Jerusalem. In telling us how the walls were built, he explains by saying, "For the people had a mind to work." And we see them toiling away, trying to rebuild the wall, though there is little enough to give them courage. We soon say, "What's the use?" "They won't take part anyhow," and then it is not long until we conclude that we might as well give up trying. If we could only learn the lesson, that God himself will see to the results and all we need to do is to keep working.

"If you strike a thorn or rose,
Keep a goin'!

If it hails or if it snows
 Keep a goin'!
 'Taint no use to sit and whine
 When the fish ain't on your line;
 Bait your hook and keep on tryin'—
 Keep a goin'!"

What Kind of Work?

We look at our task and call it great, or small. We make fine distinctions that never troubled the Carpenter of Nazareth. He chose the fishermen and the publican, knowing that they would work faithfully under his direction. A man worked all his life making chains, but he made them true and strong. In a storm at sea they cast the anchor and the chain snapped as if it were a thread, lastly they fastened a chain made by this man, and it held. Hundreds of lives were saved because this one man worked at his humble task and spared no pains, but put his best workmanship into those chains. We can almost hear Jesus saying:

"Where the many toil together, there am I among my own;
 Where the tired workman sleepeth, there am I with him alone;
 I, the peace that passeth knowledge, dwell amid the daily strife;
 I, the bread of heaven, am broken in the sacrament of life."

Topics for Discussion.

1. What was Paul's first question after his conversion? Acts 22: 10.
2. How many of your church members should be church workers? Judges 7: 24; Matt. 18: 19; John 9: 4.
3. Some were unwilling to work for Nehemiah. Neh. 3: 5.
4. God will not forget the works of the wicked. Amos 8: 7.
5. We cannot deceive God by our work. I Cor. 3: 13-15.
6. Did the Lord work with his disciples? Mark 16: 20.

* * *

There are leaders and leaders of meetings, they comprise many varieties, but there is just one who is sure to fail; when he leads, the meeting will not be what it should. Because he is not much concerned about it, he looks carelessly over the list of names of those who should take part in it, perhaps he will go to a few and say, "Now, don't forget our meeting on Sunday evening, you are to take part." Very often the answer will be, "What am I to do?" And then this leader will answer, "Oh, think up something to say," and then he feels that he has done his duty. What a mistaken conclusion! Your good leader will look over all the names that should be on his program, and arrange the work for each one. For those who are able to discuss topics, he writes out the topic for each one, and tells

them that if they cannot fill their places, they shall let him know so that he can find substitutes. Then he cuts out the comments on the lesson from the INGLENOOK and gives these to boys and girls to read, he asks them to commit the little poems to memory; he does this about two weeks before the meeting, so that they have time to learn these verses, also the scripture verses, given as references. He is careful to impress them all with the idea that they want to do their best in this meeting; that it is worth while to speak clearly and distinctly, that this is work for Jesus and should be well done. And in conducting the meeting he knows how the program should be carried out; he is never at a loss; he knows on whom to call, knows that they will respond. He has made thorough preparation for this meeting, all that should have been done, has been attended to, and so without any embarrassment, without any difficulty, the meeting is carried on to a successful close. The leader who has failed in the getting ready, is the one who is likely to grow discouraged, and say, "I don't see much use in those meetings."

* * *

Sister Frances M. Fisher, of Guthrie, Okla., says, "I do enjoy the reading so much. If more of our young people could be induced to join the Circle we would have more workers in the field. I send you one new name."

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XXIV.

Brussels, Belgium.

My Dear Mr. Maxwell:—

We left Paris two days ago, and we were glad to get away. The last thing I heard before I went to sleep and the first thing I heard upon awakening in the morning was the crack of the whip-lash of the heartless teamster in the street. It seems that we have never been anywhere where the poor horses had to be treated so mean. The boys just fairly raved and said they could never stand it to see their horses' punished that way. However, nothing better can be expected of a people who have been carried away from the love of home by the wickedness in which they have indulged.

We got a glimpse of one of the bake shops. You would laugh if you could see their loaves of bread; instead of having round loaves or square loaves they were about three inches in diameter and four feet long. In the corner of each dining room at a hotel or restaurant, you see a barrel containing these loaves of bread which invariably are set on end. The waiter draws a loaf from the barrel, lays it on the table, and, with his knife, cuts the loaf diagonally so that it makes a fair-sized slice after all. It seems that in every country we go we have something new to learn about the customs of the people. We have learned that there are a good many ways of doing a thing and yet all these ways might be right.

In spite of all the sin, vice and intemperance that we saw in Paris, we are compelled to say that we were never in so large a city where so few poor people were to be seen; indeed, they are very few. Upon leaving the sin-smitten city we saw an impressive scene at the depot. Some friends, evidently, were parting never to meet again. We saw the caress and the bitter tear. All the world over, even in Paris, there are some who know the meaning love.

Our course lay through northeastern France from Paris to the capital of Belgium. Of course as soon as we came to the Belgian line we were subjected to another inspection of baggage by the government officials in order to satisfy the law. All day we rode through a magnificent country, similar to the Mississippi valley. We saw many fields of oats, wheat, potatoes and hops. The boys kept asking each other to show a cornfield, but the cornfields are painfully absent, and it seems so queer. We were amused at the conductor taking up the tickets, for he had such a queer way of doing it. The doors are in the sides of the car instead of the end, and the steps run the full length of the car; he walks the full length of the train on these steps, reaching in at the windows and doors for the fare of the passengers. If their trains were scheduled as American trains are, I should think he would have a difficult task; but they have plenty of time for everything in the Orient.

The first day we were in Brussels we had a splendid opportunity to visit the battlefield of Waterloo, twelve miles distant. I tell you our party enjoyed that most more than anything we have seen. Miss Gertrude fairly

lectured to us all day. There are so many things that seemed so natural to us after having read the description of the battle in our school books. We saw the old chapel and chateau which stood before the battle and was stormed by shot and shell. Parts of the old brick wall, surrounding the orchard, still remain. In the chapel the Crucifix and Virgin are still intact, except one limb of the Savior which had been shot off during the battle. Near by is the old well where three hundred men are buried. We saw the spot where fifteen thousand fell at one charge and nine hundred on the retreat. It is easy to see, when standing here upon the battle ground how that the sixty thousand were lost.

It only requires a little imagination to see the great Napoleon ride out in front of his men and ask them to shoot him for his defeat. Oscar lingered near the place where Wellington said, "Would to God that Blücher or night would come." Blücher came, and Napoleon lost. The thing that interested Agnes and me more than all the other places in the battlefield, was the mountain which the Prince of Orange made at a cost of 3,000,000 franc, to commemorate the victory of the English, and to mark the graves of thousands of brave Englishmen. The mountain is 160 feet high and 1,000 feet in circumference at the base. At one corner there are two hundred twenty-six steps leading from the base to the apex. To think that Flemish women carried the dirt with which to build this great mountain, in baskets strapped to their backs, and knit stockings for their families as they went up, is almost incredible. One year was required to build it. Enclosed please find a leaf which I picked from a tree standing where Napoleon surrendered; you may keep it as a souvenir in the office of the "Mayville Times."

We thought things were bad in France, especially in Paris, but we are beginning to find out that we only had a foreshadowing of what real sin and crime is here in Belgium. As far as a casual glance is concerned, or a bird's-eye-view, it is a splendid city. The boulevards are on the circumference of the city. The Palace of Justice, houses of Parliament, Grand Opera House, Custom houses, and the city hall are all worthy of note. But the people! The people of Belgium are the "impossible people." Three words in their language explain it all very well. Mesquite—narrow-minded; Mefiant—suspicious; Mallionite—dishonest. Should you ask me to write another word I would be tempted to write "indolent." Ninety per cent of the poor people are illiterate. The editor of one of the papers told Roscoe that not one policeman in seven could write his own name. Two languages are spoken—French and Flemish. The people of the city usually speak French while the country people speak Flemish. French is taught in the schools, Flemish only being spoken. The people simply dress fit to kill. Three million people live in a territory one hundred twenty by one hundred sixty miles. It is impossible for this number of people on that amount of territory to make an honest living, which has led them to all forms of dishonesty, and they really boast that no man pays his debts; promises are broken and the majority of men actually live on the prostitution of their daughters.

King Leopold is now away as he generally is; he is but
(Continued on page 384.)

The Q. & A. Department.

WANTED.

Will some Nooker please tell us through the columns of the Ingleook how best to grow celery? What kind of soil is best adapted to the young plants, and how treat them until ready to transplant?

* * *

Editor of the INGLENOOK:—

In your magazine of March 28, page 311, I notice a mistake which, by your permission, I would like to correct. I am a voting woman and have voted on all questions and for everything the same as papa and my brothers. The States that have equal suffrage are Colorado, Wyoming, Utah, and I think Washington. We enjoy your paper very much.

BESSIE L. PATTERSON.

Sterling, Colo.

* * *

What is amber, and will you please give some information regarding it?

Amber, a hard, light, yellow substance, often clouded with white, is the hardened gum of a kind of pine tree, which does not grow now. It is found in small quantities in many parts of the world, as on the coasts of the Adriatic Sea and Sicily, in Siberia and Greenland, then in the United States in New Jersey, Massachusetts and Maryland; but most of the amber sold comes from the Prussian coasts of the Baltic Sea. Some is dug out of the ground and some is picked up on the shores, where it is washed up during storms, but the greater part is got out of the sea itself. Amber is usually found in only small pieces, from the size of a grain of wheat to that of a hen's egg. The largest piece ever found, now in the Museum in Berlin, is about as large as a child's head. Amber is much used for making ornaments, such as beads, the mouthpieces of pipes and cigar holders, and for burning for perfume. A good deal is sent to Mecca, where it is burned as incense by Mohammedans in their worship. Refuse amber is made into fine varnish. If a piece of amber be rubbed until it gets warm and then put near some small pieces of paper or cotton they will fly toward it, cling to it for a moment, and then fly off again. This is caused by the electricity in the amber which is stirred up by the rubbing. The Greeks, who knew that amber would act in this way, named it electron, and out of this word was made our word electricity.

* * *

How high is the Eiffel Tower in Paris?

Nine hundred and eighty-five feet.

Explain standard time and tell when and why it was established.

It was established in 1883 primarily for the convenience of railroads, by mutual agreement. It is now generally used throughout the country for all purposes. According to this system the United States, extending from 65 degrees to 125 degrees west longitude is divided into four time sections, each of 15 degrees longitude, exactly equivalent to one hour, commencing with the seventy-fifth meridian. The first (Eastern) section includes all territory between the Atlantic coast and an irregular line drawn from Detroit to Charleston, S. C., its most southern point. The second (Central) section includes all the territory between this line and an irregular line from Bismark, N. Dak., to the mouth of the Rio Grande. The third (Mountain) section includes all territory between the last-named line and nearly the western border of Idaho, Utah and Arizona. The fourth (Pacific) section covers the rest of the country to the Pacific coast. Standard time is uniform within each section, and the time of each section is exactly one hour earlier than the next section east and one hour later than the next section west. Thus at noon in New York (Eastern time) it is 11 o'clock A. M. in Chicago (Central time), 10 A. M. at Denver (Mountain time) and 9 A. M. at San Francisco (Pacific time).

* * *

Is there any way for a ship to go from New York to San Francisco without going around South America?

A ship could go across the Atlantic, through the Straits of Gibraltar, Mediterranean Sea, Suez Canal and Red Sea and across the Indian and Pacific Oceans, or southeast across the Atlantic Ocean, around Africa and thence across the Indian and Pacific Oceans.

* * *

Why are the counties in Louisiana called parishes?

"Parish" is the name of a district or territorial division in Great Britain and it was adopted instead of the name "county" when Louisiana became a State.

* * *

Who wrote the following: The Choir Invisible, America, Snowbound, Robinson Crusoe, Gold Bug?

James Lane Allen, Samuel Francis Smith, John G. Whittier, Daniel Defoe, Edgar Allen Poe.

* * *

Who was called "The Plumed Knight," "Sage of Monticello" and "The Great Pacificator"?

James G. Blaine, Thomas Jefferson and Henry Clay.

MISCELLANEOUS

THE GEOGRAPHY CLASS.—Chapter XXIV.

(Continued from page 382.)

a few days in Brussels at a time. He spends some time at Spa with Madame Marguerite, some time at Ostend with another Mademoiselle, and some time at Paris. The queen does not live with him. The subjects of the king follow his morals very closely, and the day is not far distant when the kingdom of Belgium will be wiped from the map.

I hope you will not think by this letter that we all have the blues, but I tell you we have seen no country yet in which we would rather live than America.

Yours fraternally,

Marie.

(To be continued.)

* * *

WOULD YOU CARRY YOUTH INTO AGE

EXPECT a good long, useful life.

Hold young thoughts persistently.

Simply refuse to grow old by counting your years or anticipating old age.

Refrain from all kinds of stimulants and sedatives; they will shorten your life.

One of the best preventives of age is enthusiasm and interest in the affairs of the day.

Keep in the sunlight; nothing beautiful or sweet grows or ripens in the darkness.

Avoid fear in all its varied forms of expression; it is the greatest enemy of the human race.

Nature is the greatest rejuvenator; her spirit is ever young. Live with her; study her; love her.

Avoid excess of any kind; they are injurious. The long life must be a temperate, regular life.

Contemplate beauty in all forms and you will drive everything that is ugly out of your life.

Keep mental cobwebs, dust and brain ashes brushed off by frequent trips to the country, or by travel.

Don't allow yourself to think on your birthday that you are a year older, so much nearer the end.

Never look on the dark side; take sunny views of everything; sunny thoughts drive away the shadows.

Be a child; live simply and naturally, and keep clear of entangling alliances and complications of all kinds.

Cultivate the spirit of contentment; all discontent and dissatisfaction bring age furrows prematurely to the face.

Don't live to eat, but eat to live. Many of our ills are due to over-eating, to eating the wrong thing, and to irregular eating.

Don't be too ambitious; the canker of an over-vault-

ing ambition has eaten up the happiness of many a life and shortened its years.

Throw aside your dignity and romp and play with children; make them love you by loving them, and you will add years to your life.

Think beautiful thoughts,—harmony thoughts, beauty thoughts, truth thoughts, of innocence, of youth, of love, and kindness.

Associate a great deal with young people; take a lively interest in their hopes and ambitions, and enter into their sport with enthusiasm.

Cultivate placidity, sincerity, and poise,—mental and physical. Do not allow anything to throw you off your balance. A centered life is a long life.

Age is conservative. Keep your mind open to truth and receptive to all that is broadening and ennobling by reading and thinking, and your sympathies alive and generous by taking a warm interest in the lives and welfare of others.—*Selected.*

THERE WILL BE NO CHANCES THIS YEAR FOR

THE idler
The leaner
The coward
The wobbler
The ignorant
The weakling
The smatterer
The indifferent
The unprepared
The educated fool
The impractical theorist
Those who watch the clock
The slipshod and the careless
The young man who lacks backbone
The person who is afraid of obstacles
The man who has no iron in his blood
The person who tries to save on foundations
The boy who slips rotten hours into his schooling
The man who can do a little of everything and not much of anything.

The man who wants to succeed, but who is not willing to pay the price.

The one who tries to pick only the flowers out of his occupation, avoid the thorns.

—*Success.*

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,
Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

SAMUEL S. THORPE,
Cadillac, Mich.,
DISTRICT AGENT

OR

BRO. JOHN A. MILLER,
Brethren, Mich.,
RESIDENT AGENT

Michigan Land Association.

Seeds! Seeds!! Seeds!!!

We have on hand several hundred packages of garden seeds, each of which contains one and one-half times as many seeds as sell regularly for 5c.

In order to get rid of these seeds this year, before the spring is over, we have decided to sell them for 2½ cents per package, postpaid. Please order for yourself and your neighbors.

TEN VARIETIES.
All Seeds Warranted Sound.

Preserve Your Eyesight!

Polk, Ohio, March 7, 1905.

Dr. J. L. Miller, Smithville, Ohio.

Kind friend:—

I want to say a few words in regard to the glasses I got from you a few months ago. I think they have done me a great deal of good, as I do not have headache now or the distress in the head that I had before wearing them. I was in bed four days in January with lagrippe which affected my eyes very much. I had to have the room darkened awhile, but after about ten days of your treatment, they were very much better again, and now I want to say to my friends, or to whom it may concern, that I feel I can recommend Dr. Miller for fair treatment and honesty, as he did just as he agreed with me, and I would say to any one in need of glasses, to write to Dr. Miller. He can do you good.

Yours very truly,

Annie E. Shoemaker.

Treatment sent on trial. Question sheet and testimonials free. Address,

DR. J. L. MILLER,
Wayne Co., Smithville, Ohio.

P. S.—Remember I never met Mrs. Shoemaker. This was all done by correspondence. See Nook of Dec. 13, page 2.

EXPLANATORY

The above statement of the corporation's affairs at the close of the fiscal year, Jan. 31, 1905, must be convincing evidence of the phenomenal growth of the business during the past year and attention is called to the fact that the statement is made out in the same manner as a bank statement and that every share of authorized stock is charged up as a liability.

The Company's attitude on financial questions is one of frankness and publicity, as should be the case with all public corporations. Such a showing as the above is only possible because of there being no "promoter's stock" and no "water" in the corporation, nor a sinister motive behind any move in connection with its organization and development. Are you a believer in such a policy?

Further explanation in regard to statement or any phase of the business cheerfully given.

References: Any mercantile agency, the Banker's National Bank of Chicago, or any of our thousands of customers.

A NEW BUSINESS HOME

A fine tract of land adjoining one of the city parks has been purchased and plans are now being drawn for a new and commodious business building to contain nearly 100,000 square feet of floor space. It is the purpose to occupy this **new business home** yet this year and erect additional buildings as rapidly as needed.

The volume of business is increasing fully 20 percent per month and Christian people are joining the ranks of coöperators at the rate of fully 100 per month, owing to the operation of the practical plans of scientific coöperation. Another catalog is now ready and will be sent free with goods or mailed free to Inglenook friends who do not have our large catalog. May we hear from you?

SCIENTIFIC CO-OPERATION

This term with the ideas and plan for which it stands has been protected by the registry laws of the various states and cannot be used by others unless duly licensed by H. P. Albaugh, the President of our company. Through the operation of scientific coöperation we have interested about 1,400 people financially and others are being added daily. Coöperation reduced to a science is the final step in business evolution and release from the thralldom of exorbitant prices.

Christian character is a prerequisite with our coöperators and it is the purpose to carry to a successful issue as large a mail order business as any in the country, same to be owned, controlled and managed at all times by Christian people,—a credit to the church as well as the commercial world. We thank the readers of the Inglenook for their part in pushing the good work along by their investments, orders and influence and while our fondest anticipations have been passed the last year, the present prospects indicate an even greater success for 1905.

ALBAUGH BROS., DOVER & CO., The Mail Order House, 341-33 Franklin St., Chicago, Ill.

"That's the Place"

A SPECIAL TRAIN TO THE ANNUAL MEETING Leaves Chicago, Friday, June 2, 1905

For the accommodation of our many friends among the Brethren, we wish to announce that for the Annual Meeting at Bristol, Tenn., to be held in June, the Wabash Railroad will run a special train of high-backed coaches and chair cars, through from Chicago to Bristol without change of cars, leaving Chicago, Dearborn Station at ten o'clock A. M. We invite all living in the city, or in the vicinity, to purchase tickets via the following route in order to take advantage of this special service: Wabash Railroad Chicago to Toledo; Ohio Central Lines Toledo to Columbus, and Norfolk and Western, Columbus to Bristol.

This special train will run through the rich farming lands of northern Indiana, picking up our friends who live in this district, arriving at North Liberty about 12:30 P. M.; Lakeville, 12:50 P. M.; Wakarusa, 1:15 P. M.; New Paris, 1:30 P. M.; Millersburg, 1:45 P. M.; Topeka, 2:00 P. M.; Wolcottville, 2:15 P. M.; arrive Toledo 6:00 P. M.; Columbus, 9:00 P. M., and arrive Bristol 2:00 P. M., Saturday, June 3. It is our desire that train reach the meeting grounds as early as possible on Saturday, to enable our patrons to get comfortably settled before dark. A special train will also be run from Bristol to Chicago at close of the meeting. Representatives of the different lines will accompany this train through to Bristol, thus insuring kind treatment and a comfortable journey, in a train occupied only by the Brethren and their families. A low fare has been named for this meeting as usual. Inform your local ticket agent that you wish to accompany this special train, and he will see that your tickets read as per above route. For further information write to,

...Beautiful Stories... FROM THE GOOD OLD BOOK

By ISABEL C. BYRUM.

The story of the old Bible is told in such an interesting and simple way that it becomes intensely interesting. It is especially adapted for boys and girls of from 10 to 15 years old.

It is a new publication and one that will do much toward interesting the children in further Bible study. It is copiously illustrated and contains 311 large pages. It is printed in clear type on good book paper, and is substantially bound in cloth.

Send for a copy. You will be pleased with it. Price, prepaid, \$1.00.

BRETHREN PUBLISHING HOUSE,
Elgin, Illinois.

Missionary Collection Envelopes

Just the thing for taking up your collections. It is arranged so that you can place the amount, date, and name on the outside, if you so desire, and you can then seal it and hand to your solicitor or treasurer.—Size, 2¼x3½ inches. Price, 15 cents per hundred. Address,

BRETHREN PUBLISHING HOUSE,
Elgin, Illinois.

Bookbinding

Do you have some magazine that you would like to have bound? Perhaps you have some books or Bibles, of special value to you, that you would like to have rebound. If so we can accommodate you.

We have an equipment equal to the best, in the book-binding line and can give you good and prompt service.

Write us, giving full particulars, size, etc., of what you want bound and we will quote you prices.

NOOK.

ART PICTURES

We have just received three new numbers of these "Fine Art Pictures" as follows:

- No. 125--MARRIAGE CERTIFICATE**
- No. 123--FAMILY RECORD**
- No. 121--MEMORIAL**

We have had a number of calls for the above numbers and are pleased to state that we are now prepared to furnish them.

The Memorial picture is printed on black paper, which makes it very appropriate, while the other two are printed on gilded paper in many beautiful colors.

No. 125.—Marriage Certificate.

We have sold more than **5,000** of these Pictures in the last two months and are still receiving many orders each day. A great many order from 12 to 25 at a time, and a number of orders are received for 40 and 50. Our customers are so well pleased that it is no uncommon thing for

the same person to send us two or three orders. Size of picture, 16 x 20 inches. **Former price, 25 cts.**

No. 123.—Family Record.

These numbers are all exceedingly fine. Send us an order and we are sure you will be delighted with them.

TWENTY SUBJECTS

Besides these we have 20 other subjects that are very popular.

OUR SPECIAL PRICE

C. S. Morey Makes Remarkable Prediction in Regard to Beet Growing Here.

"Colorado as a beet sugar producing state will soon leave Michigan far in the rear, if the present developments continue."

This assertion was made this morning by C. S. Morey, head of the Morey-Boettcher syndicate. He has just returned from a trip to the East. While there he made arrangements for the transfer of one of the largest Michigan factories from Saginaw to Sterling, Colo. The new factory will have a capacity of 600 tons and will give employment to hundreds of men.

This will make the seventh beet sugar factory in the South Platte Valley owned by this syndicate.

THE SICK MADE WELL —A CURE THAT NEVER FAILS—

YOU NEED NOT SUFFER LONGER.

I hold in my possession the secret
whereby any one having female weak-
ness, falling of the womb, leucorrhoea, in-
flammation, ulceration, irregular painful
menstruation, nervousness, headache, in-
digestion, liver troubles, constipation,
piles, fistula, catarrh, etc., can be cured
at home and thereby save big doctor
bills and embarrassing examinations.
I do not ask you to buy a patent medi-
cine, nor to try a free sample.

I HAVE NOTHING TO SELL.

I suffered for ten years, had tried
many advertised remedies, and subject-
ed myself to the humiliations which
doctors usually require of their pa-
tients: and all without being benefited.

Finally, by the help of a noted Ger-
man doctor, I discovered the secret
whereby I was cured, a simple home
treatment, which has cured thousands
of others where everything else had
failed.

SEND NO MONEY.

A Word to Mothers

WHAT heart does not go out in sympathy and compassion for the little ones when they are sick and in distress? They are the treasures of our hearts, the sunshine of our homes. We guide their footsteps, we watch their welfare, and see them develop from tiny babyhood into stalwart men and lovely maidens. Blessed are, indeed, the parents who can raise healthy, hearty children.

Few children, however, escape certain diseases, such as measles, whooping cough, croup, scarlet fever, etc. Some are born sickly and weak. They look so frail that we are almost afraid to touch them, and their development is slow and tardy. The least little variation in atmosphere hurts them, even a change in the mother's diet seems to upset them, and they grow up, pale and lanky boys and sickly girls.

If the blood of such children were examined, it would be found that certain constituents are lacking to give the blood that life and vigor which it needs, thereby retarding their development.

How often we hear mothers say, in speaking of their weak and puny children, "They will grow out of it." What a wrong idea! It is from children of this kind that we recruit the invalids of later years. Who can picture a sight more pitiful than that of a little child filled with sores, possibly a sufferer from scrofula, its poor little head covered with scabs, its eyes hardly able to bear the light of day, breathing labored and painful, limbs weak and small?

Parents, watch and check the early symptoms; see that nature is assisted in keeping the blood pure and vigorous, and your children will grow up strong and robust, the joy of your life, the comfort of your old age. Be careful in the selection of the remedy, and avoid strong medicines. Everybody knows that medicines which contain mineral ingredients, such as bismuth, mercury, or calomel, ought not to enter the human system, and under no circumstances should they be administered to a child of tender years. DR. PETER'S BLOOD VITALIZER can, very appropriately, be termed "the mother's and baby's friend." It is prepared exclusively of vegetable ingredients, is pleasant to the taste, and contains abso-

lutely nothing but what will do good. It makes new, rich, red blood, assisting nature in building bone and muscle.

CURING THE LITTLE ONES.

Dayton, Ohio, Dec. 17.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—We have a daughter four years old, who had eruptions on her face, head and limbs. She was horrible to look at and caused us much worry. My friends advised me to consult a physician, but next to God I had placed my faith in your **Blood Vitalizer**. We commenced giving her of your medicines and after she had taken one bottle, the eruptions disappeared, the sores healed up nicely, so that you cannot see anything of it any more, except a slight redness of the skin, and this is also disappearing. Our little girl is now well and as lively and as happy as she can be. Everybody looks at this case with wonder. It has increased the demand for the **Blood Vitalizer** in this neighborhood greatly. With best regards, I remain

Yours very truly,

Joseph Krause.

221 Parrott St.

SAVED HER LITTLE GIRL.

Chester Valley, Pa.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—We desire to extend to you our heartfelt thanks for what your **Blood Vitalizer** has done. It is the best medicine we have ever had for our children. It saved our little girl. When she was about three years old, she became very sick. She seemed to have catarrh of the head and lost a good deal of flesh. We consulted doctors in this city, but she grew gradually worse. We simply paid out large sums of money to no avail. We are happy to state, that your **Blood Vitalizer** cured her. We always recommend your remedy to friends and acquaintances.

Yours respectfully,

Mrs. Anna Johnson.

What a relief to the mother's heart to see her little ones that have been drooping, revive and pick up in health and strength! DR. PETER'S BLOOD VITALIZER is peculiarly adapted for such cases. Its merits have been demonstrated in thousands upon thousands of cases. It ceased to be an experiment over a hundred years ago. Unlike other ready-prepared medicines, it cannot be obtained in drugstores, but is supplied direct to the people through special agents appointed in every community. Address,

DR. PETER FAHRNEY & SONS' CO.,

112-118 S. Hoyne Ave.

CHICAGO, ILL.

Brethren Church Annual Meeting!

Bristol, Tenn., June 6th, 1905.

To Members of the Brethren church and their Friends:—

In view of the fact that so many of the Brethren have expressed their intention of attending the Brethren church Annual Meeting, we have decided to run a **Special Train** from Chicago to Bristol. This train will leave Chicago Friday, June 2nd, via the **MONON ROUTE**, C. H. & D. and **NORFOLK & WESTERN R'YS.** Following is schedule of the train:

GOING SCHEDULE.—Friday, June 2, 1905.

Frankfort, Ind.,	3: 35 P. M.
Sheridan, Ind.,	4: 04 P. M.
Westfield, Ind.,	4: 16 P. M.
Indianapolis, Ind.,	5: 00 P. M.
Arrive Cincinnati, Ohio,	8: 00 P. M.

Saturday, June 3, 1905.

Arrive Bristol, Tenn.-Va.,	4: 00 P. M.
----------------------------------	-------------

This will be a "Social" special for members of the Brethren church and their friends, and if you are thinking of going to Bristol to attend the Annual Meeting, we strongly recommend your taking this train, as it will be a **Through Train**, with no change of cars en route.

The return time from Bristol will be as shown below, the route being the same as on the going trip, to-wit, the **NORFOLK & WESTERN, C. H. & D. and MONON ROUTE.**

Leave Bristol,	1: 00 P. M.
Arrive Cincinnati,	10: 00 A. M.
Leave Cincinnati,	12: 20 P. M.
Arrive Indianapolis,	3: 25 P. M.
Westfield, Ind.,	4: 16 P. M.
Sheridan, Ind.,	4: 28 P. M.
Frankfort, Ind.,	4: 58 P. M.
Delphi, Ind.,	5: 34 P. M.
Monticello, Ind.,	5: 52 P. M.
Monon, Ind.,	6: 07 P. M.
Rensselaer, Ind.,	6: 32 P. M.
Hammond, Ind.,	7: 49 P. M.
Chicago, Ill.,	8: 40 P. M.

Rate.—The round trip rate from Chicago will be \$19.12, other points in proportion.

Dates of Sale.—Tickets will be sold to members of Standing Committee and families on certificates of District Committee, on May 29, 30 and 31, and for the General Council June 1, 2, and 3.

Limit of Tickets.—The final limit returning on all tickets will be June 30th.

Important.—In order that we may be able to provide plenty of room on the "Social Special," please advise the undersigned whether or not you will take this train. By so doing you will place us in position to supply ample equipment on the train so that there will be room for all and no crowding.

Laughlin FOUNTAIN PEN

Guaranteed Finest Grade 14k.
SOLID GOLD PEN

To test the merits of this publication as an advertising medium we offer you choice of

These
Two
Popular
Styles
For
Only

\$1.00

Postpaid to any address
(By registered mail 8c extra)

Holder is made of the finest quality hard rubber, in four simple parts, fitted with very highest grade, large size 14k. gold pen, any flexibility desired — Ink feeding device perfect.

Either style—Richly Gold Mounted for presentation purposes \$1.00 extra.

Grand Special Offer

You may try the pen a week if you do not find it as represented, fully as fine a value as you can secure for three times the price in any other makes, if not entirely satisfactory in every respect, return it and we will send you \$1.10 for it, the extra 10c. is for your trouble in writing us and to show our confidence in the Laughlin Pen—(Not one customer in 5000 has asked for their money back.)

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime.

VOL. VII.

APRIL 25, 1905.

No. 17.

CONSOLATION.

BY MARY C. STONER.

(Dedicated to a Sister.)

Art thou sad and weary, dearest?
Does thy heart with sorrow ache?
Art thou ever tried and tempted
For our dear Redeemer's sake?

Yes, thy way is rough and thorny,
And thy trials hard to bear;
But the Savior, kind and loving,
Doth in every burden share.

Does the sun e'er shine, my dearest,
On thy dark and dreary way?
Does the Father smile upon thee
In thy deep and sad dismay?

Yes, his love abideth with thee,
He is ever by thy side;
He will keep thy soul from anguish,
He will daily be thy guide.

Hast thou all for him forsaken;
Father, mother, houses, land?
Dost thou long to be in glory
With the white-robed angel band?

Yea, but stay thou with us, dearest,
Fondest joys shall yet be thine;
Earth's dark shadows linger longest
When we murmur and repine.

Does the peace of God, most perfect,
Reign supreme within thy breast?
When the outward storms are raging
And the billows have no rest?

Look thou upward then, my dearest,
To the everlasting hills,
For the Lord of glory reigneth,
And he now thy sorrow wills.

Thou shalt conquer in the conflict;
Be not weary nor cast down,
For a host of shining angels
Wait to give a victor's crown.

They will bear thee in the ev'ning
To the banquet of the sky;
There to meet thine Elder Brother
Where the fields Elysian lie.

Ladoga, Ind.

SEED-THOUGHTS FOR THE HEART'S GARDEN.

BY JOSEPHINE HANNA.

Follow after Integrity if you would overtake Confidence.

❖

Do not be superficial: things of weight have their foundation below the surface.

❖

Patience is not so much a distinct virtue as it is the good measure of every virtue.

❖

Zeal is concentrated ardor, the strength of which too often depends upon the newness of its object.

❖

It is as much a sin to have your fun at another's expense as it is to treat yourself with his money.

❖

Do not blame another for what you do and try to hide behind one whose littleness you thus confess.

❖

If the tide in your affairs was not "taken at its flood," take the oars into hand—you can yet do some good rowing.

❖

Requite a kindness,—aye, arise above self into the sunlight of universal kindness whose warmth one beam has proven.

❖

Do not take offense: if intended, it is thereby accomplished; if not intended, it doesn't pay to suffer for nothing.

❖

Overcome Satan on the spot if you would overcome him at all: one who carries compromise is rather easily run down by him.

❖

Does some one speak evil of you? God so much desires you to avoid evil speaking as to forcibly impress you with the ugliness of it.

Flora, Ind.

PRESIDENT'S ADDRESS.

Gives Views to National Congress of Mothers.

AN address by President Roosevelt was the feature of the evening session of the National Congress of Mothers now holding its triennial convention at the Metropolitan M. E. church. Anticipating the President's appearance, there was an immense crowd at the church, composed largely of women, and when Mr. Roosevelt, accompanied by Secretary Loeb, arrived, he was given a cordial reception. The President was formally introduced to the audience by Mrs. Frederic Schoff, of Philadelphia, the president of the Congress.

He read his speech from a copy which he held in his hand, but now and then departed from the text and interjected some extemporaneous remarks when he wished to emphasize a point.

The President spoke as follows:

"In our modern industrial civilization there are many and grave dangers to counterbalance the splendors and the triumphs. It is not a good thing to see cities grow at disproportionate speed relatively to the country; for the small land owners, the men who own their little homes, and therefore to a very large extent the men who till farms, the men of the soil, have hitherto made the foundation of lasting national life in every State; and, if the foundation becomes either too weak or too narrow, the superstructure, no matter how attractive, is in imminent danger of failing.

"But far more important than the question of the occupation of our citizens is the question of how their family life is conducted. No matter what that occupation may be, as long as there is a real home and as long as those who make up that home do their duty to one another, to their neighbors and to the state, it is of minor consequence whether the man's trade is plied in the country or the city, whether it calls for the work of the hands or for the work of the head.

"But the nation is in a bad way if there is no real home, if the family is not of the right kind; if the man is not a good husband and father, if he is brutal or cowardly or selfish, if the woman has lost her sense of duty, if she is sunk in vapid self-indulgence or has let her nature be twisted so that she prefers a sterile pseudo-intellectuality to that great and beautiful development of character which comes only to those whose lives know the fullness of duty done, of effort made and self-sacrifice undergone.

"In the last analysis the welfare of the state depends absolutely upon whether or not the average family, the average man and woman and their children, represent the kind of citizenship fit for the foundation of a great nation; and if we fail to appreciate this we fail to appreciate the root morality upon which all healthy civilization is based.

"No piled-up wealth, no splendor of material growth, no brilliance of artistic development, will permanently avail any people unless its home life is healthy, unless the average man possesses honesty, courage, common sense and decency, unless he works hard and is willing at need to fight hard; and unless the average woman is a good wife, a good mother, able and willing to perform the first and greatest duty of womanhood, able and willing to bear, and to bring up as they should be brought up, healthy children, sound in body, mind and character, and numerous enough so that the race shall increase and not decrease.

"There are certain old truths which will be true as long as the world endures, and which no amount of progress can alter. One of these is the truth that the primary duty of the husband is to be the home maker, the bread-winner for his wife and children, and that the primary duty of woman is to be the helpmeet, the housewife, and mother. The woman should have ample educational advantages; but save in exceptional cases the man must be, and she need not be, and generally ought not to be, trained for a lifelong career as the family bread-winner; and, therefore, after a certain point the training of the two must normally be different because the duties of the two are normally different. This does not mean inequality of function, but it does mean that normally there must be dissimilarity of function. On the whole, I think the duty of the woman the more important, the more difficult, and the more honorable of the two; on the whole I respect the woman who does her duty even more than I respect the man who does his.

"No ordinary work done by a man is either as hard or as responsible as the work of a woman who is bringing up a family of small children: for upon her time and strength demands are made not only every hour of the day but often every hour of the night. She may have to get up night after night to take care of a sick child, and yet must day by day continue to do all her household duties as well; and if the family means are scant she must actually enjoy even her rare holidays taking her whole brood of children with her. The birth pangs make all men the debtors of all women. Above all our sympathy and regard are due to the struggling wives among those whom Abraham Lincoln called the plain people, and whom he so loved and trusted; for the lives of these women are often led on the lonely heights of quiet, self-sacrificing heroism.

"Just as the happiest and most honorable and most useful task that can be set any man is to earn enough for the support of his wife and family, for the bringing up and starting in life his children, so the most important, the most honorable and desirable task which can be set any woman is to be a good and wise mother in a home marked by self-respect and mutual forbear-

ance, by willingness to perform duty, and by refusal to sink into self-indulgence or avoid that which entails effort and self-sacrifice. Of course there are exceptional men and exceptional women who can do and ought to do much more than this, who can lead and ought to lead great careers of outside usefulness in addition to—not as substitutes for—their home work; but I am not speaking of exceptions; I am speaking of the primary duties, I am speaking of the average citizens, the average men and women who make up the nation.

“ Inasmuch as I am speaking to an assemblage of mothers I shall have nothing whatever to say in praise of an easy life. No mother has an easy time, and most mothers have very hard times; and yet what true mother would barter her experience of joy and sorrow in exchange for a life of cold selfishness, which insists upon perpetual amusement and the avoidance of care, and which often finds its fit dwelling place in some flat designed to furnish with the least possible expenditure of effort the maximum of comfort and of luxury, but in which there is literally no place for children?

“ The woman who is a good wife, a good mother, is entitled to our respect as is no one else, but she is entitled to it only because, and so long as, she is worthy of it. Effort and self-sacrifice are the law of worthy life for the man as for the woman; though neither the effort nor the self-sacrifice may be the same for the one as for the other. I do not the least believe in the patient *Griselda* type of woman, in the woman who submits to gross and long continued ill treatment, any more than I believe in a man who tamely submits to wrongful aggression. No wrongdoing is so abhorrent as wrongdoing by a man toward the wife and the children who should arouse every tender feeling in his nature. Selfishness toward them, lack of tenderness for them, lack of consideration for them, above all, brutality in any form toward them, should arouse the heartiest scorn and indignation in every upright soul.

“ I believe in the woman's keeping her self-respect just as I believe in the man's doing so. I believe in her rights just as much as I believe in the man's, and indeed a little more, and I regard marriage as a partnership, in which each partner is in honor bound to think of the rights of the other as well as of his or her own. But I think that the duties are even more important than the rights, and in the long run I think that the reward is ampler and greater for duty well done, than for the insistence upon individual rights, necessary though this, too, must often be. Your duty is hard, your responsibility great, but greatest of all is your reward. I do not pity you in the least. On the contrary, I feel respect and admiration for you.

“ Into the woman's keeping is committed the destiny of the generations to come after us. In bringing up

your children you mothers must remember that while it is essential to be loving and tender it is no less essential to be wise and firm. Foolishness and affection must not be treated as interchangeable terms, and besides training your sons and daughters in the softer and milder virtues you must seek to give them those stern and hardy qualities which in after life they will surely need. Some children will go wrong in spite of the best training, and some will go right even when their surroundings are most unfortunate; nevertheless an immense amount depends upon the family training. If you mothers through weakness bring up your sons to be selfish and to think only of themselves, you will be responsible for much sadness among the women who are to be their wives in the future. If you let your daughters grow up idle, perhaps under the mistaken impression that as you yourselves have had to work hard they shall know only enjoyment, you are preparing them to be useless to others and burdens to themselves. Teach boys and girls alike that they are not to look forward to lives spent in avoiding difficulties, but to lives spent in overcoming difficulties. Teach them that work, for themselves and also for others, is not a curse, but a blessing; seek to make them happy, to make them enjoy life, but seek also to make them face life with the steadfast resolution to wrest success from labor and adversity, and to do their whole duty before God and to man. Surely she who can thus train her sons and daughters is thrice fortunate among women.

“ There are many good people who are denied the supreme blessing of children, and for these we have the respect and sympathy always due to those who, from no fault of their own, are denied any of the other great blessings of life. But the man or woman who deliberately forgoes these blessings, whether from viciousness, coldness, shallow-heartedness, self-indulgence or mere failure to appreciate aright the difference between the all-important and the unimportant—why, such a creature merits contempt as hearty as any visited upon the soldier who runs away in battle, or upon the man who refuses to work for the support of those dependent upon him, and who though able-bodied is yet content to eat in idleness the bread which others provide.

“ The existence of women of this type forms one of the most unpleasant and unwholesome features of modern life. If any one is so dim of vision as to fail to see what a thoroughly unlovely creature such a woman is I wish they would read Judge Robert Grant's novel “*Unleavened Bread*,” and ponder seriously the character of Selma, and think of the fate that would surely overcome any nation which developed its average and typical woman along such lines. Unfortunately it would be untrue to say that this type

exists only in American novels. That it also exists in American life is made unpleasantly evident by the statistics as to the dwindling families in some localities. It is made evident in equally sinister fashion by the census statistics as to divorce, which are fairly appalling; for easy divorce is now as it ever has been, a bane to any nation, a curse to society, a menace to the home, an incitement to married unhappiness and to immorality, an evil thing for men and a still more hideous evil for women. These unpleasant tendencies in our American life are made evident by articles such as those which I actually read not long ago in a certain paper, where a clergyman was quoted, seemingly with approval, as expressing the general American attitude when he said that the ambition of any save a very rich man should be to rear two children only, so as to give his children an opportunity 'to taste a few of the good things of life.'

"This man, whose profession and calling should have made him a moral teacher, actually set before others the ideal, not of training children to do their duty, not of sending them forth with stout hearts and ready minds to win triumphs for themselves and their country, not of allowing them the opportunity, and giving them the privilege of making their own place in the world, but, forsooth, of keeping the number of children so limited that they might 'taste a few good things'! The way to give a child a fair chance in life is not to bring it up in luxury, but to see that it has the kind of training that will give it strength of character. Even apart from the vital question of national life, and regarding only the individual interest of the children themselves, happiness in the true sense is a hundredfold more apt to come to any given member of a healthy family of healthy-minded children, well brought up, well educated, but taught that they must shift for themselves, must win their own way, and by their own exertions make their own positions of usefulness, than it is apt to come to those whose parents themselves have acted on and have trained their children to act on, the selfish and sordid theory that the whole end of life is 'to taste a few good things.'

"The intelligence of the remark is on a par with its morality, for the most rudimentary mental process would have shown the speaker that if the average family in which there are children contained but two children the nation as a whole would decrease in population so rapidly that in two or three generations it would very deservedly be on the point of extinction, so that the people who had acted on this base and selfish doctrine would be giving place to others with braver and more robust ideals. Nor would such a result be in any way regrettable; for a race that practiced such doctrine—that is, a race that practiced race suicide—would thereby conclusively show that it was

unfit to exist, and that it had better give place to people who had not forgotten the primary laws of their being.

"To sum up, then, the whole matter is the avoidance of risk and trouble and labor. Save in exceptional cases the prizes worth having in life must be paid for, and the life worth living must be a life of work for a worthy end, and ordinarily of work more for others than for one's self.

"The man is but a poor creature whose effort is not rather for the betterment of his wife and children than for himself; and as for the mother, her very name stands for loving unselfishness and self-abnegation, and, in any society fit to exist, is fraught with associations which render it holy.

"The woman's task is not easy—no task worth doing is easy—but in doing it, and when she has done it, there shall come to her the highest and holiest joy known to mankind; and having done it, she shall have the reward prophesied in Scripture, for her husband and her children, yes, and all people who realize that her work lies at the foundation of all national happiness and greatness, shall rise up and call her blessed."
—*Toledo Blade*.

BERNICE'S EASTER GIFT.

"WHY, Sophy," exclaimed Miss Barr, as Sophy Woronsky came into the schoolroom all out of breath and barely in time to escape being marked as tardy, "what makes you so late this morning? You are out of school a great deal this term, dear, and I am very much afraid if this habit continues you won't be able to go on into the next grade in the spring."

The tears came into Sophy's eyes, but she answered quietly, "Yes, teacher, please 'scuse me, but my mamma is off washing three days in every week, and she makes that I must stay wif Bernice while she is gone. Michael is so big in his mind now he is in third grade, he say *he* 'Not stay home to mind t' kid.' He thinks he is man all the time now. So I have to stay; but I don't like to be dropped." And Sophy looked quite ready to cry at the prospect.

Miss Barr thought for a moment; then she said, "How old is Bernice?"

"She's four, goin' on five."

"Well, that's all now. We must go to work. By and by I'll talk to you again." And Sophy went to her seat and the First Reader class began its day's work.

During recess Miss Barr consulted the principal about Sophy. He told her that the parents were honest, industrious, well-educated Poles, and that the father was organist of the church to which he belonged; but that they had seen trouble. The man had lost a good position and was now only a laborer on the rail-

road. Both were anxious that their children should be educated, but when the mother went out washing Bernice could not be left alone and she was too small to attend school.

"But if I were willing to let her come as a visitor three days in the week," said Miss Barr, "would you consent?"

"I see no harm in it," the principal replied, "except that other mothers might claim the same privilege."

"Well, I'll try it for a day or two, at any rate; if it does not work I can stop it."

So, to Sophy's great delight, she was allowed to bring Bernice to school with her whenever their mother was away from home. She was a good little thing and made no trouble. She sat in the seat with Sophy and listened quietly to the recitations and the singing, and, when the class was writing or drawing, Bernice too had paper and pencil and did her part, as she imagined, in whatever was going on. If she became sleepy Sophy was allowed to take her into the teachers' room and lay her on the lounge there for a nap.

So things went on for more than a year, and at last, to Bernice's great pride and delight, she was told by Miss Barr that she was old enough to be a pupil.

"Then I'll be in your class," she promptly replied.

"Oh, no, dear, you must go to the kindergarten first."

"No, I not go to kinnergarten. I do your work. You see."

So Miss Barr allowed Bernice to enter the First Reader class, on trial, and she was astonished to find her well prepared for it. A more devoted and industrious little pupil she had never had. Bernice did her work well, but she was never so happy as when she was helping her beloved teacher in some way.

The Woronsky children were poorly clothed this winter, for the father had been ill and money was very scarce at home. Just before Easter Miss Barr found a very pretty silk handkerchief among her treasures, and, knowing how few pleasures the Woronskys had, and how much they were in the habit of giving and receiving at Easter, she offered it to Bernice as an Easter gift.

The little girl received it with great delight and went to her seat with shining eyes; but soon her face grew very grave, and after school she came to Miss Barr and said, hesitatingly, "Teacher, is the lovely hankvish truly mine?"

"Certainly, dear."

"All my own, to do what I like wif?"

"Of course, whatever you wish."

"Yes, teacher, dear; but can I give it away?"

"Why, yes, honey, if you want to; but I wanted you to have it for an Easter gift. To whom do you wish to give it?"

"Why, teacher, I love the little hankvish oh, so much! I like to have it all the time, and I like you to give it to me. But, you see, I have one Easter gift. My mamma has for me new shoes, and for Sophy has she new shoes, and for Michael has she a new hat, all for Easter. But my mamma has for herself nottin, and I likes to give her this so she will have Easter gift too. I so happy in my hankvish," and Bernice laid her cheek against the little silken roll which she held in her hand, "but I wants to make my mamma happy too. You not be sorry if I do, teacher, dear?" she asked, looking up timidly; "I love you just so all the same."

"No, honey, darling," said Miss Barr, kissing the little upturned face, "I'm not a bit sorry. I'm glad I can help you to do so nice a thing for your mamma. She will be glad too, and then there will be three glad people. See, here is a piece of white paper to wrap it in and a bit of blue ribbon to tie it up. Now it looks lovely, but you and I must go home or our friends will wonder what has become of us."—*Sarah E. Gannett.*

LAPLAND BABIES.

LAPLAND is away up north, and up there the snow lasts six or eight months in the year. The mothers love to go to church, and they go regularly every Sunday, even when they have little babies to care for.

They wrap the babies up in warm clothes, often in bear skins or something just as warm, and then carry them along to church. Even if they have to go ten or fifteen miles they will take the baby along. It is wrapped up warmly and does not catch cold. They usually go in sleighs, drawn, not by a horse or mule, but by a reindeer.

As soon as the family arrives at the little church and the reindeer is secured, the father Lapp shovels a snug little bed in the snow, and mother Lapp wraps baby snugly in skins and lays it down there. Then the father piles the snow all around it, and then the parents go into the church.

Over twenty or thirty of these babies lie out there in the snow around the church, and I never heard of one that was suffocated or frozen. The snow does not make them cold, for when the snow covers a person all over, if he has clothing enough so that the snow will not melt and wet him, the snow will keep him warm. And the little babies are not strong enough to knock the snow aside and get away, so they just lie still there and sleep.

Then when church is out the father goes out to where the baby is, and puts his arm down in the snow and pulls the baby out and shakes off the snow, and then the reindeer trots off, a good deal faster than a horse, and takes them all home again.—*Christian Observer.*

THE HARMONY OF PHRENOLOGY AND THE SCRIPTURES.

BY H. B. MOHLER, F. A. P. I.

Part Three.

YEARS ago it was believed that Christianity afforded a quicker and better remedy for sin and human depravity than improvement of *heredity* and *health*, as physical agencies, and development of *brain centers* as a mental and spiritual agency, which nowadays is recognized with some modifications.

We do assert that regeneration is God's plan of redeeming the soul from sin and eternal death, and when the *Holy Spirit* quickens the life, permeates and remains therein, then the life is changed, for man "*becomes a new creature*"—"born, not of blood, nor of the will of the flesh, nor of the will of man, but of God." John 1: 13. But the question arises, Does the *condition of flesh, blood, will*, etc., which is vested in his *temperament, transmission, quality, mental development*, etc., modify conditions of religious life? This has been asked me dozens of times over in professional work, and when I recognize and study "God's natural laws," which are just as essential to be obeyed as the "Divine laws"—a great fact confronts me as it does everyone; *i. e.*, people in whose brains the *animal faculties* have the mastery over their moral and intellectual faculties, who in addition possess a coarse temperament and low birth, will instinctively tend to bad conduct—no matter what the social or religious influences may be! Thus we see persons who, within the church or out, under these negative conditions would have greater battles to fight than those born under favorable conditions. The "law of transmission," the "*law of quality*," and the "*law of mental development*" must be recognized as three potent factors in modifying conditions of Christianity.

The Corinthian brethren in 1 Cor. 3: 1, 2, 3, whom Paul rebukes, were withal under the ban of carnality. He says: "*I, brethren, could not speak unto you as unto spiritual, but as unto carnal, even as babes in Christ.*" These naturally inherent unfavorable conditions hindered their "growth in grace." Verse 3 clearly shows a preëminent development of combativeness and the associated dominating influences of the "propensities." The same conditions are awfully prevalent nowadays, and, associated with spirit power, we need to utilize every agency that will induce cleaner lives, purer thought, nobler living, and richer, stronger influence for God if we ever hope to, in a larger measure, overcome human sin.

It is altogether obvious, then, that the power of receiving and appreciating Christianity is intrinsically modified by development of "*brain organs*," *health*,

quality, temperament and heredity. With rough, irregular features, coarse quality, diseased body and undeveloped faculties in the intellectual and moral there cannot be much accountability or responsibility. Phrenology and the Scriptures unanimously teach that "*where there is no law there is no transgression.*"

The Gospels throughout were addressed to our intellectual and religious faculties because the "inspired writers," Matthew, Mark, Luke, John, Paul, etc., were human and could only perceive and conceive, *i. e.*, observe, think, reason, through natural brain organs. However, in Spirit life, with that "incorruptible body," we will be dismantled of this robe of flesh; but so long as we are in the body God has wisely ordained *natural laws* and *natural organs* through which these physical functions are exercised and manifested.

Throughout the divisions and subdivisions of faculties, as classified by phrenology all are emotional—based on feeling and thus are no true guide in our decisions for truth, principle and Christian manhood, unless corrected, adjusted and regulated by the intellect. In all mission and reform work that part is just appealed to by teaching, by analogy and discipline so that together there is a standard of government, enlightenment and Christian civilization.

While the moral faculties are the highest in purpose and function, yet because they are but emotions of *sympathy, hope, conviction, faith*, etc., they must be enlightened by *study, thought* and acquired knowledge. "Belief" is the most potent factor in the realm of "intellectual regeneration," and the first thing to do is to get a man to *believe*. This is God's requirement and appeals directly to his reason, thought and comparison. If conditions of intelligence, training, development, transmission, etc., are favorable, he will read, search and inquire as did Paul, the jailor, Nicodemus, etc., and find out "what the will of God is concerning him." The "parable of the talents," the "diversity of gifts" and a deal of evidence that shows the harmony of human nature, the Scriptures and phrenology has broadened my experience, deepened my interest in humanity, and brought me closer to the foot of the cross. Isaiah says, "*Come, let us reason together*,"—for by reason only can we judge, not alone of the meaning but also of the morality and evidence of revelation.

* * *

WINTER READING.

A SUMMER tourist among our mountain and seaside resorts might naturally conclude that the people of the United States read nothing but novels. What an extensive spread of paper-covered fiction at the station where he buys his ticket, and if he happens to want "something to read" at one of the great summer hotels he finds in the book-room two or three hundred

novels, and not one volume of any other kind of literature.

This does well enough for our short summer holiday, during which we need not read very much of anything; and, besides, much of the best thought, fancy and feeling of our day is communicated to the world through the medium of fiction.

One touch of nature makes the whole world kin. The world is destined one day, as we all hope, to recognize this kinship, and if so, the most powerful means of bringing it about will probably be great fiction, like that which abolished Sarey Gamp and helped emancipate Russian serfs and American slaves. At this moment there are lying upon our numberless book-stands American novels which are melting hearts, softening prejudices and inspiring endeavor away off in the interior of India and in the rising cities of Oceanica. They are helping to make the world kin.

The summer has ended. Books of other kinds are now in request, and we find them not less abundant than novels if we know where to look for them. Of late years there has been a most remarkable production of what are called books of reference, in which knowledge is stored away and arranged for convenient use when wanted.

Some of these dictionaries and encyclopædias of knowledge are wonders of cheapness and excellence; others are of such extent that they can not be of low price, but most of them command a sale in this country that surprises even their sanguine projectors. A really good book of reference appears to be one of the things which American families are most willing to make sacrifices to get.

Noah Webster published his large dictionary in 1828. The first edition, consisting of twenty-five hundred copies, lasted twelve years, and the second edition, of three thousand copies, supplied the market for seven years. We have now dictionaries and encyclopædias that cost sixty, eighty, and one hundred and fifty dollars, which reach a larger sale immediately than Webster's dictionary enjoyed during the whole lifetime of the author.

Such facts as these indicate that the reading of fiction does not destroy the taste for the acquisition of knowledge, as is frequently alleged. Thackeray was disposed to cast ridicule upon young ladies who read "improving works," and Dickens was not free from the same propensity. But, in fact, the best students are often the best novel-readers. In the most intelligent households we can see on the upper shelves of the bookcase plenty of Scott, Thackeray, Dickens, Hawthorne and Howells, ballasted on the lower shelves by the solid volumes of the encyclopædia and the dictionary.

During the winter months the works of reference come into great play in many of the best schools and

clubs, where a "winter subject" is chosen, and the advanced pupils "read all round it," until they have absorbed most of the knowledge that exists upon it.

"Africa" has been selected as the winter topic by one of our Boston evening clubs, apropos of the new African books by Stanley, Ward and others. It gives point and interest to reading to have such a subject in view. As the months go by we gradually get full possession of it, correcting erroneous impressions and getting light upon it from other minds.—*Selected.*

THE HIPPOPOTAMUS.

"IN the channels which traverse the marshes of certain districts in central Africa," writes a traveler, "hippopotami in incredible numbers are met with—sometimes in herds of sixty and seventy. Wherever the channel widens out into a reedy lake rows of grotesque looking heads with ears erect appear above the water surface, their owners studying the extraordinary apparition produced by the steamer. On approaching the spot these heads disappear, one after the other, under the water, and a series of waves and large ripples indicate the passage of the monster forms below the surface. After a few minutes' time the same huge heads reappear, generally downstream of the boat. They have another stare and again disappear, with a snort and the expulsion of a small volume of water from the nostrils. Not infrequently a severe bump is felt in the steamer, making the whole hull quiver, as the back of a hippopotamus seeking to escape has touched it.

"If the water should happen to be shallow, the attempts of these animals to hide themselves are ludicrous, as their movements are clumsy, and their anger and fear are evident. In such cases their heads and the fore parts of their bodies are under water, and nothing is seen but the huge pink hind quarters, struggling, kicking and churning up the water in the effort to get out of sight. Although their uncouth antics may be safely watched from a steamer, it is a very different matter if the observer is in a canoe or small boat. Then his position is one of considerable danger, as he stands a very good chance of being upset.

"As the water of all these channels swarms with crocodiles, such a contingency is not pleasant to contemplate. The natives are fully alive to this risk and never venture in their dugout canoes into the broad streams infested by hippopotami, but invariably keep to the shallow and narrow branches on either side of the main river."

* * *

LUXURY destroys mankind, at once corrupts the body and the mind.—*Crown.*

THE BIBLE AS A FACTOR IN EDUCATION.

To most individuals, when the term education is mentioned, the thought immediately brings to mind colleges and universities, and such subjects as are provided in their different curricula. If a certain man is spoken of as being educated we at once conclude that he has taken a thorough course in Mathematics, Science, English, History, Philosophy and kindred subjects in some college or university. While our conclusion is no doubt true, and the subjects absolutely essential, it does not argue that this is all the man possesses if he be truly educated.

A definition of education is in place before we enter into a discussion of the subject. Literally, we have "e" meaning out, "duco" or "ducre" to lead, and "ion" the act of: whence the act of leading out. I know of no better definition for education than that given by Herbert Spencer: "Education is the preparation for complete living." To put it literally, education is the leading out into complete life.

We know that in mathematics we have a law that in order to obtain certain results, it is NECESSARY and SUFFICIENT to have given conditions. In the educational world, that a thorough course in the above-named subjects is NECESSARY is readily conceded; but that it is SUFFICIENT needs to be seriously questioned. A thorough course in Mathematics, Science, English, History and Philosophy builds a strong intellect, but if we are to lead out into complete life our work is not to build intellects only, but souls. Owing to the threefold nature of man no individual lives a complete life unless he develops not only the physical and intellectual parts of his being, but the spiritual as well.

In order to build the soul it is necessary to introduce the teachings of the great text-book, the Bible. This statement is readily proven by referring to nations which have educational standards, but have not the Bible as the law of their religious life. Look at such nations as Turkey and China. The sacred book of the Turks is the Koran; that of the Chinese is the writings of Confucius. China has her higher institutions of learning. Why has she not become a ranking nation in the world? Because of the fact that she has a dead religion. Her great law of life is: "Do not do to others what you would not have them do to you." The great law of the Bible is: "Do unto others as you would have them do to you." The life of the Chinese is wholly negative, whereas it ought to be positive. The individuals who move this world are those that Do.

There is an innate tendency in every human being to worship something. The ideal, the spirit, the life of an individual is determined by the power, the greatness, the divinity, of the object which it worships. We see beauty, grandeur and sublimity in life only to the

extent that God manifests himself to us. The Chinese and the native of India can not see this sublimity as we see it because he worships a dead god; therefore there can be nothing in the god to create and inspire spirit and life. The Bible inspires life in the individual because its author is life itself.

To see the influence of the Bible upon education, rid our schools, our colleges, our universities, our education of the Bible and its influence. What do you have left?—a void. Go back in time as far as history will take you and you still have an outgrowth of what has preceded. Look into the pages of Astronomy and you will find that there are countless worlds controlled by a Power which man is unable to define. Consult Geography, and even after you have proven that the earth has been standing for millions of years, you still have no date from which to determine its origin. Turn to science—after learning that the protoplasm of the cell is the only living part of animate matter, ask the question: From whence comes this life? Science has no answer. Stand by an open grave and see the sacred clay of a loved friend lowered to the bosom of its former mother-earth, and hear the thud of the cold clods of earth as they drop on the coffin of the dead, then raise your head and ask all the science and knowledge of the world what has become of the life which was embodied in this beautiful earthly temple, and it is speechless. To what source can you turn for an answer? There is one source and ONLY one—the Bible. Science sees only the material part of man.

Since the beginning of time there has been within man the longing after another life, the feeling that this life with its incompleteness demands another life for completion. Addison has given us this thought very beautifully in his drama, "Cato," when he has Cato say in regard to the immortality of the soul:

"It must be so, Plato, thou reasoned well. Else whence this pleasing hope, this fond desire, this longing after immortality?"

"Or whence this secret dread, and inward horror of falling into naught? Why shrinks the soul back on herself and startles at destruction?"

"'Tis heaven itself that points out an hereafter and intimates eternity to man."

And what means have we of knowing of the grandeur of life, the divinity of God, the beauties of heaven, the immortality of the soul? Our great source is the Bible. Our nation recognized this at its very beginning and consequently nearly every colony was founded with some of the teachings of the Bible as a part of its charter. The nation caught the spirit at the time of the Constitution, and made religious liberty one of the prerequisites in the founding of the new nation.

The same spirit has ever since prevailed. While it

is true that some States prohibit the use of the Bible as a text in the common school, they nevertheless encourage its private study. On the other hand it is encouraging to know that nearly all of the leading universities of the United States give a theological course, and in some the Bible is not only taught but is included in the list of required subjects.

This has had a telling influence, and we are glad to note that to-day over sixty per cent of the young men and women in the colleges and universities of the United States are professing Christians.

The enviable position which the United States to-day occupies among the nations of the world is largely due to its education. Its education is a reflection of the teachings of the Bible.—*G. W. Kiefaber, Canton, Ohio.*

WHY NO WATER-RATS, SNAKES, ETC., ARE FOUND IN IRELAND.

In an interesting article on the vole, or water-rat, by Mr. Grant Allen, in the English *Country Gentleman*, the writer discusses the question why certain animals, such as snakes, vipers, water-rats, etc., are not found in Ireland. For the real solution of the problem, he says, we must go back to the time when England, Ireland and the Continent were united by a broad belt of land across the beds of the English Channel, St. George's Channel, and the North Sea. It is now an ascertained fact that in the very latest geological period, known as the glacial epoch, the whole surface of the British Islands (except an insignificant strip of the south coast) was covered from end to end with a deep coating of glaciers, like that which now envelops all polar lands, and while this condition of things prevailed there were, of course, no animals of any sort in all Britain, or, at any rate, none but a few Arctic types. After the ice melted, however, the existing British fauna, such as it is, began to occupy the land, and the fact that it did so is one proof though by no means the only proof that a communication with the Continent then existed across the bed of the North Sea. Now the animals only pushed their way very slowly into the newly-cleared region as the ice melted away, and the consequence is that only some forty kinds of animals out of the whole European fauna had penetrated as far as England before the gradual submergence of the lowland belt separated it from the Continent by forming the inclosing arms of the sea. But Ireland lies even farther west than England, and there is reason to believe that St. George's Channel had been all flooded before the waves of the Atlantic broke down the last link between Dover and Calais. Accordingly, Ireland never got her fair share of land animals at all, for though the wolf and fox and Irish hare, and many other quickly migrating creatures, had time to cross

the intervening belt before the submergence, several smaller or slower creatures, including the vipers, did not get over the ground fast enough, and were thus shut out forever from the Isle of Saints. Among them were the whole race of voles, and that is the reason why Ireland to this day has no water-rats.

A FREE HORSE.

PEOPLE sometimes decline to subscribe for their home paper for the reason that they already take several papers published in New York or elsewhere.

Yet these same people often ask and receive favors from the local paper, while none are received or expected from the far-off journal.

When they wish to express gratitude for kindly assistance during sickness or misfortune, the local paper is asked to publish a card of thanks.

When they wish to have a supper or reception of any kind, the local paper is asked to give it a free notice.

When a public meeting is to be held for any purpose, they want the local paper to give it due publicity.

When they want their town boomed so as to increase the value of their property they call on the local paper.

When they want a new railroad, or a factory built, they expect the local paper to work for it with all its might.

When a death occurs in the home they expect the local paper to report in tender, sympathetic strain, and to extol the virtues of the deceased.

When a birth or wedding occurs in the family, they expect the local paper to give a glowing description of the event.

When they are trying to build up churches or schools the local paper is asked to give them good strong puffs.

If there is a battle for right in the county or precinct the editor is expected to bear the brunt of it.

Thus people are constantly receiving favors from the local paper, but many fail to show their appreciation by subscribing for it.

Yet they cheerfully pay their subscriptions annually in advance for the New York *Bazoo* or the Philadelphia *Barnstormer*, which never did anything for them or their community.

This practice of bestowing one's patronage upon the far-off journal, while receiving all newspaper favors from the home publication, is a monumental injustice of which no decent person should be guilty.—*Exchange.*

NOT what others have done, but perfection, is the only true aim.

THERE are now over 100,000 persons in the United States who earn their living as stenographers.

FLIES—THE GOOD AND THE HARM THEY DO.

BY LULU HAINES.

FLIES, with the exception of dragon and damsel, belong to the *Diptera*, an order of the class *Insecta*, which forms the largest class of that division of the animal kingdom, formerly called *Articulata*, but for which the more expressive term *Arthropoda* is now more generally employed.

The characteristics of flies are: they are two-winged, the hind wings are called balancers, being undeveloped.

The dragon and damsel flies belong to the class *Insecta*, but to another order, the order of *Odonata*, the characteristics of which are: first, the wings are net-veined; second, mouth parts are fitted for biting; third, abdomen long and slender, and fourth, the development is direct.

To a geographical distribution of the widest extent, the flies add a range of habits of the most diversified nature; they are both animal and vegetable feeders and an enormous number of their species act as scavengers in consuming putrescent or decomposing matter of both kinds.

Flies do a great deal of good by clearing away waste matter. Although allowing for the good effected by the clearing away of animal and vegetable impurities by many species and for the indirect advantage of a few others as proven by known instances,—assisting in the fecundation of plants,—there remains a list of direct injuries effected by them. Wheat and other crops are often destroyed by the Hessian fly and are of a very serious consequence to the farmer.

Our domestic animals, horses, cows, etc., suffer from the botflies, gadflies, and the most dreaded, the African "zimb" or "tsetse," and even man himself is not spared. The petty inconveniences of wasted food, broken rest and slight personal pain or irritation experienced in temperate regions from flies are aggravated to a dangerous extent, and have ever been found prejudicial to life. Various cases have recently been noted of the diffusion of the germs of disease by flies; and instances of death from transference of putrid animal matter in New Caledonia have also been recorded.

The most familiar to us of all insects is the common house fly. It has a peculiar mouth (like most flies), called a proboscis. It is this that troubles us so effectually on a warm summer day when we wish to read or take a snooze in the shade. They cannot bite, but there is another which is frequently seen in the house (the stable fly) that can and does bite. The eyes of flies are very remarkable and do not move around or about as ours do. They are compound, and a compound eye is made up of a great many small ones.

They are so very small that they can be detected only by the aid of a very strong magnifying glass. It has been estimated that each eye is composed of four thousand small eyes.

Flies have two wings; they become numerous in August and September. The fly lays its eggs in decaying matter and they are hatched in a very short time; only about one day being required. It is then a small white larva. In about seven days it ceases to eat, becomes stiff and lies still another seven days. This is the third stage of the fly's development and is called the pupa. Finally it breaks its shell and comes out a full-grown fly, just as we always see it. Flies are full-grown when hatched. Most of them die in winter; a few, however, remain if they can find a warm place in which to hide until spring. It is estimated that there are about ten thousand different kinds of flies in America.

The antiquity of the fly is scarcely more than historical. Very few fossil species are known; but the more recent "flies in amber" are so constantly found that the expression has become a common proverb.

Union Bridge, Md.

LINCOLN AND THE LITTLE GIRL.

WILL the world ever know what depth of tenderness there was in the heart of Abraham Lincoln? An anecdote, which has never been published, brings out one more instance in which his sympathies, awakened by a little child, nobly controlled his action. In one of the first skirmishes of the civil war a brave Union soldier was so severely wounded in the leg that the limb had to be amputated.

On leaving the hospital the soldier, by the aid of influential gentlemen, obtained a position as a government weigher of hay and grain. Not long after he had entered upon his duties his superior officer said to him:

"See here, Mr. M——, this hay weighs so much on these scales; but to the government it weighs so much more."

"I do not understand, sir, that way of doing business. I can enter but one weight, and that is the correct one," answered the weigher.

His superior walked away, uttering threats. The man from that day suffered very many petty persecutions for his honesty, and it was not long before he received notice that the government had no further need for his services. The summary dismissal made him so downhearted that when he told the story to his family, he seemed to be a man without hope.

"Father," said the eldest daughter, who was but thirteen years old, "cheer up! I am going to see President Lincoln. I know he will make it all right."

Her father and mother tried to turn her from her

purpose, saying that it would be useless to see the President, as he would not attend to such a petty matter as the dismissal of a weigher of grain. But her faith in the President's sense of justice was so strong that she went to the White House, and, after three days of patient waiting in the anteroom, was admitted to Mr. Lincoln's presence.

The hour for receiving visitors had nearly expired, and as she entered the room the President, throwing himself on a lounge, said wearily, "Well, my little girl, what can I do for you?"

She told her artless story. Mr. Lincoln listened attentively, and with a smile, asked, "But how, my dear, do I know that your statement is true?"

"Mr. President," answered the girl, with energy, "you must take my word for it."

"I do," replied the President, rising and taking her hand. "Come with me to Mr. Stanton."

"Stanton," said Mr. Lincoln, as they entered the office of the great War Secretary, "I wish you would hear this child's story."

"I have no time," answered the overworked man.

"But you must," replied Mr. Lincoln.

"I have not a moment to spare to-day, Mr. President."

"Come again, my dear, to-morrow, and Mr. Stanton will hear you then," said the President, leading her away.

The next day she was admitted at once to the President, who took her over to Mr. Stanton's office. The Secretary listened to the child's simple story and was so moved by it that he indignantly exclaimed before she had finished, "The rascal!" He went to his desk and wrote an order for the immediate dismissal of the dishonest official and for the appointment of the little girl's father to the vacant place.

Mr. Lincoln never forgot the child; he told her story to several Congressmen, and through their influence her two brothers were enrolled among the pages of the House of Representatives.—*Selected.*

CAN EVERYBODY LEARN TO SING?

To those who have always sung, singing being *natural*, as some express it, the question would probably at first sight seem to be out of place. But the familiar expression, "There are always two sides to a question," may give room for a pleasant discussion of the above subject.

We give a few words from well-known musical men and would be glad to hear from others, pro, or con.—*Marguerite Bixler.*

C. C. Case, Director of Boston School of Church Music: "Without doubt all people, if they can talk, can learn, in time, to sing."

W. S. Weeden, Song Evangelist: "Yes, I think

all may sing, providing they begin early in life and stick to it. We have, however, some professional singers to-day whose voices were made long after reaching maturity."

Wm. Beery, Prin. of Music Department, Juniata College, Pa.: "This question might be answered affirmatively or negatively, depending upon what is meant by learning to sing. If we adhere to a strict definition of the term we must certainly say that there are a few people who are unable to learn to do what the word sing calls for.

"Teachers of vocal music in public schools speak of 'monotones,' meaning such persons as cannot keep a tune. That is, they cannot modulate the voice at will; and there are some who cannot even tune their voices in unison with those by whom they are surrounded. Such persons can 'drone,' but they cannot sing. If, however, the noises made by such voices be called singing, then any one who has a voice at all can learn to sing.

"It is possible that, by long and careful training, some quite unmelodious and stubborn voices may be enabled to overcome the difficulty. But I have found a few voices, in my experience of twenty-five years of teaching vocal music and voice culture, which I considered hopeless cases. In the majority of such cases the trouble is in the ear. There seems to be something out of kilter with the auricular mechanism. Some are unable to distinguish one tune from another, or even discern the difference of pitch between tones with any degree of definiteness. It would seem that the only remedy in such cases would be a reconstruction of the ear, and it will likely be some time before mortal man will be able to perform an operation so delicate.

"Most people can learn to sing with other voices, or with instruments leading. A considerably smaller number become leaders. Early, correct and careful training has much to do with the learning to sing independently, correctly and easily."

WHAT TO READ AND HOW TO STUDY IT.

A LITTLE handbook came to our desk last week which is very valuable to the student of literature. It contains: (a) Study courses in American and English literature, giving all the best works of important authors; (b) A suggestive and valuable plan for reading and studying literary productions; (c) How to memorize addresses, recitations, etc. Three hundred copies are held for free distribution to any school-teacher, Sunday-school teacher, minister or Christian Worker officer *who is a reader of the INGLENOOK*. A copy will be sent for the asking. Address: Prof. L. L. Garber, Ashland, Ohio.

A PLACE OF REFUGE.

NOT the least of the wonders and benefits of the Yellowstone Park is the fact that it serves as a place of refuge where the fast vanishing big game of the North American continent can find rest and be saved from utter extermination. No guns are allowed in the park under any pretense, and the possession of game meat by any one of the few settlers who had secured homes within the limits of the reserve before it was withdrawn from settlement is an offense punishable most severely.

There are all sorts of game in the park. Elk, for instance, are there by thousands, and are so tame that they can easily be approached and photographed; bears roam freely, actually coming up to the hotel doors at times when something with a particularly appetizing smell is being cooked; other small game is too plentiful to excite remark.

But the buffalo is very nearly missing. Of all the millions that once wandered over the Western prairies, less than a thousand, all told, remain in the world, and few of these are in the Yellowstone. There is one wild herd there, but, differing from the other animals in the park, it is so wild that it not only cannot be approached, but it does not even increase in numbers. Its young perish by accidents of flight before they have time to grow up and get strong.

Recently Uncle Sam collected another small herd from various parts of the country, some of it from Montana, and some of it from Idaho, some of it from far-off New Mexico, and put it in the park. Profiting by the misadventures of the wild herd, however, he has taken care to put it in an inclosure, large, it is true, but still it is an inclosure, where the buffaloes can be accustomed to man and their young saved from the perils that menace them. It is hoped that this herd will increase rapidly.

It is surprising that the wild herd should be so very wild when the other animals are so tame. The elk, for instance, are altogether too tame for their own good. Formerly they used to live through the winter by kicking up the snow and getting at the sun-dried grasses beneath. But nowadays, once they get a taste of man-made hay, they are not satisfied without it. Last winter literally hundreds of them actually starved to death near the haystacks of the soldiers who guard the park, although all the time there was plenty of the sweet grass on which they had been brought up growing only a little distance away. The desire seemed almost that of some old toppers for the whiskey bottle.

Of course, the concourse of all these animals has tended to cause a corresponding concourse of beasts of prey. These, however, although they do some damage to the game, do not do much. A mountain lion differs from a man in that he never kills wantonly or for sport. He kills to live, not lives to kill. One

sportsman, if given the chance, would do more damage in the park in a week than fifty mountain lions would do in a year. Man seems to be almost the only created thing which merely kills for the sake of killing.—*Selected.*

* * *

HOMES OF SEA-URCHINS.

THE sea-urchin gets its name from the spines which cover its shell. The name, *echinus*, meaning a hedgehog, has been corrupted into urchin, with plain injustice to small lads. These curious shell-fish have acquired strange habits on the coast of France. They are found at home in cavities of the rock on the shore. The diameter of the cavity is often greater than that of the entrance, and the creature is so large that he could not leave his cell even if he very much wanted to do so. It is said that thousands of these may be seen thus domiciled in the granite rock.

It is not doubted that the creatures make these houses for themselves, but how they do this is a question not yet satisfactorily answered. It has been suggested that the rock has been somehow acted upon chemically, but this theory has to be given up when the nature of the rock is considered, and the fact that no acid has been proved to exist in the animal.

The matter has been studied lately by a French naturalist, who refers the excavation to mechanical means. His explanation is that the creature "probably bites the rock, the sucker feet are also attached, and a rotary motion is imparted to the body, the prickly points gradually wearing down the surface." This work would certainly occupy the animal a good part of his lifetime, and the wonder is that no observer has yet seen the excavation going on.

An attempt is made to conceal these holes by means of mussel and other shells. The rocks in which the cavities occur are in general thickly covered with seaweed. A number of other animals are known to penetrate rocks, and it is supposed they do it by mechanical means. In the hard limestones of Algiers, spotted snails were found in holes four to five inches deep.—*Selected.*

ODD VAGARIES.

THE appointments of the table were in excellent taste, but an old man, amid all that elegance of white damask and silver and crystal, was eating with a common wooden-handled knife. The old man was the star boarder of a hotel in the White Mountains. The steel blade of his knife, from years of sharpening, was worn down to a point at the end. The wooden handle was earth colored, and there were nicks in it here and there. Such knives are only to be seen in kitchens, where they are used to peel potatoes.

"The old fellow has been coming here for seventeen

ears," said the landlord, "and he has brought that wife with him each season. Wherever he goes it is his companion. He tells me he has taken it to Egypt, to India and to Japan. A waiter would get a dreadful fall down from him if at any meal he should forget to put the knife beside his plate. Its use? Oh, its use is only to cut meat with."

"Elderly people at summer hotels," continued the landlord, "are apt to have whims and vagaries like this knife. There is a lawyer of 60 who brings here with him in August a coffee cup that is as big as your head. He had the cup made to order at a pottery, and it holds a pint and a half. He uses it always at home, and on his travels he has cheek enough to take it with him. Only with such a cup, he claims, can he get all the coffee he wants. People, seeing it, put him down as a hog. Well, he is a hog as regards coffee, but in other things he is temperate and modest enough. A woman brings with her always a special pillow—a pillow like a square pancake, one inch thick, twelve inches long and twelve inches wide. An old woman now, she says she has used this pillow ever since she was a child. An aged dyspeptic brings his flour with him—a special brand of flour, out of which his bread must be made. A retired admiral brings his bed linen—his sheets, bolster cases and pillow cases. They are of silk; he got them in China, and he claims that without them he cannot sleep. All kinds of whims," said the landlord with a philosophic smile, "may be observed at summer hotels that the aged frequent."

MUST BE PROMPT AND ACCURATE.

SOME young men drift into the habit of performing their work in a slow, indifferent manner, failing to exercise enthusiasm or in the more modern use of the term, "hustle." They may succeed for a short time, but the day will soon come when they will find that they are unable to compete with other workmen because they have failed to cultivate the habit not only of performing their work rapidly, but well.

Every young man should remember that the business world demands both speed and accuracy and that if he expects to reap the rewards that come to the successful pilot he must possess the two requisites named. While it is not well to sacrifice quality for speed, it is possible to cultivate both, and the fellow who endeavors to do so will be surprised how easily they are attained. Above all, you should learn to think and act promptly; do not become "rattled" when perplexities arise. Be master of the situation at all times, try to improve your work each day, both as to character and speed, and success is sure to follow.

It is amusing to observe how excited some young men become when they are called upon to perform a task in a given time: they lose a great deal of time in

unnecessary movements and lack of system. Instead of having the work mentally outlined, so that they can proceed intelligently, they go at it in a haphazard, go-lucky manner and when difficulties arise—and these are sure to come to all, especially to those who lack system—they are like a ship at sea without a rudder, tossed to and fro by every wind, and instead of getting the task performed in the required time, they make a bungle of it.

The world has little use for such young men; the demand of to-day is for those who have system about their work and can perform it in a proficient manner and in the shortest possible time. Are you satisfied with the progress you are making and have you attained the high standard demanded?—*Exchange*.

HOW LEAD PENCILS ARE MADE.

THE name "lead pencil" is derived from the fact that in the first pencils real lead was used.

In Nuremberg, where the great pencil factory of the Faber family was established in 1761, pencils were made from pulverized graphite cemented into solid blocks by gums, resins, glue, sulphur, etc., but none of these preparations yielded useful pencils.

About 1795 Conte of Paris devised the process, still in use, of mixing graphite and pipe-clay in water, in which, flowing from one vat into another, the heavier particles sink, the finer being carried along, that which reaches the last vat being extremely fine and suited for pencils of the highest quality. The mixture is then ground and the water squeezed out by hydraulic pressure, leaving a mass of the consistency of stiff dough, which is placed in a cylinder closed at one end by a steel plate, with a hole of the size the lead is to be. The graphite is forced through this hole by a plunger or piston, making a continuous thread, which, after being hardened in a crucible, is ready for the wood. The grades of hardness depend upon the proportions of graphite and clay and upon the tempering of the crucible.

Ordinary red cedar is used for pencils of medium price, but only the best Florida cedar is put into the finer pencils. The cedar is cut into blocks about seven inches long, and divided into strips wide enough for six pencils. The strips are grooved to receive the leads, which are placed in position by girls. The filled strips are covered with correspondingly grooved strips coated with hot glue, and put in a press to dry. A machine then cuts apart the shapes, and delivers the pencils smooth and ready for color and polish. They are colored by liquid dyes and then varnished. Stamping and finishing are done by automatic machines.

Colored leads are a mixture of clay with mineral matter, wax and tallow; copying leads are aniline mixed with clay and gum.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

THE BRIGHT SIDE OF A DARK PICTURE.

REVERSES are always bad enough at the best. They always bring with them that unrelenting sting. Disappointments are always bitter. When one has set his affections and desires on a certain thing at a certain time, disappointment is no less disastrous than an earthquake. For the girl the doll's nose is broken; for the boy the marble has rolled in a rat hole. Older people have disappointments of larger proportions,—greater in quantity, no more bitter in quality.

Discouragements make life heavy. It is hard sometimes to believe there is a silver lining behind a cloud as black as ink when you are on the dark side of it. But failures and reverses have their mission in this world. In fact they are very necessary. Notice how each reverse puts us on our guard lest we suffer a greater one which is awaiting us; and, too, it teaches us the fallibility of men and the fatherhood of God.

Few men are able to take a strong teaching of failure without some special preparation for it. Some quail under the stroke; some resort to flight and try to hunt a place where there is no trouble, and not a few of the weaker ones commit suicide, hoping that death ends all. If we allow these providences to crush us, so much the worse for us. If we accept the teaching, we have received an education at a very reasonable price.

Robert Bruce, at one time when he had become discouraged, was about to take his life to get rid of his defeat. He went into an old barn and threw himself upon a pile of hay and, placing his hands under his head, prepared to meditate upon his immediate future. While lying there he chanced to see an old spider among the rafters above him, trying to swing from one rafter to the other at the end of the web. Each time the spider fell just a little short of reaching the desired place. Twelve times she failed; summing up all the strength she could command she made one more effort

and was successful. "The thirteenth time," said Bruce. "I accept it as a lesson not to despond under difficulty, and shall once more venture my life in the struggle." History records the result. Robert Bruce made a success of life because he learned lessons from his failures and profited by them.

Horace Greeley made several attempts before he amounted to anything, and a great many of his best friends were fearful that his life was a failure. Finally he got in the right sphere; he became the editor of the New York *Tribune* and before he died was able to give away a million dollars. He was like the boy who, when asked how he learned to skate, said, "I get up every time I fall down and try it again."

Stephen A. Douglas amounted to nothing as a cabinetmaker; he made bedsteads and tables for a season, but he never became a success until he stood on the floor of the senate chamber as a recognized power among legislators. He did not reach prominence at a single bound; he made his way to the top through a long series of reverses.

Phillips Brooks failed as a Latin teacher in Boston and became so discouraged that he hardly knew what to do with life; but after several hard trials and storm through the encouragements of his friends he became one of the richest preachers this country has ever known.

Patrick Henry absolutely failed in everything he undertook, because he did not find the right place. The wheel of fortune kept rolling him on and on from one reverse to another until it landed him at the right place. It brought him to a time and place where a nation with a broken back needed a balm for his wounds, and he became the great political physician in the time of dire necessity.

Abe Lincoln will never be remembered for his failures as a galley slave on the freight boats of the Mississippi. His name will never be lauded to the skies for the molasses he spilt and the crackers he upset while he was an awkward clerk in a grocery store but he is to be remembered as the Emancipator of a nation of slaves.

Peter Cooper found, by experience, that he could not make hats that would sell, so he abandoned that undertaking. Next he tried cabinetmaking, and lost nearly everything he had. Later in life he undertook to build locomotives, and found that other people knew more about that business than he did. Perhaps not all the world knows that he failed as a grocery man; but one failure after the other was a lesson for Peter, and he profited by the schooling that he received. Before he died he gave a million dollars to establish a night school for working boys. Where you want to find it in New York City ask for Cooper's Union.

TRIFLES.

ONE morning in Holland a well-dressed gentleman walking along the dyke noticed a little boy below the great embankment, half in a sitting posture and half lying upon the ground. He was almost dead from exhaustion. He had been there all night. The exposure and exertion, during the long weary hours of the night, had told perceptibly upon him.

His one hand reached above his head quite to the ock in the dyke. Had he become fastened in the dyke? No. The little fellow was passing by the day before and, noticing a little leak which had sprung in the dyke, rushed to the place at once and put his finger in the hole to stop the leak. He was a native of that country and had so early in life learned how destructive to the dyke one of these little leaks could become. Realizing as he did the great damage and perhaps even loss of life that might be done by an overflow, he resolved to prevent it at the risk of his own life.

It was a very little thing to do; it was a mere trifle, but it was a beginning which had an end. The leak was the little thing that might have caused great destruction. It was the right thing at the right place to become a great disaster. The boy was a little thing, made of the right quality to become a great man.

Once upon a time a noted infidel, upon his death bed, made a request that his remains should be enclosed in a steel casket and placed in a stone vault, saying that he defied God or anyone else to touch either body or soul after he was dead. A short time after he was laid to rest a little acorn that had dropped, perchance from the old oak tree overhanging his last resting place, when his grave was opened to receive him, sprouted. The forces of nature began to operate upon the little thing and, for some reason it lay immediately underneath the crevice of the great stones of which his vault was composed, and consequently stuck its little head through the opening. It continued to grow upward; it finally reached the lid of the casket, being turned a little to one side by the lid of steel, forced its way through the casket and in time assumed such proportions as to burst both the tomb and the casket wide open. It was too late for the infidel to learn the lesson of the power of God, but those of his friends who lived to see the circumstance never doubted but that God was offended at the remarks he had made and demonstrated his power in the above described manner. The acorn was but a trifling little thing, but the smallest of things in the hands of God can do wonders.

In passing over the mountains of Switzerland, Alpine guides often lose their lives by the giving way of a very small piece of earth, which had many times formed a foothold for the traveler. Just a trifling

little stone in the pathway has often formed a stumbling-block that caused the traveler to land hundreds of feet below in the great chasm.

Sometimes whole trains are wrecked because one coach is derailed, and that because a switch is the tenth of an inch out of line. The tenth of an inch is a very trifling little thing, but it is the wrong thing at the wrong place at the wrong time, and ends in a great catastrophe. A handful of gypsy moths was brought to this country several years ago for scientific purposes, but it cost the State of Massachusetts seven hundred thousand dollars to get rid of them. Evil thoughts are very trifling little things, but they end in robberies, suicides, divorces, murders and calamities of all sorts:

“The smallest crust may save a human life;
The smallest act may lead to human strife;
The smallest touch may cause the body pain;
The smallest spark may find a field of grain;
The smallest deed may kill the truly brave;
The smallest skill may serve a life to save;
The smallest drop the thirsty may relieve;
The slightest shock may wake a heart to grieve;
Naught is so small that it may not contain
The rose of pleasure, or the thorn of pain.”

HATS OFF TO THE BOYS.

You think a boy isn't worth much. You think because he steps on his feet when he walks and swallows his tongue when he talks that he can't do things; he can do more things in a day than any man. He works right along with the rest of the men and goes after a jug of water while the men rest. If the energy of a boy is properly directed it is powerful. A boy is an undeveloped man; he has to grow inside as well as outside. A boy who has no energy, no mischief, is worthless. The boy shuns work, not because he is lazy, but to save his strength for old age. A boy too full of energy never makes a good old man; but the boy who loves his play as well as his work develops an equilibrium. When you are planning his work, plan it so that he can perform it while he is playing. A boy is a boy, but he will be a man.

DON'T throw down this paper without reading President Roosevelt's message to mothers. The article is a little long, it is true, but it would not have been long had you heard him say it, and it's too good to throw away or cut in two; so, read it; especially the mothers. Notice what he says about marriage, the rights of women, woman's part in the destiny of the nation, and the blessing of children. He clearly defines the relation existing between the home and the nation. You will not regret reading it.

Current Happenings

RUSSIAN-JAPANESE WAR.

THE loss of the Japanese in the battles around Mukden is put at 100,000 by foreigners.

Japanese armies, totaling 475,000 men, are advancing against Linevitch, and it is believed in St. Petersburg that he must withdraw.

By a collision of military trains west of Harbin eight soldiers were killed and twenty-six men wounded.

Forty-seven Russian ships have been sighted in the Straits of Malacca by a British steamer and Togo's squadron is near, watching every passage. The greatest naval fight of the war is believed at hand.

Reports are current in St. Petersburg that the Vladivostok squadron has been ordered to sea to take part in the coming battle.

Four powerful Russian battleships are absent from the portion of the Baltic fleet which has passed Singapore, giving Togo a chance to fight in sections.

Oyama is making a great effort to capture Vladivostok before any part of the Baltic fleet can find a haven in the only port Russia has on the Pacific.

The Japanese observation fleet is reported to be following the Russian ships on the China sea, awaiting an opportunity to drive home a torpedo attack.

LIST OF FIRES.

THE big boiler of the Union Ice works in Los Angeles, Cal., blew up, seriously injuring two employes and setting fire to the \$100,000 plant, which was destroyed.

The Loretto cotton factory near the City of Mexico was burned. Loss, \$200,000.

Fire at Akron, Iowa, burned out six business firms. Loss, \$50,000; insurance, \$33,000.

The entire plant of the C. O. Bartlett & Snow Company, mill machinery manufacturers, at Cleveland, Ohio, is in ashes. Loss, \$100,000.

The Elkins Tanning Company's plant at Elkins, W. Va., was burned. Loss, \$200,000.

The Campbell street schoolhouse at Evansville, Ind., was struck by lightning and totally destroyed. Loss, \$50,000.

The entire plant of the S. Berglund Lumber Company at White Bear, Minn., was destroyed by fire. Loss, \$80,000.

Fire at Rocky Mount, N. C., did damage estimated at \$110,000, with \$64,000 insurance.

Efforts to check the forest fire raging on South

Mountain, east of Hagerstown, Md., have been futile and the mountain people are praying for rain.

The main building of the Odd Fellows' Widow and Orphans' Home, together with its contents, valued at \$100,000 was recently destroyed by fire, at Dallas, Texas. Fortunately no one was hurt.

THE Sugar Beet Company of Sterling, Colo., quite busy, with forty men at work now on a new factory. It will require ten thousand barrels of cement to make the foundation, which is to be eighty-four feet wide and four hundred seventy-two feet long. It will be the largest slab of cement in the world. The building is to be sixty-eight feet wide. The company will soon employ one hundred sixty more working men.

WASHINGTON statistics show that our exports to Cuba indicate a big increase over last year.

WORK has commenced on the second tunnel of the three projected under the Hudson river. This tunnel is to be constructed by the New York and Jersey Company.

A HAILSTORM swept over Pittsburg April 10, causing thousands of dollars' damage.

THE Chicago post office is nearly completed and those to occupy it will move this month.

THE Fifth Avenue Baptist church, of New York City, of which John D. Rockefeller is a member, may investigate the charges against the oil king.

AFTER spending five days hunting coyotes and jack rabbits in Oklahoma, President Roosevelt and his party started for Colorado last week. During the hunt eighteen coyotes were killed. In Colorado he is to hunt bigger game under a special hunting license from the State Game Commissioner.

THE largest estimate of the dead by the earthquake in India is 13,000, mostly natives.

A LARGE reservoir, while in course of construction near Madrid, Spain, April 8, collapsed and it is believed that four hundred lives have been lost. More than eighty bodies have been recovered. The disaster was due to bad material and quick work.

PHILADELPHIA capitalists have obtained a charter for a \$25,000,000 corporation to conduct extended coal operations in southern West Virginia.

THE Panama Canal Commission has been considering the question as to whether the eight-hour law applies to the work on the Isthmus, where from 30,000 to 40,000 men will be employed in digging the canal. Chief Engineer Wallace says that the eight-hour plan will add millions to the cost of the work. At present there are only about 5,000 men at work on the canal. Six American steam shovels are operating at the Culebra cut.

THE District Court at Salt Lake City, Utah, has been asked by two members of the quorum of Seventies of the Mormon Church, to issue an injunction against Joseph F. Smith to prevent him from unlawfully diverting \$500,000 annually of the Mormon Church funds. One of the appellants has been already excommunicated for criticising Smith, but appealed his case.

ARTICLES of incorporation for an extension of the Illinois Central railroad from Shawneetown to Golconda, Ill., have been filed.

THE first-class battleship *Minnesota* was launched at Newport News, Va., April 8, christened by Miss Rose Marie Schaller, of Minnesota.

THE postoffice department has decided to draw the line against accepting as newspaper mail the various articles offered as premiums in connection with the Sunday papers, but which are not strictly germane to the newspaper itself. These include calendars, sheet music, patterns, post cards, cut-out animals, etc., and they will not be mailable after Sept. 1, except at the regular rates of postage.

A SYNDICATE of Pittsburg business men, headed by Henry Fownes, has purchased 600 acres of land near Allequippa, Pa., on the Ohio river, for \$1,500,000. They intend to build one of the largest iron and steel plants in the country in opposition to the Steel Trust. In addition to the steel mills a large blast furnace or pressed steel cars is to be erected. It is said about \$15,000,000 is behind the venture.

THE Erie railroad has received over half of the 3,300 freight cars recently ordered, and they are of the latest steel construction. Besides this, 137 heavy freight locomotives are building.

THE trial of the murderer of Grand Duke Sergius will take place in a few days. So far all efforts to establish the identity of the assassin have failed.

IN a mine explosion at Jerome, Arizona, owned by Senator Clarke, five men lost their lives and seven others were badly injured.

SZABALOVICZ, the police commissioner of Lodz, Russian Poland, had his feet blown off by a bomb thrown by an assassin, while on his way to the office of the chief of police. He was followed by a policeman and when turning a certain corner a poorly-clad man approached carrying a basket. As the official neared him the man suddenly hurled a bomb, which exploded with terrible force. The policeman wounded him almost fatally with his sword and it is feared that Szabalovicz will die.

A NUMBER of Chicago capitalists, having friendly relations with Secretary Morton, have engaged an expert to draw up plans for the construction of a complete railroad system for the Philippine Islands, in which they propose to invest millions of dollars, regarding the combination as a matter of patriotism and good business.

WHILE taking a flashlight picture of a building at Omaha, Nebr., Albert Butler, a young man, was blown to pieces by the explosion of the powder with which he was making the picture. The building was wrecked and several bystanders were badly injured. At the inquest over the young man the locket which contained the picture of his sweetheart was found imbedded in his heart. Later on the picture of the building was found in perfect condition among the ruins.

THREE hundred thousand employes of Italian railroads began strike in protest against passage of law controlling state railway employes. The government owns more than 10,000 miles of railroad, largely operated by private companies under contract. The government has decided to place on each train an armed escort and government workmen will be ready to repair any damage done, while cavalry will patrol the tracks.

THE California State Senate expelled four of its members on February 27 for alleged receiving of bribes to aid building and loan associations. The report of the investigating committee, recommending expulsion, was adopted by thirty-five affirmative votes. The other five votes of the Senate were not cast.

HOME DEPARTMENT

THE FELLOW THAT'S DOING HIS BEST.

You may talk of your battle scarred heroes,
Of martyrs and all of the rest,
But here's another I think just as worthy—
The fellow that's doing his best.

He doesn't wear gold braid and tinsel
Nor ride on the waves highest crest,
But he's always where duty demands him—
This fellow that's doing his best.

No trumpet blare tells of his coming,
For fame he is never in quest;
But he's always a hero, this fellow
Who is always found doing his best.

And I'm sure in the day of the judgment,
When many shall fail at the test,
There'll be one who will pass without trouble—
The fellow that's doing his best.

And the gates of the heavenly city,
The beautiful home of the blest,
Will swing wide for my hero to enter—
The fellow that's doing his best.

—Dallas (Texas) News.

SHALL WE CLEAN HOUSE?

BY MRS. M. M. BOLLINGER.

Is periodical housecleaning necessary? Perhaps not for the wealthy or well-to-do who can afford to hire the paper hanger, painter, cook, seamstress and wash-woman, and to buy their bread, pastries, fruit, preserves, jams, jellies and every other thing they want without fuss or worry to themselves except the paying out of a little money. Even then it is doubtful whether the experiment suggested in a previous paper would work long at a time without leaving the experimenter in both a mental and financial bankruptcy, because it is utterly impossible for any business, however unimportant, to be run successfully very long at a time without the careful supervision and oversight of the proprietor, and if he must give this attention it would be very inconvenient and annoying to be compelled to be called away at any or all times to attend to the petty annoyances of housecleaning every day in the year and so be never at leisure for the undivided attention to other business or company.

For the poor or those who cannot afford these luxuries it is utterly impossible and impracticable to do away with the periodical housecleaning.

In the first place, two-thirds of the people, if not

over that number, live in houses not nearly as large as the one mentioned, sometimes of six or eight rooms and a good many of two or three, oftentimes with only one pair of hands to do all the papering, painting, cleaning, cooking, baking, canning, preserving, washing, ironing, mending and sewing for a family of six or eight and sometimes even more, besides having the general oversight, care, and being companion and playmate of the children.

While it is possible by a little care and foresight and by having a place for everything and putting everything in its place, to keep the house passably clean and pure, the closets, cupboards and drawers orderly and free from dust, vermin and crumbs, the busy housewife, especially the farmer's wife, during the summer months, when she has more to cook for, while she tends her garden, cans fruit, makes jellies, jam and preserves, (oftentimes picking it herself), makes pickles, cans corn and other vegetables, tends to making the butter from four to a dozen cows, does the necessary washing, ironing and sewing, cannot see to papering and painting nor can she find time and strength to give the house that careful daily, weekly attention which would be necessary to give it to keep it so clean as not to require a general renovating; because dust, cobwebs and dirt will collect on the pictures and behind and under the large cumbersome articles which she cannot move alone and which the busy husband would think it both unnecessary and a nuisance to help move so often as would be necessary to keep clean.

Neither can she do the cleaning during the winter but must select the spring and fall before and after the busiest season in order to allow herself leisure in which to perform this task and at the same time have weather that is sufficiently warm and pleasant to allow the removal of furniture and children outdoors, which in some cases is the only alternative, there not being sufficient room in a small house with any amount of crowding in which to store the goods.

The plan to clean one room at a time so far apart allowing the cleaning to extend over so much time is not an economical one even to those who can afford to hire it done because workmen will do a large amount of work on a cheaper scale than a small amount. Then, too, there will invariably be a portion of paint, white-wash, or other material left which will be wasted that would probably be used if all were done together, and after all was done all of the house would never be thoroughly clean at once.

As to the movable rugs, there is probably one house in five hundred where they have them or can afford them.

There need be no shock to the household if the work is planned aright, and it is the duty of every housewife to so plan the work as to make as little confusion as possible, to set her table in a room as free from housecleaning confusion as she can, and to plan her cooking so as to give herself and family good, warm, wholesome meals instead of the cold lunches which are usually given at this time. She should also allow herself plenty of time to eat and should rest a few minutes after the meal.

I will not say that the plan proposed could not be carried out with success by some; but I am afraid if the poorer classes were to attempt it, instead of their looks balancing at the end of the day or the year they would run below the normal standard and as it is from these classes that most of our great and good men are taken they cannot be overlooked but must be taught to value the true things of life, to be industrious, cheerful, contented with the blessings which God in His wisdom sees fit to bestow upon them for their honest patient struggles, and to rise above the petty annoyances occasioned by inconveniences, crowded surroundings and scanty means. By this I do not mean that they should be contented to remain the same and indulge themselves in idleness amid unclean and wretched surroundings, but should always seek to better things, at the same time not to be extravagant, but living within their income.

I do not believe our gentleman friend took many of these things into consideration, and I do believe that he would admire the lady, even if she did indulge herself in periodical housecleaning, who tried to elevate her mind, to be an intelligent and interesting companion to her loved ones, to provide them with sweet, clean whole garments, making home as pleasant as she could by making the best of her surroundings, preserving a happy and cheerful demeanor even when she could not indulge herself in luxuries, by providing her loved ones with good, wholesome food, prepared by her own hands instead of the manufactured articles float to-day, made of we know not what, and I believe that he would enjoy a meal eaten in her house, however humble the house might be, do you not?

Vestaburg, Mich.

* * *

FASTING.

JESUS is frequently quoted to prove that fasting is a physical benefit. Jesus fasted frequently himself. He taught that certain miracles could only be performed after fasting and prayer; therefore, it is concluded by those who believe in fasting that fasting is good for the physical body.

This conclusion is not necessarily correct. It is well known that Jesus often sacrificed the good of his body for spiritual ends. He was also frequently hungered and overtired. His career finally cost him his life.

The mission of Jesus places the body necessarily secondary to spiritual ends. It is therefore unjust to quote his physical self-denials as rules for the upbuilding of the human body.

Whether one fasts or not depends upon the person. If we were asked the question, "Will fasting do me good?" it would place us in the same predicament as if some one should ask us the question, "Shall I cease earning money for a time and draw checks to pay my expenses?" That all depends on whether you have money in the bank. A man with a large surplus in the bank might very profitably stop earning money for a little season and depend on his bank account for his support, but if he has no money in the bank this would be a ruinous experiment.

Exactly so with fasting. If a man has plenty of reserve vitality a fast might be a good thing for him. But all those people who live active mental or physical lives and have a very narrow margin of reserve vitality had better not fast. Their problem is not to interrupt the nutritive processes but rather to enlarge them if possible. There are lots of people who ought to eat more instead of eating less. Those people who make a fad of fasting are just as apt to do harm as those other people who practice and preach gluttony.

There are no hard and fast rules to apply to this subject. Each individual case requires special attention. Every person must decide largely for himself.

If the blood is thick and the body inclined to overfleshiness, appetite capricious and there is a desire for condiments and stimulants with the food, then, doubtless, a good fast will be beneficial. Throw the body upon its own resources. Let the digestive organs have a rest. Allow nature to burn up some of the effete and superfluous material already lodged in the body. A fast for such a person would be better than medicine.

But a person who has a keen appetite, properly curbed, who eats only a moderate amount of food, well selected, who is carrying no more flesh than he ought to have, is not troubled with dyspepsia or irregular appetite, such a person will only unbalance his bodily powers and derange his physical forces by attempting to fast.

The best way to fast, after all, is to fast a little with each meal. Stop eating before the appetite is satisfied. If you are not hungry at mealtime omit one meal. You will doubtless be hungry by the next meal, then eat only about one-half as much as you want.

* * *

THE Turkish minister of the navy is said to be worth \$12,000,000. His salary is \$80,000 a year.

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

THE FOURTH COMMANDMENT.—Ex. 20:8-12.

For Sunday, May 7, 1905.

I. Sunday Loafing.

Excuses for not Attending Worship.

1. Too Tired, Isa. 40:31; Psa. 132:7
2. Too Sleepy, Deut. 31:11
3. Clothes Not Good Enough, Psa. 36:8
4. Don't Feel Well, Psa. 84:1

II. Sunday Excursions.

Why They are Patronized.

1. The Rates are Cheap.
2. Lots to See, Amos 6:1
3. Plenty of Fun, 1 Peter 4:3; Rom. 1:32
4. Because Some One Else Wants us to, .. Psa. 55:14

III. Sunday Visiting and Dinners.

Satan's Explanation.

1. Week-time is Precious, Mal. 3:8
2. News has Accumulated, .. Acts 17:21; 1 Tim. 5:13
3. No Danger of Dyspepsia.
4. "The Better the Day, the Better the Deed."

Text.—Remember the sabbath day, to keep it holy.—
Ex. 20:8-12.

References.—Ex. 31:13-17; 34:21; 35:2; Lev. 19:3, 30; 23:1-3; 24:8; Neh. 9:13, 14; 13:15-22; Psa. 118:24; Ezek. 22:8; 44:24; Matt. 18:1-8; Mark 2:27; Luke 4:16, 31; 13:10-17; Acts 16:13; 18:4.

The Sabbath Day.

I was wondering about the scene, and the day, and the God who first rested from his labors after the six days in which the world was flung into space, and the heavens and the earth were finished, and man was given dominion over the fowls and beasts and creeping things. Then God blessed the seventh day and sanctified it, because he rested from all his work. Then I thought of the sabbath in the wilderness when Moses and Aaron were the leaders of the people, and when the Levites pitched their tents round about the tabernacle of testimony. Then the worship of Jehovah was carefully observed, and the sabbath day was a day of rest. There was to be no fire kindled in their tents, they were to sanctify themselves, and think of the time when they were slaves in the land of Egypt. To-day we go to church and many of us do sincerely try to keep the Sabbath a holy day; but there is danger of our not regarding it and keeping it as sacredly as the Lord commanded.

Treading Wine Presses on the Sabbath.

When Nehemiah was governor of Jerusalem he saw some treading wine presses on the sabbath; others brought in sheaves and figs and all manner of

burdens on the sabbath day. The men of Tyre brought fish and other wares and sold them in Jerusalem on the sabbath. Then Nehemiah told them of their sin and then he placed trusted porters at the gates of Jerusalem, and at sunset on the day corresponding to our Friday, he had the gates of the city closed, and they could not be opened until after sunset on the day corresponding to our Saturday. The merchants and sellers of that day must have been quite enterprising because they lodged outside the walls in the hope of making a good bargain; and again the governor interfered, and forbid their doing so. If we had men like Nehemiah in politics to-day it would not be so difficult to keep the American Sabbath. "Sunday closing ordinances" would not be slighted and disobeyed until they become a dead letter.

The Sabbath of Tradition.

Whenever Jesus performed a miracle on the sabbath day there were the Pharisees and the Sadducees to find fault and cavil at his breaking away from the traditions. In proportion as the inner power and meaning of a religion are dead, in that proportion very often is an exaggerated import attached to its outward forms. It was so with Judaism in the days of Christ; its priests were no longer clothed with righteousness, its saints were few. So when the paralytic who Jesus healed, carried his bed, they said it was unlawful to carry his bed on the sabbath. And neither was it. Their law said an unnailed shoe might be worn on the sabbath, but not a nailed shoe, because that was carrying a burden. One man might carry a loaf of bread, but two men might not carry it between them. When Jesus mixed the clay and spittle and anointed the eyes of the blind, the Pharisees were angry, because their law forbade any man to smear even one of his eyes with spittle except in mortal danger. The spirit of narrow literalism and slavish minuteness—the spirit that hoped to be saved by the algebraic sum of good and bad actions—had degraded the sabbath into a pernicious superstition, and for this reason Jesus said "the sabbath was made for man and not man for the sabbath."

Why Should We go to Church?

First of all, because we stand in sad need of it. We have been working and scheming, mingling with other people all week, and have not been alone with Jesus as much as we should. When Sunday comes, with its should come the feeling, "I must go to church and

"aw nearer to my God." We know that Jesus went to the synagogue on the sabbath, "and Paul as his manner was went in unto them and three sabbath days reasoned with them out of the scriptures, preaching Jesus."

How Induce Young People to Attend Church Services.

If you really do want them to go with you to church, Sunday school and Circle meeting, that will help you find some way to interest them. Many parents wait too long; when your children are small, form the habit of going to church. But you say, They don't understand such things, why not wait until they are older? A man had a garden, and his friend advised him to prepare the soil and put in the seeds in the spring. "No," answered the man, "I'll wait awhile, perhaps July I'll get it ready for my crop,—no use starting early." Some parents reason as this man did. Is any wonder that their children are outside of the church?

Church Services that Young People Enjoy.

Just as surely as the violets and anemones lift up their faces and drink in the dew and sunlight, our children enjoy church services that are warm, sunny and life-giving. Young people, full of life and hope and strength, abhor dead, cold, formal meetings. Look well to your Circle meetings and they will be the means of drawing our children to the other church services.

One Day for the Lord.

A gentleman passing a coal mine saw a field full of mules. In answer to his inquiry a boy told him: "These are the mules that work all week down in the mine; but on Sunday they have to come up to the light or in a little while they go blind." Let us give one day truly and sincerely to God.

Topics for Discussion.

1. Jesus went to the synagogue on the sabbath. Luke 4: 16, 31; 6: 6.
2. Paul used to preach and teach on the sabbath. Acts 17: 2; 18: 4.
3. Jesus was constantly breaking with their traditions concerning the sabbath. Matt. 12: 10-14; Luke 11: 1-6.
4. People who wearied of the sabbath. Amos 8: 5.
5. Even in busy seasons they must rest on the sabbath. Ex. 34: 21.
6. The law commanded the people to make an offering on this sabbath day. Lev. 23: 27-32.
7. How is the Sabbath desecrated?
8. How can we help others to observe the Sabbath?

THE first step towards God is repentance.—*E. P. Corwin.*

EMPLOYMENT BUREAU.

Eld. A. G. Crosswhite, of Flora, Ind., is thoroughly in earnest in encouraging the study of missions in his own church. He sent us forty-eight new names at one time, and we wonder whether other elders could not bring about more missionary zeal if they went to work among their churches in the same way. Some have completed the course in Bro. Crosswhite's church; that means that they have read eight books on missions.

Are You a Member?

We are so anxious to enroll the readers of the INGLENOOK as members of our Circle, and so we keep looking for letters, and praying that our boys and girls will make up their minds to study these books on missions. You will not find them dry and uninteresting. On the contrary, they will appeal to you, and you will find it hard to realize that men and women are doing these wonderful things,—now. Read the "Lone Woman in Africa," or "India, a Problem," and see if they are not well worth your perusal. Write to us.

Our Circle and Christian Workers Meeting at Bristol.

Will you be there? We want to meet as many of our workers as possible. We have been thinking and planning for this work all winter, that the meeting might build you up in the faith, make you a better church worker, and a more devoted missionary assistant. For we are all assistants to our mission workers, if we fail them the work cannot go on. Pray for this meeting, pray earnestly for spiritual power.

NEW NAMES.

2750. James H. Monroe, North Manchester, Indiana.
2751. U. R. Young, North Manchester, Indiana.
2752. Wm. H. Eiler, North Manchester, Indiana.
2753. W. M. Ulrich, North Manchester, Indiana.
2754. Mrs. W. M. Ulrich, North Manchester, Indiana.
2755. O. A. Harris, North Manchester, Indiana.
2756. O. L. Dickey, North Manchester, Indiana.
2757. Thomas Shively, North Manchester, Indiana.
2758. Nannie Byer, North Manchester, Indiana.
2759. Jesse Funderburg, North Manchester, Indiana.
2760. Alice Mummert, North Manchester, Indiana.
2761. Mrs. Burket, North Manchester, Indiana.
2762. Mary Grossnickle, North Manchester, Indiana.
2763. A. P. Bucher, North Manchester, Indiana.
2764. Mrs. Krill, North Manchester, Indiana.

RECEIVED CERTIFICATES.

- Emma Wheeler, Cerrogordo, Illinois.
Myrtle Hughes, Flora, Indiana.
Ivy Hughes, Flora, Indiana.

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XXV.

Amsterdam, Holland.

Dear Mr. Maxwell:—

We are sitting here in the Krasnapolsky hotel and it is 8 o'clock P. M. You have 1:15 P. M. at home; this thing alone is evidence that we are quite a ways from home, and we often think about it that way.

In my last letter I got considerably worked up in telling you about the people of Belgium. We were utterly surprised to find their morals so low and their religion obsolete. We found a better city at Antwerp. It is a cozy little place of three hundred thousand, with grand boulevards, with well-kept residences, offices, shops and streets. It is a seaport of Belgium and has a very good fortification. We visited the museum of Ruebus and it contains a rare collection of paintings of celebrated masters, of which VanDyke was one of the chief ones; the Nativity, the Crucifixion, the Resurrection, the Finding of Moses, John in a Caldron of Boiling Oil, the Decapitation of John the Baptist, the Last Supper, etc., besides thousands of nymphs, portraits and landscapes, cover the walls and ceilings of the great museum.

We crossed the Belgian line into Holland with a sigh of relief; we admired their skill and art, but we very much detested their ideas of morality and spirituality.

We have a joke on the boys; when the train stopped on the line between Belgium and Holland we were compelled to pass through the custom house for the examination of baggage. Oscar led us through the wrong door and we somehow passed through the big building in a circle and came out at the same place, and never saw the custom house officers at all. We had satisfied the letter of the law, which asked that we pass through the custom house before entering another country, which we did. It was a mere matter of formality at best, and certainly what we did was formal enough. We were sure that we had no whiskey, tobacco nor jewelry for them to inspect, and therefore we felt free to go on our journey.

Holland is as level as a floor, consequently it is low and wet. The fact is, the surface of the land is lower than the level of the sea. Dykes are constructed along the shore to prevent the ocean from inundating the land. However, when it rains, and it rains often for they have a heavy rainfall, the land remains covered with water, because it cannot be drained back into the ocean. In order that this worthless land may be made exceedingly profitable the people have constructed these levees or dykes in a sort of network over the land. They construct them in such a way that they are used for a double purpose. The dykes are made broad on the top; they generally macadamize one-half of the top, which makes a very serviceable turnpike; the other half of the top of the dyke is converted into a canal. They have, along these canals, many of these old-fashioned dutch windmills for the purpose of elevating the water from the low lands to these canals, on the dyke. These canals carry the water towards the ocean until it seeks a level; then it is hoisted by another mill and again it runs until it seeks the level,

and so on with this series of mills and canals it is finally conducted to the ocean and emptied into it. The plan is success. When I see the thousands and thousands of black, sleek cattle, as fat as butter, which dot the fields I cannot help but think of the blue-grass region of Kentucky.

The dairying business is very profitable here. Quite frequently we meet wagon loads of milk cans going to the creamery, that make us think of Illinois. We saw a sight yesterday that Roscoe and Oscar will not likely forget. They had a bushel of fun. We took a carriage ride from Amsterdam to Zaantam. At one place, where we stopped to pay toll over a bridge, Miss Gertrude counted seventy-nine windmills. So you can see how prevalent they are. But that isn't what I started to tell, I was talking about the milk wagons. We saw a great big fat dutchman who had twenty-one large milk cans in his wagon which he was taking to market. What do you suppose he had hitched to the wagon? On one side of the tongue was a large Newfoundland dog and on the other side was his wife. The big lazy lubber, himself, was sitting in front with a whip in his hand, occasionally kindly reminding first the dog then his wife that he was in a hurry, and the dog and the woman alike submitted to the cruelties of the whip lash.

At first we saw the comic side of the affair; it was funny to us; then the more we studied the question of human slavery, and humanity being placed on an equality with brutes, the more serious it became. We girls decide that we were glad we were Americans and did not have to wear short skirts and wooden shoes and draw milk wagons.

The low country and the heavy rainfall gives rise to typhoid fever and tuberculosis. However, in general the people look as if they were hearty, hale and happy. Their morals are better than in Belgium. They are more industrious, honorable and religious.

It so happened that the day we arrived in The Hague we found the people celebrating the Queen's birthday. Queen Wilhelmina is thirty years old, and it seems as if all the people of Holland from grandpas to babies, were blowing horns, dancing, drinking, shouting, shooting fire crackers to celebrate the birthday of Her Majesty the Queen.

Again we had to learn a new system of money. Belgians, for the most part, use French money, and we were used to counting francs and centimes, but when we got to Holland we had to learn a new system. The Dutch people use the gilder or florin as their monetary standard. It is worth twenty stivers, or about thirty-eight cents.

Last night as we were coming to the hotel we saw a man leading fifteen goats home from pasture. He went from house to house, rang a little bell calling the maids to get her milk. When she made her appearance she selected the best looking Nanny-goat, milked a sufficient quantity of milk for her use, paid the man for the milk and he passed on to the next. I am compelled to close this letter.

Fraternally,

Marie.

(To be continued.)

The Q. & A. Department.

Please tell something about the seven wonders of the world that was recently published in the Inglebrook.

First, the Egyptian Pyramids; the largest is 756 feet square, 480 feet high, and covers more than thirteen acres. They are situated on the Nile, opposite Cairo. Second, the Walls and Hanging Gardens of Babylon, which are sixty miles in circuit, eighty-seven feet broad, and three hundred fifty feet high. There are one hundred brass gates in the walls, twenty-five on each side. There was a second wall within this outer one. The Hanging Gardens were in the form of a square of four hundred feet on each side, rising terrace above terrace to a height of three hundred fifty feet, and ascended by stairs ten feet wide. The terraces were supported by large vaultings filled with earth, and resting upon cube-shaped hollow pillars. Large trees were planted on the garden, the entire structure being strengthened and bound together by a wall twenty-two feet thick. The level of each terrace is covered with large stones, over which beds of flowers were planted, imparting the appearance from a distance of woods overhanging mountains. It is recorded that King Nebuchadnezzar raised the Gardens to gratify his wife Amytis, who longed for the hillside groves of her Median home. Third, is the Temple of Diana, at Ephesus. It was 423 feet long and 220 feet broad, built of marble, in the reign of Servius, eighth King of Rome. The roof, of cedar and cypress, was supported by 127 marble Ionic columns sixty feet high. Fourth, the Chryselephantine Statue of Jupiter Olympius, by Phidias, at Olympia. It was covered with gold and ivory, and was seventy feet high. Fifth, the Mausoleum erected to Mausolus, King of Caria, and his widow Artemesia. It was one hundred thirteen feet square and one hundred forty feet high. Sixth, the Pharos, of Ptolemy Philadelphus, a lighthouse, at Alexandria, Egypt, five hundred feet high. And the seventh, the Colossus of Rhodes, a brazen statue of Apollo, God of the Sun, one hundred twenty-five feet high, across the mouth of the harbor of Rhodes. It was hollow, with winding stairway leading to the top. It was erected in 300 B. C., and was destroyed by an earthquake, after standing sixty years. It remained in ruins 894 years, and was then sold as old brass. Its weight was 729,000 pounds.

Do modern steamships called "ocean liners" condense sea water into pure drinking water, or do they take sufficient quantity of fresh water from the shore?

Either or both may be done. Salt is easily taken out of the sea water on shipboard by distillation.

How many national holidays are there in the United States which have been made so by an act of Congress?

There is no national holiday by act of Congress, not even the Fourth of July. Congress has at various times appointed special holidays. It has made Labor Day a public holiday in the District of Columbia and has recognized the existence of certain days as holidays for commercial purposes, but with the exception named there is no general statute on the subject. The Fourth of July is a national holiday in character, but it is a legal holiday in the various States not by act of Congress, but by laws passed by the respective Legislatures. Washington's Birthday is not a legal holiday in Massachusetts, Minnesota, Mississippi and New Hampshire, but it is in all the other States. The Proclamation of the President designating a day of thanksgiving makes it a holiday only in the District of Columbia and the territories and in those States which provide by law for it.

Are there any other dukes in Russia beside the one that was assassinated?

Yes, here are some of them: Grand Duke Alexis, son of Czar; Grand Duke Michael, brother of Czar; Grand Duke Vladimir, uncle of Czar; Grand Duke Alexis, uncle of Czar; Grand Duke Paul, uncle of Czar; Grand Duke Constantine, great-uncle of Czar; Grand Duke Michael, great-uncle of Czar; Grand Duke Nicholas, cousin of Czar; Grand Duke Constantine, cousin of Czar; Grand Duke Dikitre, cousin of Czar; Grand Duke Nicholas, cousin of Czar; Grand Duke Peter, cousin of Czar; Grand Duke Nicholas, cousin of Czar; Grand Duke Alexander, cousin of Czar; Grand Duke Serge, cousin of Czar.

Is it customary when one nation defeats another nation to pay war indemnity to the victorious nation? Did Spain pay such a war indemnity to the United States when we defeated them in 1898?

Yes. Not in money, but Spain ceded to the United States the Philippines, Porto Rico and other islands. The United States, however, paid Spain \$20,000,000 for the public improvements in the Philippines.

Will some one please give a recipe for angel-food cake in which the whole egg is used instead of the white only?

Who can give a recipe for curing pork and beef so there is no danger of it spoiling in a climate like that of western Oregon which is damp and it is so hard to successfully cure meats?

MISCELLANEOUS

NUGGETS OF GOLD.

THE Christian, like gold, is made purer by passing through the fire; the fire consumes the dross but not the gold.

Gold may be used to purchase anything but happiness; usually the more gold the less happy.

Gold is a blessing when used to purchase the necessities of life, but becomes a curse when used for selfish gratification.

Gold in the pocketbook is a useful servant, but the love of gold in the heart is productive of much evil.

Gold used to relieve the needy is commendable, but gold worn for display is a violation of God's Word.

Gold is often used as a curtain, to hide the corruption of some men's lives.

Earthly honors are often purchased by gold, but heavenly honors never.

The love of gold, rather than the salvation of souls, constraineth some men to preach the Gospel.

Many who possess gold in abundance in this world, will become beggars in the next.

The glitter of earthly gold hath blinded the eyes of multitudes, insomuch that they cannot see the gold of heaven.

Those whose names are written in heaven are not found to dwell in palaces of gold while on earth.

Thousands, like Esau, sell their spiritual birthright for a paltry sum of gold.

Those who constantly seek to hoard up gold on earth have no time to lay up treasures in heaven.

A bag of gold is excellent to relieve the poor, but if hoarded makes a hard pillow for a dying head.

Few people possess both the abundance of grace and the abundance of gold.

Some one has said, A vain person's motto is, "Win gold and wear it." That of a generous person, "Win gold and share it." That of a miser, "Win gold and hoard it." That of a broker, "Win gold and lend it." That of a profligate, "Win gold and spend it." That of a gambler, "Win gold and lose it," and that of a prudent man, "Win gold and use it." To this we would add, that of the Christian is, "not to misuse it."

Worshippers of gold are infinitely more numerous than worshippers of God.

To be laid in a coffin of gold would not give rest to the soul, or admit to the favor of God.

The statutes of the Lord are "more to be desired

than gold, yea, than much fine gold" (Psa. 19: 10). "The law of thy mouth is better unto me than thousands of gold and silver" (Psa. 119: 72). "Therefore I love thy commandments above gold; yea, above fine gold" (Psa. 119: 127).

Those who buy of Christ "gold tried in the fire shall inhabit the celestial city, whose streets are of pure gold. "There shall in no wise enter into it anything that defileth, neither whatsoever worketh abomination or maketh a lie: but they which are written in the Lamb's book of life" (Rev. 21: 27).—*J. S. Shoemaker, in Young People's Paper.*

POSTAL DEFICITS.

THE impression has gone abroad that the rural delivery of mails has caused a large deficit in the United States Postal Department. We will admit that it does cost Uncle Sam a good deal of money to make daily deliveries of mails to his people in the country, but the great burden of the post-office deficit comes from the "dead head" matter which government officials send out from Washington, D. C., in car loads, or we might say, train loads, to their constituency.

About all of the United States senators and congressmen distinguish themselves occasionally, and sometimes frequently, by making a long and, they think, brilliant speech. It is too good to be filed away with other congressional records and thus go toward making history, so they have several thousand copies printed and "dead headed" to people who may read the headlines, but rarely ever go beyond them in their efforts to gain knowledge.

The free seeds these government officials mail as "taffy" to the good people who vote for them, cost Uncle Sam much more than they are worth to the planter, and add thousands of dollars annually to the postal deficit account. The seeds are usually a lot of very common stock, and just enough in each package to sample the kind, but not enough to fool with in the garden. The transportation companies that carry the seeds to their destination are about the only ones who profit by the transaction. The postal deficits do not come wholly, as some would have us believe, from the rural free delivery.—*Northwestern Agriculturist.*

OUT of the eater came forth meat, and out of the strong came forth sweetness.—*Judges 14: 14.*

Good Land Cheap

The basis of my business is absolute and unvarying integrity.
SAMUEL S. THORPE,
District Agent of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground, others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily. Write Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

EXPLANATORY

The above statement of the corporation's affairs at the close of the fiscal year, Jan. 31, 1905, must be convincing evidence of the phenomenal growth of the business during the past year and attention is called to the fact that the statement is made out in the same manner as a bank statement and that every share of authorized stock is charged up as a liability.

The Company's attitude on financial questions is one of frankness and publicity, as should be the case with all public corporations. Such a showing as the above is only possible because of there being no "promoter's stock" and no "water" in the corporation, nor a sinister motive behind any move in connection with its organization and development. Are you a believer in such a policy?

Further explanation in regard to statement or any phase of the business cheerfully given.

A NEW BUSINESS HOME

A fine tract of land adjoining one of the city parks has been purchased and plans are now being drawn for a new and commodious business building to contain nearly 100,000 square feet of floor space. It is the purpose to occupy this new business home yet this year and erect additional buildings as rapidly as needed.

The volume of business is increasing fully 20 percent per month and Christian people are joining the ranks of coöperators at the rate of fully 100 per month, owing to the operation of the practical plans of scientific coöperation. Another catalog is now ready and will be sent free with goods or mailed free to Inglenook friends who do not have our large catalog. May we hear from you?

SCIENTIFIC CO-OPERATION

This term with the ideas and plan for which it stands has been protected by the registry laws of the various states and cannot be used by others unless duly licensed by H. P. Albaugh, the President of our company. Through the operation of scientific coöperation we have interested about 1,400 people financially and others are being added daily. Coöperation reduced to a science is the final step in business evolution and release from the thralldom of exorbitant prices.

Christian character is a prerequisite with our coöperators and it is the purpose to carry to a successful issue as large a mail order business as any in the country, same to be owned, controlled and managed at all times by Christian people,—a credit to the church as well as the commercial world. We thank the readers of the Inglenook for their part in pushing the good work along by their investments, orders and influence and while our fondest anticipations have been passed the last year, the present prospects indicate an even greater success for 1905.

CURE YOUR NEARSIGHTEDNESS

Louisville, Stark County Ohio, January 6, 1905. To whom it may concern: About 4 years ago my son, Clarence, now sixteen years old, began to complain of his eyes and had to be kept in a dark room part of the time. So we took him to an oculist, under whose care he was about one year, but could not be fitted with glasses, and as a consequence lost two terms of school. After spending \$175.00 we at last concluded to write to Dr. Miller, of Smithville, Ohio, who sent him glasses, which he has worn now about one month, is going to school regularly and seems to be improving satisfactory, so far. Just why Dr. Miller could fit him without seeing him is more than I can tell, but the above are the facts in the case.—Manasses S. Miller.

Louisville, Ohio, April 5, 1905. Dr. Miller, Kind Friend:—Your treatment seems to have entirely cured my son of double vision and near sight while attending school during the winter, and can now go without his glasses. Yours Truly, M. S. Miller.

Treatment sent on trial. Write to-day for question sheet and particulars Address:

DR. J. L. MILLER,
Wayne Co. SMITHVILLE, OHIO.

ART PICTURES

We have just received three new numbers of these "Fine Art Pictures" as follows:

- No. 125--MARRIAGE CERTIFICATE**
- No. 123--FAMILY RECORD**
- No. 121--MEMORIAL**

We have had a number of calls for the above numbers and are pleased to state that we are now prepared to furnish them.

The Memorial picture is printed on black paper which makes it very appropriate, while the other two are printed on gilded paper in many beautiful colors.

No. 125.—Marriage Certificate.

We have sold more than **5,000** of these Pictures in the last two months and are still receiving many orders each day. A great many orders are received from 12 to 25 at a time, and a number of orders are received for 40 and 50. Our customers are so well pleased that it is no uncommon thing for

the same person to send us two or three orders. Size of picture, 16 x 20 inches. **Former price, 25 cts.**

No. 123.—Family Record.

These numbers are all exceedingly fine. Send us an order and we are sure you will be delighted with them.

TWENTY SUBJECTS

Besides these we have 20 other subjects that are very popular.

OUR SPECIAL PRICE

For one or more and less than six, each,	15 cts.
For six or more, each, - - - - -	12½ cts.
One dozen or more, each, - - - - -	11 cts.

SEND FOR OUR ILLUSTRATED CIRCULAR OF 20 SUBJECTS

BRETHREN PUBLISHING HOUSE, Elgin, Ill.

No. 121.—Memorial.

UPPER PENINSULA LAND CO., Ltd.,

F. J. MERRIAM, Gen. Mgr., 935 First
Nat'l Bank Bldg., Chicago, Ill.

The Upper Peninsula of Michigan is practically an unknown world to most people, and it is only within the last few years that it has been opened to settlement. It is rather out of the ordinary, and not at all what you would expect to find. It is now being opened to the Brethren. About everything will grow there that thrives in other places. And there are advantages. Water is excellent, fuel without end, and work is plenty if you would like to earn something while the farm is coming on. Hay can be put out and cut over nobody knows how long. There are fields that have yielded good crops for 24 years.

It Is a Wonderful Dairy Country.

Seedsman get their peas grown there. Root crops can be grown there and dug the next Spring. You can plant potatoes in the Fall, and they come out all right in the Spring. The ground does not freeze. The snow comes and keeps all vegetation in a sort of cold storage. It does not get so "dretful" cold, about the same as in Iowa.

And strawberries! They come the last in the United States, and being last command first crop prices. There are good-sized cities all around and good markets. There have been no drouths. There is no wilderness business about it. There are railroads, telephones, schools and all that sort of thing. And there will be a Dunkard preacher, one who knows how, right there with his family and the start of a church. One of these days he will tell you how he found things. Why don't YOU go up and see the country? Let me know and I will go up with you. There is a lot of descriptive literature about the country, and we will send it to you if you will tell us where you live. Address your letter to

C. S. Morey Makes Remarkable
Prediction in Regard to Beet
Growing Here.

"Colorado as a beet sugar producing state will soon leave Michigan far in the rear, if the present developments continue."

This assertion was made this morning by C. S. Morey, head of the Morey-Boettcher syndicate. He has just returned from a trip to the East. While there he made arrangements for the transfer of one of the largest Michigan factories from Saginaw to Sterling, Colo. The new factory will have a capacity of 600 tons and will give employment to hundreds of men.

This will make the seventh beet sugar factory in the South Platte Valley owned by this syndicate.

The Union Pacific Railroad

The 3=C's of Business Competition

"Money Saving Prices" is a hackneyed phrase true in but a few instances. Of forty competing merchants in a town each claims the lowest prices. Investigation proves that their prices are almost alike. **They Must Be. They Are Standard.** All these forty merchants buy their goods from the same or similar sources. Their expenses of business are practically the same.

Business acumen and shrewd management obtains advantages in buying goods and saving expenses as against inferior management; but the advantages gained by good management are not shared by the buying public. They simply make more money for that particular merchant. Money Saving Prices. Prices that save the consumer money—Prices that are really "Money Saving" can only be established by doing business on a New System. These forty merchants operate under the Old System. They are bound hand and foot by conditions.

Combination

The department store—a combination of small stores—established lower prices, because it did business on a New System, the main feature of which was to sell many things to the same customer. This New System became very popular because it meant convenience to the buying public; the large purchasing power, backed by ability to pay cash for goods, established a lower standard of prices with manufacturers.

The people benefited because the goods cost less to produce, cost less to sell, and the large volume of business at half the profit still meant greater net profits to the Combine. The people quickly saw their opportunity to save their hard-earned money, and so the combined stores secured their trade because the New System made lower prices.

But its patronage was limited, so the next step in this commercial evolution was the Mail Order Department Store. It burst the limitations of city patronage and successfully appealed to the entire country. Here, again was a New System of Trading, a New Plan, and again Prices tumbled.

Co-operation

Now commercial evolution takes its final step in organizing the Mail Order Department Store on the Co-operation plan. An entirely new and original plan aiming to sell still more goods to still more customers, through the interested personal selling force of thousands of co-operators in every section of the country.

Co-operation makes a new and much lower standard of Prices; it reduces the cost of selling, and returns to its interested shareholders not only all the excess profit they have paid on their own goods, but their proportionate share of the profits made on the sales to the country at large.

Our plan of Co-operative dealing and profit sharing is entirely original with Mr. H. P. Albaugh, President of our Company, and has never been used in connection with any other business enterprise. The plan has been universally pronounced "Co-operation reduced to a Science."

That American consumers are quick to see an opportunity to save their hard-earned money is shown by the instant appreciation of the advantages offered by Scientific Co-operation. While nearly 1500 Christian people have already become financially interested in our Co-operative Company, it can safely be predicted from the present rate of increase that hundreds more will become interested during the ensuing 12 months.

If you want to know more about this New Plan of co-operative dealing and profit sharing, address our President, Mr. H. P. Albaugh.

Albaugh Bros., Dover & Co.

The Mail Order House,
341-343 Franklin St. = - Chicago, Ill.

"THAT'S THE PLACE"

Missionary Collection Envelopes

Just the thing for taking up your collections. It is arranged so that you can place the amount, date, and name on the outside, if you so desire, and you can then seal it and hand to your solicitor or treasurer.—Size, 2¼x3½ inches. Price, 15 cents per hundred. Address,

BRETHREN PUBLISHING HOUSE,
Elgin, Illinois.

ATTENTION!

Are you interested in receiving full value for your money? Are you opposed to paying jobber's and middlemen's profits? If so, let us have a little confidential chat. We deal with manufacturers; we buy large amounts; we pay much less for goods than local dealers; we simplify your dealing with us so that you, at a distance, can do so just as easily as stepping into a store to buy. If you are interested in Watches, Silverware, Fountain Pens, etc., send for our special catalogue No. 127. Keep your express and freight receipts and turn them in the same as that much cash on next order. See full explanation in large catalog. Our goods must be entirely satisfactory to purchaser or we refund the money. We can fill your order for most any make or grade watch, though you do not see it in our catalogue. Be sure you get the value of your money when buying silverware. There are different weights, especially in spoons. Get the best Rogers. They are fully guaranteed. You run no risk.

We also call special attention to our line of fine Fountain Pens. Everything in our jewelry department must be just as represented or no sale; send us your order and be convinced.

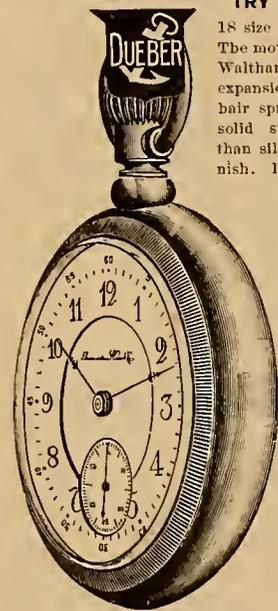

TRY OUR GENTS'

18 size watch for **\$4.42**. The movement is a genuine Waltham, 7 jewels, ant expansion balance, Breguet hair spring. The case is solid silverine; stronger than silver; will not tarnish. It is just the watch for any person in need of a good, strong time piece. You never could buy it before at our price, only

\$4.42

When sent by registered mail, 18 cents extra.

A postal will bring our special Watch Catalog.

7A5. 18 size, silverine, open face, screw back and front case.

SEND FOR IT.

Brethren Church Annual Meeting!

Bristol, Tenn., June 6th, 1905.

To Members of the Brethren church and their Friends:—

In view of the fact that so many of the Brethren have expressed their intention of attending the Brethren church Annual Meeting, we have decided to run a **Special Train** from Chicago to Bristol. This train will leave Chicago Friday, June 2nd, via the **MONON ROUTE**, C. H. & D. and **NORFOLK & WESTERN R'YS**. Following is schedule of the train:

GOING SCHEDULE.—Friday, June 2, 1905.

Leave Chicago,	12:00 Noon.
Hammond, Ind.,	12:50 P. M.
Rensselaer, Ind.,	2:04 P. M.
Monon, Ind.,	2:27 P. M.
Monticello, Ind.,	2:40 P. M.
Delphi, Ind.,	2:58 P. M.
Frankfort, Ind.,	3:35 P. M.
Sheridan, Ind.,	4:04 P. M.
Westfield, Ind.,	4:16 P. M.
Indianapolis, Ind.,	5:00 P. M.
Arrive Cincinnati, Ohio,	8:00 P. M.

Saturday, June 3, 1905.

Arrive Bristol, Tenn.-Va.,	2:00 P. M.
----------------------------------	------------

This will be a "Social" special for members of the Brethren church and their friends, and if you are thinking of going to Bristol to attend the Annual Meeting, we strongly recommend your taking this train, as it will be a **Through Train**, with no change of cars en route.

The return time from Bristol will be as shown below, the route being the same as on the going trip, to-wit, the **NORFOLK & WESTERN**, C. H. & D. and **MONON ROUTE**.

Leave Bristol,	1:00 P. M.
Arrive Cincinnati,	10:00 A. M.
Leave Cincinnati,	12:20 P. M.
Arrive Indianapolis,	3:25 P. M.
Westfield, Ind.,	4:16 P. M.
Sheridan, Ind.,	4:28 P. M.
Frankfort, Ind.,	4:58 P. M.
Delphi, Ind.,	5:34 P. M.
Monticello, Ind.,	5:52 P. M.
Monon, Ind.,	6:07 P. M.
Rensselaer, Ind.,	6:32 P. M.
Hammond, Ind.,	7:49 P. M.
Chicago, Ill.,	8:40 P. M.

Rate.—The round trip rate from Chicago will be \$19.12, other points in proportion.

Dates of Sale.—Tickets will be sold to members of Standing Committee and families on certificates of District Committee, on May 29, 30 and 31, and for the General Council June 1, 2, and 3.

Limit of Tickets.—The final limit returning on all tickets will be June 30th.

Important.—In order that we may be able to provide plenty of room on the "Social Special," please advise the undersigned whether or not you will take this train. By so doing you will place us in position to supply ample equipment on the train so that there will be room for all and no crowding.

The Sick Made Well —A CURE THAT NEVER FAILS—

YOU NEED NOT SUFFER LONGER.

I hold in my possession the secret whereby any one having female weakness, falling of the womb, leucorrhoea, inflammation, ulceration, irregular painful menstruation, nervousness, headache, indigestion, liver troubles, constipation, piles, fistula, catarrh, etc., can be cured at home and thereby save big doctor bills and embarrassing examinations. I do not ask you to buy a patent medicine, nor to try a free sample.

I HAVE NOTHING TO SELL.

I suffered for ten years, had tried many advertised remedies, and subjected myself to the humiliations which doctors usually require of their patients; and all without being benefited.

Finally, by the help of a noted German doctor, I discovered the secret whereby I was cured, a simple home treatment, which has cured thousands of others where everything else had failed.

SEND NO MONEY.

My great desire to help others justifies me in sending full information, concerning this secret, FREE to everybody.

DO NOT LAY THIS ASIDE.

This opportunity may not come to you again. SEND FOR IT NOW. A card will do. Write to-day to Mrs. Ada Warm, Dept. A., Box 198, Indianapolis, Indiana.

CUT THIS OUT

Of every Nook for six months, send us the 26 LION HEADS and we will send you any one of our sixteen "HOME TREATMENT" Remedies FREE.

Send for descriptive list and make your selection. Live agents wanted. Profitable business.

SUFFERING WOMEN

Can be relieved by the use of WILD OLIVE and MYRTLE TONIC. In use over twenty years. It has cured thousands of Lucorrhoea, Ulceration, Inflammation or Displacement of the Womb, Painful or Irregular Menstruation, Diseased Ovaries, Canceration, Tumors and Polypus without surgery. Send for Free Samples and Booklet.

VICTOR MEDICAL ASSOCIATION,

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime. (Signed) E. L. Dotson.

SPRINGDALE.

BY MARTHA SHEPARD LIPPINCOTT.

Springdale, the home of all my youth,
What tender memories cling to thee!
'Tis here my childhood days were spent,
When life seemed blossoming for me.
The orchard, with its charms for youth,
Has seen me climbing, fearlessly,
And oh! how much I loved to climb
Up in the blackheart cherry tree.

What place in all the verdant fields,
In childhood, did my feet not know?
And how we loved to places find,
Where nature's sparkling springs would flow.
And oh! what fun the meadow brook
Has given to our paddling feet,
And how the green tree's leafy shade
Made summer hours so complete.

The woods beyond the grassy fields,
Where we could huckleberries find,
Spring flowers and bright autumn leaves,
Seemed just to suit my joyous mind.
Springdale, Springdale, oh! where again
Can we find such a home as thee?
Though o'er the world our feet may stray,
Sweet memories, with thee, will be.

'Tis here, in happy maidenhood,
Such jolly times we often had,
Bright, joyous days and such sweet dreams,
Oft came to make our spirits glad.
And must I, sometime, leave this home
And travel far, perhaps, away,
While memory begs pleadingly,
With this dear, cozy home to stay?

Moorestown, N. J.

SEED-THOUGHTS FOR THE HEART'S GARDEN.

BY JOSEPHINE HANNA.

Prayer is need, not an art.

*

Smiles grease the wheels of progress.

*

Life is but a short day, but it is a working day.

*There is no mountain so high as to be independent
of a low foundation.*

*

*Since Management must run our affairs, Caution
should see that she does not run them into the ground.*

*

*If every man would commence to reform the world
by reforming himself, how quickly the work would
be accomplished.*

*

*Young man, don't be ashamed of your father. Let
your great concern be to give him no cause to be
ashamed of you.*

*

*Hope has the privilege of a sure foundation, and
yet, to some, it is but a sort of good luck which they
imagine the future has in store for them as a surprise.*

*

*While man holds the measure of God's mercy—
"Blessed are the merciful for they shall obtain mercy"
—he should wisely measure out for himself all he may
want.*

*

*There is little artistic taste, and less mercy, exhibited
in reining a horse's head into a high and uncomfort-
able position. The best art is the truest imitation of
nature's forms.*

*

*Oh how much mercy is needed from us! Souls
dying without the light of the Gospel—without the
knowledge of a Savior! How much mercy is needed
by us? Ah! how much?*

*

*There are those whose religion is a sort of moon-
light reflection of lesser lights, who might have the
full benefit of the Sun of Righteousness. Who shall
be likened unto a wise man?*

*

*It has been said that we should give until we feel
what we give; but some feel a small gift from a big
purse more than others would feel a larger one from
meager means.*

TRIMMING TREES.

SELECTED BY LULU C. MOHLER.

THE thought comes to mind that the words of J. Horace McFarlane, President of the American Civic Association, who believes in a "Beautiful America" may be helpful to the lover of trees and may cause the tree-hacker to see the harm he is doing.

"In many parts of the United States the so-called 'tree-trimmer' who is usually nothing but a 'tree-butcher,' becomes especially active in February and March."

There has grown up an entirely mistaken idea among many thousands of excellent people who have trees under their control that trimming or pruning is an annual necessity. For grapevines, and sparingly of certain fruit trees this is true; but trees for shade and ornament in the home grounds, or on the streets or in the parks, seldom need any trimming. They never need such beheading as is commonly practiced.

Every tree has its own individuality, and trees differ in form as they do in foliage. The vase form of the American elm is in absolute contrast with the round-headed Norway maple, and the impulse of the Carolina poplar to form a tapering column of green is a reason for the planting of it in places where the broad spread of the horse-chestnut would be unsatisfactory.

The tree-trimmer seldom considers the natural form of the tree. His ideal, if he has any, is the rounded head. Thus all these natural forms are subordinated to his one cruel scheme, and great limbs are ruthlessly sawn away with a hideous result.

But it is not only the loss of beauty and shade that makes ordinary trimming so objectionable; it is also the damage to the tree. The shock of beheading is fatal to humans, and most of us would not care to have our two arms lopped off, in the idea that a better form of sprouts might arise! Some trees succumb to the trimmer, but usually they react for awhile, and instead of the graceful lines of the original limbs there appears a mass of shoots forced out by the tree's effort at and below the points of mutilation. These are insecure and tender, and the storms break them out until one or two, persisting, partially restore the balance intended by nature.

Seldom are the rough wounds made by the tree-trimmer "dressed" in any way to prevent the beginning of rot or the introduction of fungous diseases. Therefore the cut surfaces form fertile soil for the breeding of tree enemies other than the trimmer, and the useful life of the tree is shortened radically.

The only needs for the trimming of ornamental trees are to correct deficiencies, to influence or restore symmetry, or to adapt to special locations. Along streets it is advisable to encourage the formation of a

higher head than some trees make naturally, in order to avoid interference with traffic. This can be best done when the tree is young, and at all times, with a little attention, branches that are starting too low can be removed as mere buds or twigs. On the home grounds, to the contrary, it is often most desirable to encourage a low head, and this may be done sometimes, also best when the tree is young, by removing the top or terminal shoot, thus stimulating the growth of the limbs below.

Most of the time the best trimming is no trimming. For where one ornamental tree is hurt by the failure to prune, ten thousand are mutilated by knife and saw. No tree should ever be pruned except by a skilled person who knows why he cuts and how to cut, and it would be far better if the energy expended annually on tree mutilation went into protecting the trees from insects and fungous diseases by spraying and other modern forms of protection. It cannot be said that there is no proper source of exact information on the pruning of trees. Professor Bailey's "Pruning Book" is an illustrated gospel on the subject. It should be in every village library, and on the bookshelf of every tree-lover.—*From The Ladies Home Journal.*

LITTLE DROPS OF WATER.

A COMPANY of little vapor drops, hanging on the skirts of a thin fleecy cloud one hot, midsummer day, were determined on an adventure. They were tired, they said, of lying there so inactive, and longed for something to do.

Now, as these drops were very small they were unable of themselves to do much, and a few, who had no faith in their ability to be of any use, decided to stay where they were. But one, more ambitious than its neighbors, cried out:

"Do you see yonder black cloud spreading itself over the sky? Soon flashes of red lightning will dart from its bosom, and the voice of its thunder will be fearful. I intend to ride on the wings of that storm cloud. How grand and terrible it will be—like the marching of an army with banners!"

Just then a rift in the silver cloud showed them where, far down on the green earth, the reapers were gathering the golden grain and heaping into great wagons the abundant sheaves. Many anxious looks were cast at the threatening cloud, which grew in blackness every moment.

"Do you not pity them?" said a soft, melting voice, like the wind of an air-harp; "so hard they have toiled; and then to see their hopes destroyed and all their property swept away in a moment by the angel of destruction! I would not be a minister of wrath, but a blessing to mankind."

"But I shall win name and fame," replied the other, proudly. "Men will talk of my mighty deeds, and learn that little things are not to be despised."

So a friendly zephyr going that way offering its assistance, the tiny vapor-drop was wafted along into the very heart of the dark thunder-cloud, and joined innumerable other drops that were being frozen in the higher and colder regions of the air. Soon vast masses of hail-stones came rattling down on the earth and swept it as with the besom of destruction. Man and beast fled before the fury of the storm; and when it was past and the sun came out again in his brightness, his beams shone down upon a scene of ruin and desolation.

The men became wise and learned this lesson: that "the Most High doeth according to his will in the army of heaven and among the inhabitants of the earth; and none can stay his hand, or say unto him, What doest thou?" Also, that God often chooses little things and things that are despised to confound the mighty.

But the next vapor-drop decided upon a more beneficent mission.

Harvest days had passed away and the earth was parched and thirsty. A long drought had consumed the green herbage, and the cattle in the field languished for want of their usual food. The springs and fountains were dried up, the mill-wheels stopped, and hundreds of persons were out of employment and lacked their daily bread. All eyes turned to the heavens, which had become like brass, as the earth beneath them looked like fire, so scorched and withered was every green herb and tree.

At last "there arose a cloud out of the sea no bigger than a man's hand," and soon the whole sky was overcast, and there was "a sound of abundance of rain." The little vapor-drop was in its element, to be sure. It rushed with thousands of others through the dry channels of the streams; and their silvery tinkle was heard as they foamed and sparkled over the rocks, and refreshed the little flower-cups that grew on their borders.

The great mill-wheels began to move round again, and the doors of the factory were thrown open, and the bustle of life grew louder and stronger. The thirsty earth drank in the showers that came from above, and brought forth abundantly for the substance of man.

But this was not all. The little rills swelled into a wide river, which bore steamboats freighted with human life and the merchandise of precious things upon its broad bosom. The river carried plenty along with it in its course through the great West, and then was swallowed up in the vast world of waters that washes the rocky shores of this mighty continent.

Yet the vapor-drop was not lost. In mid-ocean, in the calm of noonday, when no breath of air ruffled the white sails of the ships that ploughed the foam-crested billows, a great waterspout, like an inverted cone, bent from the skies; and the seas rose up to meet it, thus restoring the little drop to its cloud-home once more.

Then the one with the silvery voice modestly said, "I would not be like the first messenger, who went forth on the wings of the wind, and carried destruction and misery in its path. And I can not be great like my neighbor, who has traveled through many lands, making the earth soft with showers, so that it has brought forth seed to the sower, and bread to the eater; but I will be a little dewdrop, and go quietly to work on my mission of love."

So one soft starlight night there fell upon the green bosom of the earth countless drops that shone like diamonds when the eye of the morning looked forth upon them. Some gemmed the gossamer threads that were woven from tree to tree in the promise of a fair day—some sparkled and sported with the sunbeams—and one very large one, that trembled like a great pearl in the very heart of a crimson rose, whispered to the little maiden who came to pluck it for her sick mother this sweet lesson:

That, no matter how little or how humble we may be, we can perform deeds of kindness—speak words of love. Very few there are who become famous or great in this world; but it is given to all to work out those thousand acts of benevolence and charity which are called for in our everyday life and in our constant intercourse with each other.—*Selected.*

MAXIMS OF PRESIDENT ROOSEVELT.

THE criticism of those who live softly, remote from strife, is of little value.

A medicine that is recommended to cure both asthma and a broken leg is not good for either.

A man who is to lead a clean and honorable life must inevitably suffer if his speech is not likewise clean and honorable.

Of all the work that is done or can be done for our country the greatest is that of education of the body, the mind, and above all, the character.

There is no room in our healthy American life for the idler, for the man or woman whose object it is throughout life to shirk the duties which life ought to bring.

The best constitution that the wit of man has ever devised, the best institutions that the ablest statesmen in the world have ever reduced to practice by law or custom, all these shall be of no avail if they are not vivified by the spirit which makes a state great by making its citizens honest, just, and brave.

THE RECORD OF CONGRESS ON IRRIGATION, FORESTRY AND LAND LAW REFORM.

BY GUY ELLIOTT MITCHELL.

WHAT has Congress done this winter in the forestry and irrigation cause? Did it do anything of importance in either, or in the public land question? Nothing in any sense spectacular but yet several things of very considerable importance, and furthermore it refused to do several very bad things which were strongly urged upon it.

After a long struggle of years the law was passed consolidating all the forestry work of the government into one bureau in the Department of Agriculture; this in place of having it split up among some five various branches in different departments. This gives over sixty million acres of Forest Reserve into the care of the Forestry Bureau of the Department of Agriculture with adequate authority to fairly protect the forests, allow for the cutting and sale of ripe timber, and with power to arrest trespassers, etc.

Supporting the Reclamation Service.

Several small bills desired by the Reclamation Service to more fully carry out the irrigation law were considered and readily passed by Congress, such as the bill to allow the proceeds from the sales of the vast amount of partly used supplies, at the end of each season, to go back into the "reclamation fund," instead of into the Treasury, thus keeping the fund intact and operating as an incentive to the engineers to take care of their property and realize the most out of it.

The really great legislation of the session, however, was the repeal of the forest reserve lieu selection law, thus preventing the location in the future of all forest reserve scrip, so-called, i. e., repealing the right of a man or a corporation owning land within a forest reserve to relinquish it to the government and select "in lieu thereof" any other unreserved non-mineral public land.

First Long Step in Land Reform.

This is a great step forward in land law reform and does away with one of the most notorious and scandalous forms of fraud and graft under the federal land laws. Under this law enormous losses have been put upon the government, the right to select these lieu lands having been transferable and resulting in the relinquishment during the past few years of several million acres of comparatively worthless railroad-grant and other lands included within the forest reserves, and the selection in their place of equal areas of the finest timber lands in the northwest.

Outrageous Frauds Perpetrated.

Denuded slopes not worth fifty cents an acre, or

bare mountain sides, acquired under other land laws at a nominal figure simply for the purpose of exchange, have been relinquished and lieu selections made, worth, according to the highest official and expert authorities, \$50 and even \$100 an acre. By these transactions the country has lost in the last few years tens of millions of dollars. By the action of Congress this form of graft is now at an end.

The repeal of this lieu land law is the first recognition by Congress of the wise recommendations of the President and his Public Lands Commission. There are three other specific reform recommendations of the President and the Commission and these will be for Congress to act upon at its next session.

Square Mile Homestead Bills Defeated.

Another point, however, wherein Congress followed the recommendations of the Commission was in the refusal of the Senate to enact 640 acre homestead laws for Colorado and South Dakota; although the House did its best to secure this square mile homestead legislation. In defiance of the strong adverse reports of the Commissioner of the General Land Office, the Secretary of the Interior, the Public Lands Commissioner, along with the special message from the President to Congress endorsing the Commission's recommendation against these bills, and of the strong protest of Chairman Lacey of the House Public Lands Committee, the House of Representatives passed these measures by a vote of nearly three to one.

Dry Farming Reclamation and Range Control.

This proposed legislation was considered especially unwise just at this time when the Department of Agriculture is every year bringing into the possibilities of profitable cultivation millions of acres of the semi-arid lands, where it was proposed to apply these laws, through the introduction from abroad of drouth resisting plants and desert species of grain and fodder, and by new and improved methods for farming dry lands. Moreover, the Commission has worked out a plan of range control and grazing permits which gives the real settler all asked for under the 640 acre measures and yet avoids the danger of the absorption of the land into large cattle holdings, but allows ample time and scope for the "dry farming" reclamation work of the Department of Agriculture.

"All in all," remarked a prominent advocate of both irrigation and forestry, a man in high official life, "very much indeed has been accomplished in this Congress, the result of hard previous work. Now we have this report of the President's Commission, outlining a comprehensive policy for the treatment of the entire irrigation, forestry and public land questions and we can all stand on this report and I believe get its provisions through the next Congress. The time is ripe, the country is awake and the men are here."

Work Ahead for Congress.

The things to be done, mentioned in the report, are the repeals of the notorious timber and stone act with the substitution of a method of stumpage sale by the government, the public timber lands to remain in the government, thus insuring reforestation and protection to the water supply; the very radical amendment of the fraud-making desert land law and the commutation clause of the homestead law, requiring in both cases actual residence of the settler and insuring real homemaking. All three of these laws as stated in the report, have been, are, and will be, so long as they remain on the statute book, instruments of fraud, perjury, and great loss to the government and the nation. They stand as a continual menace not only to a broad forestry policy but to the very existence of the national irrigation idea and are fast bringing about a condition of absolute land monopoly in the west.

MISTAKES IN THE SIMPLON TUNNEL.

THE construction of the great Simplon tunnel, now nearing completion, has furnished numerous instances of how unsafe it is to prophesy. Nearly all the predictions on whose accuracy the engineers relied have proved incorrect, though made by eminent specialists in science. The geologists were particularly unlucky, if we are to credit Herr Sulzer, one of the engineers, who recently delivered an address on the subject before the Society of Swiss Engineers, at Winterthur. To quote from a translation that appears in *The American Inventor* (December 15):

"The views of the geologists proved to be extremely incorrect. They told us, for example, that from their examination of the dip and strike of the rock exposures they were confident that we should find the strata tilted to a more or less perpendicular position, which would be very favorable for excavation. But instead of crossing the strata in a practically vertical position we found them almost, or quite, horizontal. This increased the labor of perforation and required enormous sums of money to make the roof of the tunnel secure. The rock was not so solid or cohesive as it would have been if the excavation had penetrated vertical strata. The geologists told us that we should encounter very little water on the southern, or Italian side of the tunnel. The fact was, however, that we met great streams of water. From August, 1900, to the present time, no less than 1,022 liters a second have been pouring from the south end. The geologists also told us that we should probably find troublesome streams at Kilometer 5, on the north side of the mountain. It was just here that the rock was perfectly dry.

"The pressure on the roof of the tunnel is very

much greater than it would have been if the rock strata had been vertical. In one stretch about a half mile long the pressure was so great that no means we had hitherto used were adequate. Large tree-trunks put in for supports were broken. We finally introduced many steel pillars supporting a steel vaulting, with which we lined the roof. This difficulty was overcome only after six months of dangerous work, in which our average advance in digging was only twenty-five centimeters a day instead of five and one-half meters. Neither had we been led to expect the almost intolerable heat we encountered. We had been told that the maximum temperature at the depth of the excavation would probably be 107 degrees F. This would be bad enough, but not intolerable. But suddenly we reached a point in the work where the temperature arose to 131 degrees. Science is unable to explain the phenomenon. The refrigerating plant was made adequate for this new difficulty and we managed to maintain the temperature at about 77 degrees. Then suddenly the temperature fell to its original level. We are wholly unable to explain those very rapid and enormous changes in the temperature.

"These were the chief difficulties that compelled the tunnel company to ask for an extension of the contract time, and an additional appropriation. The work is now proceeding in a satisfactory manner, and we have no doubt that the first tunnel and the lower part of the second tunnel will be completed in contract time. The first tunnel will be opened to traffic on April 30, 1905, and the company, if necessary, will push the work on Sundays and holidays to have everything ready on that date."—*Literary Digest*.

* * *

THE EARTH'S POPULATION.

THE population of the earth at the beginning of the present century amounted to 1,503,300,000 souls, distributed over an area of 55,626,691 square miles, or about 26 persons to the square mile. The divergencies are, however, very wide in this respect, varying from 104 to the square mile in Europe to 2 persons to the same amount of territory in Australia and Polynesia. As to the totals of the populations, Asia, the home of the yellow races, is far in the lead, with 819,556,000. Europe is next, with 392,264,000. Even Africa is ahead of North America, the Dark Continent being accredited with 140,700,000, while North America is given 105,714,000. South America has 38,482,000; Australia and Polynesia, 6,483,000, and the polar lands, 91,000. As to the density, after Europe, as shown above, with its 104 persons to the square mile, comes Asia, with 46.6, North America with 13, Africa 13, South America 5 and Australia and Polynesia 2.

WHO shall decide when doctors disagree?—*Pope*.

DICK, THE PET CROW.

BY D. Z. ANGLE.

A FEW years ago one of our neighbors, Mr. A., had a pet crow which they caught when it was injured and confined until it had become tame. It was then allowed its liberty and would go where it pleased, but never got far away, always returning to its master and the old roosting place. Dick seemed to have lots of sense, which was almost human in its reasoning powers. This was proven by the caution and care he manifested on several occasions.

Mr. A., who is a man of truth and veracity, stated that upon one occasion he had a man working for him and this man during the day drew off his coat and hung it in a convenient place, then proceeded with his work. He had some important papers in a pocket of the coat, and on returning to the garment saw that the papers were gone. Of course he was vexed and troubled, fearing them irretrievably lost, but Mr. A. soon thought of Dick and his mischievous tricks. They hunted awhile, but failing to find the stolen documents, concluded to wait and watch for Dick.

He soon came back and went straight to the coat, examined the pockets, took some articles out of one and flew away to a fence corner, where the watchers soon found the missing papers.

Dick was energetic and always at some mischief, but finally he did one trick too many. Mr. A. had set out some sweet potato plants one day, and shortly afterwards the crow put in some of his spare moments pulling up a large number of those same plants.

The family now decided such conduct inexcusable and unbearable, and Dick was accordingly sentenced to death.

His execution was attempted by placing poison in an egg, and giving him the egg to eat. But the bird had his suspicions aroused, he looked at the egg, turned it over and over, showed his disapproval of it by a *caw! caw!* and cautiously refused to partake of the usually tempting and acceptable morsel. Whereupon the young man of the family shot the bird and thus ended an interesting, yet troublesome, pet's life.

Mt. Vernon, Ill.

TEMPERATURE OF THE SEA.

THE thermometer has become a useful instrument in examining the basins into which the bottom of the sea is divided. The geography of the sea-bottom is determined from the temperature of the water as readily as it would be by repeated soundings. When the *Challenger* cruised in the waters east and south-east of China several years ago, the geography of the

different seas formed by the group and chains of islands off that coast was made out in this way.

In this open Pacific, and in all seas into which the oceanic currents flow, the temperature varies from the surface to the bottom. Of course the deeper water is the cooler. If a basin be cut off from this general flow up to within a certain depth from the surface, then the temperature will be found to lower just as in the ocean, until a depth is reached just even with the top of the enclosing bank or reef. From that point to the bottom the temperature is found to be uniform.

Some observations in the waters named will make this intelligible. It was found that the temperature of the Celebes Sea varied until a depth of seven hundred fathoms was reached. From that depth down to more than twenty-five hundred fathoms there was no perceptible change. The walls of the basin, then, toward the Pacific, rise to within seven hundred fathoms of the surface. No colder water than that of the tropical Pacific at a depth of seven hundred fathoms was poured into this basin, and that was the temperature that the basin could preserve.

In the Sulu Sea the temperature remained the same from a depth of four hundred fathoms to the bottom at more than twenty-five hundred fathoms. All this body of water was warmer than that of the Celebes, because the rim of the basin coming nearer the surface, not so cold water could flow in from the ocean.

In the Molucca passage the temperature of the water decreases gradually from the surface to the bottom. This proves that these waters are not cut off from the ocean currents by any ridge toward the Pacific.—*Selected.*

COSTA RICA.

ONE of the most interesting of the five Central American Republics which are about to be welded into one is Costa Rica, which lies between Nicaragua—now the scene of the construction of an inter-oceanic canal under American auspices—and the Isthmus of Panama, which has long been a field for American enterprise. The State of the American Union which Costa Rica closely approaches in size is West Virginia, and, like that State, it is exceedingly mountainous. Its population barely exceeds two hundred thousand, which is much smaller than that of Rhode Island. The inhabitants are chiefly congregated on the central plateau of the country, and within sight of the mountain-tops near San Jose, the capital.

There are large plains in Costa Rica, but they are almost entirely uninhabited. They lie along the Atlantic coast, and are covered, for the most part, with forests of beautiful and valuable timber. These plains,

though hot, are not especially unhealthy, and might be rendered quite habitable by cultivation.

Above the hot lands on either side—for Costa Rica extends from the Atlantic to the Pacific—is the temperate belt, or the fertile highlands. Here the climate is delightful nearly all the year round, and salubrious as well.

The principal crop of Costa Rica is coffee, and a very excellent quality of the berry is raised. The entire central plateau is covered with coffee plantations, which are exceedingly beautiful, either in April, when the branches of the trees are covered with white and delicate flowers, or in December, when the berries show cherry-red among dark-green leaves.

The Costa Rica people are gentle, hospitable and easy-going in their ways, and are advancing rapidly in education as well as in material prosperity. They have a railway which lacks but a few miles of crossing the continent; their institutions are free, and life and property are safe throughout the country.

The people have many virtues, but they cannot understand the saying, "Time is money." "You may have in Costa Rica," says Mr. Biolley, "friends truly devoted to you; count upon their honor, their loyalty, their steadfastness, but never count upon their being punctual."

Costa Rica is not great in area, but is vast in resources. Though it already produces a large amount of coffee, it could produce many times as much. Bananas grow in abundance also, as do sugar-cane, corn, chocolate and many other tropical and subtropical products.

Recognizing the fact that the resources of the country can be adequately developed only by the aid of immigration, the Costa Rica government is doing everything in its power to induce Europeans and Americans to settle in the little republic.—*Selected.*

THE MARKET PRICE OF WIVES.

IN the earliest time of purchase, a woman was bartered for useful goods, or for services rendered to her father. In this latter way, Jacob purchased Rachel and her sister Leah. The price of a bride among the Indians of British Columbia and Vancouver Island varies from twenty to fifty pounds' worth of articles. In Oregon, an Indian gives for her horses, blankets or buffalo robes; in California, shell-money or horses; in Africa, cattle.

A poor Damara native will sell a daughter for a cow; a richer Kaffir expects from three to thirty. With the Banyai, if nothing can be given, her family claim her children. In Uganda, where no marriage recently existed, she may be obtained for half a dozen needles, or a coat, or a pair of shoes. An ordinary

price is a box of percussion caps. In other parts, a goat or a couple of buckskins will buy a girl.

Passing to Asia, we find her price is sometimes five to fifteen roubles, or at others, a cartload of wood or hay. A princess may be purchased for three thousand roubles. In Tartary, a woman can be purchased for a few pounds of butter, or where a rich man gives twenty small oxen, a poor man may succeed with a pig. In Fiji her equivalent is a whale's tooth or a musket.

In Australia, no man could formerly obtain a wife unless he gave a sister or some other relative in exchange. The number of wives was limited only by the number of relatives that could be given in return.

These, and similar prices elsewhere, are eloquent testimony to the little value a savage sets on his wife. Her charms vanish with her girlhood. She is usually married while a child, and, through her cruel slavery and bitter life, she often becomes old and repulsive at twenty-five.

TO BURN DOWN TREES ELECTRICALLY.

A DEVICE for felling trees in which a platinum wire heated red hot by means of an electric current takes the place of a saw is described in *The Scientific American*. Of this machine, the invention of two citizens of Little Rock, Ark., the paper just mentioned speaks as follows:

"The apparatus comprises a frame similar to that of a buck-saw, across the lower end of which the resistance-wire is stretched. The tension of the wire may be adjusted by a bar which extends between the side-arms of the frame, and is clamped at one side by a thumbscrew which passes through a slot in the bar. The upper end of the frame is provided with a coil spring adapted to draw the side arms together, to take up the slack in the resistance-wire as it expands when heated by the current. Since ashes are apt to collect in the kerf and retard the burning of the wood, the inventor has provided a mechanism for reciprocating the saw-frame. Furthermore, the resistance-wire may also be wound with a short length of platinum wire, and coils of the latter will act as drag teeth to remove the fine ashes and clear out the charred fragments. The mechanism for reciprocating the saw-frame may be driven by an electric motor. The apparatus offers the advantage that it may be operated at long distance from its source of power, thus giving it a wide radius of action. The inventor has designed the apparatus particularly for the use of lumbermen in felling trees. The electric saw permits of cutting off the trees very close to the ground, and at a much smaller expenditure of labor than with the usual hand-operated saw."—*Literary Digest.*

ORIGIN OF "NELLIE GRAY."

BY MARGUERITE BIXLER.

WHILE nearly everybody knows this little song, yet few know of its origin, and that it was written by Ben R. Hamby, away back in the fifties. At that time he was a teacher in a little academy near Seven Mile, Butler county, Ohio. On his way from Cincinnati in reading the *Cincinnati Commercial*, his eye fell upon an account of a beautiful quadroon girl who had been torn away from her slave lover and carried to the Southern markets to be sold. Her name was Nellie Gray.

The account worked Hamby up to such an extent that he utilized the incident as the subject of the song, the words of which were almost completed by the time he reached home. After a slight remodeling of a few finishing touches he sent it to a Chicago firm for their approval. He never received any returns from it, and the first knowledge that he had of the words having become in the least popular or even been used, was on a visit to Columbus, Ohio. While calling on a lady acquaintance he requested her to sing something for him. She complied by saying she would sing him a sweet little song she had just received, and she remarked that by a strange coincidence it had been written by a person with the same name as his. She, thereupon, much to his surprise, sang with a trained voice, "Nellie Gray."

It is needless to say that the song was famous, and it made for its publishers some thirty thousand dollars. It is said Hamby never received a dollar from the publishers. The most he ever got was six printed copies of his song.

E. Akron, Ohio.

LIFE ON A LEPER ISLAND.

Sad Fate of the Wretches Who are Outcasts from the World and Die a Hideous Death.

A WOMAN who has made a study of leprosy narrated her experience at Molokai as follows:

The resident agent broke the rigid quarantine of the Molokai one day so far as to let me land upon the island, although he did not allow me to approach nearer than ten or twelve yards to the lepers, or to leave the beach and go inland to the houses that were visible in the distance. Our boatmen ran the sloop close in shore, and carried the captain and myself through the shallow water, carefully setting us down on dry stones, but remaining in the sea themselves. A little dog that had come with the party sprang overboard, and began swimming to the shore. It was hurriedly seized by the scruff of its neck and flung back

into the boat. If it had set paw on the beach it could never have returned, but would have had to stay on the island for good.

Very lovely is the Molokai of Penrhyn; sadly beautiful this spot where so many wretched creatures have passed away from death in life to life in death. As we landed, the low golden rays of the afternoon sun were slanting through the pillared palm stems and quaintly beautiful pandanus fronds, across the snowy beach, and its trailing gold-flowered vines. The water of the lagoon, colored like the gems in the gates of the Heavenly City, lapped softly on the shore; the perpetual trade wind poured through the swaying trees, shaking silvery gleams from the lacquered crests of the palms. In the distance, shadowed by a heavy pandanus grove, stood a few low brown huts. From the direction of these there came, hurrying down to the beach as we landed, four figures—three men and a woman. They had put on their best clothes when they saw the sloop making for the island. The woman wore a gaudy scarlet cotton frock; two of the men had white shirts and sailors' trousers of blue dungaree—relics of a happier day, these, telling their own melancholy tale of by-gone years of freedom on the wide Pacific. The third man wore a shirt and scarlet "pareo," or kilt. Every face was lit up with delight at the sight of strangers from the schooner; above all, at the marvelous view of the wonderful "wahine papa." Why, even the men who lived free and happy in Penrhyn mainland did not get the chance of seeing such a show once in a lifetime! There she was, with two arms, and two legs, and a head, and a funny gown fastened in about the middle, and the most remarkable yellow shoes, and a ring with a wonderful pink stone in it, which showed her to be extraordinarily wealthy. Also every one must agree that she was extremely lovely, because her face was burned to the most beautiful scarlet color all over. She could not have weighed less than eleven stone; she was as tall as a sea captain. What a Helen of Troy!

Bright as all the faces of the lepers were at that exciting moment, one could not mistake the traces left by a more habitual expression of heavy sadness. The terrible disease, too, had set its well-known marks upon every countenance. None of those who came out to see us had lost any feature; but all the faces had the gross, thickened, inhuman look that leprosy stamps upon its victims. The woman kept her arm up over her head, to hide some sad disfigurement about her neck. One of the men walked slowly and painfully, through an affection of the hip and leg. There were nine lepers in all upon the island; but the other five either could not or did not wish to leave their huts, and the agent refused to break the quarantine any further than he had already done. What care the

wretched creatures are able to give one another, therefore, what their homes are like, and how their lives are passed, I cannot tell. Three of the lepers were accompanied by their faithful dogs. They are all fond of pets, and most have either a dog or a cat. Of course the animals never leave the island. We exchanged a few remarks at the top of our voices, left a case of oranges (brought up for Cook Islands, a thousand miles away), and returned to our boat. The case of oranges was eagerly seized upon, and conveyed into the bush.

"They will eat them up at once," I said.

"Not they," said one of our white men. "They'll make orange beer to-night, and get jolly drunk for once in their miserable lives."

The lepers are fed from stores furnished by a small government fund; and the trader who fulfills the very light duties of resident government agent generally sends them over a share of any little luxury in the way of oranges, limes, or yams, that may reach the island. None the less, their condition is most miserable, and one cannot but regard it as a crying scandal upon the great missionary organizations of the Pacific that nothing whatever is done for the lepers of these northern groups. The noble example of the late Father Damien of Hawaii, and of the Franciscan sisters who still live upon the Hawaiian Molokai, courting a martyr's death to serve the victims of this terrible disease, seems to find no imitators in the islands evangelized by British missionaries. Godless, hopeless and friendless, the lepers live and die alone. That their lives are immoral in the last degree, their religion, in spite of early teaching, almost a dead letter, is only to be expected. Penrhyn is not alone in this terrible scourge. Rakahanga, Manihiki and Palmerston—all in the same part of the Pacific—are seriously affected by the disease. Palmerston I did not see; but I heard that there is one whole family of lepers there, and some stray cases as well. The island belongs to the half caste descendants (about 150 in number) of one Masters, a "beach comber" of the early days, who died a few years ago. These people are much alarmed at the appearance of leprosy, and have segregated the lepers on an island in the lagoon. They are anxious to have them removed to the Molokai at Penrhyn, since the family came originally from that island; but no schooner will undertake to carry them. In Rakahanga, the lepers are not quarantined in any way, but wander about among the people. There are only a few cases as yet; but the number will certainly increase. This may also be said of Manihiki, for although very serious cases are isolated there, the lepers are allowed, in the earlier stages, to mix freely with every one else, and even to prepare the food of a whole family. The New Zealand

government, it is believed, will shortly pass a law compelling the removal of all these cases to the Molokai at Penrhyn. No government, however, can alleviate the wretched condition of these unfortunate prisoners, once sent to the island. That remains for private charity and devotion.

A God-forsaken, God-forgotten looking place is Penrhyn, all in all. When sunset falls upon the great desolate lagoon, and the tall cocoanuts of the island stand up in jet black against the stormy yellow sky in one unbroken rampart of tossing spears, and the endless sweep of the shadowy beach is empty of all human life, and clear of every sound save the long, monotonous, never-ceasing cry of the trade wind in the trees, it needs but little imagination to fancy strange creatures creeping through the gloom of the forest—strange, ghastly stories of murder and despair whispered in the gathering night. Death in every form is always near to Penrhyn; death in the dark waters of the lagoon, death from the white terror of leprosy and death at the hands of men but quarter civilized, whose fingers are always itching for the ready knife. And at the lonely sunset hour, when old memories of the life and light of great cities, of welcoming windows shining red and warm through gray, cold northern gloamings, come back to the wanderer's mind in vivid contrast, the very wings of the "Shadow cloaked from head to foot" seem to shake in full sight above these desolate shores. Yet, perhaps, the intolerable blaze of full noon upon the windward beaches strikes a note of even deeper loneliness and distance. The windward side of Penrhyn is uninhabited; the sea that breaks in blinding white foam upon the untrodden strand, wreathed with trailing vines of vivid green, is never broken by a sail. The sun beats down through the palms and pandanus leaves so fiercely that the whole of the seaward bush is but a shapeless blaze of green fire. Nothing stirs, nothing cries; the earth is silent, the sea empty, and a barrier of thousands of long sea miles, steadily built up, day by day, through many weeks, and only to be passed again by the slow demolishing, brick by brick, of the same great wall, lies between us and the world where people live. Here there is no life, only an endless dream; not, as in the happy southern islands, a gentle sunrise dream of such surpassing sweetness that the sleeper asks nothing more than to dream on thus forever; but a dark-hour dream of loneliness, desolation and utter remoteness, from which the dreamer cannot awaken, even if he would. Why do men—white men, with some ability and some education—live in these far-away infertile islands? There is no answer to the problem, even from the men themselves. They came, they stayed, they do not go away—why, they do not know. That is all.

AIDS IN SCHOOL DISCIPLINE.

BY MAUD HAWKINS.

WHILE "ruling by love" will not always overcome the evil propensities of human nature as manifested in a child at school, the cultivation of gentle courtesies toward the pupils, and a sympathetic interest *in* them will accomplish wonders.

If a pupil is given to understand that you have a good opinion of him he will strive to KEEP that opinion. The self-respect of a pupil is a matter of very great importance. It often needs to be *controlled* and *directed*, but under *no* circumstances should it be *crushed*. To do so is to do violence to the better nature of the pupil, and this renders efficient moral training impossible.

I often think that half of our difficulties in school government results from our failure to cultivate a normal self-respect on the part of our pupils. We are too apt to administer public reprimands, when *private talks* and *personal appeals* would produce better results.

Respect *begets* respect. When the pupils realize that the teacher has due respect for their feelings, they will be much more inclined to be considerate of *her* wishes and the welfare of the school.

Do we try hard to gain the love of our pupils, and if one means fails, do we look for another, that which lies nearest the child's heart—the baby sister, the pet rabbit, or a favorite game, and approach him through that medium? As teachers, do we strive to give more sympathy to those pupils who have none at home, more smiles and kind words to the child with a rough exterior, which may enshroud a loving heart, and less to the pampered darling who is in danger of being spoiled by the fond caresses of indulgent parents?

Let us make friends of our children and be watchful lest one have occasion to say, "It's only me and I can never be any more to my teacher." Do not look for the *bad* in boys, for if you do you will be quite apt to find it. But look for the *good* and you will be just as *sure* to find it.

When you look into the child's soul with a prayerful desire to find the good that is there and awaken it to life, you will find it just as surely as there is a divine nature to lead you. Look at the *child* and not the *results* to be obtained externally.

No teacher is in the work purely for love of the occupation or of the pupil, yet if one is resolute and conscientious in the matter, she may cultivate a sincere affection for both, and this may win the good will of the child. Be kind to those who need it most. Make it evident that you believe that

He who is honest is noble,
Whatever his fortune or birth.

The power of gentleness on the part of the teacher cannot be overestimated—especially on the unmanageable (so-called) boys, who, proud and confident of their superior and well developed muscular strength, laugh at mere physical force on the part of the teacher and defy authority and have no respect for law. Often the rudest and most defiantly disobedient boy is impressed and subdued by the power of gentleness, seemingly because it is in such strong contrast with his own disposition and ways—unlike attracting, and like repelling.

He may not analyze his feelings and the teacher may not be conscious of them, but his ridiculing smile, defiant acts and rude laugh tell the story better than words could express it, when she makes use of any ungentle but common methods of dealing with contrary minds. He knows, also, that loud, harsh, impatient tones of voice and a hasty, ungracious manner are not becoming to a lady, and he naturally resents them.

As children are attracted by the beautiful in nature and art, and readily yield to the influence of music and song, so are they as quickly responsive to the power of gentleness and to a low voice—that *excellent* thing in a woman, that *most* excellent thing in the teacher.

The effect of the teacher's voice alone cannot be overestimated. It will either cause harmony or discord; maintain order, or destroy it. The voice of the teacher in the schoolroom is as a rule pitched too high.

The use of corporal punishment except in *extreme* cases is a thing of the past. What shall be its substitute? A careful study of the conditions which help to obtain the desired results. Under the first head would be pure air and a proper arrangement of light. Cleanliness and order are so closely allied that I will speak of them together. A place for everything and everything in its place is a great help toward cleanliness.

Who can explain why so many teachers accept an untidy room as a necessity? A true lady will *make* and *keep* the place in which she spends so many of her waking hours both clean and sweet.

Amy in the realistic story of Dodd showed one of the finest instincts of her nature when she washed the schoolroom floor. We are all greatly influenced by our surroundings. The moral effect of a room is wonderful. Why should not the impression of the schoolroom where the pupils spend five days of the week affect their character? Probably no one who has not been a teacher can understand how much easier it is to control a school in a pleasant, well-ventilated room. The whole tone of the school is different. This fact is strong proof that pupils are influenced by their surroundings and that the educative value of an

attractive school interior is great in the highest sense.

Get as much of nature's own brightness inside the room as possible. The walls of the room should receive our careful attention. Appropriate pictures should adorn them. But some will ask, "Where are we to get the pictures?" Nevertheless I must still answer, Something *can* be done if we have only willing hearts, quick eyes and fertile resources, with a little self-denial to work with.

We must find our own pictures until the town or some art-loving individual will donate to each room at least one *truly* beautiful picture. The children are themselves indefatigable agents. Hint that you want pictures and your desk will be crowded. Many of them worthless, but among the number brought *some* will be worthy to be reserved.

Large uncolored copies of noted pictures may be had for a small sum. The Perry pictures are both cheap and beautiful. "Thoroughbred," "Pharaoh's Horses" and "Can't You Talk?" will supplement the lessons on kindness to animals. Have the colors of the room harmonize. The personal appearance of the teacher has its influence also. Would you make your room attractive and your pupils happy think on these things.

ABRAHAM LINCOLN'S TWO TEXTS.

AMONG those who might fairly claim to have known Abraham Lincoln were the pupils in a primary school near the White lot in Washington, the yard of which was separated by a fence from the rear end of the White House grounds. Most of the reminiscences of the President which the boys carried away with them were small events not easy to relate, but such, nevertheless, as gave to them a growing love for the great man who sometimes found recreation in watching and applauding their sports, and who more than once visited the school and addressed the children. One incident, however, stood out distinctly, and is described by a witness, one of the boys then attending the school, says the *Youth's Companion*.

One day the teacher gave a lesson on neatness, and asked each boy to come to school next day with his boots blacked. They all obeyed; but one of them, John S., a poor, one-armed lad, brought down upon himself no end of ridicule, for he had used stove-blackening, the only kind of polish which his home afforded.

Boys are sometimes merciless in their ridicule. The poor child, only nine years old, and doubly sensitive because of his lost arm, tried to be brave, but his lips were quivering and the tears were in his eyes, when the jeering suddenly stopped; for there, leaning upon the fence and listening, stood the President.

Mr. Lincoln uttered no word of reproof, but entered the school and made inquiry of the teacher. He

learned that John was the son of a dead soldier, and that his mother, who had other children, was a washerwoman. Then he went away, and it was many days before he came back again.

The next morning John was at school in a new suit, and with new shoes radiant with the best blacking. The change was so great the boys hardly recognized their companion, whom they plied with questions. John replied that the afternoon before, the President and Mrs. Lincoln and another lady had called at his home in their carriage; that the President had taken him to a clothing-store and bought him two suits and that while he was doing this the ladies made inquiries of his mother, which later were followed by clothing for the two little girls, and a supply of coal and groceries. In addition to this information, the lad brought to his teacher a scrap of paper containing a verse of Scripture, which Mr. Lincoln had requested to have written on the blackboard:

Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me.

Some weeks afterward, when Mr. Lincoln visited the school again, the verse was still there, and the teacher called his attention to it. Mr. Lincoln adjusted his spectacles and read it, then removed his glasses and wiped them, and the boys thought there were tears in his eyes. But he replaced his glasses, and taking a crayon, said, "Boys, I have another quotation from the Bible, and I hope you will learn it and come to know its truth as I have known and felt it." Then below the other verse he wrote:

It is more blessed to give than to receive.

A. Lincoln.

One boy, at least, never forgot it. He is now himself a teacher in the public schools, and often tells the boys he teaches of the texts which President Lincoln taught him and his schoolmates.

EASY TO BE DIVORCED.

DIVORCE procedure in Burma is simple. If a husband and wife decide that life together is an impossibility, she goes out and buys two little candles of equal size, made especially for the use of the unhappily wedded. She brings the candles home and then she and her husband sit down upon the floor, placing the candles between them. The candles are lighted at the same moment, and one represents the husband, the other the wife. The pair watch the burning tapers anxiously, for custom decrees that the owner of the one which goes out first is at once to leave the house. The second candle may have only flickered out a moment later, but its possessor remains owner of the house and all its contents, his or her late partner going away with nothing but the clothes worn at the moment.

THE EVIDENCE OF THE SENSES.

BY MARY I. SENSEMAN.

SCROOGE had likely been too much occupied with monetary gains to have ready a logical reply to Old Marley's question, "Why do you doubt your senses?" Sometimes we do as Scrooge did, crack dry jokes, in order to make ourselves believe that we are not scared by the daily occurrences that apparently jeopardize our happiness.

From the standpoint that rules are proved by their exceptions, the statement is made here that our senses do not give truthful evidence, they either withhold a part or declare an added (false) part.

Right here we must understand that judgment is not a sense. It is a condition or property of the mind. The senses are sight, a photograph on the retina; hearing, the vibrations of the bones and fluids of the ear; taste, smell, touch, accordingly distinguished.

If a big dog barks at us in his deepest bass we are instinctively inclined to depart from his vicinity. He sounds as if he will bite. But, feeling secure in the old adage that barking dogs do not bite, which is further justified by this one's somewhat mild appearance, we judge that he is after all not actually dangerous. Here, the sense of hearing overdid its duty. On the other hand, if a gentle-appearing dog were to bite the evidence of sight is wanting in the whole truth.

According to the testimony of one's sight, the earth is perfectly motionless and the sun is its faithful satellite. The sense of taste would delude us into believing that the more highly seasoned foods are the most nutritious, while in reality they are among the most harmful. The most beautiful flowers are by no means the most fragrant; nor the delicately-scented violet and lily of the valley the most stately. The sickly child which whines continually may eventually become a philanthropist; while the healthy one which laughs and crows always may become a prig, a slattern, or a tramp.

A man pulled down the blinds of his house. Then he beat his wife. The mere drawing down the blinds was a simple act and the evidence of sight did not show the man to be a criminal. But if the wife had any shrewdness at all, she knew, by the first act, that the second was premeditated.

A person does a bit of acting in order to test the metal of a friend. The means seemed somewhat cruel and belittling. In this case the senses gave the added or false evidence.

We must not jump at conclusions. We must probe for them. The cause and the effect of every recurrence are not wrapped around that incident; they are always embedded in it. Sometimes a big incident hides

very small cause and effect, or a thin covering of incident firmly surrounds important cause and effect.

Incidents are but the meeting-points of causes and effects, of motives and results. With both a good motive and a good result the incident can but be classed as good, however insignificant or how ungainly and ill-performed it appears on the surface. As well, a showy occurrence may be the meeting-point of an evil motive and a disastrous result.

So, strange as it sounds, we will find everybody better than he seems and nobody as good as he appears to be; the seeming and appearing being one's acts evidenced by another's senses.

Thus are the senses tricky, deceptive. In the majority of cases, at least, we cannot trust them, therefore we must not act on their advice. If we do not act we shall find in ourselves a wonderful store of patience and of faith in our fellow-man.

Covington, Ohio.

A LOST ART.

FAME and fortune await the lucky individual who can rediscover the combination of metals from which the Egyptians, the Aztecs and the Incas of Peru made their tools and arms. Though each of these nations reached a high state of civilization, none of them ever discovered iron in spite of the fact that the soil of all three countries was largely impregnated with it. Their substitute for it was a combination of metals which had the temper of steel. Despite the greatest efforts the secret of this composition has baffled scientists and has become a lost art. The greatest explorer, Humbolt, tried to discover it from an analysis of a chisel found in an ancient Inca silver mine, but all that he could find out was that it appeared to be a combination of a small portion of tin with copper. This combination will not give the hardness of steel, so it is evident that tin and copper could not have been its only component.

Whatever might have been the nature of the metallic combination, these ancient races were able so to prepare pure copper that it equaled in temper the finest steel produced at the present day by the most scientifically approved process. With their bronze and copper instruments they were able to quarry and shape the hardest known stone, such as granite and porphyry, and even cut emeralds and like substances.

If copper could thus be tempered now its advantage over steel would be very great, and it would no doubt be preferred to the latter in numerous industries. It is a curious fact that, though this lost secret still baffles modern scientists, it must have been discovered independently by the three races which made use of it so long ago.—*New York Herald.*

THE USE OF A GENTLE ANSWER.

A CIVIL answer will often save you from rudeness and insult. Even rough men are softened by a few sweet, gentle words of a child, just as I have read that a little boy was softened by the notes of a bird.

The boy was playing in the garden when a little bird perched on the bough of an apple tree close at hand.

The boy looked at it for a moment, and then, obeying the promptings of his baser part, he picked up a stone that lay at his feet, and was preparing to throw it, steadying himself carefully to take good aim. The little arm was raised backward without frightening the bird, and it was within an ace of destruction, when lo! its tiny throat swelled, and it shook out a flood of sweet notes.

Slowly the boy's arm dropped to his side, and the stone fell to the ground again, and when the little warbler had finished his merry piping it flew away unharmed.

A gentleman who had been watching the lad then came to him and asked him, "Why didn't you stone the bird, my boy? You might have killed him and carried him home."

The little fellow looked up, with a face of half shame and half sorrow, as he answered, "I couldn't because he sung so."

And civil words may some time save you from damage, just as its sweet song saved the bird.—*Selected.*

* * *

THE WOODMAN'S CLOCK.

THE pole-star is really the most important of the stars in our sky; it marks the north at all times; it alone is fixed in the heavens; all the other stars seem to swing around it once in twenty-four hours. But the pole-star or Polaris is not a very bright one, and it would be hard to identify but for the help of the so-called pointers in the "Big Dipper" or "Great Bear." The outer rim of the Dipper points near to Polaris, at a distance equal to three times the space that separates the two stars of the Dipper's outer side. Various Indians call the pole-star the "Home Star" and "the Star That Never Moves," and the Dipper they call the "Broken Back." The Great Bear is also to be remembered as the Pointers for another reason. It is the hour hand of the woodman's clock. It goes once around the north star in about twenty-four hours, the reverse way of the hands of a watch; that is, it goes the same way as the sun, and for the same reason—that it is the earth that is going and leaving them behind.

* * *

TRUTH, crushed to earth, shall rise again.—*Bryant.*

QUEER WOOL.

STRANGE as it may seem, there comes from the iron furnaces of Pittsburg a substance so white and light, so fluffy and flaky that it looks and feels like picked wool. It is called "slag wool," and a correspondent of *The Companion* offers to tell us how it is made and for what it is used. Slag is a waste substance which issues from iron melting furnaces. It is formed by the separation of the earthy matter from the ore, and looks like coarse, dark glass if allowed to cool as it comes from the furnaces. Formerly it was thrown away as valueless, but since a process of converting it into "wool" has been discovered, it is utilized for many purposes.

This mineral wool is formed by causing a jet of steam to play upon the stream of molten slag as it issues from the furnace. This has the effect of breaking up the melted mass into countless small, bead-like particles, so light that they fly in every direction. Each of these tiny beads carries behind it a delicate thread of finely spun slag, so that one is reminded of a comet with its tail.

To collect these threads, and to separate the fibres from the beads or heavier portions of the slag, the steam jet is arranged at the mouth of an open cylinder of sheet iron, in which a strong air current is induced by means of additional jets of steam.

The tube or shaft is furnished with a shield, or striking plate, which detains the heavier particles, while the lighter slag wool is carried by the draft into a large chamber resembling a gigantic meat-safe, its walls being formed of wire netting with about sixteen meshes to the square inch. Here the steam condenses and escapes, leaving the slag wool, which now has the appearance of snow-flakes, deposited on the floor of the chamber or clinging to its wire walls.

The filaments or flakes are then broken up and felted together, when they look and feel like wool.

This mineral wool is extremely light, and absolutely fire-proof—properties which make it useful for a large variety of purposes. It is a marvelous non-conductor of heat and sound, which renders it valuable for packing between the floors of rooms and in the space between partitions. It serves as an excellent covering for boilers, heating pipes and such things.

It can be woven into cloth, and as such, makes fire-proof curtains for theatres, and it might not be a bad plan to make clothes out of it for children who persist in playing near the fire. It is so porous that it will absorb and retain large quantities of water, like a sponge, and it is also an antiseptic, that is, a substance which resists or corrects putrefaction. It is useful, therefore, as a dressing for wounds, as well as for other medical purposes.—*Selected.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

THE CHICAGO SUNDAY SCHOOL EXTENSION FUND.

THE people of Chicago who are making such a noble effort to introduce Sunday schools into neglected sections of the city use a great many ways to get money to make such work possible. Last year a successful attempt was made to place a small investment in the hands of the children all over the country, with the understanding that the proceeds should be returned to the extension fund. This year they are investing in garden seeds and several thousand packages of these seeds have already been sent out, but they still have a great quantity on hand. In order to get rid of these this year they are making an offer to dispose of them at two and a half cents a package. Please notice their advertisement elsewhere in this issue. The cause is a very worthy one, and should be patronized as liberally as possible. Let the INGLENOOK family have a hand in doing good.

HEROES.

JUST about a year ago Mr. Andrew Carnegie, in trying to decide how he could best spend his surplus money for the betterment of mankind, decided it would be unique, as well as beneficial, to establish a "Hero Fund." It was his design not only to reward heroes liberally from this fund, but to award medals which would serve to distinguish them, and, in some little way, make them to feel that the world had appreciated their efforts. But to date no distribution of prizes has been made. The commission into whose hands this fund was placed has been nearly drowned in a sea of affidavits. Heroism has become as contagious as measles; the number of applicants that have filed papers with them now exceed twenty thousand. The overworked commissioners themselves really feel as if they were entitled to be rewarded and regarded as heroes.

It may be a little ungracious, nevertheless, it may carry with it a great deal of truth to say that real heroes and heroines will not ask to be rewarded and don't even know that they are heroic in their quiet, unadvertised everyday life. It follows then that in the majority of cases where heroes clamor for awards that one of two things is true; either the feat has been performed for the reward or he is desirous of wearing a medal that will distinguish him above his fellows as being a brave character. A hero, like a martyr, blows no horn; he does only what is his duty to do.

FOR THE GREAT NORTHWEST.

FOR the benefit of a great number of the INGLENOOK family who live in the Upper Mississippi Valley and the great Northwest, as well as the regions around the Great Lakes, we give some railroad information concerning the Annual Meeting at Bristol, Tenn.

A majority of those in the territory above named will of necessity come to Chicago. Then the question is the best route from Chicago to Bristol. There are several ways already mapped out by which one can reach Bristol. The fare will be the same over any of these routes. The choice between the routes will practically depend upon the country through which they pass, the distance and the connection of trains. On any of the roads one may leave Chicago, near noon of one day and reach Bristol in the evening of the following day.

The Wabash expects to run a train from Chicago to Toledo, over their own line; from Toledo to Colum-

SCENE NEAR RIPPLEMEAD.

bus, Ohio, over the Ohio Central, and from Columbus, Ohio, to Bristol over the Norfolk & Western. There will be a train over the C. & E. I. from Chicago to Evansville, Ind., from Evansville to Nashville, Tenn., over the L. & N., from Nashville to Chattanooga over the N. C. and St. L., and from Chattanooga to Bristol

FARM SCENE, MOUNTAIN AND VALLEY.

over the Southern. A third way will be to take the Big Four out of Chicago to Cincinnati, where you can have choice of roads from Cincinnati to Bristol over the Q. & C., the L. & N. or the Norfolk & Western. Another way which is extremely popular on account of distance, and because of a SOCIAL SPECIAL TRAIN that runs from Chicago through to Bristol without change, is, over the Monon route to Indianapolis; from Indianapolis to Cincinnati over the C., H. & D., and from Cincinnati to Bristol over the Norfolk & Western. Of course you can go to Cincinnati from Chicago over the Monon, C., H. & D., and can take the Q. & C. or the L. & N. from there to Bristol; but Mr. Frank J. Reed of the Monon, and Mr. W. B. Beville of the Norfolk & Western have both told your editor, personally, that they expect to run a SOCIAL SPECIAL TRAIN from Chicago straight through to Bristol without change.

As will be noticed in advertisements elsewhere, this train will leave Chicago, Friday, June 2, at 12:00 noon, and arrive in Bristol, 2 P. M., Saturday, June 3. The fare from Chicago to Bristol and return will be \$19.12. The Norfolk & Western is a terminal line at Bristol, and, with other terminal lines, will contribute a portion of receipts towards expenses of the meeting.

Again, the Norfolk & Western has a line from here running down into old Virginia, and one into Maryland. Persons traveling over this road will find it very convenient to make side trips to see their relatives and friends who live in the East. Those using this route will find it leads through a section of country which constantly unrolls a beautiful panorama afforded by moun-

tains, rivers and fertile valleys. It passes through West Virginia, which, of late, has become renowned for its immense mineral wealth.

The accompanying illustration of the scene near Ripplemead will give you an idea of the beauty of some of these valleys. Also the accompanying farm scene shows the wealth of some of these valleys which are very modest in their boastfulness.

The view of the Annual Meeting grounds only gives you a picture of one of the drives in the beautiful grove where the meeting is to be held. It certainly is a very nice grove and a delightful place for the meeting.

Any further information wanted concerning this SOCIAL SPECIAL TRAIN can be had by addressing the above officers.

You might be the means of doing some one a great deal of good by showing him our offer to send the INGLENOOK from now to Jan. 1, 1906, for 50 cents. We are getting a great many testimonials from Sunday schools telling how they like it. Why not ask us for a few sample copies to show your Sunday school what it is like?

A PARTIAL VIEW OF THE MEETING GROUNDS.

Current Happenings

THROUGH the influence of French Baptist missionaries, the Rev. A. E. Ribourg and the forty-two members of his independent Catholic parish at Manchaoug, Mass., have formally entered into the Baptist denomination. They were formerly members of the Roman Catholic Church.

THE largest picture ever painted has been completed by a French artist, after eight years of labor. The subject is the funeral of M. Carnot, and the canvas measures one hundred fifty-nine square yards.

THE Long Island Railway has received the first installment of its new steel motor cars for the electrical equipment of the road. Externally they look very much like the steel cars in the New York Subway. They are equipped with the Westinghouse multiple control airbrakes, and each car has two two-horse power motors.

PRINCE GEORGE, of Greece, who represents the Powers as high commissioner in the government of the Island of Crete, recently gave an address, after which the Cretan Assembly at Canea voted and proclaimed the union of Crete and Greece. The deputies took the oath of allegiance and proceeded to notify the representatives of the Powers of the action taken.

THE czar is reported to have declared, "If I sign peace I cannot be czar." The czar is rumored to have wounded himself in the hand in an effort to commit suicide.

PRESIDENT ROOSEVELT will deliver an address in Brooklyn on May 30 at the unveiling of the statue of General Slocum.

A NEW Italian cabinet has been formed under the premiership of Leone Fortis.

ACCORDING to official figures there were produced in France last year 1,743,959,650 gallons of wine. The *Cleveland Leader* has estimated that this would fill a canal ten feet deep, 100 feet wide and forty-four miles long.

THE latest horticultural creation of Luther Burbank is a carnation which changes color three times on the first three days of its blooming. The first day it is pure white, the second it is pink, and the third day a deep red, which color is retained until the flower fades.

THE American people pay every year \$1,074,225,928 more for intoxicating liquors than for literature of all kinds.

THE body of Admiral John Paul Jones, for which Ambassador Porter has been searching in Paris for five years, was found and identified on April 14. The body was in a good state of preservation and answered in every particular to the descriptions, portraits and statues of the admiral. The leaden coffin containing the remains was found by tunneling the old St. Louis Cemetery, now covered by city streets and buildings. The body was immersed in alcohol, and the limbs cased in tinfoil, hence its wonderful state of preservation. It is thought that Congress will reimburse General Porter for his expense in pushing the search which has proved so successful. The body will be brought to this country in fitting weather, and interred with ceremony at the Arlington Cemetery, near Washington.

THE decision of the United States Supreme Court, overthrowing the New York Ten-hour Bakery law, has been followed by strike talk, and Secretary Harzbecker, of the International Union of Bakers and Confectioners, said there might be a strike involving 85,000 bakers throughout the United States on May 1, if the ten-hour demand was refused. Business Agent Urbana, of Bakers' Union No. 3, at New York, said: "We will keep up this ten-hour fight in defiance of the United States Supreme Court."

PRESIDENT RAMSEY, of the Wabash Railroad, announced Wednesday that his resignation as president of the Wabash-Pittsburg Terminal Railroad Company had been accepted and that Frederick A. Delano had been elected as his successor. This is said to be due to a disagreement between President Ramsey and George Gould. The latter thought the earnings of the Terminal were not what they should be.

THE Japanese government it about to offer its fourth domestic loan of \$50,000,000, this being part of the war fund, appropriated for the present year. This is to meet the current war expenses.

ALBAUGH BROS., DOVER & Co., one of the Mail Order houses of Chicago, at a late Stockholders' meeting, decided to erect two large buildings at the corner of Marshall and Twenty-first St., Chicago, in order to provide ample room to take care of their growing business.

THE Shah of Persia will arrive in France shortly to take a provincial water cure.

THE Chicago and Alton Railroad Company has contracted for six gasoline motor cars, to be used in its interurban service. This service is designed to meet the competition of the electric lines now running parallel. The trains are run as frequently and at as low rate of fare as prevails on the electric lines. Stops are made not only at regular stations, but at all high-way crossings and public buildings, either to take on or let off passengers.

FRANCE is the first government in the world to put upon its bulletin boards a poster five feet long, containing an official warning against the use of alcohol as a beverage. A pretty time to begin now.

THE treasury statement of the government receipts and expenditures shows that for the month of March, 1905, there is a surplus of \$972,630.

ACCORDING to documents found in the archives of Genoa, the discovery of America by Columbus cost a little over \$7,000. The fleet of Columbus was worth about \$3,000. His salary was \$200 a year.

LAST year \$18.15 was spent for stimulating drinks for every man, woman and child in this country, or \$90.75 for every family of five. Stop and think for a moment what such figures really mean.

THE main building of the Vanderbilt University, at Nashville, Tenn., was destroyed by fire quite recently.

ACCORDING to government statistics, just published, America uses one-half of the world's production of coffee. More than 1,000,000,000 pounds, valued at \$88,000,000 came into the United States last year. The consumption is rapidly increasing every year.

THE state experimental station at Tampico, Ill., has been discontinued.

FOUR Jews were killed and forty wounded in a battle between a mob of socialists and a police patrol in the streets of Warsaw.

IN 1903 there were sold in the United States alone 3,210,352,015 cigarettes. It is estimated that if these were laid end to end they would reach twice around the world and then from New York to San Francisco and back again.

It is estimated that \$400,000,000 of British treasure lie sunk along the route from England to India.

THREE employes were seriously injured by a tank explosion which wrecked the laboratory of the Merck Chemical Company, St. Louis.

FIFTEEN store buildings were recently destroyed by fire at Lowell, Mich. The fire was caused by an explosion in the gasoline storehouse of one of the hardware stores.

FIVE czars of Russia have been assassinated as follows: Feodor I. last of the house of Rurik, which had governed Russia for 700 years, 1589, Peter III, dethroned and murdered; succeeded by Catherine, his wife, 1762; Ivan IV, murdered in prison, 1764; Czar Paul, March 4, 1801; Alexander II, March 13, 1881.

THE Northern Pacific Railroad has made it a rule to dismiss any employe who is seen taking a drink of liquor.

If it is essential for the government to establish canteens, drinking posts and official saloons for its soldiers, why should not the railroad companies establish a saloon at each watering tank or roundhouse for the benefit of their employes?

THE King of Greece has appointed the emperor of Germany an admiral of the Greek navy in return for Emperor William's courtesy in making him an admiral of the German navy.

THE Art Institute of Chicago is to receive from Benjamin Ferguson, a lumber merchant, who died at Chicago recently, the income from an estate of \$1,000,000. It is to be used to create and maintain statuary and monuments in public places, commemorating worthy men and women of America, or important events of American history.

LAST year there were brought into this country 700,000 pounds of opium and a ton of morphine, which is five times as much as was used six years ago, and the *Chicago Tribune* estimates that a million people in this country are addicted to the use of either morphine or cocaine.

RUSSIA has a population of 127,000,000, but it is said to have only 18,334 physicians, while the United States has a population of 75,000,000 and 120,000 physicians.

HOME DEPARTMENT

MOTHER'S THIMBLE.

BY NANNIE BLAIN UNDERHILL.

'Tis such a little thing:
 It cannot think, or feel.
 'Tis old, and worn, and thin—
 'Tis but a bit of steel.
 Its worth is but a penny,
 But, oh, the times—how many—
 Its power was used for me!

Our clothes were made by hand—
 It helped make every stitch—
 While Mother worked and planned
 In mother-love, so rich.
 'Tis always at its station,
 It never took vacation,
 With clothes to make or fix.

Those hands are now at rest:
 Myriad kindly deeds,
 Remind us of the Blest,
 While heart with sadness bleeds.
 Those fingers—once so nimble,
 That used this plain, old thimble—
 They have no further needs.

Her busy life is past;
 'Twas ever calm and sweet:
 I'm glad to know, at last,
 Our loved one we may meet.
 Our gentle, Christian mother,
 There, with our Elder Brother,
 With untold bliss, to greet.

Collbran, Colo.

* * *

DRINKING MILK.

Is milk more healthful to drink than water? Is it hurtful to drink one or even two glasses of milk after eating, if you drank nothing while eating? Is not milk and water more productive of health than tea and coffee?

In reply to the first question, I will say that water is the natural drink intended for man and beast, simply as a drink. I infer this from the fact that the human body is very largely composed of water, the blood containing 79 per cent; the brain, 80; the muscles, 75; even the solid bones, 10; while the digestive juices are still richer in this natural fluid, the saliva having as high as 99; the gastric juice, 97; the pancreatic juice, 90; and the bile, 87. On the whole, there is no better solvent than water.

Milk is food and drink, and should not be taken as a substitute for drink. In reference to the second, it

may be well to drink a glass of milk at the close of the meal, providing enough food has not already been eaten.

It is best not to drink at the meals, at least if this drink is simply used as a means of eating rapidly, "washing it down," the saliva being enough to moisten all of the food really needed, the starchy kind particularly, absolutely demanding the saliva for their digestion.

If the proper amount of food is eaten, a single glass may be added with perfect safety, which should be taken slowly, held for a time in the mouth. A large amount might add too much to the amount of food already taken, besides clogging the stomach with too much liquid. The last question is easily answered.

The milk and water are very much superior to tea and coffee. I believe that strong tea is one of the prominent causes of neuralgia, while coffee produces most, or much of the biliousness. Both are like alcohol, in the matter of stimulation, all acting as such on account of their poisonous properties. They both derange and retard digestion.

While most people drink far too much in connection with their meals, there is but little danger of drinking too much simple water when the stomach is empty, if not too cold. Taken in the evening, after taking a very light supper, so that the stomach may be nearly empty, and early in the morning before any food is taken, it has a very beneficial effect in dissolving the waste matters, that they may the more readily pass out of the system, as a very important means of purification.—*Selected.*

* * *

CARING FOR THE ORPHANS.

"WELL, I don't know," said Margaret, "how we shall make out, but we can't let the child starve." Margaret was house-mother in a German home where money was scarce and plain food was not plenty.

A stranger had stopped at the door and asked if he might have some supper with the family. He was watching the yellow-haired little girl who followed Margaret around.

"Then she isn't your own child?" he asked.

No, she was the child of a poor neighbor who had died a few weeks before; so they had taken her in.

"And can't you manage to keep her?" the stranger asked. "You have none of your own, I suppose."

"Oh, dear, yes!" and she laughed. Why, there were ten in all! When supper was ready they all

trooped in. At the table each one looked out for Gretchen; she had the largest potato carefully peeled by Margaret, the mother's name-child, and Melchoir, the father's namesake, put a bit of butter on it, though he ate none on his own. The stranger saw this, though he seemed not to.

The next day a soldier rode up to the house and gave Margaret a letter. What do you think it said? Why, that the man who had eaten supper with them the night before was so pleased with all the ten children and Gretchen besides that he had decided to make each one a present of one hundred dollars, to be paid to them each year while they lived. Eleven hundred dollars a year, because a strange man who took supper with them was pleased with their kindness to him, and their unselfish care of the orphan Gretchen!

The letter was signed, "Joseph, Emperor of Austria." He was the stranger who in disguise had visited them.—*Selected.*

* * *

A HASTY TEMPER.

IT is a remarkable thing that there exists in people's minds a distinct social precedence among the vices.

To own oneself on intimate terms with such a one as deceit or slander, for instance, would be almost undreamt of, but how often have we heard people say, almost with pride, at any rate with no trace of shame, "I have a very hasty temper"? And then as if to transfigure it into a very virtue they triumphantly add, "but it is soon over." So it may be, but how about its consequences! Are they soon over?

There are few more dangerous enemies to the peace and comfort of everyday life than the people who speak hastily in the squalls of passing ill temper, and then, when they are restored to good humor, expect everything to be just as it was before. There is no such position as "just as it was before" in this up and down hill human nature of ours. Every word or act is a step by which we mount upward or sink lower in the unhindered journeyings onward of all conditions of life, and the people who give utterance to the incriminations of passionate tempers unfailingly drop down in the estimation of others, from which it is a stiff climb up again.

Moreover, words once uttered, whether true or false, are usually undying and live on in hearts and memories long after the careless bow that shot such poisoned arrows is unstrung. And though the utterer may plead that to feed his passion he said not what he really believed, but what he thought at the time would hurt most, it is almost impossible for the hearer to understand that that expression was not that of a living though latent opinion and to feel it accordingly.

The code of fashion in the moral realms has decreed how much better a passionate temper is than a sulky one, but there is something to be said in favor of the

latter in that it only hurts its owner. Like the little girl who when annoyed always ate her apple pie without sugar, the guilty person may suffer most individually but that is surely better than the suffering to the innocent caused by the random shots of the fierce though short onslaughts of a hasty temper. And silence is much less generally disturbing than violence, though perhaps quite as unbecoming.—*Edith H. Fowler, in London Mail.*

* * *

OUR BOYS.

GET hold of the boy's heart. Yonder locomotive with its thundering train comes like a whirlwind down the track, and a regiment of armed men might seek to arrest it in vain. It would crush them and plunge unheeded on. But there is a little lever in its mechanism that, at the pressure of a man's hand, will slacken its speed, and in a moment or two bring it panting and still, like a whipped spaniel at your feet. By the same little lever the steamship is guided hither and yon upon the sea in spite of adverse wind or current. That sensitive and responsive spot by which a boy's life is controlled is his heart. With your grasp gentle and firm upon that helm you may pilot him whither you will. Never doubt that he has a heart. Bad and wilful boys often have the tenderest heart hidden away somewhere beneath the incrustations of sin, or behind barricades of pride. And it is your business to get at that heart, keep hold of it by sympathy, confiding in him, manifestly working only for his good, by little indirect kindnesses to his mother or sisters, or even his pet dog. See him at his home, or invite him to yours. Provide him some little pleasure, set him to some little service of trust for you; love him—love him practically. Any way and every way, rule him through his heart.

* * *

A CENSUS OF LONDON OUTCASTS.

ON the night of January 29th of last year, medical officers and inspectors of the London County Council took a kind of census of London outcasts. Between one o'clock and five o'clock in the morning, from Hyde Park to Whitechapel and Holborn to the Thames they counted 1,609 men and 188 women walking the streets without a place to sleep, or sleeping in doorways. On the basis of these figures, gathered in four hours' observations, the officers estimated that one person in every 2,000 in London was a homeless outcast. And among the 1,977 wretched wanderers thus counted, fifty were little children!—"Hooligan: The Slum as a World-Power," *Everybody's Magazine for April.*

ALL great virtues bear the impress of self-denial.—*Channing.*

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

REVERENCE.—Heb. 12: 28.

For Sunday, May 14, 1905.

I. For God's Name.

1. Holy and Reverend,Psa. 111: 9
2. His Son our Savior—"Jesus,"Matt. 1: 21
3. God with us—"Immanuel," ..Isa. 7: 14; Matt. 1: 23
4. The Anointed—"Christ,"Luke 4: 18

II. For God's Book.

1. It is Quick and Powerful,Heb. 4: 12
2. Called the Holy Bible.
3. It has Withstood Persecution.
4. It Shall Remain 'mid the Wreck of Worlds,
.....Matt. 24: 35

III. For God's House.

1. Called the House of Prayer, Mark 11: 17; Lev. 19: 30
2. The Bethel to the Weary,Gen. 28: 10-14
3. The Sinai to the Trusting,Josh. 5: 15
4. A Secure Dwelling Place,Psa. 27: 3-6

Text.—Wherefore we receiving a kingdom which cannot be moved, let us have grace, whereby we may serve God acceptably with reverence and godly fear.—Heb. 12: 28.

References.—Lev. 26: 2; Esther 3: 2; Psa. 111: 9; Gen. 17: 3; Ex. 3: 5; 19: 16-24; Isa. 45: 9; Acts 28: 10; Philipp. 2: 29; 2 Sam. 1: 14; Eccl. 10: 20; 1 Peter 2: 17; Ex. 20: 12; Job 32: 4-7; Jude 8; Psa. 27: 4.

An Old-Fashioned Virtue.

Reverence is an old-fashioned virtue, if we may call it such. Boys and girls of a generation ago spoke reverently of many things that are lightly, and even flippantly talked about in these days. We do not like to think that our boys and girls are more frivolous than those of a generation gone by, but we believe that there is a lack of teaching on this subject. Our children are taught to reverence God; but do we impress them sufficiently with the importance of reverencing the Bible, and holy things? We are grieved to hear the name of the Lord taken in vain in so many ways, sometimes we hear it in connection with oaths and profanity. You say only those degraded in thought will stoop to such blasphemy, and we suppose that is true; but there are many thoughtless persons who speak the name of the Lord lightly and carelessly because they never learned to reverence God. A great scientist used to pause before saying the word, "God"; then he would pronounce it slowly and solemnly, to show his reverence for the All-wise Creator of all things.

The Bible.

"Read to me from the book," said a dying author. "What book?" was the answer. "There is but one

book," was his reply, and his daughter read to him from the Bible. The book of the Lord, how we should revere it! Its truths and precepts should be more precious to us than anything else. If the Bible is revered and loved in the home, as it should be, if the children often see their parents read it, if they are taught its precious promises and wise counsels when they are young, then it will prove a light when they are in a dark pathway, and it will save their souls from error and danger.

Revere Sacred Things.

Said a girl, "That beautiful Bible verse has been spoiled for me by an absurd story about it." No, she did not repeat the story, she did not want to spoil the text for somebody else. So too, our hymns are sometimes quoted in jest, or absurd puns are made out of some word or line in order to raise a laugh. There are so many other things to laugh about, that we can surely abstain from the practice of using Scripture or hymns for this purpose.

God is Merciful.

"God only knows how many times we falter,
On our long pilgrimage unto his throne,
To offer at some alien, wayside altar
The homage that we owe to him alone.

"No earthly monarch would endure such treason;
No parent could forgive such wrongs as those
O troubled heart, thou tremblest without reason!
Lift up thine eyes—rejoice! God only knows."

Do We Revere God's House?

One of the saddest chapters in the life of David is that where he was desirous and anxious to build a house unto the Lord, he could not, because God forbade him. Yet he did all he could towards preparing the material. Then in Nehemiah we have an account of the people working earnestly to rebuild the temple at Jerusalem. We wonder if there are any among us to-day like David and Nehemiah, who are willing to forego many things in order that we may build a house unto the Lord. Then we should consecrate our churches to God, and meet to praise his name; amusements of all kinds should not be tolerated there. Christ drove those out of the temple who made it a den of thieves, let us give our Lord the money we owe him, lest in another sense our churches become dens of thieves who are robbing God. God loves the world: the world that despises, abuses and blasphemes his name. Shall we not revere and adore him in the churches we build in his honor?

In the Power of the Spirit.

Whenever the power of religion strikes down deeply into society, it is because the divine Christ is made to shine before the souls of men. Jesus is not only the first and the last; he is all that lies between the beginning and the end; he must be all in all to his church. Let us walk in his footsteps with reverence and godly fear.

Topics.

1. Are we commanded to reverence the house of God? Mark 11: 17; Lev. 19: 30.
2. What was David's wish? Psa. 27: 3-6.
3. Should we have respect for those in authority? 1 Sam. 9: 6; 1 Kings 1: 31.

**EMPLOYMENT BUREAU.**

ELD. P. R. KELTNER, of Sterling, Ill., says, "I trust you may receive all the encouragement in the Circle and Christian Workers' work that the cause demands. The proper care of our young people and the placing of necessary opportunities before them are of exceeding importance."

Sister Viola Cline, of Kansas City, Kans., is a missionary there. She says, "We find very little time for reading. There is always so much else to do. Good books are so helpful to me, I would like to read all our Circle books. The Lord has blessed us richly here and we give him all glory and honor. We commenced this mission last fall, and more than thirty have accepted Christ. May we ever be faithful, and do all we can to bring the light into the dark places of our ties."

Sister Dorothy Shafford, our secretary at North Manchester, Ind., is doing very good work. We have had a large enthusiastic Circle at this place for years, and many sick have been visited and the poor have been clothed by their efforts. Their meetings are interesting, they inspire many to work for Jesus and the bringing of souls to him is made a definite hope and prayer. Sister Shafford sends us fifteen new names for the Circle, and we trust North Manchester Circle will always be a working center. Her members will go out and influence others to think of their duty to God and lost souls.

"I have been chosen secretary of our Circle and am anxious to do my duty. What do you expect of me?"—*M. S.*

As you might suppose, this secretary has been fully discharging her duty. She has sent in about fourteen new names in the last few weeks, and reports interested readers, and good meetings. The secretary always sends in the new names to us, also has a gen-

eral oversight of the work in the way of knowing all that is done and giving suggestions to the various committees. Her special province is to correspond with us, and we give her all the help we possibly can. A well-organized Circle has a president, a secretary, a lookout committee, and a program committee. The program committee has the most important work of all to attend to, for they make out the programs and give each one his work. The lookout committee assists the program committee by finding material for those who are on the program, welcoming everybody at the meetings, and looking out for new members. The local secretary observes all these things and reports to us.

Be sure to attend our Circle meeting at our coming Annual Conference. Come and get acquainted and exchange views with other workers. You will hear some plans of work discussed that you can make practical in your own home Circle. You will hear some good inspiring talk on mission work, and our duty in regard to it. You will gain a new enthusiasm, a greater love for your own share of this work, and a new resolve to work on more faithfully. We shall tell you more about it later.

Sister Grace Hileman Miller, of Lordsburg, Cal., is an untiring worker in our Circle. Her letters are always encouraging. She says, "Some of our members are manifesting a creditable interest in the work of the Circle. We are glad that the good All-Father does not allow the most humble effort to pass by unheeded. In this, as in all Christian work, we must do our best and leave the rest in his hands."

Sister Elsie Brindle, of Chambersburg, Pa., says, "I have completed the course and am ready for a certificate. I enjoyed all of the books and expect to continue reading missionary literature."

Sister Light, of Nappanee, Ind., knows something about our course; read what she says: "Please send me a list of the new books. There is no Circle here and I am so hungry for some more books on missions; so we will get some, and read them and give them to others to read. This reading has done me so much good."

(May we suggest that you make a strong effort to induce your Sunday school to put these books in their library. Your children should read them.)

We are always sure of an active, working Circle at Mt. Morris, Ill. They are loyal, devoted workers, too. Their secretary, Uriah J. Fike, has just sent us thirteen new names, and we praise the Lord for the interest and enthusiasm manifested at this place.

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XXVI.

Hamburg, Germany.

Dear Mr. Maxwell:—

I tell you it is one thing to be amidst a lot of foreigners for a day or two, but it is quite a different thing to be with them all the time; and what makes it worse, is changing kinds every few days so that we do not understand their languages. Again, we have left the pleasant and industrious people of Holland and have come over into Germany.

We left Amsterdam early in the morning and rode the entire day on the fast train, showing that they have some magnificent distances as well as we at home. It also shows that Germany is a much larger state than many of the European countries. We evidently passed through the barren district of Holland, for it seemed that much of the land was utterly worthless. Sand hills, bogs, and peat marshes were the order of the day, with an occasional cattle pasture full of good cattle. At Bentheim we crossed the German line. This time I assure you the boys did not slip through the custom house as they did when we entered Belgium.

When we changed cars at Osnabruck Roscoe was wearing his traveling cap and left his hat in the coach and never knew the difference until after we were on the other train ready to start for Hamburg, when in came a guard and handed his hat to him. It was the most fun to see him put his hand up to his head to be real sure that he didn't have his hat on. When he was fully convinced that the man was doing him a kindness instead of playing him a joke, he gave him a mark, thanking him and the guard went back to his train.

Some time during the day we were compelled to move our watches up another hour, and while I am writing this, you have five minutes after two P. M., and we have 9:35 P. M.

Miss Gertrude has been delighted many times to-day with a great number of ox-teams which look so unique and interesting. Many women and girls are working in the fields. The Germans are more industrious than the Hollanders. To-day we saw the best railroad engines, the boys say, that we have seen since we left New York, and the Germans run a great deal better coaches on these fast lines than they have in France. They have a queer custom on this road. In their parlor cars they ask you fifty cents extra for your seat, and one of the guards, with his key, lifts a little steel tab in the back of the seat which reads "Besetzung" which means reserved seat, and this assures you of your seat the entire journey. The plan was a novel one to us but entirely satisfactory.

At Bremen we had the satisfaction of knowing that we were in one of the chief ports of Germany, and, in fact, of the world. We saw quite a number of Americans while we were in Bremen. But we did not find the chief port of Germany until we reached Hamburg. Here is the principal outlet for German commerce and travel. There is a better people here with a better language; they are industrious and busy.

We received another bunch of mail from America and indeed it was a great day for us. We fell in company with some Americans from New Jersey and Delaware and with their assistance we were enabled to employ a man with a carriage to show us the town. Hamburg is located on the Alster river which empties into the Elbe a little way below the city. Hamburg has 800,000 inhabitants; their commerce with the world is something wonderful. Germany is a great empire and trades with all parts of the world. We hired a small boat and took a ride around the harbor. The harbor was not only lined but was jammed and packed full of every description of vessel. There were gasoline boats and electric boats; there were yachts, brigs and trailers; there were tug barges and canoes; there were mailers, freighters and passenger vessels; rowboats, men-of-war and fishing smacks.

Almost every conceivable article of commerce was being unloaded at the docks. It certainly is a busy place. Men from every nation on the globe, looking after their interests. While we were running around the harbor we enjoyed a collision; our boatman steered our craft into a large ocean steamer, and of course we had to back out and try it over. While on our ride through the town this morning, we saw the homes of many millionaires whose fine front lawns were strewn with flowers. One of the queer things we noticed is the fact that they put their coal upstairs instead of down in the cellar. The cisterns also are many times found upstairs, which, I believe, is a novel idea.

A monument costing eighty million marks is being erected in honor of Emperor William, in front of the city hall here in Hamburg. One of the queerest things that we saw to-day was a death watch. I say queer because it is so different from our custom. We passed a nice house and saw a young man standing in the front yard, near the front gate, dressed in a long black, double-breasted Prince-albert coat, white necktie and a black plug hat. Upon inquiry of the guide as to what it meant he told us that some one had died in that home, and that this was the death watch set, and served the same purpose that black veils do on the front doors in the homeland. Although we were strangers in a strange land we could not help but feel sad for those who had lost friends that were dear to them.

Fraternally,

Marie

P. S.—I am sure you would laugh if you could see the boys when they go to the dinner table, and get hold of some of these German biscuits. Roscoe said that he believed he could kill a dog with one the first blow. Agnes wanted to bring one home as a relic, but she said she was afraid the mice might get at it, whereupon Oscar assured her there was no danger for it would be so hard the mice couldn't eat it. Miss Gertrude suggested that if it were lost at sea it would float ashore.

(To be continued.)

❖ ❖ ❖

And still they gazed, and still the wonder grew
That one small head could carry all he knew.—Goldsmith

The Q. & A. Department.

What does the Bible say about any one belonging to a secret order or a lodge of any kind?

Nothing. No more than it says that it is wrong to burn another man's house. However, sufficient evidence can be found in the tenor of the Scripture to show the earnest inquirer the position of the Bible on the question. The Bible tells us not to swear, and it is difficult to enter a lodge without taking an oath. Christ claims he did nothing in secret; it would be dangerous for Christians to do the same.

❖

From what church do the new Dunkards come, and what is their faith and practice?

They are a branch of the German Baptist Brethren or Dunkard church, before the time of the 1881 division, and their practice is much the same as the mother church, with the exception of the observance of the Lord's Supper and in the principle of non-conformity and matters of dress. They are incorporated under the name of The Church of God.

❖

Is there a movement on foot to bridge Behring Strait?

There has been serious talk by engineers of both countries of bridging Behring Strait, but it is not likely that it will be carried out providing the present project of tunneling it is carried into effect.

❖

Is there, in the laws of our country, any provision made for those who do not believe in going to war?

No, no general provision. However, one is allowed to hire a substitute or pay an exemption fee with which the government can hire some one.

❖

Is there any Larkin Soap Company in Canada?

The INGLENOOK does not know. They have an office at Buffalo, Philadelphia, New York and Peoria. You might write one of these offices and gain our information.

❖

Is India a province, kingdom or empire?

India is an empire, and the king of England is the emperor. Curzon is the Viceroy of India.

❖

What is a good remedy for removing dandruff?

A common remedy is a shampoo of listerine or underine.

❖

Where can one procure a wall map of India?

Any large concern like Rand, McNally of Chicago.

Upon what do fishworms subsist?

The name fishworm is merely a nickname, because these worms are used as a bait for fishing by anglers. The proper name is earthworm, which signifies their manner of life. The earthworm is practically a natural tube and bores his way through the earth, allowing the excavated dirt to pass through the alimentary canal, from which he draws sufficient nutriment to live.

❖

If Mrs. A and Mrs. B are first cousins, what relation are their children? And what relation is Mrs. A to Mrs. B's children?

If Mrs. A and Mrs. B are first blood cousins the children of these two women evidently are second cousins. The relation of Mrs. A and the children of Mrs. B in some localities is called first cousins and in some places second cousins.

❖

What causes dreaming and how long does a dream last?

Various causes are given for dreaming. Many dreams result from indigestion, some from intoxication and a great number from nervous exhaustion, and not a few from trouble. A dream may last from a few seconds to a few minutes.

❖

Are the corrections of the common translation of the New Testament, as given in the foot notes of the Tichenor New Testament, trustworthy or reliable?

They are generally considered to be the best. At least they are certainly as trustworthy as the translation itself.

❖

What is a good remedy to prevent chickens from eating their feathers?

Put a little slacked lime in the watering trough, throw plenty of ashes in the chicken yard and feed them all the egg shells that are at your command. Their food should have more calcareous ingredients.

❖

How are cut flowers sent through the mails?

They are either wrapped in cotton or sea moss, covered with sheet lead and wrapped in substantial press board cartons. Of course the cotton or moss should be dampened.

❖

How many foreign ministers has the United States, and where do they go?

The United States is represented by a foreign minister in almost every civilized country in the world, and some that are not.

MISCELLANEOUS

SCHOOL INCENTIVES.

Selected by J. K. Light.

Name the purpose of school training.
Name the test for proper conduct.
Is the motive low and selfish?
Is the motive high and noble?
Does it make for virtuous action?
Character becomes the chief test
And the purpose of school training.
Not a question of mere order;—
Which may be obtained by motives,—
Motives that are artificial,
Motives that bear no relation
To the end that is desired.
How shall we define a motive?
Something that impels to effort.
Proper end or aim for action.
Sometimes it is thing desired,
Sometimes the desire is motive;
Wish and thing thus bound together
Constitute a school incentive.

Now incentives are of two kinds,
Natural and artificial.
Promise of a fishing outfit,
As reward for faithful study,
Is an artificial motive.
It is not the natural object
That proceeds from faithful study.
A desire for higher knowledge;—
And the joy that crowns your efforts;—
These are natural incentives,—
Since there is a true relation
'Twixt the motive and the object.
Prizes form unworthy motives—
Are incentives artificial.
Tickets, badges, medals, honors,—
All included under prizes,—
Tend to rivalry and envy,
Many other unkind feelings.
Many evils come from prizes,
For comparisons are odious,
And involve injustice also.
Which ranks highest in the "grading"—
Knowledge, culture, skill or power?
Which is the superior knowledge,—
That disclosed by verbal memory,—
That where thought is leading factor?
Which are more important studies?
Art,—as writing, music, drawing,—
Information,—such as history?
Thus the basis is uncertain,
And the prize involves injustice.
Pupils led by lower motives
Form wrong habits and wrong ideals.
Visions of triumphant honors
Dull his feelings for his fellows
Meritorious though less brilliant.

Such a pupil, led by prizes
And by badges of distinction
And by honors and applauses,
Will desert a cause that's righteous
Just because it is declining,—
Will espouse a cause unrighteous
Just because it is applauded.
Yet he was prepared by teaching
For a traitor and a coward;
Sacrificing all that's noble,

Just because in his school training
He was urged by wrong incentives.
Should we, then, abolish prizes?
Yes, when only one can win them.
Prizes given when all may win them,—
All that reach a certain standard,—
Not involving competition,—
Not involving unkind feelings,—
May be given as praise for effort.
If the prize has not been promised,
But is token of approval,
It is not a wrong incentive.
Honor seats and privileges
Are incentives artificial.
Seats of honor and dishonor
Both involve a great injustice.
Nor is dullness a dishonor
Though it may be a misfortune.
Some have not the time for home work
And do not receive assistance.
They are dull but they are faithful;
Therefore, we should never seat them
In a place that means dishonor,
For they may be much more worthy
Than those in the seats of honor.
Privileges reach all pupils,
Do not foster competition,
Envy, rivalry are absent,
All may reach a given standard.

Now a concrete illustration:—
Once a holiday was granted,
Granted monthly to all pupils
That were neither late nor absent,
Those who had not failed in lessons,
Nor had whispered for two fortnights.
All received this special privilege,
All attained the highest standard,
Highest rank for application,
Highest mark for good deportment.
Highest rank for punctuality.
Principal was pleased with system
(Grammar school in a large city)
School ranked highest in the city—
Triumph in school regulations.
When these pupils were promoted
To the high school, some time later,
Where there were no such incentives.
They now proved themselves less worthy
Both in study and in conduct;
And it took a year or longer
For high motives to supplant their
Artificial stimulation.

Should exemption from school duties
Be permitted as incentive?
Should a pupil be excused from
Tests, reviews, examinations
When he has a high percentage
For his daily recitations?
This remission may be granted,
But should not be an incentive.
No school duty should be treated
As an evil, as repugnant;—
Nor should any be avoided
Nor regarded with disfavor:
That would surely put a discount

On the test or recitation.
May we ever use incentives
That are low or artificial?
Yes, as temporary expedients.
They are evil and only evil,
When they are made into a system.

Never use a low incentive
When a high is more effective.
Moral results of school incentives
Count for more than skill or knowledge
Life is full of natural motives,
Natural motives to right action.
School is full of opportunities
For a training in right living—
Living under proper motives.
Pupils must be freed from bondage.
From the bondage of low motives.
Pupils must form moral habits
With incentives that are natural.
Sense of right and sense of duty;
Desire for knowledge and for "standing"
These are termed incentives royal;
These are high and worthy motives,
Based on feelings altruistic.
A desire for high standing
May become the ruling passion,
May be worshiped like an idol,
May become a wrong incentive.
"Marks" are made the end of effort,—
Are confounded with true standing.
Actual work done, not its record,
Should afford the satisfaction.
Honest effort should be noted
As a factor of good standing.

Desire for knowledge and for power
Is the strongest of incentives.
Appetite of soul we term it,
Craves for food just as the body;—
Craves for knowledge not mere symbol
Constant spur to mental action
Is the appetite for knowledge.
Knowledge may be sought for money,
Reputation and position;—
But she grants her highest favor
To a wooing for her own sake.
Only those that seek her truly
Shall perceive her charm and beauty.

This requires skillful teaching
To instill a love for knowledge,
To abolish selfish motives,
And attain true moral value,—
Study for the sake of study.
Duty is the highest motive
Duty is an inspiration.
When we work from sense of duty
We have reached the highest motive.
Make this the controlling motive
In the conduct of your pupils,
Then your discipline is perfect.
Voice of conscience! Obligation!
Surely not a mere delusion
But the voice of God is conscience.
Character and conscience, therefore,
Is the aim of all school training.

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,

Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony of the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

SAMUEL S. THORPE,
Cadillac, Mich.,

DISTRICT AGENT

BRO. JOHN A. MILLER,
Brethren, Mich.,

RESIDENT AGENT

Michigan Land Association.

Seeds! Seeds!! Seeds!!!

We have on hand several hundred packages of garden seeds, each of which contains one and one-half times as many seeds as sell regularly for 5c.

In order to get rid of these seeds this year, before the spring is over, we have decided to sell them for 2½ cents per package, postpaid. Please order for yourself and your neighbors.

TEN VARIETIES.
All Seeds Warranted Sound.

A SPECIAL TRAIN TO THE ANNUAL MEETING Leaves Chicago, Friday, June 2, 1905

For the accommodation of our many friends among the Brethren, we wish to announce that for the Annual Meeting at Bristol, Tenn., to be held in June, the Wabash Railroad will run a special train of high-backed coaches and chair cars, through from Chicago to Bristol without change of cars, leaving Chicago, Dearborn Station at ten o'clock A. M. We invite all living in the city, or in the vicinity, to purchase tickets via the following route in order to take advantage of this special service: Wabash Railroad Chicago to Toledo; Ohio Central Lines Toledo to Columbus, and Norfolk and Western, Columbus to Bristol.

This special train will run through the rich farming lands of northern Indiana, picking up our friends who live in this district, arriving at North Liberty about 12:30 P. M.; Lakeville, 12:50 P. M.; Wakarusa, 1:15 P. M.; New Paris, 1:30 P. M.; Millersburg, 1:45 P. M.; Topeka, 2:00 P. M.; Wolcottville, 2:15 P. M.; arrive Toledo 6:00 P. M.; Columbus, 9:00 P. M., and arrive Bristol 2:00 P. M., Saturday, June 3. It is our desire that train reach the meeting grounds as early as possible on Saturday, to enable our patrons to get comfortably settled before dark. A special train will also be run from Bristol to Chicago at close of the meeting. Representatives of the different lines will accompany this train through to Bristol, thus insuring kind treatment and a comfortable journey, in a train occupied only by the Brethren and their families. A low fare has been named for this meeting as usual. Inform your local ticket agent that you wish to accompany this special train, and he will see that your tickets read as per above route. For further information write to,

R. S. Greenwood, M. P. A., Chicago, Ill.
J. Halderman, T. P. A., Chicago, Ill.
F. A. Palmer, A. G. P. A., Chicago, Ill.

Now is the time to renew your subscription for the **INGLENOOK**. If you have not already done so, hand your subscription to one of our regular appointed agents. If it is not convenient for you to do this send your subscription direct to us.

Victor Headache Specific

Cures all Sick and Nervous Headaches, Neuralgia, Brain-Fag, Sea and Train Sickness. Eleven cures to cents. Mailed on receipt of price.

Victor Remedies Co., Frederick, Md.

Safe and Convenient

If you want a good safe, conservative investment, write the Peoples State Bank, McPherson, Kans., about their "First Mortgage Bonds."

Ten interest Coupons with each bond. The interest is payable Semi-Annually. All you need do is to clip off the Coupon and send to them, and they will collect and remit to you "Free" of charge.

Have had eleven years experience in making First Mortgage Loans in McPherson County, Kans., and have never lost one dollar interest or Principal on any of these loans.

Customers are well pleased.

CURE YOUR NEARSIGHTEDNESS

Louisville, Stark County Ohio, Janu- ary 6, 1905. To whom it may concern About 4 years ago my son, Clarence now sixteen years old, began to complain of his eyes and had to be kept in a dark room part of the time. So we took him to an oculist, under whose care he was about one year, but could not be fitted with glasses, and as a consequence lost two terms of school. After spending \$175.00 we at last concluded to write to Dr. Miller, of Smithville, Ohio, who sent him glasses, which he has worn now about one month, and is going to school regularly and seems to be improving satisfactory, so far. Just why Dr. Miller could fit him without seeing him is more than I can tell, but the above are the facts in the case.—Manasses S. Miller.

Louisville, Ohio, April 5, 1905. Dr. Miller, Kind Friend:—Your treatment seems to have entirely cured my son of double vision and near sight while attending school during the winter, and can now go without his glasses. You are truly, M. S. Miller.

Treatment sent on trial. Write today for question sheet and particulars. Address:

DR. J. L. MILLER,

Wayne Co. SMITHVILLE, OHIO

A Word to Mothers

WHAT heart does not go out in sympathy and compassion for the little ones when they are sick and in distress? They are the treasures of our hearts, the sunshine of our homes. We guide their footsteps, we watch their welfare, and see them develop from tiny babyhood into stalwart men and lovely maidens. Blessed are, indeed, the parents who can raise healthy, hearty children.

Few children, however, escape certain diseases, such as measles, whooping cough, croup, scarlet fever, etc. Some are born sickly and weak. They look so frail that we are almost afraid to touch them, and their development is slow and tardy. The least little variation in atmosphere hurts them, even a change in the mother's diet seems to upset them, and they grow up pale and lanky boys and sickly girls.

If the blood of such children were examined, it would be found that certain constituents are lacking to give the blood that life and vigor which it needs, thereby retarding their development.

How often we hear mothers say, in speaking of their weak and puny children, "They will grow out of it." What a wrong idea! It is from children of this kind that we recruit the invalids of later years. Who can picture a sight more pitiful than that of a little child filled with sores, possibly a sufferer from scrofula, its poor little head covered with scabs, its eyes hardly able to bear the light of day, breathing labored and painful, limbs weak and small?

Parents, watch and check the early symptoms; see that nature is assisted in keeping the blood pure and vigorous, and your children will grow up strong and robust, the joy of your life, the comfort of your old age. Be careful in the selection of the remedy, and avoid strong medicines. Everybody knows that medicines which contain mineral ingredients, such as bisulphate, mercury, or calomel, ought not to enter the human system, and under no circumstances should they be administered to a child of tender years. DR. PETER'S BLOOD VITALIZER can, very appropriately, be termed "the mother's and baby's friend." It is prepared exclusively of vegetable ingredients, is pleasant to the taste, and contains abso-

lutely nothing but what will do good. It makes new, rich, red blood, assisting nature in building bone and muscle.

CURING THE LITTLE ONES.

Dayton, Ohio, Dec. 17.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—We have a daughter four years old, who had eruptions on her face, head and limbs. She was horrible to look at and caused us much worry. My friends advised me to consult a physician, but next to God I had placed my faith in your **Blood Vitalizer**. We commenced giving her of your medicines and after she had taken one bottle, the eruptions disappeared, the sores healed up nicely, so that you cannot see anything of it any more, except a slight redness of the skin, and this is also disappearing. Our little girl is now well and as lively and as happy as she can be. Everybody looks at this case with wonder. It has increased the demand for the **Blood Vitalizer** in this neighborhood greatly. With best regards, I remain

Yours very truly,

Joseph Krause.

221 Parrott St.

SAVED HER LITTLE GIRL.

Chester Valley, Pa.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—We desire to extend to you our heartfelt thanks for what your **Blood Vitalizer** has done. It is the best medicine we have ever had for our children. It saved our little girl. When she was about three years old, she became very sick. She seemed to have catarrh of the head and lost a good deal of flesh. We consulted doctors in this city, but she grew gradually worse. We simply paid out large sums of money to no avail. We are happy to state, that your **Blood Vitalizer** cured her. We always recommend your remedy to friends and acquaintances.

Yours respectfully,

Mrs. Anna Johnson.

What a relief to the mother's heart to see her little ones that have been drooping, revive and pick up in health and strength! DR. PETER'S BLOOD VITALIZER is peculiarly adapted for such cases. Its merits have been demonstrated in thousands upon thousands of cases. It ceased to be an experiment over a hundred years ago. Unlike other ready-prepared medicines, it cannot be obtained in drugstores, but is supplied direct to the people through special agents appointed in every community. Address,

DR. PETER FAHRNEY & SONS' CO.,

2=118 S. Hoyne Ave.

CHICAGO, ILL.

ART PICTURES

We have just received three new numbers of these "Fine Art Pictures" as follows:

- No. 125--MARRIAGE CERTIFICATE**
- No. 123--FAMILY RECORD**
- No. 121--MEMORIAL**

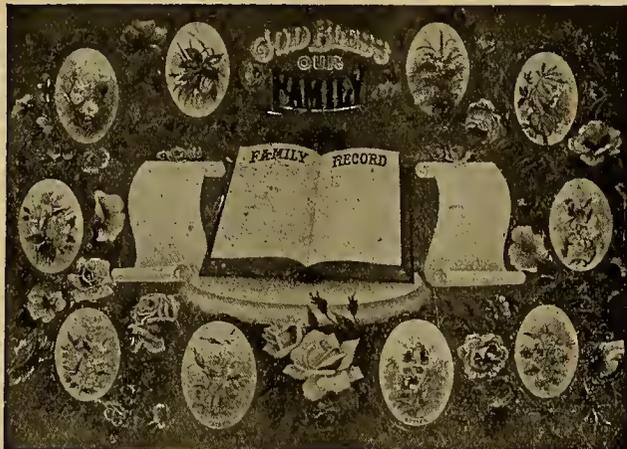

We have had a number of calls for the above numbers and are pleased to state that we are now prepared to furnish them.

The Memorial picture is printed on black paper which makes it very appropriate, while the other two are printed on gilded paper in many beautiful colors.

No. 125.—Marriage Certificate.

We have sold more than **5,000** of these Pictures in the last two months and are still receiving many orders each day. A great many order from 12 to 25 at a time, and a number of orders are received for 40 and 50. Our customers are so well pleased that it is no uncommon thing for the same person to send us two or three orders. Size of picture, 16 x 20 inches. **Former price, 25 cts.**

No. 123.—Family Record.

These numbers are all exceedingly fine. Send us an order and we are sure you will be delighted with them.

TWENTY SUBJECTS

Besides these we have 20 other subjects that are very popular.

OUR SPECIAL PRICE

For one or more and less than six, each,	15 cts.
For six or more, each, - - - - -	12½ cts.
One dozen or more, each, - - - - -	11 cts.

SEND FOR OUR ILLUSTRATED CIRCULAR OF 20 SUBJECTS

AGENTS WANTED No previous experience necessary. **Quick sellers. Good Commissions.** Our agents who are already at work are reporting excellent returns. **Write to-day for terms.**

BRETHREN PUBLISHING HOUSE, Elgin, Ill.

No. 121.—Memorial.

UPPER PENINSULA LAND CO., Ltd.,

F. J. MERRIAM, Gen. Mgr., 935 First
Nat'l Bank Bldg., Chicago, Ill.

The Upper Peninsula of Michigan is practically an known world to most people, and it is only within the st few years that it has been opened to settlement. It is ther out of the ordinary, and not at all what you would pect to find. It is now being opened to the Brethren. ount everything will grow there that thrives in other ces. And there are advantages. Water is excellent, el without end, and work is plenty if you would like to n something while the farm is coming on. Hay can be t out and cut over nobody knows how long. There e fields that have yielded good crops for 24 years.

It Is a Wonderful Dairy Country.

Seedsman get their peas grown there. Root crops 1 be grown there and dug the next Spring. You can nt potatoes in the Fall, and they come out all right in Spring. The ground does not freeze. The snow nes and keeps all vegetation in a sort of cold storage. does not get so "dretful" cold, about the same as in va.

And strawberries! They come the last in the Unit- States, and being last command first crop prices. There good-sized cities all around and good markets. There re been no drouths. There is no wilderness business out it. There are railroads, telephones, schools and all t sort of thing. And there will be a Dunkard preacher, who knows how, right there with his family and the rt of a church. One of these days he will tell you how found things. Why don't YOU go up and see the coun- ? Let me know and I will go up with you. There is a of descriptive literature about the country, and we will d it to you if you will tell us where you live. Address r letter to

HOWARD MILLER,
Elgin, Illinois.

Paints - Varnishes

Enamels, Stains, Leads, Oils and every- thing else in the paint line. Only the best material is used in making our paints. We guarantee entire satisfac- tion when our material is properly ap- plied.

Send for color card showing 72 differ- ent shades and quoting very low prices on a full line of material used by paint- ers.

A copy of our new catalog containing 872 pages which is just from the press will be sent free to any interested party free on application.

Inform us of your needs.

C. S. Morey Makes Remarkable Prediction in Regard to Beet Growing Here.

"Colorado as a beet sugar producing state will soon leave Michigan far in the rear, if the present developments continue."

This assertion was made this morning by C. S. Morey, head of the Morey-Boettcher syndicate. He has just returned from a trip to the East. While there he made arrangements for the transfer of one of the largest Michigan factories from Saginaw to Sterling, Colo. The new factory will have a capacity of 600 tons and will give employment to hundreds of men.

This will make the seventh beet sugar factory in the South Platte Valley owned by this syndicate.

**The Beautiful Grand
Prairie in . . .**

ARKANSAS

We offer to settlers some of the finest lands to be found to-day, at prices which cannot be duplicated. If you attend the Annual Meeting at Bristol, Tenn., come over and see this beautiful country. Several of the Brethren are here and we will take pleasure in showing you over the country and drive you to their homes. Write for our list of lands, with prices quoted, also rates for side trip from Bristol to this place.

We have a healthy location, splendid water, good land and good markets; you will be pleased if you come and see the lands. Homeseekers' rate of one fare plus \$2.00 for round trip, from most northern and eastern States on first and third Tuesday of each month. We refund your railroad fare if you buy land from us. Splendid opportunities for colony. Address:

**E. C. HOLT & CO.,
Lonoke, Arkansas.**

A SPECIAL TRAIN TO THE ANNUAL MEETING

Leaves Chicago Friday, June 2, 1905, via the

WABASH RAILROAD

For the accommodation of our many friends among the Brethren, we wish to announce that for the Annual Meeting at Bristol, Tenn., to be held in June, the Wabash Railroad will run a special train of high-backed coaches and chair cars, through from Chicago to Bristol without change of cars, leaving Chicago, Dearborn Station at ten o'clock A. M. We invite all living in the city, or in the vicinity, to purchase tickets via the following route in order to take advantage of this special service: Wabash Railroad Chicago to Toledo; Ohio Central Lines Toledo to Columbus, and Norfolk and Western, Columbus to Bristol.

This special train will run through the rich farming lands of northern Indiana, picking up our friends who live in this district, arriving at North Liberty about 12:30 P. M.; Lakeville, 12:50 P. M.; Wakarusa, 1:15 P. M.; New Paris, 1:30 P. M.; Millersburg, 1:45 P. M.; Topeka, 2:00 P. M.; Wolcottville, 2:15 P. M.; arrive Toledo 6:00 P. M.; Columbus, 9:00 P. M., and arrive Bristol 2:00 P. M., Saturday, June 3. It is our desire that train reach the meeting grounds as early as possible on Saturday, to enable our patrons to get comfortably settled before dark. A special train will also be run from Bristol to Chicago at close of the meeting. Representatives of the different lines will accompany this train through to Bristol, thus insuring kind treatment and a comfortable journey, in a train occupied only by the Brethren and their families. A low fare has been named for this meeting as usual. Inform your local ticket agent that you wish to accompany this special train, and he will see that your tickets read as per above route. For further information write to,

R. S. Greenwood, M. P. A., Chicago, Ill.
J. Halderman, T. P. A., Chicago, Ill.

Verified by Time

AFTER an intermission of ten years, a subject of absorbing interest is again revived. A father and son both write. On the 9th of February, 1895, a little over ten years ago, a letter was received from a Mr. Theodore Schubert, of Wald, Canton Zurich, Switzerland, which letter is given in full below. In this letter, Mr. Schubert calls attention to the remarkable cure of his son Paul, from a terrible skin affliction which covered his entire body and which had baffled the skill of many eminent physicians of Europe.

Now, ten years later, under date of Feb. 13, 1905 comes a letter from Mr. Paul Schubert, the son referred to in the father's letter, and gratefully acknowledges in person the cure effected by DR. PETER'S BLOOD VITALIZER. He is now a young man of twenty-eight years and states that there is no trace of the terrible ailment with which he suffered for so many years as a youth; that the last vestige of it disappeared entirely, and that next to God he owes the restoration of his health to DR. PETER'S BLOOD VITALIZER.

THE FATHER'S LETTER.

Wald, Canton Zurich, Switzerland, Feb. 9, 1895.

Dr. Peter Fahrney, Chicago, Ill.

Very Esteemed Sir:—My eldest son, Paul, eighteen years of age, had been suffering with Flechten (herpatic eruptions), extending all over his body, ever since his early childhood, and he was consequently, at times, especially during the winter, a very miserable and pitiable being.

We had been doctoring for him a great deal, regardless of expense; even professors who were specialists in the treatment of skin diseases, were consulted, but to no avail.

In the latter part of the year 1892, I was personally informed by Mr. Jacob Knecht, a farmer in Bodenacker, Gyrenbad, that he had a remedy which might cure my poor Paul.

Mr. Knecht, whom I knew to be a Christian and trustworthy, was able to win my confidence at once, and I commenced a trial.

Bottle after bottle of the Dr. Peter's Blood Vitalizer and Dr. Peter's Oleum was used. Months after months passed; no change in the condition of our dear Paul. Such a terrible breaking out of the disease took place, especially at the joints, that it was almost impossible for Paul to move himself.

I ordered him to bed for an indefinite length of time, in order that his body might have a uniform warmth which could but be favorable to the breaking out of the disease. At the same time I saw to it that nourishing food was taken, and that the daily airing of the room and thorough cleaning of the bedclothes were not omitted. The breaking out of the disease was increasing. Paul was hardly recognizable. His hair fell out and I was reproached by near relatives for sending Paul to the grave, as they said that, by ignoring all professional help, an accounting and severe punishment awaited me.

I, however, had confidence and persevered. The eruption began to form into scales which by and by fell off,

so that I could throw away a dustpanful thereof daily. Underneath the scales a reddened skin appeared which by and by began to look white, clean and fresh.

His confinement to the bed lasted about six weeks, and thirteen bottles of the Vitalizer and seven of the Oleum were used. Paul is now cured, with the exception of a single spot about the size of a hand on his abdomen.

Is not that a miracle? Soli Deo Gloria!

Mr. Knecht has no medicine on hand at present, and besides that, at the beginning of last month all at once he returned to America, and his wife sent me word that they are expecting a new supply from Dr. Peter Fahrney and that they had remitted for same some time ago.

I am awaiting its arrival, and requesting other sufferers, to whom I have recommended your medicine, to be patient. Four bottles have been ordered from me.

With the aid of God I try to make known your remedies on all occasions. I think they are in favor with God and mankind.

Respectfully and humbly,

Theodor Schubert.

THE SON'S LETTER.

Written Ten Years Later.

Wald, Canton Zurich, Switzerland, Feb. 13, 1905.

Dear Dr. Fahrney, Chicago, Ill.:—About ten years ago, I used your Dr. Peter's Blood Vitalizer and with the most remarkable of results as was testified to by my father, Theodor Schubert, in a letter which he sent you in February, 1895.

To-day I happened to meet Mr. Knecht, of Bodenacker, the man of whom we obtained your Blood Vitalizer at that time. When he learned who I was, he naturally inquired as to the state of my health and for that reason I thought I would write to you and tell you that I have seen no trace of that terrible ailment which I was afflicted with for so many years. I used no other medicine than your Blood Vitalizer after the doctors gave me up, so that, next to God, I have your Blood Vitalizer to thank for my complete restoration to health.

I shall and always do make known your remedy to the people at every opportunity as it is my earnest desire that other sufferers shall be made acquainted with its wonderful powers. With deepest esteem, I remain

Yours very truly,

Paul Schubert.

Who can read such letters and note the circumstances under which they were written without feeling the conviction that there must be something to it—something in this remedy above the ordinary! "I have seen no trace of the ailment since," says Mr. Schubert. No, the BLOOD VITALIZER not only cures, but eliminates every vestige of disease-germ poison from the system, so that there can be no recurrence of the disease.

DR. PETER'S BLOOD VITALIZER holds an unbroken record of success in the treatment of blood and constitutional diseases. It ceased to be an experiment over one hundred years ago. Unlike other medicines, it is not to be found in drugstores, but is supplied to the people direct through special agents appointed in every community. For further particulars in regard to this old herb-remedy address

A CALIFORNIA COLONY

OF BRETHREN

On the 21st of February, 1905, a party composed of S. W. Funk, of Glendora, J. Overholtzer, of Colton, Wm. Platt, of Charter Oak (Ministers), T. M. Calvert, M. P. Custer (deacons), M. N. Overholtzer, F. L. Hepner, E. O. Overholtzer, of Covina, Cal., L. S. Ober, of Laotta, Ind., together with a number of friends, including J. P. Funk, of Charter Oak, and C. R. Greider, of Los Angeles, left Southern California on a trip to investigate the land under the Sacramento Valley Land Company's Canal system of irrigation just completed.

Ten of the party were old Californians who have had considerable experience in irrigating, fruit growing and farming in Southern and some in Central California, and are acquainted with the resources, climatic conditions, etc., of this country.

The party spent several days thoroughly investigating the water rights, character of soil, climate, health conditions, etc., in Glenn and Colusa Counties, and were well convinced that the richness of the soil, unfailing and cheap water supply, reasonable prices of land, transportation facilities, cool, pure, soft water for drinking, pleasant and healthful climate, etc., would insure a safe investment and deserve recommendation to others for settlement.

The party selected the Packer ranch of 6,600 acres, as a location, and secured an option for 15 months on 2,000 acres of this Ranch at prices ranging from \$25 to \$100 per acre, including water right, according to distance, west from the River, character of soil and drainage. Out of the 2,000 acres the party bought almost 800 acres, selecting from the cheapest to the highest price.

This tract runs about three and one-half miles west from the new town site of the Brethren.

As soon as the 2,000 acres are sold the Company agrees to open the balance, 4,600 acres, of the Packer ranch for the Brethren and their Friends.

The new town site on this tract will be located $3\frac{1}{2}$ miles north of Princeton. The tract is in the Southern part of Glenn County, extending from the river west. It is about 80 miles north of Sacramento.

All the water that is needed for any kind of farming or fruit growing is furnished by the Company for \$1.00 per acre per year, and the Company keeps up the ditches. The water can be had almost any day in the year.

This is an opportunity that perhaps has never before been offered in California or in any other part of the United States. A number of those who have purchased

will soon move to their new location and others are purchasing, and in a short time this tract will all be settled by the Brethren and their friends, especially by those from the eastern States who desire to do general farming in California.

This is certainly an opportunity to eastern people, as they can reap the benefit of the many years of experience these old Californians have had in irrigating and farming in California.

Wm. Platt and J. Overholtzer, two ministers, expect to move soon to Princeton, Colusa County, California. (The latter went about the 27th of March.) They will gladly answer any inquiries and welcome those who come to investigate this country with a view of locating. Any of this party will also gladly answer inquiries regarding the new Colony.

A town site will soon be laid out and in the near future there will be a school, post office, stores and preaching services.

There is a trading vessel which comes up the River once a week and will take produce of all kinds in exchange for groceries and pay cash. With the advantages here and the conditions well adapted to general farming, there is no doubt but what one of the largest congregations of the Brethren in California will be located on this tract in the near future, and those desiring to take advantage of this opportunity should do so as soon as possible.

We have a climate that is no doubt equal to any valley of any consequence, for health and agreeableness. There is an occasional case of malaria in the lower and undrained lands of the county where water stands, but as the lands are becoming more thoroughly drained, this has almost entirely disappeared. For throat and lung trouble our climate is excellent. The weather is a little warmer than near the coast in Southern and Northern California, but not so warm as Riverside, Redlands, San Bernardino, etc.

The continual flowing water of the great Sacramento River directly from Mt. Shasta and the Mountains add greatly to the health of the country.

Any one desiring to see this tract will go to Colusa Junction, thence to Colusa on the Narrow Gauge, and, by notifying the Farmers and Merchants Bank of Colusa, they will be taken direct to the Tract in automobiles free of charge.

For catalogues or any further information address,

C. M. WOOSTER, President,
Sacramento Valley Land Company,

648 Market St., San Francisco, Cal.

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime. (Signed) E. L. Dotson.

VOL. VII.

MAY 9, 1905.

No. 19.

AN APPEAL TO US FROM NATURE.

BY H. A. GOSSARD.

The Buttercup and Clover may be hidden,
And shortest months seem longest when we frown;
But the flowers yield their beauty when they're bidden,
And then for loyal service, get a crown.

If we would have Him crown us by protection,
We must show our colors, loyal true and brave;
And then in need we'll never know rejection,
For we are more than flowers,—and "He'll save."

A law that tells us—"Soon we must awaken,"
Is the law that shields the flowers God has sent.
When life has gone,—and time their beauty taken,
He calls it back;—the God who only lent.

True, we're more than flowers, by creation:
We are Queens, and Priests, and Kings by grace divine;
Through holiness by Christ we are relation,
Continued to the grave—Oh, heaven mine!

Then how can we delay or shrink from duty,
When taught by nature and by His command?
Obedience has crowned the flowers' beauty,
While He to us pours blessings from His hand.

Let love then be without dissimulation,
For man, for God, and all that nature is:
To heaven be our prayer for a salvation—
Which came to earth by love, and made us His.

This token, be it mutually intended,
To bring our hearts to duty and to love;
And may our love with heaven's grace be blended,
Our lives be pure, and fitted for above.

Mt. Morris, Ill.

SEED-THOUGHTS FOR THE HEART'S GARDEN.

BY JOSEPHINE HANNA.

There is no policy like politeness.

❖

It is hard to try to forgive—'tis sweet to forgive.

❖

Regret follows not in the steps of regardful forethought.

The opportunity of the present is the only opportunity that is.

❖

There are heights in religion that freeze, but not in Christianity.

❖

Greatness of character is introduced by—not acquired of—the events which prove it.

❖

Some men, who are called Christians, appear to enjoy relating unchristian experiences.

❖

People who are always too poor to take a good newspaper never have any trouble in raising money to go to a circus.

❖

You may not have been born with a silver spoon in your mouth, but you were born with at least one talent in your head.

❖

A man never becomes greater than his conception of manhood. When an atheist says he has no soul, we can well believe it.

❖

"Why do you not make a display of your learning?" inquired a youth of Wisdom. "Because," she replied, "I am not proud of my ignorance."

❖

There are still a good many people trying to fit themselves to dwell with the angels in heaven who are yet unable to dwell in peace with their own families down here.

❖

If kindness is catching, so is the lack of it. Say unkind things to people around you, and it will not be long before everybody will be saying unkind things about you.

❖

Why is the success of the modern church measured by the dollars and cents taken in at its latest supper or fair, or by the large crowd that assembled to witness the church entertainment?

Flora, Ind.

INDUSTRIAL WORK IN INDIA.

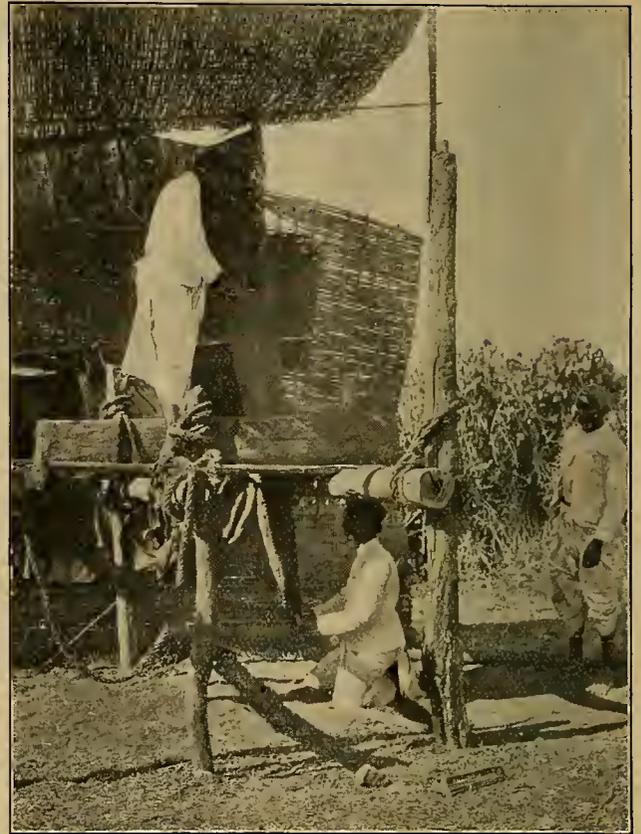

BY D. L. MILLER.

WORK of every description in India moves slowly. I have never seen a native who seemed to be in a hurry at his work. How to get the least done in the greatest length of time seems to be the rule among the native workmen. They have reduced the limitation of production to a fine art. The climate is not conducive to the hurry, rush and hustle of the homeland. If the hustler comes here one of three things is sure to happen to him. He will be in evidence a few years, making things move in his immediate circle, and then a little mound in the cemetery tells the end of the fight, or with broken nerves and an irritable temper he goes back to the old home a wiser if not a better man, or he will learn wisdom from wiser men, fall into the ways of the country, take things easy and never worry. Kipling writes:

"It is not good for the Christian man,
To worry the Aryan brown,
For the white man riles and the black man smiles
And it weareth the good man down.
And the end of the fight is a tombstone white,
With the name of the late deceased,
And an epitaph clear, 'A fool lieth here
Who tried to hustle the East.'"

THE CARPENTER SHOP AS IT NOW IS. MANAGER EMMERT IN THE REAR.—Photographed by W. R. Miller. All Rights Reserved.

THE SAWMILL AT THE BULSAR INDUSTRIAL WORKS. Photographed by W. R. Miller. All Rights Reserved.

But it is a weariness to the flesh and a stern trial to the patience to be compelled to wait, and wait, and wait and keep on waiting for results that under ordinary conditions would be had in a few hours at home. And yet one need not wonder at the conditions found in India. Here is a semicivilization antedating by many hundreds of years the Christian era. And strange to say, it gave birth to the virile, strenuous peoples of Europe and America, the hustlers of the world. It is likely when the Western movement began the active, energetic men went out leaving the older and more conservative element behind, and this may in part account for the present difference. Those who remained lived under climatic conditions, enervating, to say the least, and here they have dwelt for thousands of years until their customs, habits, modes of thought, actions and ways of doing things have become a fixed part of their lives. To change these and to introduce occidental methods is a slow process and requires a great store of patience.

The sutar, or carpenter shop, where Bro. Jesse Emmert, of Waynesboro, Pa., is the presiding genius, he having full charge of our industrial work at the mission station at Bulsar, is always a place full of interest to me. I go there, sit down and take a quiet rest, watching the natives at work. There is no rush or hurry, every movement is made with quiet delibera-

tion and with a slowness that will not excite the most susceptible nerves, and it gives one a quiet restful sense of ease to see them at work. The shop is entirely open at one side and end so that ample ventilation is had and one never provides against cold in this latitude. Heat and rain are the chief factors to contend with in building. Fortunately the heavy rain storms, monsoons, as they are called here, come from the southwest and one always faces his buildings in the opposite direction if at all possible. The new industrial building, now in course of construction, will be entirely open to the southeast.

At the west end of the carpenter shop is the sawmill. Four posts are set up and pieces of coarse bamboo matting protect the sawyers from the heat of the sun. How well I remember, when I was a lad in school at Rockdale, Maryland, crossing the near-by brook and finding a suitable place where I sat watching the old-time sawmill at work. How often I wondered at what seemed to me the mighty power of the small crank below, turned by the great water wheel, which forced the broad, glistening saw up and down as its steel teeth slowly but surely ate their way through the oak logs. The old sawmills are but a memory now, but the primitive sawmill of India is still a reality. Here the saw is likewise forced up and down, but the motive power, instead of being furnished by a water wheel, comes from two men. One stands on top of the log and the other kneels below and these men pull and draw the heavy saw up and

PLANING MILL.

Photographed by W. R. Miller. All Rights Reserved.

down as it laboriously and slowly cuts into the heavy log. And so all the lumber we use here is cut, or sawed. It is a slow process, and expensive too, for while the men get but a few cents a day for their hard work it takes so much time to saw out the lumber that in the end it is costly to have it sawed. The best teak lumber costs about seven cents per square foot in the rough.

And it is in the rough, for hand sawing does not give regularity of thickness to lumber produced in this way. In order to reduce the sawed stuff to a uniform thickness the carpenter must cut it down. He has no modern planing mill to do the work for him, but only give him time enough and he will accomplish the task in his own way. The master carpenter takes the board in hand and with a narrow-bitted plane cuts the edges to a true line. It is then turned over to the man with the adz. He has a flat block in front of him in which a hole has been bored and a strong wooden pin driven perpendicular to the block. The workman sets the board on edge leaning it against the pin, and holding it in place with his feet, as he sits in front of it, begins chopping away on the surface until he has reduced it to its proper thickness. A smoothing plane is then used to finish up the job and the board is ready for use. Sawed and dressed lumber is an expensive proposition in India and the common people use none of it in the construction of their buildings.

SMOOTHING A BOARD WITH AN ADZ.

Photographed by W. R. Miller. All Rights Reserved.

Planing, like nearly every other kind of carpenter work, is done in a sitting posture, for it is an inflex-

ible rule with the native workmen never to stand to do work that can be done by sitting down. The board to be planed is laid flat on the ground, and if long enough the workmen sit on it facing each other. The plane is pushed and pulled along the surface, the men moving until the work is done. It is a slow, time-consuming process and is in keeping with other methods, so that the harmony of getting the least possible amount of work done in a given time is unbroken.

(To be Continued.)

PEAT BOGS OF IRELAND.

WE hear a great deal about the peat bogs of Ireland, and it is not remarkable, for these bogs mean much to an Irishman, for here he gets all his fuel and sometimes his living, when he is hired out by others. Life on these bogs is very interesting, for men, women and children take part in cutting and gathering the peat, while a goodly portion of their time is spent here, for, next to tending the cattle and raising vegetables, the peat cutting is the most important part of an Irish tenant's work.

In spite of their rather hard, colorless lives, the Irish, both men and women, are a gay, happy lot, and they make merry over the hardest work. When the bogs are filled with peat workers the air rings with song and chatter and much laughter; in fact, Irish girls laugh almost constantly over their work and jibe at each other in friendly raillery. They work all day long on the bogs when cutting peat, and usually carry their dinners in pails or baskets and at noon sit down by the hedgerows or under a friendly haystack to eat their coarse bread, cheese, pork and jam, with milk to wash it down, for there is always plenty of milk and dairy food in Ireland, where every tenant has his cow.

Many a bright-cheeked Irish maid finds her future husband while working on the bogs, and from a joking acquaintance on the peat he gets to calling for her at night at "sprigging" parties, (sprigging being embroidering by needle on linen), where Irish girls meet at their several houses evenings and work together on delicate fine designs that later find their way into the great markets of the world.

This out-door life makes the Irish girl's complexion brilliantly beautiful, her cheeks glow with rich red blood and her eyes are bright and clear from health. It is such girls as these who come to America to become domestic servants, and in their indoor life they miss the splendid freedom of the bogs and moors where they so merrily stacked the peat or searched eagerly for the delicate trailing shamrock, by the hedgerows, in the spring. They soon lose their blooming cheeks and bright eyes after arriving here.

The peat is cut in the early autumn and spread out to dry. It is a rich, black-looking muck, but dries hard. It is made up of the fibrous roots and decayed leaves and burns with a slow, steady, smouldering heat, giving out a pungent odor which to some nostrils is delightful.

It is very cheap, in fact, in most cases, costing only the labor of gathering. Some families have bogs on their own farms, while many go to the great public bogs and cut what they want. The bricks of peat are evenly cut with a long, narrow, flat spade, well sharpened at the edge. The women spread the peat on the bog or moor and it is left to dry for weeks. Sometimes it is stacked after it has dried, and left till it is needed.

The carting is usually done by old men and the women folk. The carts used are odd affairs, with two big wheels, drawn by a horse, donkey or a small pony:

Very poor people carry their peat home in baskets strapped upon their backs and one may meet men and women thus loaded down at any time during the year.

When working on the bogs the women go barefoot, they wear short homespun gowns, and either wear a small shawl or a kerchief over the head, or go bareheaded in the soft Irish sunshine.

The Irish people have a fondness for their bogs, for the atmosphere is enchanting and the eternal greenery of everything inexpressibly sweet to the eye. It makes them wholesome and happy to thus be out in God's pure sunshine and the wandering breezes, and with health come good thoughts and a contented mind.

Almost invariably these simple people are devout and God fearing, they attend to the requirements of the church with true devotion and their life is far better than that of some of their country people who are crowded into city tenements. It is not to be wondered at that one so frequently hears Irish-born men and women sighing for their sweet-smelling bogs in sunny Ireland, for it is not by any means an undesirable thing to have been born on the bogs of Ireland. —*Elizabeth O'Brien, in Home Magazine.*

A BRAVE BOY.

I LIKE to read of heroes, I like to see men who have done heroic deeds, I feel strengthened by thinking of what they have done. It acts as a tonic to one's moral nature.

Not long since I saw a hero; I was a witness of his brave deed, and felt a warm glow at my heart a hundred times since at the thought of it. But the deed of bravery was one the papers said nothing about. They would not have considered it worth mentioning,

I suppose; but I do, and I am going to write it down to help others who may be tempted as this boy was. For my hero was only a boy; but there is the making of a strong man in him.

It happened in this way: I was walking down the street and stopped in front of a saloon to talk with a friend. As we stood there two boys came along.

"Come in and have something to drink," said one of them.

"Thank you," was the reply, "but I never drink."

"Oh, temperance, are you?" said the other, in a tone that had a suspicion of a sneer in it.

"Yes," answered the boy bravely; "I don't believe in drinking liquor."

"Well, you needn't drink liquor if you don't want to," said his companion. "Take some lemonade."

"Not in a saloon," was the other's reply.

"Why not?" asked his friend. "It won't make you drunk because they sell whiskey over the same bar, will it?"

"I don't suppose it would," was the reply. "But saloons are bad places, and I don't believe in patronizing them."

"What a moral young fellow you are!" said his friend, with contempt in his words. "Do you intend to preach when you get to be a man?"

"No, I don't expect to," was the reply. "But I intend to make a man of myself; and I never knew a fellow to amount to much who got into the habit of frequenting saloons."

"I haven't asked you to hang about saloons, have I?" demanded his friend angrily. "One would think from what you say that I asked you to get drunk."

"You didn't ask me to get drunk," was the reply, "but you have asked me to take the first step in that direction. If I drank now, I would probably drink again. How long would it be before I got the habit formed of drinking liquor?"

Some other young fellows had come up by this time, and the one who had invited his friend to drink turned to them and said:

"You've just come in time to hear a temperance lecture. Go on, Bob; maybe you can convert these chaps." They then laughed, but Bob did not get angry. He looked them bravely in the face and said:

"I suppose you think I am 'soft' because I won't drink. I know you think it foolish because I refuse to go into the saloon and have a glass of lemonade;" (to his friend) "but I don't, and I am not afraid to stand up for what I think is right. If you want to drink, you will do it, I suppose, in spite of anything I could say against it, but you can not coax or laugh me into doing it. I want to have my own respect, and I shouldn't have it if I drank, for I don't believe it is right to drink whiskey. You think, I suppose,

that I am a coward in not drinking, but I think I should prove myself a coward in doing it."

Wasn't I glad to hear the boy say that? I couldn't help going to him and telling him so.

"Thank you," said he, looking pleased at what I said; "I mean to be a man, and I shouldn't be if I got to drinking."

He was right. God bless the young hero. I wish there were thousands more like him.—*Selected.*

BORING SNAILS.

NATURALISTS have long been acquainted with those enterprising sea urchins which cut their way into hard rocks. Urchins provided with a boring apparatus have been found on the shores of France, England, Algeria, the Azores, the India islands, California, Panama, Australia, Mauritius, and recently on the island of Grand Manan, New Brunswick. It seems that they share their talent with some of the snails. The snails, of course, bore rocks out of water.

A block of compact, blackish gray limestone was recently sent from Constantine to the Academy of Sciences in Paris. The stone was riddled with hemispherical perforations. At the end of each of these small artificial passages slept a snail, *Helix aspersa*.

The specimen was put in the museum gallery of geology in October. The journey from Algeria had not disturbed its tenants, and they passed a quiet winter. One day in May while the stone was being sketched, they suddenly roused themselves, came out, and would have crawled away had they not been captured.

A scientist decided the question as to whether they secreted an acid which corroded the stone, or cut their way by means of hard, sharp structures in the feet, in this way: he killed a snail by holding it under water, took it from its shell, and put it into sulphuric acid. All the animal substance of the snail was rapidly carbonized and dissolved by the acid. This was washed away with water, and a hard, insoluble substance was left.

The hard, irregular grains were evidently flint. There was of course no indication as to where in the body of the snail they had been, but it is reasonable to suppose that they composed the structure by which he had bored holes in the limestone.—*Selected.*

SHORTHAND IN ANCIENT TIMES.

AN excavation at Herculaneum revealed a bond—dated A. D. 100—apprenticing a slave for two years to the "semiograph," to be taught to read and write shorthand, or "the signs that your son Dionysios knows," the teacher receiving in all 120 drachmas—about \$23.

BIBLE AND SUNDAY SCHOOL INSTITUTE.

To be held at Bristol, Tenn., May 28 to June 3.

At the request of the Committee of Arrangements a Bible and Sunday-school Institute will be held at Bristol, Tenn., the week preceding the Annual Meeting. Following is given an abridged outline of the work to be given:

Holy Spirit.

I. The Holy Spirit's Power as Manifest in: (1) The Old Dispensation. (2) The Christ Life. (3) Conversion. (4) Development of Christian Character. (5) Christian Service. (6) Unifying the Church.

II. The Personality and Divinity of the Holy Spirit.

Interpretation of the Sermon on the Mount.—Matt. 5-7.

1. Beatitudes.—Character in Religion. 5:1-12.
2. The Christian's Obligation to the World. 5:13-16.
3. Christ's Attitude to the Law.—The Negative and Positive Life. 5:17-20.
4. The Christian in Social Life. 5:21-48.
5. The Christian's Motive in Religion. 6:1-18.
6. The Christian's Attitude toward the Temporal Things in Life. 6:19-34.
7. An Exhortation to a Careful Discernment of the Truth. 7:1-29.

The Sunday School.

I. Its Place. (1) In History. (2) In its Relations. (a) To the Church. (b) To the Home. (c) To the State. (3) In Its Purposes.

II. Its Organization. (1) Its Direction. (2) Its Departments. (a) Missionary. (b) Financial. (c) Musical. (d) Instruction. (e) Supervision. (3) Divisions or Grades.

III. Its Officers. (1) Usher. (2) Librarian. (3) Treasurer. (4) Secretary. (5) Chorister. (6) The Pastor. (7) The Superintendent.

IV. Its Teachers. (1) Their Work. (2) Their Preparation. (3) Their Helpers. (4) Their Duties. (a) As under pastors. (b) As trainers. (c) As teachers.

V. The Lesson Study. (1) The Study Plan. (2) The Teaching Plan.

VI. The Recitation. (1) The Test, (a) of attention. (b) of preparation. (2) The Teaching. (3) The Appreciation.

VII. The Teachers' Meeting. (1) Its Purposes. (2) Its Methods. (3) Its Leadership. (4) Its Program.

VIII. Good Training Better Than Good Teaching.

IX. "Knack" in Teaching Boys. (1) The Boy in the Lesson. (2) Teaching Plans. (a) The "entering-wedge" plan. (b) The "one-point" plan. (c) The "topic-card" plan. (d) The "think-and-search-questions" plan.

X. The Great Teacher. (1) His Example. (2) His Characteristics. (3) His Methods.

Walks in Bible Lands.

Rome, Naples and Vesuvius.—Martyr Scenes of Early Christianity. Corinth, Ephesus and Athens.—Paul the Greatest Missionary. Tarsus, Baalbeck, and Damascus.—Early Life of Paul. Egypt.—(1) The Land of Monuments. (2) The Home of the Oppressed. Hebron, Bethlehem, Nazareth and Jerusalem.—Birth and Life of Jesus. Standing on the Mountain-tops of Palestine.—Great Events of Bible History. The Sea of Galilee.—The Life Work of Jesus.

Sermon Subjects.

(1) Atonement and Redemption. (2) "Ye Must Be Born Again." (3) The Kingdom of God. (4) The Development of Christian Faith. (5) Man's True Perspective.

Ministers, church and Sunday-school workers are cordially invited to attend. Bring your Bibles.

J. G. Royer, E. B. Hoff, Instructors; Geo. B. Holsinger, Musical Director.

Note.—This old teacher is studying the "Boy" in the Sunday school, and how to handle him. And since he has made a special study, those who attend will find him especially interesting as an instructor and a lover of the boys.—Ed.

A SQUIRREL STORY.

BY ALICE VANIMAN.

ONE time, during my childhood, I lived with my parents near a wood, in Ray county, Missouri. One day my father brought to the house a couple young squirrels which he had found in the wood. They were so very young that my mother was afraid to undertake to raise them. At that time we had a very gentle old cat which had three baby kittens. Some one of the family proposed that we give the squirrels to Tabbie, she could do no more than make a good feast out of them. So my brother and I carried the squirrels to an outhouse and presented them to the old mother cat as she lay snugly tucked in her nest, giving her babies their dinner. Tabbie at once welcomed the new addition to her family, and began immediately to see that they were made comfortable.

She raised the squirrels and seemed to give them more care and attention than she did her own children. She seemed to realize that they were orphans and needed a mother's care. While the little family of five were taking their dinner the old cat always seemed to prefer to have the squirrels nearest her head where she could smooth down their grey hair at her leisure.

When kittens and squirrels were large enough they played together in the most pleasing manner. Many evenings during that summer we sat on the porch enjoying the entertainments given by cats and squirrels. The squirrels would run all over mother cat and kittens, pull their tails, then be up in the tree almost before kitty could turn around. The kittens would watch the squirrels run up the tree, then they would take courage and undertake the wonderful feat. But the little clumsy fellows would soon find themselves lying flat on the hard ground with aching sides.

I have many times seen mother cat carry birds and mice to the squirrels and in cat language beg them to partake. But Bonnie and Billy preferred bread and nuts. They were at home in the house as well as in the tree tops. My mother kept her bread in a large tin boiler. The squirrels soon learned to know this. Many times we have watched them climb up on the boiler, clatter around, seemingly trying to find some

way to get the lid off. When we would give them bread they would go away satisfied, only to return again when they were hungry.

One of them strayed off to the wood one time and never returned. The other one came home often, came in the house, played with the cats, but finally he also disappeared and never returned. We were sorry to lose them, for they had been very interesting companions for a few months, and had given us many hours of pleasant entertainment with their pranks and cute actions.

Malmö, Sweden.

THE JEWISH ATTITUDE TOWARD JESUS.

RABBI ENELOW, of Louisville, Ky., addressing one of the largest and most influential Jewish congregations in this country, recently urged upon his coreligionists the celebration of Christmas, as commemorating the birth of the teacher Jesus, who "inculcated the noblest and holiest tenets of all true religion." This question of the attitude of the modern Jew toward Jesus is one of considerable interest. In the *New York Sun* Dr. Isidor Singer, editor of the "Jewish Encyclopedia," compiles a brief symposium on the subject, in which he quotes from "some of the most eminent contemporary Jewish theologians, historians, and orientalists." He quotes Dr. N. Porges, a conservative rabbi of Leipsic, Germany, as follows:

"Even the most conscientious Jew may without hesitation recognize that, in view of the immense effect and success of his life, Jesus has become a figure of the highest order in the history of religion, and that the noble man, the pure character, the mild heart-winning personality come forth unmistakably even from the mythical cover which surrounds his person. The fact that Jesus was a Jew should, I think, in our eyes rather help than hinder the acknowledgment of his high significance, and it is completely incomprehensible to me how a Jew should think and speak about Jesus otherwise than with the highest respect, although we as Jews repudiate the belief in his Messianic character and his divine humanity with the utmost energy from innate conviction."

Dr. Singer goes on to quote from several "representative American Jews." First, from the late Dr. Gustav Gottheil:

"If he has added to their [the Jewish prophets] spiritual bequests new jewels of religious truth, and spoken words which are words of life because they touch the deepest springs of the human heart, why should we Jews not glory in him? The crown of thorns on his head makes him only the more our brother, for to this day it is borne by his people. Were he alive to-day who, think you, would be nearer his heart—the persecuted or the persecutors?"

From Dr. Morris Jastrow, Professor of Semitic Languages in the University of Pennsylvania, we have the following:

"It is commonly said that the Jews rejected Jesus. They did so in the sense in which they rejected the teachings of their earlier prophets, but the question may be pertinently asked, Has Christianity accepted Jesus? The long hoped-for reconciliation between Judaism and Christianity will come when once the teachings of Jesus shall have become the axioms of human conduct."

From the pen of Mr. Simon Wolf, President of the Independent Order B'nai B'rith, we read:

"I look upon him as a great teacher and reformer, one who aimed at the uplifting of suffering humanity, whose every motive was kindness, mercy, charity, and justice, and if his wise teaching and example have not always been followed the blame should not be his, but rather those who have claimed to be his followers."

Dr. Singer concludes:

"In spite of the narrow vestry and petticoat orthodoxy which a handful of Anglo-Oriental pseudo-romanticists are anxious to implant just now in the American soil, liberal American Judaism, led by advanced theologians of the type of Dr. K. Kohler in Cincinnati and Dr. E. G. Hirsch in Chicago, will continue tearing down the walls of separation between the children of the same Father. Woe to the ill-advised Jewish philanthropists who are throwing the weight of their gold bars into the balance of religio-national reaction! The poor masses, alas! will have to harvest the bitter fruits of their Pyrrhian triumph."

COLORADO CLIFF DWELLINGS.

THE most remarkable ruins in America are the Colorado cliff dwellings. These queer old constructions of a now extinct race are hereafter to be protected from wanton destruction by tourists and professional curio hunters. They are safe so far as the Ute Indians are concerned, who stand in superstitious awe of them, believing them inhabited by the spirits of the dead. The two principal and most easily accessible of the ruins are the so-called "Spruce Tree House" and the "Balcony House." They are in the Southern Ute Reservation. The "Spruce Tree House" or village is so called from a large red fallen spruce by means of which the ruin is reached. It is composed of a number of connecting square houses, and it is supposed to have contained about 130 separate rooms. The builders evidently understood the use of the right angle, the plumb line and circle, for the walls are true, the corners correct, and the ground plan of the towers and "estufas" perfect circles.

WORDS—THEIR USE AND ABUSE.

BY MARTHA B. LAHMAN.

To have a good understanding of and a ready use of words should be the aim of students, especially those who intend to make teaching, public speaking or writing their vocation.

The pupil's teacher is his ideal; to him he looks for authority. It is not a despicable thing to be found often studying the dictionary. It has been said there are many pretty stories in the dictionary. It is interesting to note how words often change their meaning. For instance, the word *bureau* once meant tablecloth. And *stamina* is the plural of *stamen*. It is also strange that such poor adjectives as *spunky*, *poorly* and many others found their way into the dictionary.

One of the common errors of the day is that of using the double negative. These mistakes are not always made through ignorance, but often through carelessness. Thus, we know it is proper to say it is he, or it is she; but we give usage the preference, and say it is him and her.

The following is a list of words that are frequently mispronounced by even fairly educated people: *Perspiration*, *genuine*, *cemetery*, *drowned*, *hollow*, *attacked*, *specialty*, *casualty*, *illustrate*, *mischievous*, *appendicitis*, *recess*, *bomb*, *decade*.

Sometimes in formal prayer we make use of repetitions, such as the phrases: "Lead, guide and direct us," "Aid and assist us," and "Around and about us."

It is not always advisable to use a big word when a little one will express the thought just as well, but it is good taste to use smooth words (words that do not grate), whether they be large or small. And it is well enough to be posted or we might come off like the old doctor who declared he never had a case of convalescence.

If the education has been limited, much can be learned outside of schoolhouses and text-books. The close reader will observe the literary style as well as the thought conveyed; but no embellishment of literary attainment can atone for lack of thought in discourse or written production. Henry Ward Beecher said he never read for style, but was a slow reader. Too many read simply to get the thread of the story or argument, regardless of the diction.

As we grow older and our field for usefulness widens, we look back and think of the moments we might have spent storing our intellects and ennobling our lives. It is not always the fault of a poor memory that we do not remember what we read or what the preacher says, but it is sometimes due to a poorly trained memory. It is human nature to forget the

things we should remember and to remember what we should forget. It is easy enough to remember what occurs at the party, or what our next door neighbor tells us over the picket fence. Given a good pair of eyes and a willing mind, we need not despair of a reasonable education.

Holmes struck the proper chord when he sang these lines:

"Build thee more stately mansions, O my soul,
As the swift seasons roll!
Leave thy low-vaulted past!
Let each new temple, nobler than the last,
Shut thee from heaven with a dome more vast,
Till thou at length art free,
Leaving thine outgrown shell by life's unresting sea!"

May their cadence continue to swell until they reach the human heart in every land, civilized or uncivilized.

Franklin Grove, Ill.

MORAL COURAGE.

FEW people enjoy being suspected of cowardice. In fact, there is nothing which the average boy is so quick to resent as the slightest intimation that he is afraid of any person or any peril under the sun. He shows his sense of such an affront by the rising color, flashing eye and contemptuous speech, which declare that to be thought a coward is intolerable. And, in these days, whatever may formerly have been the case, girls are ashamed of showing physical fear. It is not now considered a mark of feminine grace to scream or faint at the sight of a poor, little, frightened mouse, and the girl who runs, terror-stricken, from a peacefully grazing cow, is the subject of ridicule.

The question for you, my reader, and for myself and other older people as well, is, "Have we moral courage?" This is of a higher quality than the other, and often demands a greater resolution, a firmer will, a truer bravery. The young man who goes to a doubtful entertainment, a place where not for the world would he take his own sister, temporizing with conscience because he is only doing what "the fellows" generally do, knowing the while that he has not grit enough to say no when he ought to, is a moral coward. The young man, himself perhaps a church member, who hears the name of Jesus lightly spoken or reviled, and keeps silence, ashamed of his colors and his Captain, is a moral coward, and, oh, what a marvel of ingratitude into the bargain! The host, more than we can count, of young men and women whose conviction is that they ought to follow the Master and boldly range themselves on his side, confessing his name, but who for one weak reason or another delay to take the step which would show to all beholders on which side they stand, are every one of them moral cowards. Could their cowardice be overcome, what a grand rally we should have of those who would

enter the King's army, carrying forward his conquests into the enemy's land!

It is a thing inexplicable on any basis which I can reconcile with common sense, but numbers of young people, brave everywhere else, break down ignominiously if the proposition be one of expense. "I cannot afford it," would seem to be a simple statement, which might be made without stumbling or hesitation, yet multitudes resort to any subterfuge, evasion, or distortion, rather than free themselves from a difficulty, by this easy acknowledgment. Our American desire always to put the best foot forward, our unhappiness if our boots are patched, our hat a little behind the season, our coat or gown a trifle worn, moves people of older countries to amazement. Over the water, a gentleman or a gentlewoman is not dependent for social recognition on the style of his garments, and so goes comfortably along in whatever suits himself; but, unfortunately, a few of us have the self-respecting courage to be contented in a shabby suit of clothes. Now, would it not be better to cultivate that spirit of independence which, in all honesty, should never hesitate to say, "I cannot afford this or that," setting one's self free at once from a network of annoying entanglements? Whatever the thing be that one cannot afford, peace of mind will be insured by bravely stating the fact; and usually the person who has once gained the victory in this battle, will find himself morally some inches taller, and feel an instant reinforcement of spiritual strength.

One should exercise moral courage in behalf of absent friends. The French have a proverb, "The absent are always in the wrong," meaning, of course, that they are powerless to defend themselves if their motives are aspersed, or their characters defamed. I have a horror of the person who can sit still, holding his or her peace, when the reputation of a friend is assailed. Silence is not golden in such circumstances, but, on the contrary, is of the basest alloy. Do not suffer in yourself moral cowardice, when a brave word will show that you, at least, are a true friend.—*Margaret E. Sangster.*

OLD BANK NOTES.

How Uncle Sam Disposes of His Worn-Out Bills.

EVERY one likes, not only money, but fresh money; in fact, a fresh, clean, crisp note always gives an additional thrill of pleasure. Besides that, torn, spoiled money, which has passed through thousands of hands, which has been thumbed by persons afflicted with contagious diseases, and well-fingered by the "great unwashed," is a constant menace to public health. As the notes run out Uncle Sam has them redeemed at his Treasury and after they are all counted and packed

into bundles of so many thousands each they are sent down to the "macerater," in the cellar.

The macerater is a huge, oven-like affair, capable of holding about a ton of paper. It opens only at the top by means of a trap door. This door is fitted with three locks, and a key of each is given to a different officer in the Treasury. This necessitates the presence of all three officers at the macerating of the money, and also at the opening of the oven, as it is impossible to open the door without all three keys.

In the macerater the money is chewed and steamed into a grayish-green pulp. This is afterward placed in large stone vats. From here it is sold to men who mold it into small busts of public men, paper weights, and miniature animals. One figure of the Washington monument recently made, which is only about a foot and a half high, is said to contain at least \$3,000,000 worth of Uncle Sam's bank notes.—*Philadelphia Times.*

WHALING REVIVING.

IN July, 1904, a sperm whale was killed off the east coast of Newfoundland, and from the cavity back of the gigantic skull nearly \$400 worth of spermaceti was dipped. This, so far as the records show, is the fourth sperm whale ever caught in northern waters. Within the last four years whaling has sprung to a foremost place among the industries of Newfoundland. For unforeseen and inexplicable reasons these monster mammals of the deep have resumed their visits to the North Atlantic, and dozens of "whale factories" have been built and are now in profitable activity along the coast of the island. Every part of the whale is now utilized. Oil, bones, skin, entrails and flesh have places in the marketable products of the mighty creatures. Bologna sausages made from the flesh of the whale are one of the most profitable products and find ready sale in the West Indies and in the markets of Central and South Africa.

MAGNETIC POLES.

THE compass variation in many parts of the North Pacific is imperfect, while there is a slow but constant secular change going on in the position of the earth's magnetic poles, or foci. Two of these poles, toward which the magnetic needle is attracted, exist in the Northern Hemisphere. One of them was actually reached by Sir James Ross in 1831, in the vicinity of Hudson Bay (70 degrees, 5 minutes north, 96 degrees, 43 minutes west). The other is theoretically located in Siberia, about 70 degrees north, 115 degrees east. But the position of the Siberian focus—which controls compass variations in the Western Pacific—is yet to be accurately determined.

PEANUTS.

Two varieties of peanuts are grown in the South, the red and the white. The red is an upright grower, and produces a small nut with the epidermis or interior coating dark red in color. The white grows with spreading branches, which lie flat on the ground, bearing pods almost throughout the entire length of the vine if the soil be sufficiently mellow to permit the bearing spikelet to penetrate the ground. The pods are larger than those of the red variety, and both nut and epidermis whiter. These command a better price than the red ones, because they present altogether a better appearance.

There must be for the full perfection of the crop of the white varieties at least five months without frost. The Spanish varieties will mature in less time. The best peanuts, however, are planted early, and therefore an early spring is desirable, with no beating rains, especially if the land is strongly argillaceous, for when the ground is baked the delicate plumule or stem cannot penetrate the hard crust. A bad stand then results, which is scarcely to be remedied by replanting.

The best soil for the peanut is a light colored clayey soil, filled with finely comminuted, cherty, angular gravel, which makes the ground loose and prevents it from baking. The ground should be well drained, and light in color, for it is a singular fact that there is a correlation between the color of the soil and the color of the nut, black or deep red soils making a dark colored nut, and light or whitish soils a light colored nut. The darker soils may, and most frequently do, make a larger yield per acre, but the nuts are not so marketable, and are classed in a lower grade.

Land with much humus is not suited to the growth of peanuts. The soil should be strong, but with a small amount of vegetable matter in its composition. Peanuts, therefore, do not yield well after clover, nor in freshly cleared lands. In such conditions the amount of vine is excessive, but the quantity of good peanuts is very small. The best results are obtained by planting the crop after corn or tobacco or potatoes or after any other crop that requires clean cultivation.

The land for peanuts is usually prepared in the latitude of Tennessee during the latter part of April, after the danger of frost is passed. It should be well broken and finely pulverized with a harrow. For white peanuts, or the spreading variety, the land is checked off in rows two and one-half to three feet apart, and two kernels, after being carefully hulled by hand, are dropped at the points of intersection of the furrows like corn, and covered with a hoe to the depth of one and one-half to two inches. In shelling the nuts care must be taken not to break the delicate

covering that surrounds the kernels, for this would impair or totally destroy their vitality. If the land after planting should become compacted by a hard rain, a light harrow should be run over it when the ground is dry enough to plow, in order to break the obstructing crust, so that the very delicate shoot can make its way to the surface. Red peanuts are planted in ridges like cotton. The rows are run off three feet apart, and four furrows thrown on these. The ridges thus made are opened on top, and the seed dropped at intervals of eight to twelve inches apart, and covered two inches deep by a board like that employed for covering cotton seed, or it would be better to procure a one-horse corn planter, adjust so as to open the ridges to the proper depth, and to drop the kernels at the required intervals, and at the same time cover them. About two and one-half bushels in the hull are required to plant an acre. The brown millipede, the cutworm, and the mole are all great enemies of the peanut when just planted. Replanting should begin if the plant should not appear above the ground in ten days.

Many peanut growers object to the use of any manure whatever, but in this they undoubtedly make a mistake. The application of a large amount of stable manure would prove detrimental, but in small quantities it is highly beneficial.

The best fertilizer for the peanut is an ammoniated superphosphate of lime, with some potash. An application of lime in its caustic state on other than limestone soils, during the fall previous to planting, would be beneficial. The peanut must have lime, but not too much of it. The heavy limestone soils will produce a great quantity of vine, and also a great quantity of "pops." No top dressing of lime of any kind should be made. The superphosphate and the nitrogenous manures may be strewn in the furrows at the rate of three hundred pounds to the acre. Leached ashes or kainit will supply potash, and a greater amount than one hundred fifty pounds to the acre is not necessary. Cottonseed meal and barnyard manure in limited quantities are excellent fertilizers for this crop. Being a leguminous plant, the peanut has the power of extracting nitrogen from the atmosphere.

If the land has been well prepared before the peanuts are planted, the after cultivation is very simple and inexpensive. The weeds should be kept down by using a narrow harrow or a double cultivator. Many growers use a one-horse turning plow and bar off the soil from the peanuts when they first come up. Afterwards in the cultivation of the white peanut this middle ridge is leveled down with a harrow or double shovel. For the red or upright growers the dirt at the second plowing is usually thrown back to them, if they have attained a height great enough

not to be covered up by the process. The peanut will thrive with the same cultivation that is given to corn. Any cultivation is good that will destroy the weeds and keep the land in good tilth, but it must not be extended beyond the period when the peanuts begin to form, and especially must this caution be observed in the case of the trailing or white peanuts. Level cultivation is far better for the white peanut and equally as good for the red.

Many years ago it was thought that a necessary requirement in the cultivation of the white peanut was to cover the bloom. This practice has been long discontinued, for it not only does no good, but it does much injury and decreases the yield of the crop. The spikelets form above the ground after the fall of the flowers, but the ground should be soft enough to permit the sharp, thorn-like points to penetrate the surface. When once beneath the surface the ovary at the end of the spikelet begins to enlarge and ripens into a pale, yellowish, wrinkled pod, slightly curved, sometimes contracted in the middle and containing generally two, sometimes three, and rarely, four kernels. A dry spring is always desirable for planting and cultivating, but when the spikelets begin to push down into the ground frequent showers are indispensable to a large yield.

The harvesting must always take place before frost, for the nuts and hulls are both greatly injured, if not ruined, by frost. If the fall should be wet or the peanuts mature very early, many of the first-formed nuts will be ruined by sprouting. Dry weather should always be selected for harvesting. It cannot be done when the ground is wet, for then the dirt will adhere to the nuts and ruin them or at least greatly detract from their market value by turning them black.

The crop of white peanuts is harvested by running a furrow on each side of the row with a bull-tongue plow or a pea-digger, so as to dislocate the roots. Care must be taken not to detach the nuts from the vine in running the side furrow. After the plow has been run on each side of the row (and it is sometimes necessary to run twice on a side), then lift the vines gently with the hand, carefully shaking off the dirt, and lay them on the ground. Let them remain in this way, if the sun is shining, from six to eight hours. The vines will wilt like clover, when they may be brought together and stacked. The stacks are made around a pole planted in the ground and rising some eight feet above the surface. A platform made of old rails rests upon logs placed around the pole, and upon this the stack is built. The platform protects the nuts and vines from the mold and dampness of the ground. In stacking, the nuts should be put on the inside next to the stack-pole, but not so close as to prevent the air from circulating freely from the bottom to the top of the stack. To make the

stack entirely secure it should have a capping of hay or corn fodder. Put up in this manner the nuts will keep securely all the winter, should it be desired.

The red nuts are more easily harvested than the white, as they have but few roots and the nuts adhere closely about the stem. In loose land they may be pulled up without running a furrow on each side of the row, though to do this will make the work much easier.

Usually the nuts are allowed to stand in the stacks about four weeks and are then picked off by hand, the white always. The red nuts are sometimes threshed off by taking up bundles and beating them against a rail or the side of a box. This latter plan greatly injures the peanuts. Five or six bushels of red peanuts can be picked off the vines in a day by a nimble-fingered person, but the picking of three to four bushels of the white is considered a good day's work. Women and children are said to be much more expert in this work than men. The price paid for picking is about ten cents a bushel.

The weight of a bushel of peanuts in Tennessee is twenty-three pounds; in Georgia twenty-eight, in North Carolina and Virginia twenty-two pounds. The Tennessee peanuts are larger than those of Georgia, and smaller than those of North Carolina and Virginia. Of those raised in Tennessee, less than one-fourth are of the red variety. The usual yield per acre is from thirty to fifty bushels, though as many as one hundred bushels are sometimes made. The white peanuts will make from ten to twenty bushels per acre more than the red, but not being so easily cultivated or gathered they were until recently considered less valuable as a crop.

The quantity of peanuts grown in the State of Tennessee has not increased during the past few years, owing to the low prices which have prevailed. The census of 1890 reports the production for Tennessee as 523,088 bushels, grown on 16,250 acres, and worth during the census year in farmers' hands one dollar per bushel. The county planting the largest number of acres and producing the largest number of bushels was Perry, in which 5,962 acres produced 182,801 bushels. The yield per acre in that county was 36.84 bushels. The average yield for the State was 32.37 bushels per acre.—*Selected.*

A FOE to God was ne'er a true friend to man.—*Young.*

PARASITISM.

BY KATIE RINEHART.

THE word parasite literally means one who lives at another's expense. They are found both in the animal and plant kingdoms. The animal parasite is therefore an animal which lives during its existence on or in the body of some other animal, feeding upon its food, blood or tissues.

Upon taking up the study of parasites we notice their enormously wide prevalence,—the number of parasitic individuals, if not indeed that of the species, probably exceeding that of nonparasitic forms,—also their very considerable variety in degree and detail. The majority derive their main support from their host; but of these, some are free, wandering about from animal to animal; some are attached permanently to the exterior of their victim, while others again are concealed within its body. In some cases the parasitism is only temporary, with others it is a lifelong habit. The majority are free in their youth, while some pass their early life as parasites, becoming free in their mature state, and others again spend their whole life on their host.

The majority of parasites belong to the class *Insecta*, and occur in all orders, but in very different degrees. Whole groups are naturally epizoaic, others entozoic, while a few (such as fleas and bedbugs) can scarcely be arranged in either of these divisions. As true epizoa the whole group of true lice and bird lice are especially familiar. These cannot exist without their host, and their whole life is passed on them, each mammal or bird having its special parasite, which affects it only, or is at any rate confined to it and allied species.

The largest class of insect parasitism is that which exists between insects themselves as exhibited in an enormous number of certain families of *Hymenoptera*. Grasshoppers are often subject to injury by parasites, especially certain red mites which are often to be found under the bases of the wings. They are often destroyed in large numbers by the growth of a parasite fungus in their body. The butterfly also has a parasitic enemy called *Braconids*. These deposit their eggs on the caterpillar, the little larvæ bore their way into the big larva and after consuming the tissues of the caterpillar, eat their way out. Many of the mites and ticks are parasitic, sucking the blood of animals, as ticks on dogs, cattle, and even men. Among the mites is the itch mite, which has been made rare by the spread of soap and civilization. It is among the vertebrates that parasitism is most frequent and most fatal. Fishes swarm externally with leeches and parasitic crustaceans. Nothing gives a more vivid idea of the extent to which parasitism has reached than

an examination of a ray, or even better, the common sunfish. Frogs and lizards have many parasites and those of birds are of extraordinary number and variety. The number is often so vast as to occasion the most serious diseases; thus the "gapes" is due to the choking of the bronchial passages by multitudes of *Nematoids*. Yet a great number may be borne without injury; thus the post-mortem examination of a stork has yielded forty from the lungs and air passages, one hundred from the coat of the stomach and many hundreds from the gullet and intestines.

STARCH.

THE mealy substance known by the name of starch forms the basis of some very simple and easily performed chemical experiments. Rasp some potatoes on a grater, knead the pulp thus obtained with water, and squeeze it in a linen cloth; the fibrous particles of the cells remain behind, but the juice, together with a large proportion of the starch, runs through. Let the liquid remain quiet for some hours, it becomes clear because the heavier starch settles at the bottom. Pour off the liquid, wash the starch several times with fresh water, allowing it to settle each time, and then dry in a moderately warm place, and starch will be the result.

Heat in a flask the liquid poured from the starch, and after boiling a few moments it deposits a flaky substance, which is vegetable albumen.

If starch is placed in a ladle and gently heated with constant agitation till dried up, hard, horny granules are obtained, which swell when boiling water is poured over them. These granules are called sago.

Heat in a vessel half a drachm of starch with an ounce and a half of water, stirring till it boils, and you have starch as it is used for stiffening linen.

If starch paste be allowed to stand for a length of time in a warm place, it gradually is converted into lactic acid—the same acid that gives to buttermilk its well known sour taste.

If starch be heated over a gentle flame and constantly stirred to prevent burning, it acquires after a while a yellow and finally a brownish-yellow color, and then possesses the new property of dissolving in either cold or hot water into a mucilaginous liquid. This is called dextrine, and is used as a gum for many useful purposes. Starch gum of a white color may also be made by mixing half an ounce of starch with one drachm of water and four drops of nitric acid. Let the mixture dry in the air, and evaporate the nitric acid at a gentle heat.

Bring to brisk boiling two ounces and a half of water, to which twenty drops of sulphuric acid have been added, and then add one ounce of starch mixed

with a little water, forming a paste, but only in small quantities at once, that the boiling may not be interrupted. When all the starch is stirred in, let the mixture boil for some minutes. Then add chalk to neutralize the acid, filter the liquid through porous paper, and evaporate to the consistency of a thick syrup. The starch syrup thus made, as well as the white solid starch sugar, are both articles of commerce.

It has not yet been explained how this effect is produced, but as starch, starch gum, and starch sugar have each the same constitution, the difference is undoubtedly caused by a different grouping into molecules of the atoms of carbon, hydrogen, and oxygen, of which they are composed, which is effected by the sulphuric acid.—*Selected.*

AN ANCIENT CANAL.

IN California on the lowlands of the Stanislaus river there is a piece of engineering, the origin of which surely dates back many years. This work is a canal which was probably used for irrigating purposes by the Spanish or early Mexican settlers.

The proof that this canal was built long ago is shown by the large oak stumps which grew up, were cut, and now lie decaying in the bottom.

The canal is built on the bluff bank, between the lowlands and the plains, and is about one mile long. It is about twenty feet wide and seven feet deep. Water even now runs through it during freshets, and at no place will it overflow its banks till it gets clear full, when it will run over the bank its entire length, which shows the skill of the persons that made it.

Just think of an undertaking of this kind so many years ago, when they had no steam shovels, no steel scrapers, and I doubt if they had iron picks and shovels at that time. Think of the vast amount of labor it must have taken and the time consumed to complete such a piece of work. The laborers must have used wooden shovels and wheelbarrows.

As one walks this ancient canal, which is made as well as some of our modern ones, it makes us think that there was civilization here long before California was explored by the Americans.

[The above item of interest was contributed by some kind friend who forgot to sign his name; hence no credit is given.—Ed.]

GETTING AN EDUCATION.

THERE are a great many boys who do not like to go to school and who at every opportunity will shirk their duties for something more pleasant. Such boys as these are making the greatest mistake that youthful years will admit. They may be getting enjoyment out of life at present as it is, but what misery, disappoint-

ment and care in age! The uneducated man is a bore to everyone in this age. He is unfit for any duty that requires independent thinking. Your text-book may be hard to master, boys, but your efforts will be repaid a hundredfold if you do.

A great many boys are determined to have an education regardless of what the cost might be. They do not hesitate to grapple with the most difficult problems and work away until they thoroughly understand them. An education is only acquired by study and untiring effort.

However hard the labor, boys, industry is always rewarded. Through your own efforts you will succeed. You may succeed in passing on examination day; you may get through with each day's lesson by receiving assistance from your schoolmates; but you should ever bear in mind that a time is sure to come when you cannot wear another fellow's armor, a day when you will be compelled to stand the test alone, and then you will be judged accordingly. If you depend in youth on some one else to help you along in lessons you will be unable to stand alone when the props are taken from under you.

You had better begin to build an independent structure, one that will stand you in need in the days to come.—*Exchange.*

OLDER THAN CHINESE.

OLDER even than China, the oldest existing nation, are the cliff dwellings of southwestern United States, homes of a race whose very name has perished from the earth. Explorers, puzzling through the Mancos and Casa Verde canyons of Arizona and New Mexico, have found the houses of this strange people in the wildest and most inaccessible of the mountain sides. Did the cliff dwellers antedate the pyramids of Egypt? Were they of blood relation to the early inhabitants of the land where the Nile is god? Some students are prepared to answer both questions affirmatively and to give what is to them abundant proof. The pottery from their long-wrecked homes suggests Egypt, and the few inscriptions found have similar suggestions. Mummies, bodies wrapped in cloth, feathers from the breast of the turkey, have been dug from the burial places among the cliffs, and, in bone and hair much unlike the Indian of to-day, there is a hint of resemblance to a more Oriental type. If the cliff dwellers left any descendants, however remote, they are doubtless the Moki and Zuni Indians, who, resembling them in habits and appearance, are their closest kinsmen.

OUTWARD things are but the coloring of the man.—*Schiller.*

THE most manifest sign of wisdom is contained in cheerfulness.—*Montaigne.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

SLANDER.

SOME one has very well said, "So deep does the slanderer sink in the murky waters of degradation and infamy that could an angel apply an Archimedean moral lever to him, with heaven for a fulcrum, he could not, in a thousand years, raise him to the level of a convict felon."

At first reading of this quotation the casual observer is inclined to think the author is a little severe, but when duly considered he is not far from the right conclusion. When it is remembered that infamy and crime can generally be traced to some form of slander it is clearly seen that they are the results of it; therefore it becomes one of the greatest of crimes. The nature of the crime itself is of the very worst character. Slander is like an arrow shot in the back of a neighbor, or like a stroke made after nightfall. It is a coward that hits a man when his face is turned, and it is well known that the arrows of slander can be cast at no other time. The slanderer would not dare to make his scandal in the presence of the accused, and if he did the nature of it would hardly allow it to be classed as slander.

Slander is like a hot wind; it blasts the green foliage before it and retards development; each breath pollutes the atmosphere with poison, and its venomous sting virtually kills the plants. Slander really searches the world for victims. There is not a nook or corner in the universe, not a spoke in the written language, not a single tribe or nation of people, but that slander has found its way there. It has a forked tongue like a serpent, thoroughly charged with venom, whose bite is incurable. Although its nature is of the very worst it is like the good in one respect, it is said that God is no respecter of persons, neither is slander. It passes not by the wealthy man and poverty excludes none. The high and low alike submit to its indomitable rule. It visits the palace of the king and it sulkily crouches in the domicile of the peasant. One

would think when a man is once dead he would at last be free from scandal, but not so. How often do we see its devotees fairly dancing and stamping upon graves of the just and the unjust. It is one of those afflictions that does not end with death. There is no position in life, no calling, no inheritance, no degree of learning where slander does not do her awful work; but of all her workshops she delights most in destroying intrinsic worth and immolating innocence.

It is a lamentable fact that we have in our fallen natures a sad propensity to listen to retailers of petty scandal. It is strange, but true, a good sermon, a good lecture, a good book is soon forgotten, but a piece of miserable scandal is hashed and rehashed and forever kept green and bright as the pot-flowers in the bay window, with the tenderest care.

This bit of poisonous scandal, gossip or slander, is like so much tinder ready to be ignited at any moment by the merest friction and it bursts into a flame that is unquenchable. With many people it has become the spice of conversation and the elixir of life. They depend upon it to keep them going, the same as a toper takes his drinks, and become intoxicated with it just as much as he does. They could not deny themselves of the dailies which are all full of it. They attend the clubs to get more of it, and make evening parties to have a chance to use it; and make afternoon calls just for the sake of practice. Yes, it finds its victims for sacrifice in every class of mankind, and it doesn't fail to lay them upon the altar.

Sometimes without any intention whatever of doing a neighbor a personal injury a careless remark is seized by a babbler and is passed on to Governor Small Talk, Squire Chit Chat and Colonel Twiddle Twaddle, and by the time it goes the rounds it assumes the magnitude of base slander; and you would hardly recognize it to be the same lie that you had started in the morning.

Slanderers and gossipers are the turkey buzzards of society. Putrefied meat appeals to their appetite most. A buzzard will soar for hours to find a carcass with which he may satisfy his gluttonous appetite. So the makers of scandal will wear out a lot of shoe leather in gathering up the mistakes and dead things of society in order to satisfy their appetites. The turkey buzzards of the church use the same means of defense as the turkey buzzards of the forest when approached by an enemy, and they take their spite out on the poor deacons in telling them the mistakes of everybody else but themselves.

There are some animals which, when one of their mates is crippled or wounded, will pounce upon it and devour it; there are people as well who have not arisen above that animal instinct, and when one of their comrades falls by the wayside, through error, they commence pouring scandal upon him and devour

him. Why is it that people cannot rise above this level and pity the unfortunate wretch who has made the mistake? However, it is not necessary to trust a betrayer; no kindness demands the risk. Censure and criticism never hurt anybody; they cannot harm you unless you are wanting in character. And if their criticism be true, they show a man his weak points and forewarn him against failure and trouble.

INGRATITUDE.

WE never know the value of a good thing until it is gone. For some reason the things around us become so commonplace and such a part of us that they approach so near to second nature that we cannot measure their value.

As we sit down to a meal's victuals not one time in ten thousand do we think of the cost and trouble it required to bring those edibles together from the ends of the earth. We so little appreciate our modern conveniences of transportation. Until the railroads are blockaded, bridges are washed away, or a national holiday comes along, we cannot appreciate our post system; we expect the mail two or three times a day and think nothing of it when it comes. It is when it fails to arrive that we take notice of it. The real value of the faithful old family cow is never realized until she is dispensed with. The good team of horses is never appreciated until they are replaced by a balky pair. We don't know how to be thankful for good health until we lose it. When we are compelled to buy a wooden limb we know how we have been blessed in the past.

In the same way we fail to appreciate our social, religious and educational privileges. It is impossible for our children to know the modern conveniences as compared with the old log schoolhouse, with its fireplace, split logs for benches, and greased paper for window lights. We fail to attend church services because we have a mile or two to go, because there is a little fresh gravel on the road, and because some certain man is going to preach or is not going to preach. When privileges of these kinds are taken away from us for awhile it seems rather good to enjoy them again.

There seems to be an inclination on the part of mankind to be constantly dissatisfied with present achievements, environments and conditions. This helps us to be unappreciative of the blessings at hand.

Among us also are characters,—the world may know of them or it may not,—who seem to be almost indispensable to the community. Their work or labor is not always appreciated at the time, but is often lauded to the skies after they are dead, and a lot of posthumous praise is carved on a cold slab of marble. The honorable T. C. Morton discovered ether

after a long and tedious effort; to reward him for his labors others claimed his discovery and, through a series of legal proceedings, secured rights, and poor Morton was unknown to the world.

Roger Bacon served ten years in the penitentiary because he declared to the world his discoveries along scientific lines. His efforts were not appreciated then, but since the world has learned the value of his discovery it is ready and willing to praise his name and give him credit for it; but that does his penitentiary life no good.

Socrates was one of the greatest men of his age and did as much or more for humanity as any one in his time, but the people were so ungracious, and his efforts were so little appreciated that he was imprisoned for a long time and finally compelled to drink the poisonous hemlock. He died a martyr to science, pedagogy and philosophy. In our age scarcely a day passes but that he is quoted as authority on some subjects. Thousands of martyrs might be named whose lives have been of incalculable value, but who were practically unknown to the world until their blood was spilled upon the ground; and then perhaps their name was mentioned because of the blood that was spilled instead of the blood that was spent in doing good to others.

Shakespeare has truly expressed the ingratitude of the nations when he said:

"The evil that men do lives after them;
The good is often interred with their bones."

OUR FIFTY-CENT OFFER.

SINCE we made our fifty cent offer to the end of the year to new subscribers for the INGLENOOK, we have received a large number of orders for it. We are glad to note that many of the old subscribers are telling their friends about it and they are becoming subscribers almost daily.

We have on our desk several letters of recent date, praising the influence of the INGLENOOK in their Sunday school. We will be glad if more of the Sunday schools would take advantage of this opportunity. It certainly is a first-class magazine for the older classes. It is clean and spicy; instructive as well as entertaining.

Several of our Christian Workers' Societies order it in clubs and distribute them among the members, always ordering a few extra copies so that the visitor may be given a copy, which not only acquaints him with the INGLENOOK, but insures him the outline and comments upon the next lesson for the Christian Workers' meeting.

You can't point to the cross with a frown on your face.—*E. P. Brown.*

Current Happenings

A GREAT irrigation project, involving an expenditure of about \$25,000,000, has been authorized by the secretary of state for India.

WHAT is said to be the largest pearl in the world was found in the San Saba river, Texas. It is almost as large as a hen's egg and weighs 810 grains.

BISHOP LIBERT, head of the Catholic church in Hawaii, arrived in San Francisco from Honolulu, on his way to Rome. He will call on President Roosevelt.

THE enemy seems to be gaining foothold on the union men in Chicago. The most violent disturbances that have been known in the city since the American Railway union strike of 1894, occurred recently, which marked the bitter progress of the teamsters' conflict. And there seems to be no prospect of peace. It is expected that federal or state troops, or both, will possibly have to be summoned, as the police force is almost helpless.

ANOTHER negro has received recognition at the hands of President Roosevelt. This time it is Sergeant Geo. S. Thompson, of the Twenty-fifth Infantry, who has been appointed to the second lieutenantcy in the Philippine Scouts. The appointment adds one more negro to the commissioned officers of the army.

FOUR newsboys were crushed to death at Indianapolis, Ind., in a panic caused by some one crying "fire." They were standing at the window waiting for tickets and when the alarm was given the crowd simply crushed them to death. Several others were badly injured.

A CUSTOM prevails in Austria which would no doubt seem queer to many of our American people. Emperor Franz Joseph, of Austria, selects twelve of the oldest poor men of his entire kingdom that can be found; he washes their feet with his own hands, on Thursday before Good Friday, and, after presenting each with no insignificant gift, he sends them away. This manner of celebrating the Passion Week of our Savior is certainly much superior to some other methods endorsed by other rulers. While in every detail, perhaps, we might not agree with the emperor, yet if his motive is pure and he does not allow himself to grow formal in the observance of it, it evidently will be a lesson that will impress much truth on many of his subjects.

AN Iowa Indian, living near Stroud, O. T., is the owner of a scalp rug which took the lives of seventy-seven beings. It is one hundred fifty years old, and consists of seventy-seven scalps torn from the heads of as many human creatures. The rug, which is barely five feet square, is of many hues, for the scalps are red, gray, black, brown, white and auburn.

THE plant of the Westware Paper Co., of Massachusetts, was destroyed by fire with a loss of \$75,000.

THE prefect of Algiers has been formally notified that King Edward will shortly visit that city.

LOST in the jungles of Mindanao, a troop of the fourteenth United States Cavalry subsisted for nineteen days on monkeys.

THE Sultan of Morocco has definitely rejected the reformation demands of the French.

SECRETARY HITCHCOCK has planted an oak sapling near the east gate of the White House ground. Strange to say this sapling grew from an acorn picked up in the city of St. Petersburg. The oak which produced the acorn was planted in St. Petersburg, many years ago, by a prominent Russian, who took it from an immense oak tree which stood near the door of the home of George Washington, at Mt. Vernon, Va.

CLAIMS for insanity have become so prevalent and fashionable that they sometimes cause trouble instead of relieving people from trouble, as is generally the intention when such claims are made. Now comes a report from Norfolk, Va., of a Thomas Yandaw, who has been more or less conspicuous in Norfolk for more than fifty years. He claimed, up to the time of his death, that he was entitled to a large fortune in California. His actions and the talking that he did led many to believe that he was afflicted with insanity. Accordingly he was placed in the lunatic hospital at Williamsburg, Va. Two years ago he filled a pauper's grave at that place. A letter has just been received at Norfolk, by authorities, stating that Yandaw was entitled to a large portion of an estate in California, worth \$1,500,000. Yandaw's wife is dead and they left no heirs.

THE Finnish Senate has resolved to petition the emperor of Russia to withdraw his army from Finland.

By the end of May more than two hundred French priests, who are compelled to leave France, are expected to arrive at Mexico City, to remain there permanently. Many of them are Jesuit fathers.

HENRY WHITE, the new United States Ambassador to Rome, has been received in audience by King Victor Emmanuel.

ALL the boiler makers of the Santa Fe railroad have struck for higher wages. Inexperienced men are taking their places, but no violence has been reported.

THREE cases of cholera, one of which was fatal, have occurred at Baku, Russia.

THE Russian, Kalieff, who assassinated Grand Duke Sergius, has been tried, found guilty and condemned to death.

THE Mexican mints have now been definitely closed to the free coinage of silver.

A FEW days ago the main building of the Vanderbilt university at Nashville, Tenn., was destroyed by fire. The loss is total, except a few fixtures that were saved.

ABDUL HAMID, the sultan of Turkey, has received in audience Anthony J. Drexel, of Philadelphia.

JUDGE STEVEN NEAL, author of the fourteenth amendment of the constitution of the United States, is seriously ill at his home in Lebanon, Pa. He is upwards of eighty years old.

FIRE damaged the plant of Bebee & Sons, Leather Merchants and Tanners, in Titusville, Pa., to the extent of one hundred seventy-five thousand.

FIVE miners are dead and three others are fatally injured as the result of an explosion in the mines of the Cabin Creek Mining Co., of West Virginia.

IN fear of death by bombs or revolution on May day, the majority of the nobles of Russia found refuge in other countries until after festivities were over.

THE third brother of the Sultan of Turkey, Ahmed Kemal, is dead.

THE Baltimore & Ohio Railroad Company is closing a contract for two hundred and fifty locomotives.

THE German Government has formally notified the American Government that the tariff agreement between the two countries will terminate March 1, 1906, the same day on which the reciprocity treaties which were recently signed between Germany and several other European States go into effect. Nevertheless, negotiations for a new treaty with the United States are invited. This termination of the *modus vivendi* by Germany is in response to public opinion, and is presumed to anticipate the demand for certain tariff concessions upon her manufactured goods in return for low duties upon American cotton, grain and food-stuff.

IT was recently announced at New York that Andrew Carnegie had created a trust of \$10,000,000, the income of which is to pension those college professors in the United States, Canada and Newfoundland who, through old age or disability, have become incapable of rendering efficient service. The minimum old age limit is to be 65. The fund consists of \$10,000,000 in five per cent first mortgage bonds of the United States Steel Corporation. Ninety-three institutions will benefit by the fund. These include three thousand faculty members. The average salary of the college professor was found to be \$2,000. Sectarian and government supported colleges are not included in the list.

ROJESTVENSKY has selected Togo's flagship as his objective in the coming sea fight, and says he is resolved to gain the victory or lose his entire fleet.

THE Vienna Medical Society, after gathering statistics on the relation of alcohol to crime, concludes that the latter increases in proportion to the consumption of the former, and that Sunday, which is the great pleasure day of the continent, is the principal crime day. In Vienna 254 crimes on the average are reported every Sunday, most of which are due to the excessive use of alcohol.

WHEN the German Emperor reached Naples, Italy, Friday, and was told of the world-wide discussion of his Moroccan visit, he facetiously remarked: "The whole world is in trouble when I travel."

JAPAN has filed in Washington a formal complaint against France for harboring the Russian fleet. Representations are also being made direct to Paris.

THE resignation of the nine out of ten pensioner examiners, constituting the board of review, who were accused of irregularities, were accepted by Secretary Hitchcock at Washington.

HOME DEPARTMENT

THE DEAR OLD CHURCH.

BY R. G. LAHMAN.

I am thinking now of the old, old church,
That I loved so well, so long,
Where the wild birds sang in the old oak trees
Their gladsome, joyous song.
There we gathered oft on the Sabbath day
To pray to him above,
And to praise the name of Christ our king
For all his wondrous love.

O thou dear old church! I shall ne'er forget
The Spirit's gentle calls,
When I sought the Lord and found him there
Within thy sacred walls.

O thou dear old church! they that built thy walls
Are sleeping 'neath the sod:
They will come no more, for they are gone
To heaven, their home with God.

There with softened steps and mourning hearts
We have borne the silent dead;
There we've gone to weep with those that weep—
The mourner's tears have shed;
There we've borne the babe from the mother's arms—
Aye, maidens fair and sweet—
And gray-haired ones bowed down with age,
To slumber 'neath our feet.

So in years to come I will think of thee,
Though I wander far away;
And thy hallowed scenes shall teach me still
To seek the heavenly day.

O thou dear old church! I shall ne'er forget
The good that thou hast done
For the weary souls that have sought for rest,
And a crown of life have won.

Roanoke, Va.

ARE WE OBEDIENT?

BY MRS. M. M. BOLLINGER.

WHILE on a visit to a near neighbor a short time ago, I heard a young married woman make the following remark: "I just have to get up on my dignity, and do just what I please regardless of what ——— thinks or says, or else I couldn't have anything, do anything, or go anywhere; he would simply tie me down so I couldn't have any pleasures at all."

While on my way home, in reviewing my own feelings on the subject the thought or question occurred to me: "I wonder in how many families this is the case, and if it is always the husband's fault, or rather if it is not the wife's useless extravagance and un-

reasonable judgment in some cases, which the husband, in duty to himself and his family, is bound to check, and her rebellion to the proper authority.

How many women, especially the sisters in the church, really realize that God intended us to be subject to our husbands in EVERYTHING, and that we cannot be truly Christians unless we are?

Eve in her weakness transgressed; so God in his wisdom saw that she was not capable of ruling herself, and as a part of her punishment put her subject to the rule of her husband, Adam, and this rule applies to us also as her descendants.

While we may advise and counsel with our husbands if they do not see as we do, if we obey God, we are bound to submit.

We pledge ourselves to obey our husbands when we are married and if we are not willing to love and trust them to such an extent as to do this we are wronging them, ourselves, our children, our associates, lying before God and to God, and making God without just judgment. Especially is this so of us, sisters, we who wear the prayer covering which is a sign or symbol that our husband is the head of our home, that we are subject to him in EVERYTHING. Shall we wear this sacred emblem and then desecrate it by being disobedient and rebellious of proper authority?

If such authority is sometimes contrary to our wishes and just a trifle harsh, may we not by our gentle submission, meekness of spirit, kindness and modesty be such a light in our home as to draw our husband from his harsh, unkind and selfish ways, if they be so, instead of quarreling, scolding and setting such an ill example before our children, at the same time making our husband more selfish, unkind and tyrannical?

While, in some cases, women are almost obliged to act as the head of the house or else see themselves and their children almost freeze and starve, I believe this would not be so if our boys and girls were properly educated as to their duties and positions in life. We as mothers and fathers are partially to blame for this condition of affairs, because we do not set the proper precepts and examples before our children; we allow them to see our weakness too much, hence they lose respect for our teaching and us.

So, sisters, let us more thoroughly instruct ourselves of the position which God intended us to occupy by reading that portion of God's Word pertaining to it, and be obedient to it as far as in our power

with God's help and guidance. If we do as we are commanded in Gen. 3: 16; Eph. 5: 21-33; 1 Cor. 11: 3-16; 1 Cor. 14: 34, 35; Col. 3: 18; Titus 2: 3, 4, 5; 1 Peter 3: 1-6; Matt. 18: 15 and many others which we will find if we read these and follow the references, we may wear our prayer covering without acting a lie, and with a consciousness of doing right every time we don that sacred emblem.

Now, husbands, you are admonished to love your wives as yourself, as Christ loved the church and gave himself for it, and if you do this you will first learn obedience to your Master, Christ, for no one can be a good ruler who has not first learned obedience to proper authority. Then you will take your proper position in your home, and provide the things necessary for comfort. (But not necessarily luxuries,—those pertaining to the world, style, fashion, or only pleasing to the eye,—unless your means will allow it and you wish to do so, but it is best not, even then, as it has a tendency to encourage extravagance in those who cannot afford it.) Be kind, gentle, courteous and affectionate to your entire family; be considerate of their wishes as near as you can and remain in the right path, and in this way you will greatly assist your wives in being obedient to you and God.

Vestaburg, Mich.

* * *

WEAR LOOSE CLOTHING.

"DURING the winter one should abjure tight shoes and tight clothing of all description if one would avoid additional suffering from the cold," Dr. Gustave Lippman says.

"Drivers of vehicles often have their feet frost-bitten, though they have made every precaution of which they may have knowledge against just such a contingency arising, and the reason they suffer frost bite is because they have gone to the extreme of wearing socks so thick that the feet are cramped in the shoes, the circulation is thus retarded and frozen toes under such circumstances are practically inevitable. Men who sit still in an exposed place, like teamsters, should never bind the feet at all. The wrappings for warmth ought to be on the outside of the shoes and never drawn tight.

"Even a citizen who is not exposed to the inclemency of the weather and who wears a tight shoe only in the evening, will suffer severely with cold feet because of the retarded circulation. When the throat is bound tightly a cold in the head may develop, and the women who lace the waist to an extreme degree are in danger of contracting cold in some part of the body which receives only a partial circulation of blood in consequence. All clothing worn in cold weather should be loose—not too loose, but sufficiently so to enable the blood to flow naturally

and freely, and the chances of colds and frostbites being contracted will be much reduced when this is attended to."

* * *

WORTH WHILE.

A FAMOUS woman was one day talking over old and new times with a friend of her childhood and youth. "You must be a proud and happy woman," said her old friend. "Your name is well known all over the country. Your words are read and pondered in hundreds of homes."

"That is pleasant, of course," was the answer, "but I shall soon be forgotten. Let me tell you the one great satisfaction of my life, the only deed I have ever done which can be remembered with a perfect joy.

"When I was making my first hard struggle in my profession here in the city my mother was living in a dull country village, trying to endure the time until I could afford to have her with me. One day when I was going down to see her I bought some crocus bulbs, in what seemed a fit of wild extravagance, and took them with me.

"I planted them carefully, and refused to tell her what they were, exacting a promise that she would leave the ground untouched. At first she treated the mystery as a joke, then she forgot all about it. Next spring, when the little village was all mud and desolation, my mother chanced to look out one day and saw a yellow flower in the yard.

"She could not believe her eyes; she rubbed her spectacles and looked again. Without doubt it was a yellow flower, and she put a shawl over her head and ran out to examine it. Next day the little bed was alive with purple, white and yellow, and the neighbors came flocking in to see the flowers which blossomed almost in snow.

"Such a sight was never seen in the village before, and my mother was the heroine of the hour. Through the excitement of that blossoming time she actually forgot to write me. I believe it did her as much good as a trip to Europe.

"She is not here now, but I would rather have given her that great pleasure than to be famous from one pole to the other."—*Selected.*

"An optimist and pessimist;
The difference is droll,
An optimist sees the doughnut,
The pessimist, the hole."

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

IN HIS NAME.—John 15:16.

For Sunday, May 21, 1905.

I. The Gentiles' Trust—In His Name.

- Rom. 15:12
- 1. Cornelius.
- 2. People at Antioch, Acts 13:42-45
- 3. Psa. 117:1.
- 4. Isaiah 11:10.

II. Miracles Performed—In His Name.

- 1. By the Apostles at the Beautiful Gate, Acts 3:1-11
- 2. By the Sons of Sceva, Acts 19:13-17

III. Christ with Those Who Meet—In His Name.

- 1. In Worship, Matt. 18:20
- 2. In Council, 1 Cor. 5:4, 5

IV. Acceptable Work Must be—In His Name.

- 1. We Must Walk that Way, Micah 4:5
- 2. Be Pardoned that Way, Luke 24:47
- 3. Be Baptized that Way, Acts 19:5
- 4. Take Communion that Way, 1 Cor. 11:24, 25
- 5. Do Everything that Way, Col. 3:17

Text.—Ye have not chosen me, but I have chosen you and ordained you, that ye should go and bring forth fruit, and that your fruit should remain: that whatsoever ye shall ask of the Father in my name he may give it you.—John 15:16.

References.—Acts 10:43; 3:16; Rom. 10:9; Luke 18:42; John 13:20; Luke 1:38; 1 Tim. 4:10; 2 Tim. 1:12; Rom. 8:38, 39; 1 Cor. 8:3; Mark 9:41; Gal. 6:14; Phil. 5; James 1:12; 1 Peter 2:7; Psa. 18:1; 145:20; 2 Cor. 4:5.

The Cup of Water.

It was Jesus who said, "For whosoever shall give you a cup of water to drink in my name, . . . he shall not lose his reward." It was more difficult to give a cup of water in those days and in that arid country than it is for us. Yet it stands for a small, humble service that almost any of us can perform. But I am afraid that some of us are giving cups of water in his name when we should be giving purses filled with money. Too many of us try to serve two masters: we follow the world, we seek for gain, we know nothing of sacrifice or of Christian toil, we fritter away our powers, and then hand out a cup of water to one of Christ's little ones in the hope of a reward. O, we should follow the Lord fully, he should be our portion, our refuge, our all; whatever we leave undone we should do the work of the Lord.

Through Christ who Strengtheneth me.

Some are asking, "What can I do?" Can you not answer with Paul, "I can do all things through Christ who strengtheneth me." We are not able to do

much in our own strength; our ability to do all things is not original with us, but is derived from Jesus. We have read that years ago Ole Bull was traveling through an American forest, when he saw a hermit sitting in his hut. A violin hung on the wall. Ole Bull, pointing to it, said, "What is that?" The hermit answered that it was a fiddle he had bought in London. Ole Bull asked him to play and the hermit played a few tunes without any expression, and with faulty technique; but he lowered the violin with a self-satisfied air, and Ole Bull said, "Let me take it." He took it. He drew the bow across the strings and played. He played "God Save the Queen" till the birds in the tree-tops stopped to listen, till the winds paused, and the leaves of the trees ceased their rustle to listen. Then came "Home, Sweet Home" till the hills of Norway arose to view in the violinist's mind. And that violin in the hands of Ole Bull is the master instrument of the century. And what are we? Feeble and poor in ourselves, but when our Savior draws the bow of his love over our lives, the music of redemption is heard.

We Can Do Nothing Without Christ.

We were watching a long heavy freight train pass through our town, it was loaded with coal and iron— heavy stuff. The engineer sat in the cab of the huge locomotive with his hand on the lever and the entire train of cars moved onward at his will. Now suppose that engineer should be foolish enough to get out of his cab and go to the rear of the train, and putting his shoulders to the hindmost car should attempt to push the train along in his own strength; you say at once that he could do nothing. And we are just that foolish when we try to do any work for God in our own strength. We must place ourselves into a heart-to-heart touch with him who said, "All power is given unto me in heaven and in earth."

In my Name shall They Cast out Devils.

To cast out evils is the first power of faith. And it is only in the name of Jesus that we can get rid of sin in all its forms. Ignorance, war, slavery, superstition, these are to be cast out of society by the power of faith; individual evils such as greed, intemperance, hate, uncharitableness, can be cast out only in the name of Jesus.

"Strength often have I none,
The battle must be won
Without my aid:
I never can be lost,

God always has his host
Ready arrayed.

"Why, therefore, am I sad?
His help should make me glad
And banish fear.
I am not weak or poor;
I can all things endure
When he is near."

Trust Jesus.

If we want to really serve Jesus it will mean a difficult time for us. We must first believe that things can be done—the hardest things, the things that others say cannot be done. We must live up to high ideals, even when we find ourselves stumbling up against defeat. The soul resting secure in Jesus' love will bear up under troubles and trials heavy enough to crush steel pillars down. O, we can do this if we only trust him, and then obey him. He will help us to do the hard work, to bear the bitter disappointments, and to go on, though the waves of trouble round us swell.

For the Sake of One.

When Robert Bruce was in hiding, he came one night to a woodcutter's hut, and asked for shelter. The woman who came to the door bade him enter and welcomed him. She said, "All wanderers are welcome for the sake of one who is homeless to-night—our chief." She did not know that she was giving shelter to this much-loved chief, as he did not reveal his identity until in the morning. We should take care of the poor, the sick and the afflicted, the orphans and the widows for the sake of one who had not where to lay his head, who, though he was rich, yet for our sakes he became poor. The highest commendation any of us can ever have is this, "As ye have done it unto one of the least of these, ye have done it unto me."

Topics for Discussion.

1. How shall we do good? Col. 3: 17.
2. Name the highest service we can perform. Matt. 20: 28; Mark 8: 35.
3. Give the story of one woman who loved to serve him. Mark 14: 3-10.
4. Fruit-bearing Christians. John 15: 4-10.
5. What did Peter and John do in his name? Acts 3: 1-10.
6. What is Paul's testimony? Rom. 8: 35-39.

* * *

EMPLOYMENT BUREAU.

The young people here at Covington, Ohio, have been much interested in Dr. O. H. Yereman's work in India, as he visited the Covington church when he was in this country, and gave us some talks that we will always remember. The following letter from him to our Sunday school was much appreciated:

Dahanu, India, March 9, 1905.

You cannot imagine how happy I was to receive Dr. Rosenberger's letter with the draft, telling that you had donated \$10.00 for my work. Do you know why?

For nearly a year I have been painfully conscious of the great need of beds for the patients who came to me for operations of various sorts. Especially did the blind patients touch my heart. Almost all of them were persons of advanced age. They had been without eyesight from one to ten years. They could not help themselves and felt they were a burden to those about them; hence they came for help. After the operation they must remain lying on their backs (not moving from one side to the other, as any little motion may spoil the good results to be obtained by the operation) from six to ten days. To give them the bare, uneven floor of a public inn to sleep on seemed cruel indeed; but that was the only thing I could do. Sometimes they brought straw along with them to sleep on, sometimes not; and although for the first couple of days they made no complaints, the third or fourth day was sure to produce cramps and backache concerning which they could not hold their peace. Do you blame me when I say that I was painfully conscious of the need of beds?

The first of last January the wife and son of one of our native workers were critically sick. They had tried the local native doctor and the government and mission doctors of two other large towns, with no success. The brethren thought it would be well if I could treat her—but we had no place for them. I suggested that I could easily arrange that, and with their consent I planned to put up a large grass hut on an empty field not very far from our dispensary. I went to one of my patients, who is also my friend, a well-to-do Parsee, to purchase some material and told him of my plan. On hearing it he offered me the use of a tile-roofed shed; this he then enclosed with grass walls for me in just a few hours. So here we have been "keeping hospital" since that time. Neither has it been vacant very long. Up to date twenty-seven different patients have been in it.

Now your ten dollars I expect to use in improving "the hospital." We need beds and bedding, a door, as well as some protection against the rains that will be coming after while. Our cots are of wood, with ropes stretched across them. They cost about \$1.25 each. For mattresses I expect to use straw in such a way that it can easily be thrown out and burned after each patient vacates the cot. The sheets and pillows should not cost much, so I am expecting to have about three Covington Sunday-school cots. Although several have spoken, still you are the first to supply beds for our hospital, and I hope you may be the first to support beds for poor unfortunates who are unable to supply themselves with food because of some long sickness. I have several such persons just now. Fourteen dollars would be sufficient to run a bed one entire year. May God's richest blessings attend you all.

O. H. Yereman.

*

Sister Laura E. Jennings, of Brownsville, Md., says, "Our number is very small yet, but I hope we will grow and do much good for the cause of Christ. We have Christian Workers' meetings every Sunday evening. They have been very interesting and helpful to all who would take part. I have read a number of missionary books,—indeed these books come next to the Bible with me. The Lord bless the Circle."

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XXVII.

Malmö, Sweden.

Dear Mr. Maxwell:—

The most beautiful sight we saw in all Hamburg was the large flower park, in whose beautiful lake gracefully floated hundreds of white swans. They were gracefully proud of their gracefulness. They had to spend so much time in arching their beautiful necks, and in dressing their fluffy white feathers, that they have no time to care for their needs and wants. When the little swan is out of the eggshell one minute, he is just as able to swim as when he is fifty years old. This relieves the mother of any maternal care along that line. They remind me of some other mothers who spend so much time primping and fixing that they do not have time to look after the wants and needs of their offsprings.

When Miss Gertrude first saw these swans swimming about on the bosom of the lake she involuntarily quoted that old couplet from Harvey's grammar that we used to have so much trouble in parsing and diagraming.

"The swan on still St. Mary's lake,
Float double—swan and shadow."

Many mounted policemen parade the streets of this city with their well-kept aid-de-camp. As we had expected to stop at Hamburg again on our return from the Jutland Peninsula, we did not tarry there so long as we would have done otherwise. We reached Copenhagen, Denmark, via Kiel and Kørsor.

We had not spent a night on the ocean for a long while, but soon after we left Kiel we went to our cabins and awoke with the sun shinging brightly in our faces. After breakfast we put our feet on Danish soil. The morning ride through Southern Denmark was simply delightful in every respect. Our boys nearly went wild with praise for the Danes, from the fact that they have their farm houses on their farms something like they do in America, a thing which we have not seen since we have been abroad. As a rule people all live in little villages, from which they go to work in the morning, and to which they return at night. The land is slightly undulating, with good roads and splendid crops, and real snug farm houses for country homes. Every little while Oscar would shake his head, point out the car window and say, "More like livin'." The hired men here get two kroners a day, or about fifty-six cents in our money, and in order to receive those wages they must contract for not less than six months at a time, and be registered so that they cannot escape. We visited the King's Palace and the market in Copenhagen. The market indeed was an interesting one; it was conducted almost entirely by the women, in a large open square where their baskets of vegetables and fishes were set upon the ground, and a large crowd of anxious customers buying very rapidly. The large stock of goods was sold out by noon and the market cleared up.

Christian is ruler of Denmark and Oscar II is king of Sweden. A beautiful little body of water lies between Copenhagen and Malmö, called the Skagerak. It is a

prong of the Baltic sea as is the Cattedgat, which lies on the other side of the Island upon which Copenhagen is situated. Malmö is a beautiful little city, and the Swedes are a splendid people. They really cannot be discounted by any people in the world for politeness and hospitality. It seemed to make no difference how many times a day we passed a man on the street he always tipped his hat; and he didn't make a false motion as do our boys in America, or wait till he got a rod by, but removed his hat and extended his arm at full length until he passed us.

The majority of clerks in all stores are ladies. A small counter is prepared near the door to receive the hats of male customers as they come in, who attend to their trading bareheaded, and replace their hats as they leave the store. When calling upon a native, one is hospitably received, and comfortably seated; the good housewife proceeds to the lagenhet (leggenhate) (kitchen), where she makes some Swedish coffee, and when all have partaken of the coffee, which is generally accompanied with coffee cake, a dark bread that is especially calculated to be used with coffee, the guests are all expected to arise and one by one approach the host and then the hostess, shake hands with them and say, "Tack sa mycke," (Tock sa mick-y), (Thank you). Whereupon the host and hostess replies "Var sa gude" (You are welcome). When ready to depart, every last member of the family, whether few or many, not only accompany us to the door, as is sometimes done in the west by the more polite or those who have time to waste in such foolishness, but they go with you to the very line of their possessions, whether it be near or far. When they have reached the line we all have a warm hand-shake and they bid us "Adjö," (I-ya) (Good-bye).

Sweden is not the undulating prairie that Denmark is; although there are some beautiful valleys, for the most part it is broken, hilly and mountainous. In the northern part of Sweden the soil is very poor, and crops are very scanty. In the extreme north one comes into the territory of "The land of the midnight sun," where the long, dark day of winter excludes the light of the great illuminary. Although the country is very interesting and the people very nice, we have no notion of making this our permanent home.

Sincerely,

Marie.

(To be continued.)

A WONDERFUL SHAWL.

THE Czarina has a shawl which she values very highly. It was sent to her by the ladies of Orenburg, a town of Southeastern Russia. It reached her in a wooden box with silver hooks and hinges, the outside being embellished with designs, spears, turbans, whips, etc., on a ground of blue enamel, that being the color of the Cossack uniform. The shawl is about ten yards square, but it is so exquisitely fine that it can be passed through a ring, and when folded makes a small parcel of a few inches only.

The Q. & A. Department.

What is meant by a ship going twenty knots an hour?

A "knot" is a nautical mile or 6,085.889 feet. A statute mile is only 5,280 feet. The term "knot" refers to a division of the log line which is used to ascertain the vessel's motion. The log consists of a log chip and the log line. The chip is a piece of board shaped like the fourth part of a circle loaded with lead on the round side, so that it will stand up in the water. The line is about one hundred fifty to two hundred fathoms long and is wound up on a large reel, so held as to let it run out easily. A fathom is six feet. The line is divided into equal parts by bits of string run through it, from which the name known is given to the divisions. When the chip is thrown overboard it stands still and draws out the log line as fast as it unwinds, and the speed of the ship is shown by the number of knots that run out in half a minute. The actual length of a knot is 47.3 feet, and when it is known how many run out in half a minute it is easy to calculate how many would run out in an hour. The record of the heaving of the log and of all other important things happening on shipboard is kept in a book called the log book.

❖

Recently, in looking across an open field, when the mercury stood at zero, I saw what looked like waves of heat, as it is often called. It was very readily seen and lasted fifteen or twenty minutes. Please explain the phenomenon.

What you saw was practically what may be seen in the summertime. It was caused by a rapid change of temperature. The earth was not the same temperature as the atmosphere and the rapid change which the atmosphere was undergoing made it perceptible to the naked eye.

❖

When was the Erie Canal built and what places does it connect? Also give its cost and dimensions.

The Erie Canal was completed in 1826. It connects Albany and Buffalo, N. Y. The cost of construction was \$52,540,800, and it is 387 miles long, 7 feet deep and has 72 locks.

❖

What is the address of Andrew Carnegie?

No. 2 East 91st St., New York City, N. Y., U. S. A. Skibo Castle, Sutherland, North Britain.

❖

Please give names and height of some of the world's loftiest structures.

Eiffel Tower, France, 985 feet; Washington Monument, 555 feet and 6 inches.

In what part of Ohio was the battle in which the Indians defeated General St. Clair, and is the place marked by a monument or otherwise? Where did St. Clair die and where was he buried?

The defeat of St. Clair, Nov. 4, 1791, took place in the southwest corner of Mercer county, Ohio. The battlefield is now occupied by a town known as Ft. Recovery. It is on the south bank of the Wabash river, one and one-half miles east of the Indiana State line and fifteen miles southwest of Celina. St. Clair was removed from office on political grounds by President Jefferson in 1802, when he returned to Ligonier, Pa., where he lived for a time on an annuity of \$600 and a pension of \$60 a month, but his pension was seized by one of his creditors. He was ultimately driven out of his house to barren lands five miles distant from it, where he supported himself and his daughter by selling supplies on the roadside to wagoners who traveled by. He met death by accident, having been thrown from his wagon; was found dead on the road, Aug. 31, 1818. The Masonic lodge has erected a monument over his grave at Greensburg, Pa., with this inscription: "The earthly remains of Major General St. Clair are deposited beneath this humble monument, which is erected to supply the place of a nobler one due from his country."

❖

What part of New York is Blackwell's Island? How many acres does it contain, and why was it so called?

It is in the East River, and is a part of New York City. The city lunatic asylum, workhouse, almshouse, penitentiary, smallpox, charity and fever hospitals, also separate hospitals for incurables, for epileptics and paralytics and an asylum for blind are located on the island. It has an area of 120 acres, and was named after a family which long owned it. At its north end is a stone lighthouse, with a fixed red light, which is fifty-four feet above the sea.

❖

When did Jenny Lind, the singer, make her first tour of America, and who brought her to this country?

In 1849, under the management of P. T. Barnum. She was born at Stockholm, Sweden, Oct. 6, 1821, died at Malvern, England, Nov. 2, 1887.

❖

Does Japan uphold any great principle?

Only the principle of commercial expansion, which is now digging the Panama canal.

❖

When did James Watt build the steam engine?
1782.

MISCELLANEOUS

IF I BUT KNEW.

SELECTED BY B. F. GOSHORN.

If I but knew that somehow, somewhere, I
Had dried a tear or lessened sorrow's sigh,—
Had slaked the thirst of parching fever's lips,—
Or led some soul through trial's dark eclipse,
Then I should feel life's mission had been true,—

If I but knew!

If I but knew some heart this side the tomb
Had by mine act been rescued from the gloom;
Or that one life had grown in noble deeds
Because somewhere I'd sown some worthy seeds,
The thought would drive dark clouds from out life's view,—

If I but knew!

A STRANGE PREACHER.

THERE was once a minister of the Gospel who never built a church.

Who never preached in one.

Who never proposed a church fair to pay the debts with which the church was burdened.

Who never founded a new sect.

Who was known to have drank wine with sinners.

Who never received a salary.

Who never asked for one.

Who never wore a plug hat or a white necktie.

Who never used a prayer book.

Or a hymn book.

Or wrote a sermon.

Who never hired great musicians or singers to draw people to hear the Word.

Who never went through a course of theological study.

Who never was ordained by the church.

Who never was even converted.

Whose abiding places were always among the poor.

Who made no distinction between sinful men and sinful women.

Do you know who this strange preacher was?

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,

Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

Brethren, Mich.,

RESIDENT AGENT

Michigan Land Association.

The 3=C's of Business Competition

"Money Saving Prices" is a hackneyed phrase true in but a few instances. Of forty competing merchants in a town each claims the lowest prices. Investigation proves that their prices are almost alike. **They Must Be. They Are Standard.** All these forty merchants buy their goods from the same or similar sources. Their expenses of business are practically the same.

Business acumen and shrewd management obtains advantages in buying goods and saving expenses as against inferior management; but the advantages gained by good management are not shared by the buying public. They simply make more money for that particular merchant. Money Saving Prices. Prices that save the consumer money—Prices that are really "Money Saving" can only be established by doing business on a New System. These forty merchants operate under the Old System. They are bound hand and foot by conditions.

Combination

The department store—a combination of small stores—established lower prices, because it did business on a New System, the main feature of which was to sell many things to the same customer. This New System became very popular because it meant convenience to the buying public; the large purchasing power, backed by ability to pay cash for goods, established a lower standard of prices with manufacturers.

The people benefitted because the goods cost less to produce, cost less to sell, and the large volume of business at half the profit still meant greater net profits to the Combine. The people quickly saw their opportunity to save their hard-earned money, and so the combined stores secured their trade because the New System made lower prices.

But its patronage was limited, so the next step in this commercial evolution was the Mail Order Department Store. It burst the limitations of city patronage and successfully appealed to the entire country. Here, again was a New System of Trading, a New Plan, and again Prices tumbled.

Co-operation

Now commercial evolution takes its final step in organizing the Mail Order Department Store on the Co-operation plan. An entirely new and original plan aiming to sell still more goods to still more customers, through the interested personal selling force of thousands of co-operators in every section of the country.

Co-operation makes a new and much lower standard of Prices; it reduces the cost of selling, and returns to its interested shareholders not only all the excess profit they have paid on their own goods, but their proportionate share of the profits made on the sales to the country at large.

Our plan of Co-operative dealing and profit sharing is entirely original with Mr. H. P. Albaugh, President of our Company, and has never been used in connection with any other business enterprise. The plan has been universally pronounced "Co-operation reduced to a Science."

That American consumers are quick to see an opportunity to save their hard-earned money is shown by the instant appreciation of the advantages offered by Scientific Co-operation. While nearly 1500 Christian people have already become financially interested in our Co-operative Company, it can safely be predicted from the present rate of increase that hundreds more will become interested during the ensuing 12 months.

If you want to know more about this New Plan of co-operative dealing and profit sharing, address our President, Mr. H. P. Albaugh.

The Sick Made Well

—A CURE THAT NEVER FAILS—

YOU NEED NOT SUFFER LONGER.

I hold in my possession the secret
whereby any one having female weak-
ness, falling of the womb, leucorrhoea, in-
flammation, ulceration, irregular painful
menstruation, nervousness, headache, in-
digestion, liver troubles, constipation,
piles, fistula, catarrh, etc., can be cured
at home and thereby save big doctor
bills and embarrassing examinations.
I do not ask you to buy a patent medi-
cine, nor to try a free sample.

I HAVE NOTHING TO SELL.

I suffered for ten years, had tried
many advertised remedies, and subject-
ed myself to the humiliations which
doctors usually require of their pa-
tients; and all without being benefited.

Finally, by the help of a noted Ger-
man doctor, I discovered the secret
whereby I was cured, a simple home
treatment, which has cured thousands
of others where everything else had
failed.

SEND NO MONEY.

My great desire to help others justifies
me in sending full information, con-
cerning this secret, FREE to every-
body.

Real Estate in Kansas

If you are thinking of changing lo-
cation you had better come to Kansas,
where you can get land at reasonable
prices and raise nearly all kinds of
crops, fruit and vegetables, and be close
to railroads, churches and schools.
Farms from \$25 to \$60 per acre, accord-
ing to improvements and locations.
Write for full description of special bar-
gains.

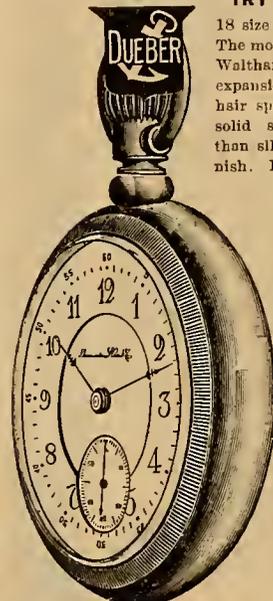

N. P. J. SONDERGARD,
Marion Co. 14113 Ramona, Kans.

ATTENTION!

Are you interested in receiving full value for your
money? Are you opposed to paying jobber's and
middlemen's profits? If so, let us have a little con-
fidential chat. We deal with manufacturers; we buy
large amounts; we pay much less for goods than local
dealers; we simplify your dealing with us so that you,
at a distance, can do so just as easily as stopping into
a store to buy. If you are interested in Watches, Sil-
verware, Fountain Pens, etc., send for our special
catalogue No. 127. Keep your express and freight
receipts and turn them in the same as that much cash
on next order. See full explanation in large catalog.
Our goods must be entirely satisfactory to you or we
or we refund the money. We can fill your order for
most any make or grade watch, though you do not see
it in our catalogue. Be sure you get the value of your
money when buying silverware. There are different
weights, especially in spoons. Get the best Rogers.
They are fully guaranteed. You run no risk.
We also call special attention to our line of fine
Fountain Pens. Everything in our jewelry depart-
ment must be just as represented or no sale; send us
your order and be convinced.

UPPER PENINSULA LAND CO., Ltd.,

F. J. MERRIAM, Gen. Mgr., 935 First
Nat'l Bank Bldg., Chicago, Ill.

Howard Miller, Elgin, Ill.

Des Moines, Iowa, April 26, 1905.

Dear Bro.:—I have just returned from a visit to the lands you represent in the Upper Peninsula of Michigan. I have purchased a half section of the same, near Rudyard, with the expectation of making it my home in the near future. The soil here is a rich clay loam, from 60 to 300 feet in depth. Hay is the great farm crop at present, and a constant cropping from the same ground for twenty-four years is said to show no diminishing of the yield, which is from 1½ to 2 tons of timothy, and from 2 to 3 tons of clover per acre. The crop is always heavy, as the ground in winter is covered with snow, which prevents heaving, and drouths are unknown. Other farm crops, except corn, are equally profitable, and some of them probably more so, but hay being the easiest farming done, is the most prevalent crop, here, and the farmers seem satisfied with it. The market for it is good, and if nothing else were grown the yield obtained would fix a value to the land of from \$50 to \$75 per acre.

The great vegetable crop is potatoes. In fruits, red raspberries and strawberries run riot everywhere, in a wild state. Peas take the place of corn for fattening, and are sown broadcast, with a resulting yield of from 25 to 40 bushels per acre. Most other vegetables, fruits and grains are successfully grown, but the ones named have been made a specialty, and seem to be so unusually successful that the farmers have not tried to explore the possibilities of the land in all lines. All staple crops common to central United States seem profitably grown except in grains, corn; in vegetables, tomatoes; and in fruits, peaches. The country is well watered, and stock of all kinds do well, and sheep remarkably so.

All the residents say that the south-of-Rudyard-district, where I purchased, is the best soil in the largest body in the upper peninsula, and the country is dotted with farms in a high state of cultivation. There is quite a bunch of wild land in this region from 4 to 8 miles from Rudyard, along good graded roads, with schools near. This is in what is called "the flowing-well region." That is, here wells may be had at a cost of from \$35 to \$100 which flow out above ground the year round. The flow is sometimes raised to the second story of a house with pipes. The water is clear and usually quite soft.

I saw the country at the worst season of the year for looks, and the looks were against it. Timber, timber, and still more timber, and brush without end, in the wild tracts, along good roads. A formidable-looking task is the clearing of it for farming, but investigation proves that it is not as great as it appears to a man from the prairie. The wood is soft and cuts rapidly, the roots run on top of the ground and stumps sprout but little, and they are easily pulled, and there is a profitable market for most of the timber. Were the work of clearing the average wild lands in the Rudyard district hired, an estimate of the cost, to get it into cultivation, is about \$10 per acre, according to the people here who ought to know. The best of the land can be had for from \$5.00 to \$10.00 per acre from the Upper Peninsula Land Company, in this section, and the net value of the timber often runs as high as \$500 per acre. That is, it may be sold in the tree at that price. Therefore, while the task of clearing is considerable, the land has a financial value of from two to three times its cost, based upon its yielding capacity, as already shown, and the excellent markets of the Upper Peninsula. If a person does his own clearing, the cost of the land is a trifle and the wood from the land will make his living as he works.

I think the South-of-Rudyard district ought to be taken up by our people rapidly, as I understand this spot will be reserved for them for a short time, and there is no like opportunity open anywhere else to get as rich land as there is in the United States at such cost, were the work of clearing even hired.

The health of the country is excellent. The winters are long, but not usually severe. Last winter the United States Weather Bureau gives the lowest temperature at any time as 21½ below zero. The summers average about two weeks shorter than in central Iowa, and nights are always cool.

I expect to make this my permanent home and would like to have others of our members here with me. There is a splendid market for butter, eggs, poultry, vegetables, fruits and grains. There is a constant demand for heavy horses in the lumber camps, at \$500 per team. Society here is splendid and our people will find a congenial social home in it.

Fraternally,

John E. Mohler.

In going to the Upper Peninsula see that your ticket reads over the North-Western railroad. There is no other way of getting there direct. It connects with the "Soo" line, along which the Rudyard district lies.

At the very last this: Address all letters of inquiry to,

HOWARD MILLER,
Elgin, Illinois.

C. S. Morey Makes Remarkable
Prediction in Regard to Beet
Growing Here.

"Colorado as a beet sugar producing state will soon leave Michigan far in the rear, if the present developments continue."

This assertion was made this morning by C. S. Morey, head of the Morey-Boettcher syndicate. He has just returned from a trip to the East. While there he made arrangements for the transfer of one of the largest Michigan factories from Saginaw to Sterling, Colo. The new factory will have a capacity of 600 tons and will give employment to hundreds of men.

This will make the seventh beet sugar factory in the South Platte Valley owned by this syndicate.

SPRING MOHAIRS AT REDUCED PRICES

On account of a delayed shipment just received from ENGLAND, we are closing out these handsome light weight Mohairs at an astonishingly low price. They are 36 in. wide and of an excellent quality. The STOCK is VERY LIMITED and the LATE ORDERS may have to go UNFILLED. After what we have laid in stock has been used, we may not be able to procure any more. A hint to the wise is sufficient. Write for samples at once.

The colors are a pretty dark brown with a raised silk "splash" in self color; a very light champagne color, almost a cream, with a self color raised silk "splash"; a green check on a background of blue, and black with a small figure in silk. They are very handsome, the patterns being selected by a lady, who, naturally, knows best what would suit another lady.

While they last, per yard.... 45 cents

ALSO, a few pieces of Gingham, pink with a white stripe; a large fancy green and white check with a black line; a large fancy check in pink and white; a large fancy check in blue and white; plain blue; small pink and white check; plain pink. Price to close, ... 10 cents

A few yards of Summer Dress Goods in light tan and white with an open work check and the stripe one way in silk. Price, 25 cents

A few yards of Summer Dress Goods with an open work stripe. Color, black with a small white figure. Price, 12½ cents

A few yards of plain Basket Weave for shirtwaists or dresses for summer, in white. Price, 21 cents

A few pieces of Calico, dark blue, with a white dot; red with a small white dot close together; pink with a clouded white stripe; gray with a black and white design, and plain pink. Price, 5½ Cents

One piece of Percale in red, with a white flower and vine. Price, .. 7 cents

One piece of Percale in buff, with a tiny red and green flower and a scroll design in white. Price, .. 9 cents

One piece of white Vesting for shirtwaists with a fancy stripe in self color. Price, 19 cents

One piece of Silk in turquoise blue with an inch wide lacey stripe in self color. Price, 41 cents

One piece of Persian Lawn, good quality. Price, 15 cents

One piece of extra fine dainty India Linen. Price, 40 cents

Two pieces of fine Mohair in navy blue. Price, 70 cents

One piece of very dark blue Mohair, excellent quality. Price, 67 cents

A few remnants of Broadcloth and Fancy Suitings, length ranging from 1 to 3½ yards in all the leading colors. They are of an extra fine quality and the price which we quote is at a loss to us. In order to get them off of our shelves. Price, 75 cents.

Note.—From now on we intend to give the readers of the Inglenook, and our friends, the benefit of the low prices which we are forced to make on remnants and dress goods in small quantities. Watch for them!

DR. PETER'S BLOOD VITALIZER

Is one of the best blood medicines yet discovered. Health depends more or less on the condition of the vital fluid. The Blood Vitalizer eradicates from the system all poisonous germs and thereby heals skin diseases, salt rheum, eczema, boils, etc.

It cures disorders of the stomach, the liver and the kidneys.

It keeps the vital organs in healthy condition and compels them to perform their functions with regularity.

It enriches the blood, thereby strengthening the brain, which is the center of the nervous system.

It cures dyspepsia, the prevailing malady of the modern age.

It speedily neutralizes the uric acid in the blood, curing rheumatism in all its stages.

It invigorates the weak and the aged, giving them a new lease of life.

It is not a drugstore medicine, but can be procured from special agents or direct from the proprietors,

DR. PETER FAHRNEY & SONS' CO.,

112-114 South Hoyne Avenue,

CHICAGO, ILL.

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime. (Signed) E. L. Dotson.

LYRICAL LINER'S HOME-MADE POETRY.

Equal Rights.

Sometimes the folks at home'll spile
A kid into a monarch pet,
That's how it come for such a while,
My way, by force, I tried to get.

And, when away from home I'd go,
I'd set my foot hard on the ground,
Surprised to take it up, you know,
Without impressin' them around.

Then I'd get mad and pile right down,
And, for the world, I wouldn't budge,
To find the world would just roll on,
And leave me poutin' with my grudge.

I heard them say that folks like me
Cut off the nose to spite the face,
I didn't know how that could be,
But wondered if it was my case.

But finally I come to learn,
Whether or not things suit my eye,
To leave the table 'fore my turn
I only miss my piece o' pie.

While other folks are needin' room
As well as I am, I can see
We have to kind o' keep in tune,
And, where our song's alike, agree.

And when I see another stride
His mule, and ride o'er ev'ry plan
To gain his own, I'm satisfied
Mine died; and I became a man.

*

What is the use of trying to be better than other people? Let's charge about and try being better than ourselves.

Hagerstown, Ind.

INDUSTRIAL WORK IN INDIA.

BY D. L. MILLER.

Part Two.

THE turning lathe is perhaps the greatest curiosity of all the tools found in the hands of the native workmen. In construction it is simplicity itself. A short post is driven firmly into the ground into which a nail has been driven and filed to a point to hold in place the wood to be turned. Another post with center point is mortised into a two by four piece of scantling to which at right angles is nailed a board three feet in length. The piece to be turned is centered between the posts and held in place by the iron points which allow it to turn. The operator sits on the board, thus holding the movable post firmly in its place. He has in his hand a thin stick about four feet in length with a heavy cord attached to both ends reminding one of a bow with string loosely attached. The heavy cord is loosed at one end of the stick and wrapped once around the piece of wood to be turned and again fastened at its place. In wrapping the slack in the string has been taken up and it is given a firm hold on the object to be turned. The man seated on the board draws the bow in his hand back and forth thus causing the wood to be turned to revolve rapidly. With his disengaged hand and toes he guides the chisel back and forth and proceeds with his turning operation, doing some surprisingly neat work with his primitive lathe. It takes much time to perfect

the leg for a table but time is not considered by the workman and he is content.

The ordinary handsaw is used here but it takes two men to run it. In order to expedite the work a second handle is fastened to the small end of the saw. There is also this difference, our saws do the cutting as we push them away from us, the India saws cut in the opposite direction. The men sit on the ground with the board to be sawed in two set on edge between them where it is held firmly in place by the feet of the sawyers, and then by dint of pushing and pulling the sawing is done. Given a good carpenter from home, with a sharp handsaw and a pair of trestles on which to work and he will cut as much lumber to length in a day as two of these men, with their primitive methods, can saw in a week.

The other day a beginning was made on the new industrial building to which those in charge have been long looking forward. A few hundred dollars' worth of modern machinery is now on the way from Rockford, Ill., such as turning lathes, circular saw, mortising machine and other needed tools, and it is for the housing of these and the better accommodation of the weaving and other industrial activities that the new building is needed. The plan of construction required the digging of a number of post holes two feet square and three feet deep. Two men were put at this work and of course they sat down to do the digging.

The tools used were a common narrow rock drill, two short-handled, heavy hoes and a pan into which the earth was scraped and thrown out. One man very slowly and deliberately pried the earth loose and the other removed it with hands and hoe, each waiting while the other did his part of the labor. They began in the morning and about noon, when I saw them, were still at work on the first excavation. I inquired how many holes they had dug and Brother W. R. said, "When they finish the one they are now working at and another they will have two done." As a matter of fact the two finished one hole and partly dug

POST HOLE DIGGER.

another in one day, and later on I learned that three holes were dug in two days. The men receive three annas a day, which is equal to six cents, and the setting of the posts is quite expensive as compared with similar work at home where a good workman with proper tools would dig, in the same kind of earth, at least forty holes a day. So it turns out that when you pay six cents a day for labor you get less than six cents' worth of work done.

Among the common people all the grinding is done on the little hand mill and every day you may hear the sound of the millstone in all the land. At the orphanage at Bulsar all the meal used to feed two hundred and twenty-five boys and girls and men and women is ground on the hand mills, the girls and women doing the work. Here it is a common sight to see one or two women grinding at a mill, even more so than in Palestine, for the last score of years has brought many changes to the land where the Book was written and nowadays steam mills are being introduced and slowly but surely the old way of grinding is falling into disuse. Not so in India where probably three-fourths of all the meal and flour used is ground by the women on the hand mills. Within a hundred feet of the open door of the room in which I write is a native hut and each afternoon the women

grind the day's supply of meal, for sufficient unto the day is the labor thereof, and they never do to-day what can be put off until to-morrow. So every day I hear the sound of the grinding and it is a sign that the poor people have at least food for the day. In Bible times the sound of the millstone was taken as an evidence of plenty and when this familiar sound ceased it was because the famine shut off the food supply and the same is true here.

Examples of how work is done here might be continued at wearisome length and one more must suffice for the present. Here are the men who cut and split the wood for use in the kitchen, and by the way these several occupations have become a set, fixed work for those who follow them. If you want sawing done you must get the sawyer, if wood is to be sawed and split for the use of the cook, you must get the men whose business it is to do that kind of work. These occupations finally have become a kind of a caste among the people and the sons follow the line of work of their fathers, and it is a rare thing that one gets away from the trade of his ancestors. This state of things has its advantage in this that each become expert in the line of work they and their fathers have followed for centuries. The two men in the front of the picture have between them a heavy crescent-shaped saw, and seated as you see them, cut the logs into the requisite length and the men in the rear do the splitting. The axes used are dull, the handles thick and rough and the wood very hard to split, so that it takes a very long time to do the work.

"TWO WOMEN SHALL BE GRINDING AT THE MILL."
Photographed by W. R. Miller. All Rights Reserved.

It is the purpose of the manager of the industrial work to make a determined effort to change, to some extent at least, these slow, antiquated methods of doing things. He realizes that he has undertaken a hard task, but little by little he will accomplish what he has undertaken. Workbenches will be set up in the new shop, and the beginner will be taught to use saws

WOOD SAWING AND SPLITTING.—Photographed by W. R. Miller. All Rights Reserved.

and planes as we use them. This much accomplished, more and better work will be the result. The hope of India, industrially, is to be found in teaching her how to do more and better work and to teach her also the dignity of labor. These two lessons well learned, more work will be accomplished, better wages will be paid and the result will be a better condition among the people. It is to be hoped that in this labor to better the condition of the people in India those in charge of the work may realize their most sanguine expectations.

Bulsar, India.

THE TRUE STORY OF A WATCH.

THE year that I was fourteen I spent with my Uncle William at Mertonhill, to attend the high school. The town of Mertonville was made up of five villages. The high school, the railroad station and the principal stores were located at the largest village, so there was a good deal of teaming to be done, and my Uncle William had charge of this work.

Uncle William had a noble span of heavy gray horses, such great strong fellows that they could pull their loads from morning until night without overworking. I used to help uncle take care of the horses nights and mornings—feed and water and curry them and help harness. Didn't I just love to make their stalls cosy and inviting, and "bed them down" well, when they came in at night hungry and tired! Jerry and John were nice fellows to take care of. Saturdays I was off with uncle all day, at the station and everywhere, and helping him deliver the freight that came in for the townspeople and doing all sorts of heavy hauling.

One Saturday morning we had to start out unusually early, for there was a car load of lumber to deliver, and we knew we had a hard day's work before us, and I went out to feed the horses before daylight. I found it snowing, thick and soft, and it was still snowing when uncle came out, but already growing colder. It was what he called a "sap snow," damp and clinging, just right for snowballing.

When we went to water the horses we found that all the water had leaked from the trough in the barnyard. So we had to lead Jerry and John out to the big watering tub that stood near our house, on Main street. It was still very early and there were only two or three tracks to be seen.

As we stood there letting the horses drink, Mr. Clark came out of his store and came down the street, kicking the snow right and left, and closely hunting the foot-track he had made going up from his house.

"Hello! Clark—lost anything?" Uncle Will called, just as Jerry lifted his dripping mouth from the tub and wheeled about, stamping off the snow, to make room for John.

"Lost anything!" answered Mr. Clark, still poking in the snow, "I should think I had—and it's my new gold watch—that big hunter I showed you yesterday! It must have dropped from my pocket in the snow, along here somewhere, when I went up a few minutes ago. It was in my pocket, loose, for I wanted to put it on a new cord up at the store. I had it when I left home, all right, but I missed it right after I unlocked the store. I've been down to the house and back again, but I can't find it. Somebody has been along and picked it up, of course, and that's the last I shall ever see of it!"

"Oh, you'll find it at the store, all right!" Uncle William said, "for no one has passed in your tracks, only Dick and I and the horses, as far as the watering tub. You haven't seen anybody, have you, Dick?"

"Nobody but Ira Bean," I said. "He went by just as I opened the barn. He was hurrying to get on the freight—he has to go to town for his mother's medicine."

"Well, then, that boy's got the watch!" declared

Mr. Clark. "It's five minutes yet till the freight comes in, and I'll get to the station and overhaul him!"

"Overhaul who?"

It was the Professor, hurrying by, but he paused.

"Ira Bean," replied Mr. Clark. "He's picked up my watch somewhere in this snow." And then he told the story. "Dick here saw him go along soon after I went up to the store, and nobody else has been along since, and if he's going to the city of course he'll trade it off. I'm going up and overhaul him on the spot."

"Ira Bean!" repeated the Professor. "Why, he's the most honorable boy in school, Mr. Clark. And all the evidence you've got is that you think you've dropped your watch in the snow, and that you've been along here, and that he's been along here! Overhaul nobody, Mr. Clark!"

"I know he's got it!" repeated the storekeeper. "Of course, if he saw it he'd pick it up. His mother's sick, and they're poor, and he'll sell it to-day in the city. I've got to prevent it here on the spot." And he turned toward the station.

The Professor laid his hand on Mr. Clark's arm. "See here," said he, "Ira may have picked it up, but you've no evidence. It would be rather rough on a young fellow to walk into the station and accuse him, and make a scene! Now, I'm going to the city on the freight, and I'll quietly keep an eye on the boy, and I'll promise you, Mr. Clark, he don't sell your watch without my knowing it."

"Yes," said Uncle William; "and to-night, Clark, if you don't find it in the course of a day, the Professor and I'll talk it over with Ira and see if he's known of anyone picking up a watch."

And I put in my voice. "Do wait, Mr. Clark!" I said.

I was filled with horror at the idea of Ira Bean's being questioned at all. Ira would have gone to somebody and told of it if he had found a watch lying in the snow, in our little village. Ira was younger than I, only thirteen, but a proud little fellow.

Mr. Clark, still angry at what he called "being prevented," by the Professor, walked away. "I guess I'll go along to the city too," said he. Uncle and I hurried in to breakfast and then went up to the station and got our load and set off.

We had a hard cold day of it, for it began to freeze long before noon, and it was considerably after dark, about seven, before we got home. We heard the whistle of the freight just before we drove in. Ira passed, in haste, just as I was setting the barn doors open, and spoke. The Professor came along afterwards, and Mr. Clark came too, presently, and came into the barn.

"You've got home, too, have you?" said Mr. Clark. "We'll go right over. You hain't heard of

any gold watch being found to-day, I suppose?" he asked my uncle.

"No, I haven't," Uncle William said.

"Didn't expect you had," said Mr. Clark. "The young scamp. He's got it fast enough. Anyway he'll have to give an account of himself. Dick here saw him go by, right up past the store. And you didn't see anybody else pass, now did you? We shall want you to come along with us, as a witness, Dick."

I felt heartsick at the thought of going over to Ira's house on such business. I said nothing. I had turned Jerry into his stall—Uncle William was taking care of John. I had just hung up Jerry's harness and was beginning to work on his feet—they were all balled up and caked with hard snow, and I was poking and prying at them with a sharp stick, when something dropped at my feet; and there, gleaming out faintly in a frozen cake of snow, was a gold object—and in less than a minute, at my call, we all saw what it was—a gold watch.

We all had hold of it in an instant, Uncle William, the Professor, Mr. Clark.

"Jehosaphat!" exclaimed Mr. Clark.

I couldn't see or speak, for I was all choked up with tears, and with laughing too.

Yes, it was Jerry's big scooping foot that had picked up the watch as we led him to water that morning. Yes, wedged so snugly and safely inside the curving hoof, and held so fast by the frozen hard-packed snow that it had not been one bit injured though driven over miles of the Mertonhill roads—there the gold watch lay, again in its owner's hand!

So none of us made a call on poor Ira Bean that evening.—*Clarissa Potter, in Little Folks.*

ELECTRIC LIGHT AND GOLD FISH.

SIR HERBERT MAXWELL, writing to the *London Times*, draws attention to a form of cruelty which, he claims, should be sternly discouraged. On a recent occasion he attended a most elaborately appointed dinner. The centre of the table was occupied by a crystal bowl in which were half a dozen gold fish. Among these an electric lamp had been introduced, and its strong light beat on the fish with an effect that must have been excruciating. Fish are extremely sensitive to light, not only in their eyes, but some of them over the whole surface of their bodies, as is shown by the faculty possessed by trout of altering their color according to that of the ground over which they swim. The peculiarity which renders exposure to strong light intolerable to fish is that they have no eyelids.—*Our Dumb Animals.*

WHEN Greeks joined Greeks then was the tug of war.—*Lce.*

RAILWAY MAIL CLERK'S EXAMINATIONS.

BY D. C. BOSSERMAN.

RAILWAY postal clerks are examined every six months on some one of the States of which they are required to distribute the mail.

This means they must learn on what railroad every post office in this State is situated, or supplied by mail. The chief clerk's method of finding out the mail clerk's knowledge, or of examining him, is a unique and practical test.

The offices are all printed on cards about the size of calling cards, on the backs of which, in a short-hand key, known only to the examiner, is the name of the railroad route. A number of small pigeon holes are labeled accordingly. The cards are very thoroughly mixed, so that seldom two alike (on the backs) are found together. The chief takes the time, and the sometimes trembling clerk proceeds to put each card into the case, under its proper label.

There are usually about from 1,000 to 2,000 cards in one examination, the States being divided into sections when necessary. There are usually about ninety separations to be made. On an average the clerk can "throw" a thousand cards in thirty minutes.

When the clerk is through, the time is again taken, and the examiner scans the back of every card to see if it corresponds to the label. All that are wrong he places back in the box where he found them. These errors are then counted, and a grade is made on a basis of 100 per cent.

The clerk is expected to make a grade of about 99 per cent, though 95 is passing. So, in an examination of a thousand offices, he ought not to make more than ten errors. And quite a number are able to make 100 per cent. This is recorded, and counts when time for promotion comes.

To give an idea how difficult it is to pass a perfect examination, I will show how similar the offices are in certain States. In the Territory of Oklahoma there are already Fair, Fairfax, Fairmont, Fairview, Fairbanks, and Fairvalley. In Ohio there are forty-nine offices commencing with the prefix *West*: Westfield, Westrichfield, West Clarksfield, West Williamsfield, Westville, Westerville, West Rushville, West Woodville, Westboro, Westpark, Westview, et al. And you must remember that Roy and Ray are different, Colton is in the north and Coalton is in the south part of the State, and that Lewisburg and Louisburg are not the same office. In the case of the separation into counties of Ohio, the mail clerks learn that New Athens is in Harrison county, Harrison in Hamilton county, Hamilton in Butler county, Butler in Richland county, Richland in Vinton county, and Vinton in Gallia county, etc., while many are in the county of the same name.

It is hard to remember that George is not in Washington county, Robert is not in Fulton, and that Pierpont is not in Morgan.

5321 Minerva Ave., St. Louis, Mo.

BIBLE INTERPRETATIONS.

THERE is no part of Africa, Egypt being excepted, the history of which is connected with so many objects of interest as Abyssinia. A region of Alpine mountains, ever difficult of access by its nature and peculiar situation, concealing in its bosom the long-sought sources of the Nile, and the still more mysterious origin of its singular people, Abyssinia has alone preserved in the heart of Africa its peculiar literature and its ancient Christian church. What is still more remarkable, it has preserved existing remains of a previously existing and widespread Judaism, and with a language approaching more than any living tongue to the Hebrew, a state of manners and a peculiar character of its people, which represents in these latter days the habits and customs of the ancient Israelites in the times of Gideon and of Joshua. So striking is the resemblance between the modern Abyssinians and the Hebrews of old that we can hardly look upon them but as branches of one nation; and if we had not convincing evidence to the contrary and knew not for certain that the Abrahamidae originated in Chaldea, and to the northward and eastward of Palestine, we might frame a very probable hypothesis; which should bring them down as a band of wandering shepherds from the mountains of Habesh ("Habeshinia"), and identify them with the pastor kings, who, according to Mantheo, multiplied their bands of the Pharaohs, and being, after some centuries, expelled thence by the will of the gods, sought refuge in Judea, and built the walls of Jerusalem. Such an hypothesis would explain the existence of an almost Israelitish people, and the preservation of a language so nearly approaching to the Hebrew, in intertropical Africa. It is certainly untrue, and we find no other easy explanation of the facts which the history presents, and particularly the early extension of the Jewish religion and customs through that country.

OBEYING ORDERS.

MR. CHITTENDEN tells an anecdote in his "Recollections of President Lincoln," which illustrates how ready the President was to obey orders. Mr. Chittenden had gone out to Fort Stevens, anticipating an attack on Washington from the Confederate forces under General Early. As he entered the fort he was surprised to find there President Lincoln and Secretary Stanton.

A young colonel of artillery, the officer of the day,

was in great distress because the President would expose himself. He had warned Mr. Lincoln that the Confederate sharpshooters had recognized him and were firing at him, and a soldier near him had just fallen with a broken thigh. The officer asked Mr. Chittenden's advice, saying that the President was in great danger.

"What would you do with me under similar circumstances?" asked Mr. Chittenden.

"I would civilly ask you to take a position where you were not exposed."

"And if I refused to obey?"

"I would send a sergeant and a file of men, and make you obey."

"Then treat the President just as you would me or any civilian."

"I dare not. He is my superior officer; I have taken an oath to obey his orders."

"He has given you no orders. Follow my advice and you will not regret it."

"I will," said the officer. "I may as well die for one thing as for another. If he were shot I should hold myself responsible."

He walked to where the President stood. "Mr. President," he said, "you are standing within range of five hundred rifles. Please come down to a safer place. If you do not, it will be my duty to call a file of men and make you."

"And you would do right, my boy," said the President, coming down at once. "You are in command of this fort. I should be the last man to set an example of disobedience."

The President was conducted to a place where the view was less extended, but where there was almost no exposure.—*Selected*.

LEARN TO DO ONE THING WELL.

ALMOST every working day in the year I am called upon to receive some young man who comes to me highly recommended for a position in our establishment. My questions to such applicants are somewhat in this vein:

"What can you do?"

"I can do anything, Mr. Ogden. I am an all-around man, and have filled many responsible positions."

"Can you take charge of our silk department and buy to advantage in the open market as well as sell in our store?"

"Well, no, I do not understand the detail of buying silk."

"Can you go down in our shipping department and take charge of the general freighting of goods, or direct our city deliveries?"

"I have been a shipping clerk, but I am afraid I couldn't quite take all the responsibility of the shipping department."

"Perhaps you can assume the management of our interior decorations department and suggest to patrons harmonious color schemes for floors, walls and draperies?"

"I am afraid I couldn't do that, sir. I can sell carpets and wall paper, but I don't understand interior decorating."

And it all ends in placing the name of the man on our waiting list as an ordinary salesman, if he is thought to be worth employing at all. They all know something about everything, but only once in many cases do I find a man who knows "everything about one thing."

There is no department of human activity in business or the professions where failure is not due to the lack of thoroughness.—*Saturday Evening Post*.

FOR THE LAST TIME.

DOES it ever strike you, my dear reader, that there will be a last time for every one of the common things which you do day by day? You will rise some morning and go to your work for the last time; some evening you will go to rest for the last time; the day will come when you will eat your last meal, take your last walk, read your last book. There is not a thing you are doing now that you will not some day do for the last time. And this, whether the thing be good or bad.

Do you frequent a place of worship? Some day you will go there for the last time. Do you neglect the house of God? Some Lord's Day you will hear the bell ringing and, as usual, pay no attention to it, and never hear it again. Are you a drinker? The day will come when your foot will cross the threshold of the dram-shop for the last time. Do you swear? Some day an oath will pass your lips, and, little as you may think so, will be your last.

O reader! when you have slept, and risen, and eaten, and drunk for the last time—when you have looked your last, and breathed your last, where will you be? Do you think of it every day and make it your first concern? Remember that solemn parable of our Lord in Luke 13: 6-9. Perhaps you have been like that fig tree, without fruit, and perhaps another year's trial has been allowed you, and this, it may be, is that last time of grace obtained for you, and when this is gone no more will be granted.

And what if it should be all in vain? What if this should be your last opportunity, and you should neglect it? What if the end should be close at hand, and you should remain careless and hard, impenitent, unpardoned?

I beseech you by the mercies of God, do not turn away from these thoughts, but think now of the time.—*Western Christian Union*.

FOLLOWING THE CROWD.

BY RILLA ARNOLD.

ONE Sunday morning when it was time to get the children ready for Sunday school, little Carl, five years old, could not be found. The family lived in a flat over a store in a little country town and as the street was Carl's playground, not much uneasiness was felt when it was discovered that he had run away, for it was not the first time.

In about an hour the little dirty-faced boy came home. "Where have you been, Carl?" asked his mother. "I was to Sunday school," the little fellow answered proudly. "Which church did you go to?" the astonished mother asked. "O, I don't know, I jes' follered the crowd."

How much grown up people are like this little boy, they have such a desire to follow the crowd. Only a few people have the will power to break away from the crowd and go in another direction, although they know it is leading them to a far different place than Sunday school.

In one town the crowd leads to one church, in another to some other church, and in some towns the public sentiment is so low it does not lead to any church—it goes no higher than the saloon, dance hall or card party. You ask some people what church they belong to, and they say, "O, I always hand my letter in to the most popular church in the town where I live. I find it pays to go where the crowd does, it helps my business." When those people move to a town where the crowd goes to dances, etc., they do not find it worth while to unite with any church.

O, yes, it's easy to follow the crowd! It takes no effort whatever. It is like sitting in a boat with folded arms, drifting, drifting, drifting. It is much easier than rowing against the current of public opinion.

What a god we do make of public opinion! A young lady was convinced that a certain principle of living was right, but she was too weak to break away from the crowd. She said, "I am not proud, but I just can't bear to be called 'peculiar.'" If that is not pride, pray tell us what is.

Why should we hate to be called peculiar? Do you suppose Socrates, Plato, Martin Luther, Alexander Mack, Oliver Cromwell, Patrick Henry, Lincoln, Clay, and scores of other religious, social and political reformers of different countries and ages, hated to be called peculiar? No, they were true to their convictions. They fought for the right and how strong it made them! It always makes us strong to fight for the right.

My dear young friends, live true to your ideals, stand firm on your convictions of right and wrong, whether on religion or the social questions of the day, and if you are called *peculiar*, consider it the greatest

compliment you ever received. It should only prove to you that you have strength of character, which is far more valuable than a great talent even, for without it talent is never powerful.

Cultivate a strong personality. Live your own life, do not spend your time trying to imitate some one else. Think your own thoughts, speak your own words and you may not be popular with the crowd, but you will win the respect of the people who are really worth while, the people who think.

AFTER NINETY-NINE YEARS.

BY F. G. WINE.

THE following is the marriage bond of David Crockett, taken from the original in the courthouse at Dandridge, Jefferson Co., Tenn.:

Know all men by these presents that we David Crockett and Thomas Doggett are held and firmly bound unto John Sevier Governor and his successors in office in the sum of Twelve Hundred and fifty dollars to be void on condition there be no cause to obstruct the marriage of the said David Crockett with Polly Finley.

Witness our hands and seals the 12th day of August 1806

David Crockett
His
Thomas X Doggett

"DON'T GIVE UP THE SHIP."

FROM the battlefield we get many daring examples. During the War of 1812, Captain James Lawrence won great reputation as a naval commander. He was placed in command of the *Chesapeake*, one of the strongest ships in the American navy. He put out to sea, but was soon challenged by a British ship, on which a dreadful conflict ensued. The *Chesapeake* was wrecked. In a few minutes every officer on board was either killed or wounded. Lawrence himself fell dying on the deck. As they carried him down the hatchway, he was heard crying out, "Don't give up the ship." These were his last famous orders, and became the motto of American sailors.

The ship was captured by the British, but who can estimate the value of the last words which fell from the lips of that dying man? They have been the watchwords of brave men from that time until now. Surely they have given courage to many a storm driven sailor, causing him to win far greater victories.

Just so in the great battle of life these words should be an inspiration to us. We are sailing out on the ocean of time, we think, in a strong vessel. At times

all is well, and we glide smoothly on as if nothing but good was in store for us. But when temptations arise, and this old ship is rocked and tossed by the storms of life, then our courage is tested; then do we hear the Captain cry out: "Don't give up the Ship!"

How easy for the little child, the schoolboy and girl, to form vast ideas of life. Nothing is too hard to accomplish, no ideal too high to attain. But, ah! too soon there comes a time when these childish dreams vanish away, and we find ourselves out in the world, confronted with the trials and difficulties of life. Then it is that we first learn the reality of life. The problems once solved by our teachers are now left for us to solve. We must now fight our battles single-handed. Many times we become discouraged and would despair but for those words, "Don't give up the ship."

We have an account of Robert Bruce, who, discouraged by successive defeats, one night reached a poor hut, under whose roof he chanced to rest until morning. He threw himself on a heap of straw and fell asleep. When morning began to dawn, he awoke, and gazing about, noticed the rafters of the old hut very much entangled with webs. Forgetting for awhile his trouble, he became intensely interested in a spider which was trying to swing itself from one rafter to another. Twelve times it failed, yet it tried again, and this time reached the much desired point. "Thirteenth time," cried Bruce, as he sprang to his feet. "I shall risk my life once more for my beloved country." The spider taught him a lesson, and he at last won the independence of Scotland.

The most glorious victories, the most famous warriors, are not those who gain every battle, but those who fight their way slowly but earnestly through many difficulties and defeats. He who would win the crown of a successful life must fight, and many times against overwhelming odds. Remember, labor is the key to success, which only a strong, resolute will can unlock.

Failures and temporary defeats only strengthen, as the storms cause the oak of the forest to strike deeper root, sending forth new strength and vigor to every branch.

It is easy enough to be pleasant,

When life flows along like a song;

But the man worth the while is the one who can smile,

When everything goes dead wrong.

For the test of the heart is trouble,

And it always comes with the years,

But the only smile that is worth the while,

Is the one that shines through tears.

Be cheerful. Always look on the bright side of life, and thus make sunshine within when there is none without. Patience is the weight of the soul to keep it from being tossed about by every wind of trouble. Don't look for too hasty results.

Remember, Rome, with her magnificent temples and towers, was not built in a day. These crumble into dust, but we want to build a temple to last for time and eternity. A character, spotless, undefiled, with unwavering faith in God. You may boast of the dreams of childhood, and glory in the achievement of early manhood, but the end crowns the work. A Solomon's wisdom may all be lost in a sad ending.

"He who stops where bright deeds are done,

May look for stars beneath the midday sun."

Trials may surround us, difficulties confront us, the problems of life be hard to solve, but "Don't give up the ship." Cling to the mast as long as life's lamp holds out to burn, and let your dying cry be to those behind: "Labor on, boys. 'Don't give up the ship.'"
—*Elsie Dotterer, in College Rays.*

ROMAN BOOKS.

THE form of Roman books was very different from ours. In those days, 8vos, 4tos, and folios were unknown. The "copy" or first draft of a book, was written on wooden tablets, (codices) coated on one side with wax, the pen being an iron or steel rod, or stylus, one end of which, like our modern school-pencils, had an appliance for erasing any word or phrase which it was desirable to alter. We know that Horace wrote his poems in this way. These tablets were arranged and copied by the *Scribæ* (Roman compositors), an intelligent and well-educated class of slaves, trained by their masters for the purpose. It is said that a leading Roman publisher would have as many as five hundred *Scribæ* in his employment constantly engaged in the production of books. Copying, illuminating, binding, book-selling, and publishing were processes all carried on in the important book-producing houses. Book-binding then was a very simple operation. Two tablets joined together with a bit of wire (the earliest instance of wire stitching), was the primitive form of a bound book. But when a book was made of papyrus, sheet pasted to sheet, until there was enough to make a roll or volumen, (hence our own word volume,) the work was bound by having its ends fixed to a pair of rollers, very much in the same way as we affix our wall maps. The Roman book had also frequently an elaborate title beautifully written in red ink. It is impossible to form a correct estimate of the extent to which book production was carried on in the Roman Empire; but that it was an expensive industry is evident from the various allusions to be found in contemporary literature. The works of Virgil, Horace, Ovid, Terence, Propertius, and Martial were widely known; and Martial, in one of his epigrams, says, "Every one has me in his pocket; every one has me in his hands." What more could any one say of Tennyson or Burns?—*Selected.*

MOUTH PARTS.

BY EDITH L. POTTS.

THE most important organs in the animal system are those relating to digestion. An animal can do without a circulatory or a nervous system, but it must eat in order to live and grow. The opening by which the food is carried into the alimentary canal is the mouth.

The structure of the mouth differs in the different animals, but in all Metazoa the mouth is due to an in-pushing of the ectoderm. The edges of the mouth are usually called the lips, but true lips for the first time appear in mammals.

The mastication of food is brought about in many different ways. The mouth parts vary in different kinds of animals. In some they are suited for biting, such as the grasshopper. In this insect there are three pairs of mouth appendages. First, the true jaws, or mandibles, which are single-jointed, and are broad, short, solid, with a tooth-cutting and grinding edge, adapted for biting. The mandibles are situated on each side of the mouth opening. Behind the mandibles are the maxillae which are divided into three lobes, the inner armed with teeth or spines, the middle lobe unarmed and spatula shaped, while the outer forms a five-jointed feeler, called the maxillary palpus. The maxillae are accessory jaws, and probably serve to hold and arrange the food to be ground by the true jaws. The floor of the mouth is formed by the labium which, in reality, is composed of the two second maxillae soldered together in the middle, the two halves being drawn separately. To each half is appended a three-jointed palpus, within the mouth and situated upon the tongue, which is a large membranous partly hollow expansion of the base of the labium; it is somewhat pyriform, slightly keeled above, and covered with fine, stiff hairs, which, when magnified are seen to be long, rough, chitinous spines, with one or two slight points or tubercles on the side. These stiff hairs probably serve to retain the food in the mouth, and are apparently of the same structure as the teeth in the crop.

The base of the tongue is narrow, and extends back to near the pharynx (or entrance to gullet) there being on the floor of the mouth, behind the tongue, two oblique slight ridges, covered with stiff golden hairs, like those on the tongue.

In some insects the mouth parts are suited for sucking as in the butterfly. They have a long coiled tube by which they suck nectar from the flowers. When not in use this tube is coiled like a watch spring and concealed between the labial palps. The sucking tube consists of two maxillae, much lengthened and each grooved along its inner surface, so that when the two

are closely applied to each other they form a tube. The mandibles are but slightly developed.

In some insects the mouth parts are suited not only for lapping, but also for rasping. This is seen in the common house fly. The mandibles and maxillae are rudimentary. The proboscis is composed mainly of the labial palps, which are developed into broad plates which serve for rasping also lapping. The fly cannot bite although it often lights on the human skin to lap up the perspiration.

The mouth parts of the beetle differ from the rest of insects. The head is small, but has strong mandibles, and two pairs of maxillae. The mouth parts of the honey bee are peculiar. In the most of insects they are fitted either for biting or for sucking. In this insect we find both structures. Mandibles are present and sometimes are strongly developed. But the food of the bee is in liquid and the tongue is a conspicuous organ. The two maxillae with labial palps form sucking tube, within which the tongue moves up and down. The mouth of the cray-fish (craw-fish) is different from the others here named in being on the under surface of the head, as is seen in many animals. There are six pairs of mouth parts; one pair of mandibles, two pairs of maxillae and three pairs of maxillipeds. These jaws all move sidewise, and when all are closed the third pair of maxillipeds cover all the others.

Thus we see by the few different mouth parts described, that they differ widely in the different animals.

Union Bridge, Md.

THE "IRISH" POTATO.

THE planting of a potato by Clausius, in 1588, in the Botanical Gardens at Vienna, is named as the introduction of the potato into Europe. But there is good reason to believe that it was introduced into England and Spain a few years earlier, and from Spain into Italy and Belgium. It has been said, too, that Christopher Columbus was the first European who ever tasted a potato. What he tasted at Cuba, in 1492, and brought home to Genoa, was the sweet potato.

The potato is a native of Chili. It had been brought from South America by the Spaniards, when Sir Walter Raleigh found it in Virginia and took specimens of it to England.

During the seventeenth century it was quite a rarity in England. A committee of the Royal Society urged, in 1662, that all the Fellows who possessed land should "plant potatoes and persuade their friends to do the same, in order to alleviate the distress that would accompany a scarcity of food."

Before this a prejudice had existed against it, as

being poisonous and unwholesome, probably because the proper method of cooking it had not become generally known, and it had even been eaten raw. In 1738 the first field of potatoes was planted in the Lowlands of Scotland. Its cultivation in India, Bengal, the Dutch East Indies, China, and Australia, is of comparatively recent date.

It is not only as a food plant that the potato is of value. Starch is made of it for the laundry and for the manufacture of farina. The dried pulp from which the starch has been extracted is used for making boxes. From the stem and leaves a narcotic is extracted. In some places cakes and puddings are made from potato flour.

The potato disease, which has been the cause of famines in Ireland, is a species of fungus which first attacks and discolors the stalks, then spreads to the tubers, increasing the quantity of water in them, reducing the quantity of starch, and so altering the other substances as to render the potato unfit for food.—*Selected.*

THE ZODIAC.

THE ZODIAC is a belt in the heavens sixteen degrees in width, extending eight degrees on each side of the ecliptic. It receives its name from the Greek word *zoon*, meaning a living creature, for the reason that the constellations included in its boundaries, with the exception of Libra, are representations of animals.

The ecliptic, on each side of which the zodiac extends, is a great circle cutting the equator at two points one hundred and eighty degrees apart—the points being known as the equinoxes—and making, with the equator, an angle of twenty-three and one-half degrees. It is called the ecliptic, because it was long ago discovered that eclipses take place only when the moon is crossing it.

The ecliptic is the apparent path of the sun among the stars; hence its great importance in the celestial economy.

A belt on each side of it was therefore marked off, and within this space the moon and such planets as were then known were always to be found. The classification has come down from prehistoric times, when it was believed that the earth was the central body in space, and at rest, while sun, moon, and stars revolved around it—long before the Copernican system was adopted, the telescope invented or Uranus, the asteroids and Neptune discovered. It shows how much observation can accomplish, even when resting on an untenable foundation.

The zodiac is divided into twelve equal parts, thirty degrees in length, called signs, each sign representing the progress of the sun during a month, and thus illustrating the sun's annual journey. The names of the twelve signs are these: Aries, Taurus, and Gem-

ini for spring; Cancer, Leo, and Virgo for summer; Libra, Scorpio, and Sagittarius for autumn; Capricornus, Aquarius, and Pisces for winter.

The signs are unchangeable. Whenever the vernal equinox occurs, the sign Aries commences, and longitude is reckoned from that point. It is different with the constellations, for the vernal equinox falls back a little every year.

When the first catalogue of stars was formed, 140 B. C., the signs nearly corresponded to the constellations bearing their names; but in the two thousand years that have passed since that time the vernal equinox has fallen back twenty-eight degrees, so that the constellations seem to have advanced a whole sign. The sign Taurus now corresponds with the constellation Aries, Gemini with Taurus, and so on. The cause of this seeming advance of the stars is called the precession of the equinoxes.—*Youth's Companion.*

A MOVING MOUNTAIN.

A TRAVELING mountain is found at the Cascades of Columbia. It is a triple-peaked mass of dark-brown basalt, six or eight miles in length where it fronts the river, and rises to a height of almost two thousand feet above the water.

That it is in motion is the last thought which would be likely to suggest itself to the mind of any one passing it; yet it is a well established fact that this entire mountain is moving slowly but steadily down the river, as if it had a deliberate purpose some time in the future to dam the Columbia, and form a great lake from the Cascades to the Dalles. The Indian traditions indicate immense movements of the mountains hereabouts, long before white men came to Oregon, and the early settlers, immigrants, many of them from New England, gave the above described mountainous ridge the name of "traveling mountain," or "sliding mountain."

In its forward and downward movement the forests along the base of the ridge have become submerged in the river. Large tree stubs can be seen standing deep in the water on this shore. The railway engineers and the trackmen find that the line of the railroad which skirts the foot of the mountain is being continually forced out of place. At certain points the road-bed and rails have been pushed eight or ten feet out of line in the course of a few years.

Geologists attribute this phenomenon to the fact that the basalt, which constitutes the bulk of the mountain, rests on a substratum of conglomerate, or of soft sand-stone, which the deep, swift current of the mighty river is constantly wearing away, or that this softer subrock is of itself yielding, at great depths, to the enormous weight of the harder material above.—*The Astorian.*

A RELIC OF PIONEER DAYS.

BY D. Z. ANGLE.

THE city of Mt. Vernon, Ill., was founded in 1819; and the first record kept of the official doings within the county was written June 7, 1819, shortly after Illinois was admitted into the Union. Consequently the book containing these records is quite a memento of early pioneer days.

Jefferson county at that time was sparsely settled, public roads were few and far between, and railroads not yet dreamed of. The State of Illinois was then principally a wilderness, and over a large portion roamed the red men of the forest.

We obtained a partial copy of the proceedings of an important meeting by the County Commissioners just prior to the building of the first county courthouse, which was built during the fall of 1819, and as we note the various specifications of that primitive building, followed in time by the large and costly brick, stone and iron edifice of the present day, we are filled with wonder at the onward march of human progress and the growth of our beautiful city of Mt. Vernon.

Following we quote from the Record:

As it is inconvenient to hold court in a private house for several reasons, Ordered that the building of a court house be let to the lowest bidder on Friday the 25th Inst. to be 18 feet by 20 feet 13 feet high. to be built of hughed logs that will face from 10 to 12 inches. Closely notched down to have good roof, made of boards, also a good under floor of plank tough and closely laid, and joist plates with holes cut for joists the house to have one door and one window cut and faced and to them good shutters hung made of tough plank the house and all the work about it done in a workmanlike manner. Completed and delivered to the County Commissioners court at the next Sept. term subject to the inspection of the County Commissioners the said house to be built on the public square, or on the spot the said commissioners shall designate, the timber to be furnished by Isaac Casey, Wm. Casey and Joseph Jordan.

The building of said house to be paid for out of any money's that may be in the Treasury not otherwise appropriated.

Zadok Casey	} County Commission- ers and Esquires.
Joseph Jordan	
Flemming Greenwood	

June 25, 1819.

After the building was completed as above specified, the worthy gentlemen of the court discovered that they must have fire sometimes, and as stoves were scarcely thought of those days, they provided at another meeting for the cutting out of the logs and the building of a fireplace in the vacant space on one side of the building; this fireplace to be similar to one then in use in one of the settler's houses, which was used as the model. They also arranged for a new ceiling of tough, sawed plank. After completing these details we suppose they were satisfied with their facilities for holding court and organizing government.

Mt. Vernon, Ill.

THE DRUMHEAD BUSINESS.

Few people know that more than half the banjo and drum heads sold in the United States are made on Long Island. Near the railroad station at Cold Spring is a little red building surrounded by frames, in which skins are stretched for drying, while near by is an artificial pond, with wooden sides and bottom, filled with a chemical mixture. It is an unpretentious establishment, but in our two wars and in the peace between it has fathered a great deal of noise. The business was established in 1860, and success was almost immediate. Competition was strong after the rush of war orders was over, but the business has advanced in importance until now there are but three factories in this country whose opposition can be felt. Two of these are in Brooklyn and the other at High View, N. Y.

New York markets furnish the salted raw skins from which the drumheads are made. The hair is removed from the skin by a chemical bath in the artificial pond, and the skins are then stretched on racks and dried. A thorough scalping removes any particles of fat or flesh that may have adhered to the dried skin, which is then the thickness of parchment. The skins are thoroughly bleached in the drying process and are then ready for cutting into heads. During the Spanish American war the factory was fairly swamped with orders for drumheads, 500 dozen heads often being ordered at one time. The principal demand was for the "tenor" drum, on which a loud accompaniment to the fife or brass instrument can be produced.

Kangaroo skins make the costliest drumhead. When dressed, they are showy, but beyond their appearance and name they are of no greater value than heads made from calfskin. Sheepskin is used for cheap toy drums.—*New York Post.*

BOOKS AND LABORERS.

"NOTHING is so homeless as a bookless house, unless it be a house whose books betray a vulgar and narrow conception of life," writes Miss Burt in her "Literary Landmarks." "A small library, well selected," she adds, "may, like Aladdin's lamp, turn the abode of poverty into a princely home." She illustrates her thought by recalling an old farmhouse where a tired mother, after a hard day's work, gathered her seven children about her, and with her knitting needles kept time to the measures of the verses read by one of the children from a great poet.

"The poetry which she knit into the lives of her boys has outlasted all the stockings, and crowned her memory with a halo of poetic recollections."

There are persons who urge that the children of

laboring people should be taught merely to read and write, lest they be "educated above their employment." Miss Burt, who taught in the Cook county, (Ill.) Normal School, once asked a class of pupils, most of them children of working men, which would make life more endurable to them if they were obliged to do the meanest labor—to be ignorant of good books, or to be acquainted with the classics.

A lively discussion followed, and only one child thought that a fine education would diminish one's power to endure the hardships of a menial life. All the rest were disgusted with his remark, and one little boy said he could be a better ditch-digger with the "Thoughts of Marcus Aurelius" to think of.

A little girl whose father kept a saloon said people would not come to the saloon to spend money if they loved good books; for her own part, she would rather stay upstairs with her books than tend bar. "The little library she had collected," adds Miss Burt, "was better than many which may be found in the homes of teachers and ministers."

Even John Ruskin speaks derisively of "the people who do not distinguish between books for the laborer and the school-man." Miss Burt indignantly answers this disparaging remark by saying, "Almost any teacher can show better writing from children than there is in Queen Victoria's Journal, and sentences equal to Ruskin's." She also tells of an uneducated workingman who, deploring his lack of early advantages, was in the habit of taking his little son on his lap at night to hear his lessons. He followed the boy through all his high-school work, and to-day is an educated man through the sympathy he gave the child in his studies.—*Selected.*

THE BIG DIPPER.

THE pole star is really the most important of the stars in our sky. It marks the north at all times. All the other stars seem to swing around it once in twenty-four hours.

But the pole star of Polaris is not a very bright one, and it would be hard to identify but for the help of the so-called pointers in the "Big Dipper," or "Great Bear." The outer rim of the dipper points nearly to Polaris, at a distance equal to three times the space that separates the two stars of the dipper's outer side. Various Indians call the pole star the "Home Star" and the "Star That Never Moves," and the dipper they call the "Broken Back." The "Great Bear" is also to be remembered as the pointers for another reason. It is the hour hand of the woodman's clock. It goes once around the North star in about twenty-four hours, the reverse way of the hands of a watch—that is, it goes the same way as the sun—and for the same reason—that it is the earth that is going and leaving them behind.—*Country Life in America.*

GREATEST POWER ON EARTH.

CHRISTIANITY is to-day the greatest power on earth and the most beneficent. The thrones of the whole world have not power to overthrow it. Like the sun, it shines without asking permission, and human power is no less impotent to the blotting out of the one than unequal to the eradication of the other.

The boundaries of empires will change; despotic thrones will chase each other to oblivion; new policies and potentates will rise upon the ruins of the old; names at which the world trembles, and altars at which it offers incense, will become unknown and crumble into nothing; but Christianity, surviving all and becoming more and more lustrous, must continue to lead on and lead out advancing civilizations, becoming itself not only the dominant but the one only power under heaven in whose name kings shall rule, and for the furtherance of whose ends policies shall prevail.—*Bishop R. S. Foster.*

* * *

ALASKA'S OVERLAND MAIL.

Dogs were the most useful means of transportation in the early days of Alaska. They helped the adventurous explorer to penetrate this arctic wilderness; they have been the inseparable companions and steadfast friends of the prospectors who have blazed the trails; they have drawn sleds in the winter and carried packs in the summer; they have suffered with their masters from cold and hunger, and more than one chapter of hardship has ended by the sacrifice of a faithful dog to feed his starving master. Now, when verdure covers the hill-slopes of California and the grain fields are green, and the orange orchards are yellow with ripening fruit, more than a hundred dogs in a score of sled teams are hauling the mail, posthaste down the mighty Yukon to every post office in Northwestern Alaska.

* * *

DIGGING OUT HERCULANEUM.

THE proposed formation of an international organization to conduct extensive excavations at Herculaneum is regarded at Naples as impracticable, because it is known that the greater part of the buried city was destroyed by incandescent lava, which has penetrated every fissure, and has now become with the old city itself an impenetrable vitreous mass too hard to excavate. The only successful work done by the Italian government at Herculaneum was in places where the ashes of the volcano had prevented the lava from penetrating. The success of the excavation at Pompeii was due to the fact that the whole city had been buried in ashes before the incandescent lava reached the place.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

THE SALOON: A LIE.

SOME one has said that the word "evil" is bad all the way through; as it stands it means the very worst of things; remove the "e" from the front and place it at the rear and it changes it to "vile," which changes the pronunciation of the word, but doesn't harm the meaning. Take the first two letters from evil and we have "il." While illness in itself is the result and not the evil itself, it becomes a part of this evil. Then the author of this still claims that we might remove all the letters but the last one, which is "l," of which it takes two to finish the word "hell."

What the author quoted above has to say of evil we think comes very nearly being true of the saloon. In the first place the "saloon" does not have the right name, it is a stolen one. Were you to select a hundred people and ask them what a saloon is they would refer you to a place where intoxicating liquors are sold. This has been taught by the saloon-keeper, who has stolen this name and placed it above his door. A saloon, in reality, is not a drinking place, nor ever was intended for such; the word comes from the French and means a very fine parlor, or reception room. The saloon-keeper stole it in order that his place of business might have that refining, drawing power which the parlor of a home carries with it; and since he has stolen it and confiscated it to his own use, the people have been foolish enough to keep on calling it that and advertising his business free.

The second way in which the saloon becomes a lie is by its furniture. In the majority of cases the very finest of furniture is placed in the front of the room, where it can be easily seen from the street and an attempt is made to make it resemble the original place of entertainment or a social parlor; but no sooner do you pass behind this delusive furniture than you come in immediate contact with the devil's workshop.

The third falsehood for which the saloon stands is the window decorations. Many times one may see

beautiful pot flowers, aquariums full of gold fishes, beautiful pictures, etc., thrown before the public as an inducement to enter. This is a positive lie; there is nothing like a home, and, in fact, every enemy of the home is behind it. It is an abuse of God's creatures, and neither the plants nor the animals would stay in such a hell-hole were they not compelled to do so.

The fourth great lie for which the saloon stands is the beautiful music which often peals forth through the open door, upon the air so heavily laden with the fumes of the intoxicating bowl—an outrage and disgrace upon the music itself. The whole thing is a lie from beginning to end. Instead of writing "saloon" above the door, why not put skull and crossbones and write such words as Destruction, Danger and Death? Instead of a name that carries with it the meaning of the finest and best place in the world, let it seek one that will represent it. Instead of the beautiful furniture, with which they are supplied, let them gather up some furniture from their customers, such as three-legged chairs, without a back; a two-legged cook stove, leaning against the wall; a table propped up by a store box, and such other furniture as may be had by searching diligently in a drunkard's home. This kind of furniture would well represent the results of investing in such an institution. Instead of the beautiful window decorations let us place in the window some of the tattered garments of the drunkard's child; a mortgage; crepe on a door knob; a portrait of a drunkard's wife, with a sad countenance, and around her knee the hungry little ones crying for bread. Let another frame contain the picture of the drunkard as he comes from the club in the small hours of the morning, and such other pictures as will show the thing just as it is. Instead of the beautiful instrumental music, let it be supplanted by the wails of a broken-hearted bride, whose hopes have been blasted because her husband has been ruined at this miserable den; let a phonograph be placed so as to catch her cries and let them be mingled with the screams and pleadings of the starving babies; to this add the uproar of a saloon fight, the breaking of glassware, cursings, shouts, and growls; the voice of policemen; the crack of a revolver; the slamming of doors, and such other fiendish sounds as would well represent what goes on inside, and it would also give the customer an idea of what his company would be in the future, after having been a devotee of one of these so-called saloons.

No, the whole thing is a lie; it isn't a saloon at all, in any sense of the word; they have stolen the name of a saloon, the furniture of a saloon, the windows of a saloon, the music of a saloon, and have given them all to these miserable places of drink, where men and women are led by the thousands every day to destruction. Don't call them saloons; the name is too good for them.

ANARCHY.

ANARCHY is matured selfishness. Before a man can become an anarchist he must lose his friends, that is, his real friends, and get pals in their stead. These pals he thinks sometimes he can trust, but they are not to be trusted, for he has lost his friends; even his pals betray him because that is part of the game. He soon measures all the people by the traitor and reaches the conclusion that "All men are liars." He loses the regard for the wants and needs of any and all others, fails to recognize the common benefit men are to each other and he wants to live to himself.

It is possible for this to be done for a short time, but it will not last long. No man can live unto himself; man is only one composite factor of a great life. We are creatures, not the creator; the creator is complete and is all in all; we are only component parts of one great whole, and are dependent upon each other. One man does not know it all, does not own it all, and is not all of it himself.

God did not calculate that man should live alone, and, as it is impossible for him to live happily without a helpmeet, so it is impossible for men to live outside of communities. Men are not skilled alike, and the different occupations are brought about as results of these differences in the skilled men. One man cannot labor in all the occupations necessary to life; since he does not know it all he cannot do it all. Therefore since communities are necessary and men and women must live with each other and for each other and by each other, it is a fullgrown conclusion that some system or government must obtain in order to maintain the rights and privileges of each.

As long as there are people there will be selfishness; as long as selfishness reigns there must be a law to enact justice. An anarchist is a person who despises law and order and lives only for self, regarding not the desires of others. The very fact that men spurn the idea of government is the best evidence in the world that they are most in need of them. The man who is purely unselfish in himself can get along without government; of course it is the man who needs it worst that doesn't want it. Why do not all the anarchists, and growlers and grumblers get out of politics, out of the government, out of the nation and go to some lonely island in the ocean and live by themselves? Why doesn't the anarchist in the home, who thinks he knows more than father and mother both, get out and root for himself and find out that a little law and order and system was the very thing needed. The anarchist in the church should not spend his life fighting the church and continually throwing bombshells in the camp, but if he will not submit to system and order and ruling, let him acknowledge himself to be an anarchist and get out of the church, clear out, and organize a religion of his own by himself; just for him

and no one else; that's what it all means; it is an unforgiving spirit; it is an uncharitable spirit; it is an uncompromising spirit, and above all it is a most selfish spirit.

Let it be a warning to you that when you find yourself seeking the company of two or three weaker ones, in the home, in society, in the church, or in the state, and forming a secret alliance with them that it is fateful; secrecy is a stepping-stone to anarchy; anarchy is the threshold of death, and death means separation.

❖ ❖ ❖

IN THE NEAR FUTURE.

MAIL now comes from Elder D. L. Miller, who has spent the winter in India, asking us to address him at Johannesburg, South Africa, which means that he has either already gone, or will very soon go to that place.

The readers of the INGLENOOK will remember that Brother Miller has kindly promised us a series of articles from that great Southland, under the title, "With Kodak and Pencil South of the Equator." Those who have been looking forward to this series of letters with fond anticipation are now soon to have their hopes realized. Most of us know the peculiar power Brother Miller possesses as a writer and appreciate his keen observation.

Although he had not promised to do so he has already sent us some interesting articles well illustrated from the Mediterranean Sea, Suez Canal and India. However, these have been mentioned more or less by other writers, but the new field into which he now goes will be of special interest because we do not often get articles from that country from those with whom we are so intimately acquainted.

Will you not do this much for the good cause? Tell your friends that the INGLENOOK can be had till January 1, 1906 for 50 cents. Tell them to subscribe now for two reasons: First, they will get more papers, and second, they will get all of his articles.

❖ ❖ ❖

A CORRECTION.

IN the INGLENOOK of May 9, in Bro. D. L. Miller's article on Industrial Work in India, p. 435, in the right-hand upper corner is the photograph entitled "Planing Mill." This is a mistake. It should read, "Sawing Boards to a Length." In this issue, on page 458, in the right-hand upper corner, is the picture that should have been placed in the other article, and we will have to ask you to read the other article over again and use this illustration in that place. You will notice in this issue that the hand saw is described, but you will have to look in last week's paper to see the photograph.

Current Happenings

THE CHICAGO STRIKE.

HOPES have almost been lost for a peaceful settlement of the teamsters' strike at Chicago. Mayor Dunne appointed a citizens' committee to bring about concessions from either side which so far have been a complete failure. The union leaders have repeatedly offered to arbitrate the question in dispute. The employers have steadily refused to have any dealings with the unions as unions. The unions have carried their troubles a little too far; they have abused their privileges; they have showed themselves to be a public nuisance, and the employers' association proposes to put them to an end.

In their desperation the unions, for fear of losing out altogether, have appointed a committee to wait upon President Roosevelt, Governor Deneen and Mayor Dunne, requesting them to investigate before sending state or federal troops. What little hope is left for them rests in their ability to delude the eyes of the law and the government for which they have no respect. Twelve indictments have already been made against that many labor leaders who have been charged with conspiracy against the law, especially in the delivery of merchandise. It is to be hoped that the employers will continue to refuse to arbitrate, and that they will be resolute in refusing to employ any union men hereafter. The only successful way to break the strike is to break the union and scatter it to the four quarters of the earth. It has ruined Russia, is ruining France and has reached an alarming degree in the United States.

AUGUSTA VICTORIA, the empress of Germany, has presented fifty-one nurses at North Brothers Island hospital, with diplomas, in recognition of their services at the Slocum disaster. To the head nurse, Miss Edith Smith, the empress presented a beautiful brooch. The diplomas bear the picture of the empress.

A LARGE number of striking bootmakers at North Hampton, England, have organized to march in a body to Windsor Castle and petition the king in person for redress of grievances. His Majesty may have opportunity to understand what Coxey's army was in this country.

THE Metropolitan Steamship Company has been duly incorporated with a capital of \$3,000,000, at Augusta, Maine. The company proposes to add to its service a line of fast steamers between Boston and New York, operating by turbine engines. It is esti-

ated that they can make a speed of twenty-five miles an hour, enabling them to leave New York at 5 o'clock in the evening and reach Boston at 8 o'clock the next morning.

SECRETARY MARTIN, of the Massachusetts State Board of Education, has recommended that the public schools of that State engage in special exercises for the purpose of emphasizing the blessings of peace, and showing the superiority of arbitration over war. May 18 has been chosen.

A TRAIN was buried in a tunnel by the caving of a mountain at Edson, Wyoming, April 23. The engineer, the fireman and the head brakeman are buried with the engine and it is supposed that they are dead.

NEAR Churubusco, Ind., is a small body of water called "Blue Lake," which is to have a fish broodery. This is a simple device, says Commissioner Sweeney, but its success will depend largely on geographical conditions. At Wawasee, last year, 200,000 fine bass were turned into the lake from the brooderies. They are placed in shallow water and an even temperature is necessary to their success.

TEN men were killed by the breaking of a rope attached to the cage in which they were being lowered into a tunnel of the Conygham mine at Wilkesbarre, Pa.

THE seal-fish season, which closed April 30, was one of the poorest in years. Last year the catch numbered 384,000, while this year there were only 170,000.

IN the federal court at Peru, Ind., Benjamin Wallace, the showman, recently brought suit against the Grand Trunk railroad for damages amounting to \$68,000 for a wreck at Durand, Mich., in August, 1903, in which twenty-seven persons were killed and the circus temporarily demoralized.

THE American railroad magnate, Mr. E. H. Harriman, and a group of his associates have received concessions of the Mexican government authorizing them to build a system of railroads in western Mexico, connecting with the main line of the Southern Pacific in Arizona. The new line is to be built from the port of Guayamas on the Gulf of California, north to the Arizona border, and southeasterly to the port of Topolobampo, touching at the port of Agiabampa.

THE noted bandit, Raisuli, who captured an American citizen by the name of Perdicaris and his English nephew, last summer, has been recently promoted by the Sultan of Morocco to the responsible position of comptroller of the Fash district. The Fash district is a province leading up to the very gates of Tangiers.

A MAILING machine, perfected by A. Eschenbach, of Dayton, Ky., automatically feeds, folds, wraps, pastes and addresses 5,000 papers an hour. The paper for wrapping is delivered from a large roll, and after the machine has folded a paper, the wrapper of required length is cut off and tightly wrapped about the paper. Electrotype addresses are fastened on a continuous brass belt, which is inked by a roller. The parcels are then automatically separated by post offices, routes and States.

THE cruiser *Galveston* reached Norfolk from the Gulf with more than forty men in irons, either for mutiny or an attempt to desert. Many of the men have already deserted. She was under command of Captain Cutler.

THE officials of the Harriman railroad system are planning a tour from ocean to ocean in a gasoline motor car. These officials think that they now have a practical gasoline motor, which is the beginning of a new era in railroad circles. The object of the invention is to enable steam roads to compete with electric lines in matters of expense, especially on their branch lines.

PROF. W. H. PICKERING, of the Harvard Observatory, has announced the discovery of a new satellite of Saturn. This now makes ten in all. The discovery of the new satellite came about through the photographic plates used at Arequipa, Peru. The sensitive plates of the camera proved to be more powerful than the eye when aided by telescopic vision. This new Saturnal moon makes a revolution in twenty-one days and is supposed to have a diameter of two hundred miles.

GROUND was broken May 1 for the new Agricultural Building at Cornell University. The students of the College of Agriculture pulled the plow, guided by Professor L. H. Bailey, and thus the first row was turned. Members of the faculty and students took turns at the shovel.

AN earthquake, lasting several seconds, was felt throughout Derbyshire and Yorkshire, England, April 23. While there was no serious damage, yet it is reported there was great alarm for a time.

DURING the first four months of this year 234 automobiles have been imported at a cost of \$865,000, aside from the enormous output of American automobiles since a year ago. During the same period last year only about 140 machines were imported. The demand is increasing at a rapid rate.

EXCAVATIONS at Bismya are being made by Dr. Edgar J. Banks, or rather a series of excavations, on behalf of a group of scholars, headed by President Harper, of Chicago University. Dr. Banks has announced the discovery of a marble statue of one David, a Sumerian king of the pre-Babylonian period. According to the style of dress the inscriptions and the known age of the stratum in which it was found, it is supposed to date at least 4500 B. C. So far as is known this is the oldest statue in the world by 1,500 years. This removes the date of the history of civilization back at least a thousand years.

THROUGH the Chinese ministry at Washington, the imperial government has assured the United States that it will do everything in its power to prevent Russia from violating Chinese neutrality. The authorities at Washington have forwarded this information to the Japanese government.

ALL of the \$100,000,000 short term loan offered by the Russian Government at Berlin has been subscribed by German bankers, applications from other sources being refused.

ABOUT sixty persons were killed and two hundred wounded, recently, by the troops of the Czar, in the streets of Warsaw. The troops attacked a procession of workmen and pursued them with brutal assaults. The workmen revenged their insults by fire and guns and throwing bombs. A general strike was proclaimed throughout Poland. All over the Russian Empire, a popular feeling is rapidly rising to revolution point.

PROF. MONTGOMERY'S aeroplane has had a successful test at San Jose, California.

A WIRELESS telegraph station, powerful enough to communicate with New York, is being established near San Juan, Porto Rico, by the DeForest Company.

A SIXTY-INCH telescope, recently purchased in England, is being mounted at Harvard University. It is the largest of its kind in the world, and will be the only telescope operated entirely by electricity. The observer can carry on his investigations in the coldest weather unexposed.

HOME DEPARTMENT

KEEP A WATCH UPON YOUR WORDS.

SELECTED BY LOTTIE BOLLINGER.

Keep a watch on your words, my darlings,
For words are wonderful things;
They are sweet like the bees' fresh honey;
Like the bees, they have terrible stings.
They can bless like the warm, glad sunshine,
And brighten a lonely life;
They can cut, in the strife of anger,
Like a cruel two-edged knife.

Let them pass through your lips unchallenged,
If their errand is true and kind,
If they come to support the weary
To comfort and help the blind.
If a bitter revengeful spirit
Prompts the words, let them be unsaid.
They may flash through a brain like lightning,
Or fall on a heart like lead.

Keep them back, if they're cold and cruel,
Under bar and lock and seal;
The wounds they make, my darlings,
Are always slow to heal.
May peace guard your lives, and ever,
From this time of your early youth,
May the words that you daily utter
Be the beautiful words of truth.

HEALTH.

BY MARY I. SENSEMAN.

THE body first; above, the mind; uppermost, the soul. Between the first and second, a nervous system, which is tangible *within* the body,—that is, up to the brain. For the brain is but the mind's storehouse. Beyond the storehouse exist nerve fibres that are intangible as the mind itself. Between mind and soul there is evidently some connective system also. We shall call it nerve extension.

Thus whatever good or bad something there is in a person's body or mind or soul is carried to both its colleagues.

First, a body; second, a mind; third, a soul.

A body is healthy when each part of its mechanism is in freedom. Ah! then it can send no burden to the mind and soul. What is this freedom? It is the condition existing when no part of the body attracts the individual's attention to itself. Is there freedom when an indigestible tidbit is in the stomach? When cramped limbs and cramped lungs vainly demand ex-

ercise? When an aching head says strained eyes or bad stomach, late hours or overwork?

The delicate nerves transmit the sense of weight to the mind. Did you ever learn as much in that hour of studying when that miserable ache bothered you all the time as you did when there was no ache to divert your thought toward your body?

The nerve extension system faithfully delivers its burden at the upper terminus. Borne downward by the weight, faith sinks below par; hope follows; love goes too. Can anybody pray—sincerely—with a stomach four-thirds full? Can he, with that bad taste in his mouth, smile fraternally among his fellows?

A mind is healthy when it is in freedom. Wrong thoughts. Down the body they go, up to the soul. Afraid? Thump goes the heart. The face is pale, the limbs quivering. Angry? Flushed and tense now. The worse the thought, the more powerful its effect on the body.

How do we know wrong thoughts poison the soul? A man may be pure, so you see him outwardly. His mind is reeking with sinful thoughts. The test comes finally and all men know him exactly as he is.

A soul is healthy when it is in freedom. No God? Bible untrue? Then the mind must be burdened with forcing its reason corkscrew into,—never through,—everything. The body must be tortured with the pleasures of the hour, in order to have Father Time by the forelock, forgetting eternity, endless.

Eat, sleep and exercise for health. Think for health. Believe and love for health.

Covington, Ohio.

SPEAKING OF BABIES.

"ARE babies worth what they cost?" asks an exchange.

The man or woman who would ask that question is to be pitied.

"Are babies worth what they cost?"

Bless their little hearts, the dividends they pay each day exceed their cost by as many thousand per cent as there are dimples in their faces and smiles on their lips.

The slightest touch of a baby's hand is ample compensation for all the pain and tears and heartaches and financial investment it brings. The men or women who would stop to consider what the baby cost while looking into its eyes or listening to its cooing, would talk through their noses to save wear and tear

on their teeth, or tip-toe down the street to save the wear on shoe-heels.

“Are babies worth what they cost?” The sight of a baby’s smiling face at the window can make bright and glorious the finish of a day begun in mental anguish and loaded to the Plimsoll line with financial difficulties and dread. The prattling welcome at the door could no more be measured in dollars and cents than the love of God could be measured by finite minds.

“Are babies worth what they cost?” Ask the mother and father who are weeping by the side of the little coffin that holds the mortal remains of the little one that brightened their home for a brief span, and catch the answer in their broken sobs and moans. All that they have, and all that they expect ever to have in this world, would they give just to call back to life for one brief day the little one too soon to be consigned to the bosom of mother earth.

Worth what they cost? As an investment they cost a few dollars in money and a few hours of pain and tears, but they return dividends of hope and love and light every day through the span of eternity.

“Are babies worth what they cost?” We’d pity the babe given into the keeping of a husband and wife who could quit looking into its eyes and fondling its chubby little form long enough to ask themselves that question.

As a matter of fact, we can not believe that any real father or mother ever asked such a fool question.

* * *

TO SAVE THE HANDS.

Use Mittens Made of Canton Flannel While Sweeping, Etc.

To protect the hands while sweeping I have never found anything else half so satisfactory as a pair of loose mittens made of extra heavy canton flannel, fleeced side in. The strong points about these mittens are, first, the material from which they are made, unless worn almost threadbare, is impervious to dust, thus keeping the hands clean and free from grit; the fleeced lining serves as a sort of cushion and affords double protection to the palms; being large and loose, they are easy to put on and prevent the hands from becoming red and swollen as they do when incased in tightly fitting gloves while sweeping; extending well over the wrist, they keep the dress cuffs clean; simple in shape, they can be made by even the most inexperienced needlewoman; they are cheap, one yard of material being sufficient for two pairs of gloves; they are durable and wash both easily and well, considerations not to be undervalued. I have always used the white canton flannel for the purpose, though, if preferred, the colored might be employed. Gray or brown would be very suitable.—*Good Housekeeping.*

A LICENSED LOTTERY.

The *Ram's Horn* recently contained a striking cartoon on the first page representing a bartender tempting a young man with liquor and at the same time holding out a lottery bill with the following inscription which needs no further comment:

THE DRUNKARD'S LOTTERY

Licensed by U. S.

TAKE A CHANCE

Prizes!

Out of every 1,000 drinking men there are:

600 habitual drinkers
 250 criminals
 10 suicides
 2 murderers
 50 lunatics

Among these are 400 paupers and tramps.

* * *

BRICK TEA.

CHINESE soldiers along the borders of Manchuria, who are mostly outlaws, consume vast quantities of tea, both as an infusion and as a solid vegetable. The latter is called “brick tea” in English. It is formed of the old and coarse kinds of tea leaves, the refuse and stalks of the better kinds, and the leaves of other shrubs, all incorporated with the serum of ox or sheep blood and fashioned into thick four-sided cakes or bricks. It supplies those nomads with a portable food which renders the very worst waters of the steppes drinkable. They are in the habit of rubbing it up with water and boiling it with the addition of some flour and suet of beef, mutton or horse (or in case of need a tallow candle) into a kind of broth, which they take with the salt on the steppes, and, if possible, with ashes or other alkaline salts. The latter are obviously used, though unwittingly, to dissolve the caseine as much as possible.

* * *

No woman is worth very much until she has been through a good deal of sadness, a great deal of wanting that which she cannot get. I hope you will go through that. But, dear, if you turn bitter under it, you had better not have lived, and certainly you had better die, for death is better than bitterness. But if you take the woe and the sadness which is inseparable from life, without bitterness, it strengthens and cleanses you. And you will certainly emerge from it a far finer creature than if you had never been through it. Emerge? Ah! it may last till the day of your death, but what then? What does that matter?—*E. F. Benson, in The Challoners.*

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

THE THREE LEAVENS.—1 Cor. 5:6-9.

For Sunday, May 28, 1905.

I. The Leaven of the Pharisees—Hypocrisy.

- Luke 12:1
 1. Desire to be Seen and Heard, Matt. 6:5
 2. Narrow-minded and Critical, Mark 2:23-28
 3. Proud and Boastful, Luke 18:12

II. The Leaven of the Sadducees—This Life Ends All.

1. Deny the Resurrection, Matt. 22:23
 2. The Existence of Angels and Spirits.
 3. Future Reward and Punishment.

III. The Leaven of Herod—Duplicity.

1. Jealous of the Babe Jesus, Matt. 2:7-9
 2. Tries to Kill Him, Matt. 2:16-19
 3. Herod's Miserable Death.

Text.—For sin shall not have dominion over you; for ye are not under the law but under grace.—Rom. 6:14.

References.—Matt. 24:50, 51; John 15:6; 6:70; Luke 14:34; 20:46, 47; Matt. 25:41-45; 7:15; Mal. 3:14; Zech. 13:6; Hos. 11:12; Isa. 65:5; Jer. 17:9; Prov. 25:19; Psa. 101:7; 5:9; 55:12-14; Ezek. 33:30-32; 1 Tim. 4:2; 1 Peter 2:1; James 3:17; 1 John 4:20.

Hypocrisy.

Jesus reproved the Pharisees in words of terrible condemnation. It seems to me they must have quailed beneath his glance and trembled at the awful woes he pronounced against them. They were prominent in the church councils of that time, but their religion could be measured by a foot-rule. If the hem of their garments was the exact width, if their robes were just the prescribed length, then it mattered not that they oppressed the widows, and orphans, and looked with scorn at the poor, they were honored in the church, and their prayers rang out long and loud on the street corners. Is it any wonder that Jesus said, "Now do ye Pharisees make clean the outside of the cup and the platter; but your inward part is full of ravening and wickedness. Ye lade men with burdens grievous to be borne, and ye yourselves touch not the burdens with one of your fingers"?

Nothing Hid.

Jesus says, "For there is nothing covered that shall not be revealed; neither hid that shall not be known," and in this lies the punishment of the hypocrite. His real self always appears, sooner or later; the things he says in a whisper are repeated from the housetops. His deeds done in secret are made known in public. When Jacob disguised himself and brought his father some venison, he succeeded in deceiving his father for the moment and gaining his own ends. But he had

to flee from his home and live in a strange land many years; he never saw his mother again, and the blessing of the firstborn so dearly purchased proved only a sorrow, not a joy, to him.

Uriah Heep.

One of the most detestable hypocrites in literature is Uriah Heep. He is always "umble," and so worms his way into the good graces of people who trust him. Then he repays their confidence by ruining them, leading them wrong and obtaining their money. When at last his villainy is discovered, Dickens thus describes him: "Though I had long known that his servility was false, and all his pretences knavish and hollow, I had no adequate conception of the extent of his hypocrisy, until I saw him with his mask off. The suddenness with which he dropped it, when he perceived it was useless to him; the malice, insolence and hatred that he revealed; the leer with which he exulted, even at this moment in the evil he had done—at first took even me by surprise."

Be True to Yourself.

"This first of all—to thine own self be true;
 And it must follow, as the night the day,
 Thou canst not then be false to any man."

"Beware of the Leaven of the Sadducees."

Jesus himself gave this warning, and we need it to-day. The Sadducees said there is no resurrection; this life ends all. Jesus was crucified and laid in the rock-bound tomb to open up the way for our resurrection. Do we fully realize that after this life there comes a larger hope, a larger life? That as the plants go to sleep in the fall and are dead during the winter, only to take on new life in the spring, so we shall sleep in the grave, and then waken on the morning of the resurrection?

If Death Ends All.

If death ends all, then indeed our hope is vain. Men who think they have only this one life to live, will very often attempt to crowd into it all the pleasures that they fancy, self only needs to be thought of,— "eat, drink and be merry, for to-morrow we die."—let us live while we live, they say. So thought the French people in the earlier part of this century, and the Reign of Terror in France was to a great degree an outcome of this belief.

Resurrection an Established Fact.

"Dear Jesus, we remember thee,
 The words thou spak'st in Galilee,
 That thou wouldst die and rise again,
 A Savior thus for sinful men."

The resurrection of our Lord is one of the best attested facts in human history. One of the greatest of French infidels used to say if he could explain away the resurrection of Christ and the conversion of Paul, the overthrow of Christianity could be accomplished. But are you not glad that they stand beyond dispute?

The Leaven of Herod.

Some way, Herod has always seemed a type of that class which shrinks from no sin, no matter how black or terrible. Jesus warned his disciples to be beware of the leaven of Herod. The crimes of Herod shock every human feeling, and violate every sense of what is good and pure. But there are men who have gone so far down the slippery paths of sin that they pause for nothing, no crime too dark for them to commit. The leaven of Herod is working in them, and they stop at no deed. Their last days shall be like Herod's, filled with terrors, remorse of conscience shall be theirs, night and day, haunting them, driving sleep from their eyes, and peopling the solitude with their victims.

Topics for Discussion.

1. What was Haman's purpose? Esther 3.
2. What was the result of Haman's plans? Esther 7.
3. Was Ananias a hypocrite? Acts 5: 1-11.
4. Describe Jacob's course. Gen. 27: 6-23.
5. Jacob's sons deceived him. Gen. 37: 29-35.
6. A hypocritical critic. 7: 5.
7. When do we worship God in vain? Matt. 15: 9.
8. A thankful Pharisee. Luke 18: 11, 12.

* * *

EMPLOYMENT BUREAU.

That Program Committee.

IN our Circle here, the program committee consists of but three members. They have divided our Circle of 112 members into three divisions. Division A is under the care of Sister Clark, division B under the care of Brother Smith and division C under the care of Brother Brandt. Our lookout committee assists the program committee. When division A has the meeting, division B and division C have no part whatever in the work beyond attending the meeting and helping to sing and pray, the entire program is given by division A. The same rule is followed all through the year, the meeting being in charge of each division alternately, and better programs are the result because more time and thought can be given to them.

The program committee is also an advisory committee, they advise and plan with the young people. All matters of special interest and importance are first discussed by this program committee before they are brought before the Circle. They also help to plan some Christian work for these young people, such as

visiting our older members, or those who are sick, providing for the poor and any work that their hands find to do for Jesus.

If your work is not moving along as it should, speak to your program committee, and prayerfully talk it over with them. They will gladly do all they can to help you, but talk it over; better plans are agreed upon when you look at the situation on all sides; you can then see what is lacking and provide for it.

Mission Study.

It is a matter for encouragement that so many Circles have been organized throughout our church for mission study. The fields in which the missionaries are to-day toiling are white with harvest sheaves already gathered; and a study of the work done not only gives one a fund of useful information but thrills the heart as well. We know that it does more than this, it has loosened the purse strings of our brethren. We wish you would notice the difference in our church collections before and after our Circle studies of missions; it has made us to thank the Lord and take courage. And it has done more than this. Our missionaries in India, in Europe and in our cities are there because of their love for dying souls, they were impelled by their knowledge of the dire need of people who have not the Gospel. Why should we not be enthusiastically interested in missions?

Calls for Circulars.

"Please send me some of your new circulars," is a request that always sets our heart a-tune with praise and gladness, because, as a rule, the new circulars mean more new members. It is impossible to place too much stress on a personal canvass; see your Sunday-school workers, and your church members and enroll as many as possible, each one enrolled will influence others to join too. Have faith in the power of God to use this mission study to his glory. We enrolled more of the elders of our church last year than in any three preceding years, which shows that our elders and ministers see the necessity of their members reading up on missions. Circles need not be large in order to be successful; where two or three are gathered together studying the lives of men and women who sacrifice themselves for Jesus' sake, there he is in the midst of them. But such a band will draw others into the Circle, and soon a large number will be at work.

* * *

Please send us the names of your Sunday-school workers, your superintendents and others. We want to write to them about introducing our Circle in their Sunday schools. Address Our Missionary Reading Circle, Covington, Ohio.

*

Next week we will give you our program for our Circle meeting at our coming conference in Bristol, Tenn.

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XXVIII.

Malmö, Sweden.

Dear Mr. Maxwell:—

In speaking of the hospitality of the people, in my last letter, I had neither time nor space to tell you about some of our interesting experiences in Swedish hotels. Each country we enter has a new custom for us to learn, and we are learning to expect something new each time. But the Swedish hotel was such an entire departure from anything before visited that we were all particularly interested in the proceedings. Our first meal at a Swedish hotel was at the little town Kjöfänge. It was a nice hotel; the dining room was very large. In the center of the large room was a long table just fairly stacked and piled with bread,—black bread, white bread and spisbrod; there was liverworst, souse and dried beef; smoked eel, fried eel, and pickled eel; there was butter, cheese and limburger; without attempting to enumerate all that was on the table, I can make it shorter by saying there was nothing that heart could wish in the way of meats and pastries, except pie. Pie was painfully, woefully absent.

Agnes had looked in vain for pies ever since we entered the European continent and her hopes were never realized until we took dinner at the house of a friend who was born and raised in America and is now a missionary in this country. The good lady of the house, knowing that we were Americans and knowing the failings of the American appetite for pie made us some fine lignon pie. But I never finished telling about that hotel. Beside the long table in the center of the room that was loaded almost to breaking, there was a series of small tables around the edge of the room which were large enough to comfortably accommodate from two to four people each. These tables were supplied with plates, knives and forks. When we entered the room a young lady seated us at the tables, and we sat there expecting to be handed a bill of fare, and we continued to wait. The boys suggested that they had gone to London for the victuals, and finally the young lady, noticing our ignorance, approached the table, made a few gestures, and told the rest of it in Swedish. Roscoe said he didn't know whether she was talking about the icebergs in Greenland or the price of oats.

About this time Miss Gertrude saw some people on the other side of the room, arise and take their plates and forks and go to the center table and make such selections from the overburdened table as their appetite suggested. When she called our attention to this it began to dawn upon us that we had come in touch with a new custom, and the best thing we could do was to fall in line and get to work. Oscar thought he was brave enough to take the lead, and, seizing the necessary utensils, proceeded to proceed. As soon as he made the attempt the blushing little blond greeted him with an assuring smile that he was doing the right thing. The ice was broken; we fell to, and loaded our plates according to our appetites, which had been slightly imposed upon. We, like all Americans, didn't want to leave in debt to our

appetites and were on the point of expressing ourselves to each other that we had had a very nice meal, and that the Swedish custom was not so bad after all; whereupon the blushing young damsel beckoned to a waiter in the other room, who appeared in uniform, bearing a steaming roast, hot boiled potatoes, accompanied with hot drinks, etc.

Again our horizon broadened. Again it dawned upon us that another lesson was ahead. Oscar ventured that these Swedish customs are a thing one has to get used to. We tried to conceal our chagrin and did our best to act comfortable under the situation; but no doubt it was evident to the little maid that we had made a mistake, for, in spite of the dainty viands that were so tastefully served, we could not do them justice. We all thought, of course, that such a royal entertainment as this and such a meal as we had eaten would come at a good, high price, but we were utterly astonished when the clerk charged us a half a kroner each, which is about nineteen cents. There are a great many advantages we observed about this Swedish custom at hotels, but Roscoe thinks most favorably of the fact that there was not a row of waiters from the kitchen door to the vestibule lined up to receive the tips as we went out.

As I have often written you before, and as you very well know, we are making this tour to learn and to study geography, and don't forget the old definition, "Geography is a description of the earth as the home of man." In order to have a new experience we thought we would ride from Kjöfänge back to Malmö in a fourth-class tram. I think I have told you before that there were four different classes of traffic on railway trains. The first is like our observation palace cars; second, like our coaches; third, like our cabooses, and the fourth like our freight box cars, with no seats at all. A hand rail is fastened to the car all the way around, and the passengers stand clinging to this rail to keep from staggering when the train is in motion. We enjoyed this experience very much. Certainly this day has been full of interest, but it is time to retire for the night.

Fraternally,

Marie.

(To be continued.)

INTRUST thy fortunes to the powers above.—*Dryden.*

The Q. & A. Department.

Please explain the Monroe Doctrine.

The Monroe Doctrine is a statement by President Monroe in his seventh annual message to Congress, Dec. 2, 1823, in which he declared: "We owe it to candor and the amicable relations existing between the United States and the allied Powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European Power we have not interfered, and shall not interfere; but with the Governments which have declared their independence and maintained it, and whose dependence we have, on great consideration and just principles, acknowledged, we could not view an interposition for oppressing them or controlling in any other manner their destiny by any European Power in any other light than as a manifestation of an unfriendly disposition toward the United States." Also: "The American continents should no longer be subjects for any new European colonial settlement." The occasion that prompted President Monroe to make this declaration was the formation of the so-called "Holy Alliance" between Russia, France, Austria and Prussia to maintain the monarchial system of government in Europe. It was the President's aim to serve notice on them not to attempt to extend their operations to the new world as the United States would afford political protection and guarantee freedom from European interference to all states of North and South America.

❖

When will the next Indian reservation be thrown open to the public; where is it located and how much land is there?

It is expected that the Crow and Uintah reservations will be thrown open this summer and possibly also the Wind River or Shoshone reservation. The Crow Indians have ceded 1,115,000 acres to the Government, and this will be given to the white men. It lies along the Valley of the Big Horn River just over the northern boundary of Wyoming in Montana and is very fertile. The Uintah land is in eastern Utah and the Shoshone tract is in Wyoming. For further information write to W. A. Richards, Commissioner of the Land Office, Washington, D. C.

❖

When is the rainy season of Oregon and how long does it last?

The dry season usually extends from May 1 to October 15, and the wet season the rest of the year.

Will we know our friends in heaven?

Why not? Are we to be imbeciles in heaven? Or blind? Or will it be too dark to see the faces of those about us? Will we know less there than we know here? Will we know Moses and Elias whom we have not seen and not recognize father and mother whom we have seen? Will we be happy in a land of strangers? "Some have doubts," says Spurgeon, "whether there will be recognition in heaven; there is no room for doubt, for it is called my Father's house, and shall not the family be known to each other?"

❖

What is the altitude of Portland, and is it near the ocean?

Portland is thirty feet above sea level, according to the United States geodetic survey. It lies in the northern part of the Willamette Valley, between the coast ranges and Cascade Mountains, which are in plain view. The city is one hundred twenty miles from the ocean, but being at the head of deep water navigation, on the Columbia and Willamette Rivers, makes it practically a seaport. The largest steamships are able to go direct to the city wharves at all seasons of the year.

❖

What is the maximum and minimum of the temperature of Oregon during the winter and summer?

In Western Oregon the average spring temperature is 52 degrees and summer 67 degrees, autumn 53 degrees and winter 39 degrees. The rainfall averages 44 inches in the Willamette Valley.

❖

Is it necessary to get an article patented before you can put it on the market for sale?

You can get a caveat for one year for ten dollars. This is a notice to the Patent Office of your patent and entitles you to notice in case another person tries to get a patent on your invention.

❖

What will it cost to get an article patented which would sell for ten or fifteen cents?

It costs fifteen dollars on filing the application and twenty dollars on getting the patent for seventeen years.

❖

When is Flag Day?

June 14, 1905, when "Old Glory" will be one hundred twenty-eight years old.

MISCELLANEOUS

OLD SAYINGS IN RHYMES.

As poor as a church mouse, as thin as a rail,
As fat as a porpoise, as rough as a gale,
As brave as a lion, as spry as a cat,
As bright as a sixpence, as weak as a rat.

As proud as a peacock, as sly as a fox,
As mad as a March hare, as strong as an ox,
As fair as a lily, as empty as air,
As rich as was Croesus, as cross as a bear.

As pure as an angel, as neat as a pin,
As smart as a steel trap, as ugly as sin,
As dead as a door nail, as white as a sheet,
As flat as a pancake, as red as a beet.

As round as an apple, as black as your hat,
As brown as a berry, as blind as a bat,
As mean as a miser, as full as a tick,
As plump as a partridge, as sharp as a stick.

As clean as a penny, as dark as a pall,
As hard as a millstone, as bitter as gall,
As fine as a fiddle, as clear as a bell,
As dry as a herring, as deep as a well.

As light as a feather, as hard as a rock,
As stiff as a poker, as calm as a clock,
As green as a gosling, as brisk as a bee,
And now let me stop, lest you weary of me.

* * *

USEFUL INFORMATION.

THE following countries, it is said, were originally named by the Phœnicians, the greatest commercial people in the world. The names, in the Phœnician language, signified something characteristic of the places which they designate:

Europe signifies a country of white complexion, so named because the inhabitants were of a lighter complexion than those of Asia and Africa.

Asia signifies between or in the middle, from the fact that the geographers placed it between Europe and Africa.

Africa signifies the land of corn or ears. It was celebrated for its abundance of corn, and all sorts of grain.

Siberia signifies thirsty or dry—very characteristic.

Spain a country of rabbits or coons. It was once so infested with these animals that it sued Augusta for an army to destroy them.

Italy, a country of pitch, from its yielding great quantities of black pitch.

Calabria, also, for the same reason.

Gaul, modern France, signifies yellow-haired, as yellow hair characterizes its inhabitants.

The English of Caledonia is a high hill. This was a rugged mountainous province in Scotland.

Hibernia is utmost, or last habitation; for beyond this westward the Phœnicians never extended their voyages.

Britain, the country of tin, great quantities being found on it and adjacent islands. The Greeks called it Albion, which signifies in the Phœnician tongue either white or high mountains, from the whiteness of its shores, or the high rocks on the western coast.

Corsica signifies a woody place.

Sardinia signifies the footsteps of men, which it resembles.

Syracuse, bad savor, so called from the unwholesome marsh on which it stood.—*Selected.*

A LIVING ROPE.

QUICK thought and prompt action in time of danger have averted many an otherwise fatal accident, as is well illustrated in what came near being a case of drowning last winter. A dozen boys were skating on a pond, when one of them broke through the ice, and the next moment was struggling in the water.

The accident occurred near the middle of the pond; there was no house near to which the boys could run for help; no rope which they could throw to their unfortunate companion, nor yet a pole or stick of any kind. For a minute they stood aghast, huddled together, watching the poor boy's struggles in the icy water, and his futile efforts to hold himself up by grasping the treacherous ice.

Suddenly Dave Small threw himself, face down, upon the ice and cried, "Quick! Shove me up to the edge. John, you lie down and get hold of my feet, and Si, you get hold of his. I'll catch hold of Rob; and when I give the signal, the rest of you fellows grab Si and haul us out of this."

The brave boy took the post of danger himself, the others followed his directions, and when he had securely grasped Rob the signal was given. All hands pulled with a will, and the drowning boy was saved.—*Selected.*

WESTWARD the course of the empire takes its way.—*Berkeley.*

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,
Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

The Sick Made Well

—A CURE THAT NEVER FAILS—

YOU NEED NOT SUFFER LONGER.

I hold in my possession the secret
whereby any one having female weak-
ness, falling of the womb, leucorrhoea, in-
flammation, ulceration, irregular painful
menstruation, nervousness, headache, in-
digestion, liver troubles, constipation,
piles, fistula, catarrh, etc., can be cured
at home and thereby save big doctor
bills and embarrassing examinations.
I do not ask you to buy a patent medi-
cine, nor to try a free sample.

I HAVE NOTHING TO SELL.

I suffered for ten years, had tried
many advertised remedies, and subject-
ed myself to the humiliations which
doctors usually require of their pa-
tients, and all without being benefited.

Finally, by the help of a noted Ger-
man doctor, I discovered the secret
whereby I was cured, a simple home
treatment, which has cured thousands
of others where everything else had
failed.

SEND NO MONEY.

My great desire to help others justifies
me in sending full information, con-
cerning this secret, FREE to every-
body.

ADVERTISE IN THE INGLENOOK.

A CALIFORNIA COLONY OF BRETHREN

On the 21st of February, 1905, a party composed of S. W. Funk, of Glendora, J. Overholtzer, of Colton, Wm. Platt, of Charter Oak (Ministers), T. M. Calvert, M. P. Custer (deacons), M. N. Overholtzer, F. L. Hepner, E. O. Overholtzer, of Covina, Cal., L. S. Ober, of Laotta, Ind., together with a number of friends, including J. P. Funk, of Charter Oak, and C. R. Greider, of Los Angeles, left Southern California on a trip to investigate the land under the Sacramento Valley Land Company's Canal system of irrigation just completed.

Ten of the party were old Californians who have had considerable experience in irrigating, fruit growing and farming in Southern and some in Central California, and are acquainted with the resources, climatic conditions, etc. of this country.

The party spent several days thoroughly investigating the water rights, character of soil, climate, health conditions, etc., in Glenn and Colusa Counties, and were well convinced that the richness of the soil, unfailing and cheap water supply, reasonable prices of land, transportation facilities, cool, pure, soft water for drinking, pleasant and healthful climate, etc., would insure a safe investment and deserve recommendation to others for settlement.

The party selected the Packer ranch of 6,600 acres, as a location, and secured an option for 15 months on 2,000 acres of this Ranch at prices ranging from \$25 to \$100 per acre, including water right, according to distance, west from the River, character of soil and drainage. Out of the 2,000 acres the party bought almost 800 acres, selecting from the cheapest to the highest price.

This tract runs about three and one-half miles west from the new town site of the Brethren.

As soon as the 2,000 acres are sold the Company agrees to open the balance, 4,600 acres, of the Packer ranch for the Brethren and their Friends.

The new town site on this tract will be located $3\frac{1}{2}$ miles north of Princeton. The tract is in the Southern part of Glenn County, extending from the river west. It is about 80 miles north of Sacramento.

All the water that is needed for any kind of farming or fruit growing is furnished by the Company for \$1.00 per acre per year, and the Company keeps up the ditches. The water can be had almost any day in the year.

This is an opportunity that perhaps has never before been offered in California or in any other part of the United States. A number of those who have purchased

will soon move to their new location and others are purchasing, and in a short time this tract will all be settled by the Brethren and their friends, especially by those from the eastern States who desire to do general farming in California.

This is certainly an opportunity to eastern people, as they can reap the benefit of the many years of experience these old Californians have had in irrigating and farming in California.

Wm. Platt and J. Overholtzer, two ministers, expect to move soon to Princeton, Colusa County, California. (The latter went about the 27th of March.) They will gladly answer any inquiries and welcome those who come to investigate this country with a view of locating. Any of this party will also gladly answer inquiries regarding the new Colony.

A town site will soon be laid out and in the near future there will be a school, post office, stores and preaching services.

There is a trading vessel which comes up the River once a week and will take produce of all kinds in exchange for groceries and pay cash. With the advantages here and the conditions well adapted to general farming, there is no doubt but what one of the largest congregations of the Brethren in California will be located on this tract in the near future, and those desiring to take advantage of this opportunity should do so as soon as possible.

We have a climate that is no doubt equal to any valley of any consequence, for health and agreeableness. There is an occasional case of malaria in the lower and undrained lands of the county where water stands, but as the lands are becoming more thoroughly drained, this has almost entirely disappeared. For throat and lung trouble our climate is excellent. The weather is a little warmer than near the coast in Southern and Northern California, but not so warm as Riverside, Redlands, San Bernardino, etc.

The continual flowing water of the great Sacramento River directly from Mt. Shasta and the Mountains add greatly to the health of the country.

Any one desiring to see this tract will go to Colusa Junction, thence to Colusa on the Narrow Gauge, and, by notifying the Farmers and Merchants Bank of Colusa, they will be taken direct to the Tract in automobiles free of charge.

For catalogues or any further information address,

C. M. WOOSTER, President,
Sacramento Valley Land Company,

648 Market St., San Francisco, Cal.

READ THIS!

Do you canvass for a livelihood? Are you a widow without any support. Is your health poor and not able to do much work? If so, write to Bro. F. C. Renner, New Midway, Md. He is a minister in the Brethren church and wants to help you to help yourself. Sister Sophia A. Stong, Newville, N. Dak., sold 3,564 boxes, and Bro. E. B. Stern, Noblesville, Ind., sold over 9,000 boxes. Many widows support their families with it. It is a pleasure to sell it, because it gives full satisfaction and is wanted by everybody. People come to your home for it, if they know that you have it. Here is what Sister Hannah Royer did. She had canvassed for other things, and when we sent our circular to each minister named in the Brethren Almanac, Bro. Koontz got one and he handed it to Sister Royer. Now notice her orders and the dates of them: Aug. 12, \$1.50; Aug. 22, \$5.00; Aug. 29, \$7.60; Sept. 9, 17.00; Sept. 25, \$16.50; Oct. 12, \$30.50. Just two months ago she wrote us that she cleared from \$2 to \$5 a day. Now you can see that it is no fake or catch penny article. Over four million boxes have been sold, and not one complaint. It suits every one. It has gone to all nations, England, Russia, Sweden, Belgium, Palestine, India, Mexico, Canada, Hawaii and the Islands. Many poor widows and orphans are supporting themselves with it. Write for particulars, or send two stamps for a sample and full particulars. Address:

ROSE JELLY CO.,
Frederick Co., New Midway, Md.

IT'S FREE

Our new No. 64 Mail Order Catalogue is now being sent out by the hundreds. Have you received one? If not, order at once. We also have a number of special department catalogues which will be sent on request. Sporting Goods, Watches and Silverware, Cameras and Photographic Goods, Artists' Materials, Stationery and Perfumery, Spy Glasses, Opera Glasses, Musical Instruments and Talking Machines, Sewing Machines, Baby Carriages, Clothing and Furnishing Goods.

You can enjoy the privileges of a large department store and remain in your own home. We handle a very large line of goods and can supply your needs. A glance at our large catalogue will convince you. Your patronage is solicited only on a competitive basis with other houses. Drop us a postal card and a new catalogue will be delivered at your door.

A SPECIAL TRAIN TO THE ANNUAL MEETING

Leaves Chicago Friday, June 2, 1905, via the
WABASH RAILROAD

For the accommodation of our many friends among the Brethren, we wish to announce that for the Annual Meeting at Bristol, Tenn., to be held in June, the Wabash Railroad will run a special train of high-backed coaches and chair cars, through from Chicago to Bristol without change of cars, leaving Chicago, Dearborn Station at ten o'clock A. M. We invite all living in the city, or in the vicinity, to purchase tickets via the following route in order to take advantage of this special service: Wabash Railroad Chicago to Toledo; Ohio Central Lines Toledo to Columbus, and Norfolk and Western, Columbus to Bristol.

This special train will run through the rich farming lands of northern Indiana, picking up our friends who live in this district, arriving at North Liberty about 12:30 P. M.; Lakeville, 12:50 P. M.; Wakarusa, 1:15 P. M.; New Paris, 1:30 P. M.; Millersburg, 1:45 P. M.; Topeka, 2:00 P. M.; Wolcottville, 2:15 P. M.; arrive Toledo 6:00 P. M.; Columbus, 9:00 P. M., and arrive Bristol 2:00 P. M., Saturday, June 3. It is our desire that train reach the meeting grounds as early as possible on Saturday, to enable our patrons to get comfortably settled before dark. A special train will also be run from Bristol to Chicago at close of the meeting. Representatives of the different lines will accompany this train through to Bristol, thus insuring kind treatment and a comfortable journey, in a train occupied only by the Brethren and their families. A low fare has been named for this meeting as usual. Inform your local ticket agent that you wish to accompany this special train, and he will see that your tickets read as per above route. For further information write to,

R. S. Greenwood, M. P. A., Chicago, Ill.
J. Halderman, T. P. A., Chicago, Ill.
F. A. Palmer, A. G. P. A., Chicago, Ill.

The Reedley Tract

The Gem of the San Joaquin Valley.

Is destined to be the home of many Brethren. Those settled here are well satisfied and are advising others to come.

The undersigned expects to be at the Annual Meeting at Bristol, Tenn., and will be pleased to meet the brethren, and talk with them about the Reedley Country. My headquarters will be at the Union Pacific Office, Annual Meeting grounds, Bristol, Tenn.

Elder D. L. Forney, late Missionary from India, has just purchased land near Reedley. Other leading brethren will locate soon.

Write for booklet and full information.
Address:

O. D. LYON,
Reedley, Fresno Co., California.

Chicago, Illinois.

UPPER PENINSULA LAND CO., Ltd.,

F. J. MERRIAM, Gen. Mgr., 935 First
Nat'l Bank Bldg., Chicago, Ill.

Howard Miller, Elgin, Ill.

Des Moines, Iowa, April 26, 1905.

Dear Bro.:—I have just returned from a visit to the lands you represent in the Upper Peninsula of Michigan. I have purchased a half section of the same, near Rudyard, with the expectation of making it my home in the near future. The soil here is a rich clay loam, from 60 to 300 feet in depth. Hay is the great farm crop at present, and a constant cropping from the same ground for twenty-four years is said to show no diminishing of the yield, which is from 1½ to 2 tons of timothy, and from 2 to 3 tons of clover per acre. The crop is always heavy, as the ground in winter is covered with snow, which prevents heaving, and drouths are unknown. Other farm crops, except corn, are equally profitable, and some of them probably more so, but hay being the easiest farming done, is the most prevalent crop, here, and the farmers seem satisfied with it. The market for it is good, and if nothing else were grown the yield obtained would fix a value to the land of from \$50 to \$75 per acre.

The great vegetable crop is potatoes. In fruits, red raspberries and strawberries run riot everywhere, in a wild state. Peas take the place of corn for fattening, and are sown broadcast, with a resulting yield of from 25 to 40 bushels per acre. Most other vegetables, fruits and grains are successfully grown, but the ones named have been made a specialty, and seem to be so unusually successful that the farmers have not tried to explore the possibilities of the land in all lines. All staple crops common to central United States seem profitably grown except in grains, corn; in vegetables, tomatoes; and in fruits, peaches. The country is well watered, and stock of all kinds do well, and sheep remarkably so.

All the residents say that the south-of-Rudyard-district, where I purchased, is the best soil in the largest body in the upper peninsula, and the country is dotted with farms in a high state of cultivation. There is quite a bunch of wild land in this region from 4 to 8 miles from Rudyard, along good graded roads, with schools near. This is in what is called "the flowing-well region." That is, here wells may be had at a cost of from \$35 to \$100 which flow out above ground the year round. The flow is sometimes raised to the second story of a house with pipes. The water is clear and usually quite soft.

I saw the country at the worst season of the year for looks, and the looks were against it. Timber, timber, and still more timber, and brush without end, in the wild tracts, along good roads. A formidable-looking task is the clearing of it for farming, but investigation proves that it is not as great as it appears to a man from the prairie. The wood is soft and cuts rapidly, the roots run on top of the ground and stumps sprout but little, and they are easily pulled, and there is a profitable market for most of the timber. Were the work of clearing the average wild lands in the Rudyard district hired, an estimate of the cost, to get it into cultivation, is about \$10 per acre, according to the people here who ought to know. The best of the land can be had for from \$5.00 to \$10.00 per acre from the Upper Peninsula Land Company, in this section, and the net value of the timber often runs as high as \$5.00 per acre. That is, it may be sold in the tree at that price. Therefore, while the task of clearing is considerable, the land has a financial value of from two to three times its cost, based upon its yielding capacity, as already shown, and the excellent markets of the Upper Peninsula. If a person does his own clearing, the cost of the land is a trifle and the wood from the land will make his living as he works.

I think the South-of-Rudyard district ought to be taken up by our people rapidly, as I understand this spot will be reserved for them for a short time, and there is no like opportunity open anywhere else to get as rich land as there is in the United States at such cost, were the work of clearing even hired.

The health of the country is excellent. The winters are long, but not usually severe. Last winter the United States Weather Bureau gives the lowest temperature at any time as 21½ below zero. The summers average about two weeks shorter than in central Iowa, and nights are always cool.

I expect to make this my permanent home and would like to have others of our members here with me. There is a splendid market for butter, eggs, poultry, vegetables, fruits and grains. There is a constant demand for heavy horses in the lumber camps, at \$500 per team. Society here is splendid and our people will find a congenial social home in it.

Fraternally,
John E. Mohler.

In going to the Upper Peninsula see that your ticket reads over the North-Western railroad. There is no other way of getting there direct. It connects with the "Soo" line, along which the Rudyard district lies.

At the very last this: Address all letters of inquiry to,

HOWARD MILLER,
Elgin, Illinois.

Paints - Varnishes

Enamels, Stains, Leads, Oils and everything else in the paint line. Only the best material is used in making our paints. We guarantee entire satisfaction when our material is properly applied.

The 3=C's of Business Competition

"Money Saving Prices" is a hackneyed phrase true in but a few instances. Of forty competing merchants in a town each claims the lowest prices. Investigation proves that their prices are almost alike. **They Must Be. They Are Standard.** All these forty merchants buy their goods from the same or similar sources. Their expenses of business are practically the same.

Business acumen and shrewd management obtains advantages in buying goods and saving expenses as against inferior management; but the advantages gained by good management are not shared by the buying public. They simply make more money for that particular merchant. Money Saving Prices. Prices that save the consumer money—Prices that are really "Money Saving" can only be established by doing business on a New System. These forty merchants operate under the Old System. They are bound hand and foot by conditions.

Combination

The department store—a combination of small stores—established lower prices, because it did business on a New System, the main feature of which was to sell many things to the same customer. This New System became very popular because it meant convenience to the buying public; the large purchasing power, backed by ability to pay cash for goods, established a lower standard of prices with manufacturers.

The people benefitted because the goods cost less to produce, cost less to sell, and the large volume of business at half the profit still meant greater net profits to the **Combination**. The people quickly saw their opportunity to save their hard-earned money, and so the combined stores secured their trade because the New System made lower prices.

But its patronage was limited, so the next step in this commercial evolution was the Mail Order Department Store. It burst the limitations of city patronage and successfully appealed to the entire country. Here, again was a New System of Trading, a New Plan, and again Prices tumbled.

Co-operation

Now commercial evolution takes its final step in organizing the Mail Order Department Store on the Co-operation plan. An entirely new and original plan aiming to sell still more goods to still more customers, through the interested personal selling force of thousands of co-operators in every section of the country.

Co-operation makes a new and much lower standard of Prices; it reduces the cost of selling, and returns to its interested shareholders not only all the excess profit they have paid on their own goods, but their proportionate share of the profits made on the sales to the country at large.

Our plan of Co-operative dealing and profit sharing is entirely original with Mr. H. P. Albaugh, President of our Company, and has never been used in connection with any other business enterprise. The plan has been universally pronounced "Co-operation reduced to a Science."

That American consumers are quick to see an opportunity to save their hard-earned money is shown by the instant appreciation of the advantages offered by Scientific Co-operation. While nearly 1500 Christian people have already become financially interested in our Co-operative Company, it can safely be predicted from the present rate of increase that hundreds more will become interested during the ensuing 12 months.

If you want to know more about this New Plan of co-operative dealing, and profit sharing, address our President, Mr. H. P. Albaugh.

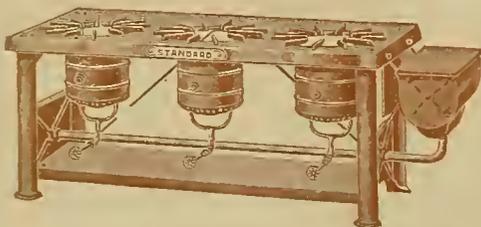

Albaugh Bros., Dover & Co.

The 3=C's of Business Competition

"Money Saving Prices" is a hackneyed phrase true in but a few instances. Of forty competing merchants in a town each claims the lowest prices. Investigation proves that their prices are almost alike. **They Must Be. They Are Standard.** All these forty merchants buy their goods from the same or similar sources. Their expenses of business are practically the same.

Business acumen and shrewd management obtains advantages in buying goods and saving expenses as against inferior management; but the advantages gained by good management are not shared by the buying public. They simply make more money for that particular merchant. Money Saving Prices. Prices that save the consumer money—Prices that are really "Money Saving" can only be established by doing business on a New System. These forty merchants operate under the Old System. They are bound hand and foot by conditions.

Combination

The department store—a combination of small stores—established lower prices, because it did business on a New System, the main feature of which was to sell many things to the same customer. This New System became very popular because it meant convenience to the buying public; the large purchasing power, backed by ability to pay cash for goods, established a lower standard of prices with manufacturers.

The people benefitted because the goods cost less to produce, cost less to sell, and the large volume of business at half the profit still meant greater net profits to the Combine. The people quickly saw their opportunity to save their hard-earned money, and so the combined stores secured their trade because the New System made lower prices.

But its patronage was limited, so the next step in this commercial evolution was the Mail Order Department Store. It burst the limitations of city patronage and successfully appealed to the entire country. Here, again was a New System of Trading, a New Plan, and again Prices tumbled.

Co-operation

Now commercial evolution takes its final step in organizing the Mail Order Department Store on the Co-operation plan. An entirely new and original plan aiming to sell still rarer goods to still more customers, through the interested personal selling force of thousands of co-operators in every section of the country.

Co-operation makes a new and much lower standard of Prices; it reduces the cost of selling, and returns to its interested shareholders not only all the excess profit they have paid on their own goods, but their proportionate share of the profits made on the sales to the country at large.

Our plan of Co-operative dealing and profit sharing is entirely original with Mr. H. P. Albaugh, President of our Company, and has never been used in connection with any other business enterprise. The plan has been universally pronounced "Co-operation reduced to a Science."

That American consumers are quick to see an opportunity to save their hard-earned money is shown by the instant appreciation of the advantages offered by Scientific Co-operation. While nearly 1500 Christian people have already become financially interested in our Co-operative Company, it can safely be predicted from the present rate of increase that hundreds more will become interested during the ensuing 12 months.

If you want to know more about this New Plan of co-operative dealing and profit sharing, address our President, Mr. H. P. Albaugh.

A CALIFORNIA COLONY OF BRETHREN

On the 21st of February, 1905, a party composed of S. W. Funk, of Glendora, J. Overholtzer, of Colton, Wm. Platt, of Charter Oak (Ministers), T. M. Calvert, M. P. Custer (deacons), M. N. Overholtzer, F. L. Hepner, E. O. Overholtzer, of Covina, Cal., L. S. Ober, of Laotta, Ind., together with a number of friends, including J. P. Funk, of Charter Oak, and C. R. Greider, of Los Angeles, left Southern California on a trip to investigate the land under the Sacramento Valley Land Company's Canal system of irrigation just completed.

Ten of the party were old Californians who have had considerable experience in irrigating, fruit growing and farming in Southern and some in Central California, and are acquainted with the resources, climatic conditions, etc., of this country.

The party spent several days thoroughly investigating the water rights, character of soil, climate, health conditions, etc., in Glenn and Colusa Counties, and were well convinced that the richness of the soil, unfailing and cheap water supply, reasonable prices of land, transportation facilities, cool, pure, soft water for drinking, pleasant and healthful climate, etc., would insure a safe investment and deserve recommendation to others for settlement.

The party selected the Packer ranch of 6,600 acres, as a location, and secured an option for 15 months on 2,000 acres of this Ranch at prices ranging from \$25 to \$100 per acre, including water right, according to distance, west from the River, character of soil and drainage. Out of the 2,000 acres the party bought almost 800 acres, selecting from the cheapest to the highest price.

This tract runs about three and one-half miles west from the new town site of the Brethren.

As soon as the 2,000 acres are sold the Company agrees to open the balance, 4,600 acres, of the Packer ranch for the Brethren and their Friends.

The new town site on this tract will be located $3\frac{1}{2}$ miles north of Princeton. The tract is in the Southern part of Glenn County, extending from the river west. It is about 80 miles north of Sacramento.

All the water that is needed for any kind of farming or fruit growing is furnished by the Company for \$1.00 per acre per year, and the Company keeps up the ditches. The water can be had almost any day in the year.

This is an opportunity that perhaps has never before been offered in California or in any other part of the United States. A number of those who have purchased

will soon move to their new location and others are purchasing, and in a short time this tract will all be settled by the Brethren and their friends, especially by those from the eastern States who desire to do general farming in California.

This is certainly an opportunity to eastern people, as they can reap the benefit of the many years of experience these old Californians have had in irrigating and farming in California.

Wm. Platt and J. Overholtzer, two ministers, expect to move soon to Princeton, Colusa County, California. (The latter went about the 27th of March.) They will gladly answer any inquiries and welcome those who come to investigate this country with a view of locating. Any of this party will also gladly answer inquiries regarding the new Colony.

A town site will soon be laid out and in the near future there will be a school, post office, stores and preaching services.

There is a trading vessel which comes up the River once a week and will take produce of all kinds in exchange for groceries and pay cash. With the advantages here and the conditions well adapted to general farming, there is no doubt but what one of the largest congregations of the Brethren in California will be located on this tract in the near future, and those desiring to take advantage of this opportunity should do so as soon as possible.

We have a climate that is no doubt equal to any valley of any consequence, for health and agreeableness. There is an occasional case of malaria in the lower and undrained lands of the county where water stands, but as the lands are becoming more thoroughly drained, this has almost entirely disappeared. For throat and lung trouble our climate is excellent. The weather is a little warmer than near the coast in Southern and Northern California, but not so warm as Riverside, Redlands, San Bernardino, etc.

The continual flowing water of the great Sacramento River directly from Mt. Shasta and the Mountains add greatly to the health of the country.

Any one desiring to see this tract will go to Colusa Junction, thence to Colusa on the Narrow Gauge, and, by notifying the Farmers and Merchants Bank of Colusa, they will be taken direct to the Tract in automobiles free of charge.

For catalogues or any further information address,

C. M. WOOSTER, President,

Sacramento Valley Land Company,

648 Market St., San Francisco, Cal.

"Happiness Lies First of all in Health."

—CURTISS.

The above sentiment is found frequent expression by sages, philosophers and men of learning since time immemorial. The secret of good health lies in temperate and careful living and in correcting the little physical irregularities of the system as soon as they appear by the use of a reliable blood and constitutional remedy such as:

Dr. Peter's Blood Vitalizer

It Purifies the Blood.

It Strengthens the Body.

It Builds Up the System.

It Rejuvenates the Old.

It Makes the Weak Strong

It ceased to be an experiment more than a hundred years ago. Thousands have testified to its remarkable health-giving powers.

A GRATEFUL MOTHER.

Oshkosh, Wis., March 13, 1904.

Dr. Peter Fahrney, Chicago, Ill.:

Dear Sir,—I consider your **Blood Vitalizer** a God's blessing. I have often thought how I would like to see you personally and tell you how much good it has done for us. I must, however, write you a letter although I am such a poor writer.

Our four-year-old daughter had been ailing a long time, and all doctors had failed to help her. One said she had dropsy, another kidney trouble, and others jaundice. She was operated on, twice on her left side and once on her right, but without avail. Finally, when the doctors gave her up, we commenced using your **Blood Vitalizer**. That was ten years ago. She is now a fine-looking girl of fourteen years.

I would like to be agent for your remedies, and supply the people with them; in fact, I think it is my duty to do it. Kindly let me hear from you.

Yours very truly,

389 Iowa Street.

Mrs. Bertha Schultz.

SHE WRITES FOR GRANDMA.

Kendallville, Ind., May 20, 1904.

Dr. Peter Fahrney, Chicago, Ill.:

Dear Sir,—Grandma is now eighty-four years old and almost too old to hold an agency for your medicines,

but she says she cannot live without the **Blood Vitalizer** in the house. It has done wonders for her. She wanted me to write and tell you that she will do all she can to get some one to take the agency here.

Yours truly,

Theresa M. Alexander.

DID NOT THINK HE COULD LIVE.

Afton, Tenn., December 9, 1903.

Dr. Peter Fahrney, Chicago, Ill.:

Dear Sir,—When I ordered the box of **Blood Vitalizer**, my husband was apparently at death's door. The neighbors who came to see him would go away declaring that he could not live more than two or three days. Some thought that evening that he would not live until morning.

I had almost lost all hope when the **Blood Vitalizer** arrived. I commenced giving it to him at once according to directions, and by the time I had given him three doses I could see a change. He is eighty-three years old and he can now sit up in his chair all day. He will, of course, on account of his age never be robust, but I am certain your medicine has prolonged his days.

Yours truly,

Mrs. Mary Bayer.

BEATS ALL MEDICINE.

Rochester, Pa., Aug. 15, 1904.

Dr. Peter Fahrney, Chicago, Ill.:

Dear Sir,—Please send me some more **Blood Vitalizer**. I am improving greatly from its use. I have been taking it regularly for a short time and I must say it beats all medicines I have come across. I have put my crutches away and can now walk with a stick. There are several afflicted the way I was who are watching the results in my case. I am a living advertisement for your **Blood Vitalizer**.

Respectfully yours,

W. J. Ware.

DR. PETER'S BLOOD VITALIZER is known as a plain household remedy. It comes in a plain bottle encased in a plain carton, but there is the element of cure in every bottle. No one is so low with disease but what this remedy gives hope, and no one so well, but what it will still do good.

Do not ask for the **BLOOD VITALIZER** in drug-stores. It is not a drugstore medicine, but is supplied direct to the people through local agents appointed in every community. Should you know of no agent in your neighborhood, write at once to the sole proprietors,

DR. PETER FAHRNEY & SONS' CO.,

112-118 S. Hoyne Ave.

CHICAGO, ILL.

The Land of Promise In Southern Idaho!

The Oregon Short Line Railroad

Will be represented at the Annual Meeting at Bristol, Tenn., by their General Immigration Agents, S. Bock and J. E. Hooper, who will be pleased to meet the Brethren and their friends at our office, opposite the Tabernacle, where they will find a welcome during the meeting.

The Oregon Short Line Railroad is the popular route to points in Idaho, Oregon and Washington. Homeseekers, tourists and business men will find this route interesting and train service unsurpassed.

Homeseekers' round trip excursion rates from Chicago on June 6th and 20th and July 4th and 18th, 1905. Return limit 21 days.

MAY 23, 1905.

No. 21.

HAPPINESS.

Happiness is like a crystal
Fair and exquisite and clear,
Broken in a million pieces,
Shattered, scattered, far and near.
Now and then, along life's pathway,
Lo! some shining fragments fall.—
But there are so many pieces
No one ever finds them all.

You may find a bit of beauty,
Or an honest share of wealth,
While another, just beside you,
Gathers honor, love or health.
Vain to choose or grasp unduly,
Broken is the perfect ball;
And there are so many pieces
No one ever finds them all.

Yet the wise, as on their journey,
Treasure every fragment clear,
Fit them, as they may, together,
Imaging the shattered sphere.
Learning ever to be thankful
Though their share of it be small,—
For there are so many pieces
No one ever finds them all.

—Washington Echo.

SNAPSHOTS.

BY MARY I. SENSEMAN.

Self-conceit is not self-reliance.

Simplicity is the offspring of good sense.

Large quantity cannot compensate for small quality.

Honesty is a vice, if used as a means to a vicious end.

The bigger we think ourselves, the smaller we become.

To win a battle only because we fear defeat is not victory.

We are not good simply because nobody knows our meannesses.

No incident, however small in itself, has ever ended or ever will end.

We are not bad simply because everybody discusses our shortcomings.

Life shapes itself toward perfection unless we distort it. It is our lot to fill it to perfection.

Sometimes the reason that we have not done bad is that we had no chance to carry out our thought.

A tree, if its wood is full of holes bored by worms, although the bark is perfect, will fall at the first high wind.

If we fully realized what exact photographs of our thoughts are our expressions, a good many of us would strive more to improve the originals.

Some are born good, some achieve goodness, and some have goodness thrust upon them; but it is the goodness achieved that will probably count for most in the final summing up.

Covington, Ohio.

A WEEK IN HAVANA, CUBA.

BY C. M. WENGER.

THE first thing one looks for and the first thing one sees on approaching the city of Havana is "Morro Castle." This old fortification is built on a solid rock that projects far out into the waters of the gulf. Between this and the sea wall of the city is the channel through which boats and vessels pass in entering the harbor. This channel is rocky and dangerous and a pilot is always sent out to meet incoming vessels and guide them safely through. No foreign vessels are allowed to land at the wharf and all passengers as well as freight are transferred by small boat to city.

Our boat was anchored in the channel near the wreck of the ill-fated *Maine*. Some of the ruins are still seen, clearly reminding one of that cruel deed and awful destruction. Here the doctor comes on board and all passengers go through quarantine inspection. This inspection is quite formal, yet simple. The passengers gather in dining saloon and door is closed. The official gentleman comes in, removes his cap, counts heads and says, "All right," bows very gracefully and passes out. And for his services, I presume, draws a very satisfactory salary.

On reaching the wharf you at once come in contact with hotel runners, each claiming to have the best and most favorably located house. Here you get your first impressions of foreign customs and people. The dark-skinned natives are everywhere in evidence and the language they speak is a dead blank. These runners, however, speak broken English and are very persistent in advancing their claims. By this time you will have decided on some hotel and pass out through custom house, have your baggage examined by an official, and on through gates to the street where you take cab, show driver your hotel card and in a moment you are off, winding through extremely narrow streets until hotel is reached. The hotel may please you and it may not, more often it does not, but American comforts and luxuries must not be looked for here.

There are no elevators and stair climbing is one of the trials of a sojourner in Havana. Everything is very much oriental and at every turn some strange and novel sight presents itself and you at once feel that you are in a foreign land among strange scenes. Havana has a population of 275,000, and is very compactly built. There are no vacant lots and each house adjoins another, making a continuous solid block. The streets are extremely narrow and buildings stand close up to the curb. There are no rear alleys and all houses have only front entrance. This entrance is through a large reception hall which contains staircase, some furniture, and where the carriage, if they possess one, is stored.

The horse is taken through this hall to his stall in the rear beside the kitchen. There is an open court in center of the buildings extending from the ground to the sky, affording light and ventilation, and around which are located the living rooms. In the wealthy homes this court is often beautiful with tropical plants and flowers, but with the poorer class it serves as a back yard to the place, where wash lines are strung about, and where one sees goats, chickens and children all having equal freedom.

On the second floor, between the living rooms and the open court, is a large corridor where the family spends much time in the shade and pleasant breeze. The roofs are flat and have no chimneys. The tem-

perature never reaches the frost point and heating stoves are not required. The cooking is done with either gas or a charcoal fire. A number of arches are built along one side of kitchen wall, forming a shelf and over each arch is an iron grate on which the fire is built and the cooking utensil is placed directly on the coals; the few crude kitchen utensils are hung around the wall of the room.

The parlor is a large, spacious front room with one or two windows facing the street. The windows have iron bar grating with no glass, with blinds or solid shutters on inside, extending from floor to ceiling, which is from eighteen to twenty feet high on an average. The stair steps and floors in halls and living rooms are largely of marble with no carpets or matting, and only occasionally a rug is seen.

The Cuban store is a small affair compared to our large retail establishments in America. The room is small and shallow and extends the long way on the street. Often several merchants with different wares occupy the same room. The merchant's family as a rule lives in rear of store. On some of the streets, and especially those fronting on the parks and the Prado, are large colonnades extending over sidewalk, furnishing shade and protection to pedestrians from the hot rays of the noonday sun.

The Prado is a magnificent avenue of unusual width, extending from Colon Park on the south to the gulf sea-wall on the north. There is a double promenade lined with shade trees through the center, and a carriage drive on each side, making a fine promenade and parade ground.

Central Park, located about midway along the Prado, forms the central convenable point of the city, and at any hour of the day or evening one can see hundreds of people enjoying the beautiful shade and cool breeze of this delightful place. Around this park and on either side of the Prado are located the large hotels and theaters and some of the finest residences.

Original Cuban custom keeps the ladies in rather close retirement and when on the streets they are always accompanied by some member of the family. But our American freedom and sociability is fast gaining ground and ere long many of the strict old customs will be a thing of the past. Yet the orthodox Cuban is loud in his denunciations of our American "flim-flam" ways. The people are only medium in size, but finely featured and have handsome faces. The ladies are fond of dress and when out driving or for a promenade one can see feminine beauty hard to excel anywhere.

The people are mild and quiet in manner and no loud, boisterous talking is heard. Instead of yelling, "Hello!" or "Hey, there!" they call each other by a simple "Hist," and it is strange how effectually and generally this signal is used. They can attract

one on opposite side of street, call a carriage, stop a street car, get the attention of a clerk or waiter, and do it satisfactorily. The carting and hauling is done with the two-wheeled ox cart. Mules are used for city work and are driven tandem; often as many as five mules are hitched tandem to one cart.

Oxen do the heavy hauling, with two and three oxen hitched to the cart. In the country oxen are used generally and the one-handled wooden plow is still the standard farm implement. The yoke is fastened across the forehead of the ox just below the horns, instead of resting on the neck and shoulders. Much of the produce is brought to market on horseback, and early each morning may be seen whole caravans of pack beasts weighted down with immense loads of vegetables, going either to the public market or to be peddled about the streets, and it is a common sight to see dispensers of milk, fruits or groceries on horseback, going about the streets at all hours of the day. The milk dairies are found in any portion of the city, in the business as well as residence districts, and often a shop, residence, restaurant or store may be their next-door neighbor. Havana has an excellent and extensive street railway system, built and owned by American capitalists, but operated with native help.

The old Cuban horse car, a wagonette drawn by a span of burros or mules, is still doing service, but is patronized largely by laboring Cubans, the fare being three cents, while that of the electric cars is seven cents. The victoria, a one-horse cab, is much used for carriage transportation in the business district, and for pleasure driving.

There are numerous old forts about the city that have a history dating far back into the centuries. The largest and most conspicuous of these is Fort Cabanas, adjoining Morro Castle on a high prominence overlooking the city, but a recital of the torture and cruelty perpetrated there on the unfortunate victims makes the place appear most ghastly and horrifying to the present-day visitor. The religion of Havana had been universally Catholic, until the past few years, when American immigration begun, there have been Protestant missions established and now services are held by various sects with regularly stationed pastors.

The visitor rarely comes to Havana without seeing Colon Cemetery, one of the notable institutions of the place. The grounds are enclosed with a stone wall and the arch over the main entrance bears a sculptured panel representing the raising of Lazarus from the dead, and surmounting the whole is a group of heroic figures representing Columbus bringing the light of religion to the New World. The prevailing mode of burial is in stone-cased graves covered with a marble slab extending several feet above the ground and one is at once attracted by the uniform appearance of these receptacles for the dead. Many are of sufficient depth

to hold four or five bodies, one casket resting immediately above the other. The very rich bury in vaults above the ground, while the poor class, of which there is a large number, deposit their dead in plainly dug graves without any rough box, which is immediately filled, and often the top of the coffin is crushed in by the heavy clods of earth dropping on it. Funerals in Havana lack much of the solemnity and order which are characteristic of such occasions in the United States. Women do not attend funerals from the home to the cemetery, but the men attending follow on foot. Sometimes the undertaker and attendant are the only persons to accompany the remains to their final resting place.

South Bend, Ind.

HAWAIIANS AND THE JAPANESE.

WE are now in the seventh year since the annexation of Hawaii to the United States. The group consists of eight inhabited islands and seven small barren islands. In 1900 the total number of Hawaiians of both pure and mixed blood was 37,635, little more than half the number of pure bloods half a century ago. About thirty thousand of these are of pure blood. The Hawaiians are therefore a dying race. They have small families. Many of the children die in infancy. Among the adults, consumption and other diseases indicating low vitality are prevalent. The mixed Hawaiian blood is more vigorous, and presents in two general types, the Caucasian Hawaiian and the Chinese Hawaiian. Of these two, it is the common testimony that the latter is both physically and mentally superior.

But Japanese are entering the islands in large numbers—a fact full of significance. According to the report of the Pinkham Commission, which was appointed by Governor Carter to investigate the labor and industrial conditions of the islands, and whose report has just been completed, the Japanese have numerically become upwards of half of the total population—"more than half when the effective force of production is considered." The Chinese element shows a tendency to reduction, but the Japanese element is an incoming sea. Of the Porto Ricans who were imported into the islands to relieve the labor situation, the report says that "never was a community cursed by a larger per cent of worthless vagrants, public charges in hospitals and jails, and dastardly murderers, than come from these people." Of the Japs, it is said that they "have eagerly adopted the practical material ideas of the Western civilization and subjected themselves to severe courses of training and education for their individual and race advancement."—*World's Events*.

GOODNESS is the only investment that never fails.—*Thoreau*.

"DHOBIES AND DHOBIE WORK IN INDIA."

BY S. N. M'CANN.

A DHOBIE is a man who does laundry work for a living. They, like all artisans in India, are born to their trade. A man is born a dhobie, lives and dies a dhobie, his ancestors were dhobies and all his posterity will be dhobies. His trade makes a caste called the dhobie caste; he cannot rise above this and he will not associate with any below him in caste.

Well do I remember my first days in India, when in the early morning long before daylight I could hear the thud, thud of what seemed to be a dozen or more men chopping in dry timber. On inquiry I was told it was the dhobies at work, but I could form no conception of what was going on until on an early morning walk I came to the dhobie tank or pond, where I beheld what since has grown a very common sight: A number of men standing in the tank in the water above the ankles, a flat stone on an angle of about thirty degrees sloping away from them, a miscellaneous lot of clothes, belonging to Parsees, Musselmen, Hindoos of the various castes, Eurasians and Europeans, piled around them in the mud and water.

The clothes are dipped in the water at the feet and with a long full sweep bringing them around over the shoulder they come upon the stone with a thud that soon calls for new clothes, but much sooner for new buttons and fringed-out seams.

To the newly initiated American, with his western

DRAWS THE WATER.—Photographed by W. R.
Miller. All Rights Reserved.

idea of cleanliness, the washed clothes are rather repulsive to his sense of smell, and when he sees the mingling of vermin and disease-laden clothes, he feels like turning laundryman himself at least once a week. This feeling grows on him as the tank dries away to only a puddle of muddy water here and there, and finally a puddle with water turned into it drawn from an improvised well dug into the bottom of the tank close by the slanting stone and mud puddle.

The clothes when not colored by some fading garment of many colors generally look fairly clean. They are steamed together, then bleached in the hot sun.

The dhobie always goes dressed in the best that his customers afford. He never or seldom has any clothes of his own, but he chooses the best in his laundry, washes it, wears it about four days, washes again and either rents it or brings it to its owner.

Our dhobie, Lelou Mah Dave, and his brother Pershotun had on the following clothes when this picture was taken: Lelou's coat, Musselman; shirt, Varnia Hindoo; dhotie, farmer. Pershotun's coat, Varnia Hindoo; shirt, Parsee; undershirt, Parsee; dhotie, Varnia; socks, Varnia.

Lelou Mah Dave says he never owned but one sewed piece of clothes (meaning his own) in his life and that was when he was a child. He says, "What use to buy clothes?" he always has plenty.

Once when Bro. Lichty's shirt came from the wash it had great tucks in the arms, which he could not account for. The dhobie explained that the tailor wanted a pattern but the sleeves were too long hence he tucked them up. But the dhobie now says the sleeves were too long to wear without the tucks. We asked if he wore our clothes, and he said they were too large, else he would.

Washing is generally done by the week, at so much per week and if it does not come back for ten days or two weeks the next wash is only counted for a week. It seems to puzzle the newcomer how the dhobie can afford to keep clothes for two weeks or more and then take the wash for only one week. This is all clear to the dhobie, however. Good clothes often rent for much more than the price of the week's laundry. It clears up to the impatient Westerner if he meets his clothes walking about the street or at a Hindoo festival.

It seems to puzzle the dhobie when the European objects to some one else wearing his clothes. Were not clothes made to wear? Has a dhobie not his rights? The American fumes and frets and the dhobie smiles and goes on his accustomed way.

Anklesvar, India.

A BEAUTIFUL YOUNG WOMAN THE DEVIL'S AGENT.

A YOUNG man in a Wisconsin town gave his heart to God and was converted through and through. He was very bright and before his conversion was very wild. There was a young lady in that town he had been wont to visit often. She said to a familiar friend of hers, when she heard of his conversion, "I wonder if he will come to our parties now?" That friend replied, "I don't believe he ever will; and after hearing what he said, I don't think he will play cards any more." "I'll bet I can get him to play," said she. "I'll bet you can't," said her friend, and they made some kind of a bet together, the two girls, both members of the church, though they had no interest in religion. "Now, I'll tell you," said the first, "I'll give you two weeks, then will report to you." A few nights after the meeting closed he came down to spend the evening with the girl. He put his things on the rack in the hall and stepped into the parlor. She invited him to a chair. By and by she said, "Well, let's have a little game of cards to-night." "No, thanks," said he; "I am not going to play any more."

"You are not? What do you mean?"

"I mean just that—that I am not."

"Well, I know you are not going to play with bad men, or gamble any more, but you will play with me."

This was his reply: "I played my first game in a

parlor with a girl, and my last with a gambler in a gambling den. Before I knew it I was gambling with all I could get. I don't propose to start again where I did the first time."

A brave, kind, polite answer. He had turned out a miserable gambler, and he did not propose to be caught a second time that way.

They talked on a few minutes together, and then she said: "Oh, pshaw! I am not going to let you be so particular. What will we do if we don't play cards?" Continuing, she said: "There is such a thing as being really fanatical. I am glad you have changed, but I don't want you to be fanatical. I wouldn't have you fanatical for anything. And right here alone, just you and I—will you play a little game with me? I'll never tell."

She pulled out a little drawer and from it took a pack of beautiful enameled, gilt-edged cards, and as she held them out to him she gave them that quick snap—music to the player's ear.

"Come on! any game you say! your deal!" He looked at the cards; he looked at her; she was almost trembling with excitement. He looked into that eager face and she smiled upon him out of those beautiful eyes; he saw those pearly white teeth as they flashed out from behind coraline lips; she smiled at him again so temptingly. He thought the world of that girl.

He stood for an instant, hesitatingly looking into her face, then he reached out and took the cards from her hands and—tossed them over into a corner of the room. He turned and said: "I have a lesson to prepare to-night for to-morrow's recitation; I guess I had better go home and get it. Good evening." And he bowed and walked out of the room.

Young man, are you made of this sort?—*Selected.*

AN UNOSTENTATIOUS EMPEROR.

THE Emperor Francis Joseph of Austria is a man of simple, frugal habits and a hard worker. He is an early riser, and for many years after ascending the throne he was up at five o'clock in the morning to begin his day's work after a breakfast of coffee and bread and butter. The amount of work he is able to get through is amazing. For recreation he goes to one of his shooting boxes for a few days, wearing Tyrolese costume and devoting himself entirely to the chase.

A VERY interesting scientific discovery has lately been made in regard to the current naval manœuvres in Cuban waters, that it is impossible to transmit wireless messages to as great a distance in the warmer zones as farther north.

A TOWN OF THE PAST.

BY D. Z. ANGLE.

IN the southern part of Jefferson county, Ill., is located the village of Spring Garden. This place probably took its name from a large dug well many feet deep and with a never-failing spring at the bottom. This well is in the center of the town. The surface of the country in and around the town is nearly level, which in itself would be suggestive of a garden.

We presume the founders here thought to build a mighty city, and the site surely was a promising one, for the place reminds one of the prairies of the north where skyscrapers can be seen as far as the eye will reach.

Spring Garden was first started probably about sixty-five years ago, and made rapid progress for twenty-five or thirty years. During that time it was one of the chief trading points for the inhabitants in a radius of twenty miles around. It had reached the zenith of its prosperity in the 70's. About that time the Louisville and Nashville railroad was built through Jefferson county from west to east about midway of the county. This road (the first one completed within the county), struck Mt. Vernon just right, and by its help (and also being county seat), she was enabled to outstrip Spring Garden and other inland towns.

Just prior to this one of Spring Garden's main business men failed. He was very wealthy, but got to speculating in the St. Louis cotton exchange, and for a time was very fortunate, being worth at one time, 'tis said, \$80,000. But finally his luck turned, and he lost about all he had; and down with him, in a measure, went Spring Garden. Still the place continued to transact considerable business up till about ten years ago, when the Chicago and Eastern Illinois railroad was built through the county from north to south, missing Spring Garden again by two or three miles. The towns of Ina and Bonne soon sprung up on the new road, and of course being so near could easily put Spring Garden out of business.

Now they have but one store in operation with probably half a dozen empty storehouses; some of them of brick, on the road to decay. A large two-story brick structure designed and formerly used as a hotel and erected about the time the South rebelled, is in a fair state of preservation. The somewhat pretentious buildings now stand as monuments marking the place where once was bustle and activity.

Could those crumbling, weather-beaten walls but talk, what stories they might tell of proud dreams and fond hopes, of wealth and power, of magnificence and commercial supremacy, rivalling the cities of the East. Starting as it did probably before Chicago, fondly might they have hoped to here found the metropolis

of the West, to flourish like a London or Paris and become the capital of an empire.

Mt. Vernon, Ill.

WHAT CÆSAR DID FOR ROME.

CAIUS JULIUS CÆSAR was born in the year 100 B. C. Among the many men who have secured for themselves a prominent place in Roman history, this man stands out preëminent. It has been said of him: "That Julius Cæsar was a famous man; with what his valour did enrich his wit; His wit set down to makes his valour live; Death makes no conquest of this Conqueror; for now he lives in fame; though not life."

In the sixteenth year of his age he assumed the toga and was appointed Flamen Dialis, high priest of Jupiter. This was the beginning of his political career. From the first he had but one aim—to advance himself by all means, risks and sacrifices, to supreme dominion. He now set to work to gain this end. It was his first object to become popular among the citizens. He courted the favor of the people by lavishing enormous sums of money on public games and tables and by every other method within his power.

In the year 63 B. C., he set forth into Spain in command of a military expedition. The men against whom he warred were brave but undisciplined, and Cæsar, with his well-drilled legions, completely conquered them. He killed a great many of these people needlessly. In fact, his object in conducting the campaign was to attain military glory, not to quell a rebellion, for none existed until he purposely stirred up one.

After returning from Spain, he obtained the consulship in 59 B. C., through the influence of Pompey, whom he bribed by giving him his daughter in marriage. This and other similar briberies at this time caused Cato to say that it was intolerable that provinces, armies and governments should be bartered for women.

While consul, Cæsar used his power justly, and won the favor of all the classes. To twenty thousand poor citizens of Rome he gave allotments of public land in Campania; he favored the equestrian, or middle class, by remitting one-third of their rent as revenue farmers in Asia; and the highest class of citizens by securing the passage of some laws restricting governors of provinces, so as to prevent extortion, facilitate justice, etc.

The popular assembly then granted Cæsar what he much desired—a province for a term of ten years. This was about equal to giving him control of it for life. He would now have command of an army in the very jaws of the republic, assuring him means of conquering it when a suitable opportunity arrived.

About this time the Helvetians, fierce mountaineers of Switzerland, began to migrate southward, intending to settle in or near the Roman province, Gaul. This greatly alarmed the Romans, and, at his own instigation, the Senate gave Cæsar the control of the provinces of Cisalpine Gaul and Illyria, for a term of five years, with an army of three legions. The Senate would have opposed him, but was powerless because the populace favored him; so, either hoping to keep him at a distance, or conciliate him to their party, they gave him Transalpine Gaul and another legion. When Cato heard this he said that the Senate had elected their king and planted him with a body-guard in the Capitol. Cæsar conquered the Helvetians, thus ridding Rome of a hitherto constant and formidable enemy.

The Senate now foresaw danger and commanded Cæsar to resign his office and disband his Gallic legions by a certain day. The long-sought opportunity now presented itself. He led his army across the Rubicon, the boundary line between Cisalpine Gaul and what was then Italy proper. This was a declaration of war. As the great leader entered the river, he said, "The die is cast."

He overran Italy and captured Rome. Pompey and the Senate fled to Greece. After conquering the western part of the Roman world Cæsar led his army into Greece and defeated Pompey at Pharsalus. The battle of Thapus, in Africa, ended the war.

The ambitious general had now attained the object which, with his great energy and powers, he had been striving to gain; he was supreme ruler of Rome.

When he entered the city, it was thought that he, like Sulla and others, would proscribe those who had opposed him: but he gave assurance that life and property would be respected.

His reign was a good one. Cæsar reversed the narrow policy of Rome in the past, rebuilding both Carthage and Corinth, and founded numerous colonies, where he settled a hundred thousand poor citizens of Rome. He conferred upon some of the provincials Roman citizenship, upon others, Latin rights, thus striving to form a community of interests and sympathies.

While it is true that Cæsar was one of the principal factors in the overthrow of the Roman Republic, and by thus destroying the liberties of the people was indirectly responsible for the tyrannical rule and oppression of some of the emperors who succeeded him; yet, considering the corrupt condition into which the republic had fallen, and recognizing the improvements under his good rule, and the fact that he conquered for Rome some of her most formidable enemies, it is questionable whether he deserved the reward (assassination) which he received at the hands of his countrymen.—*Geo. E. Roop, in College Rays.*

THE STAR-SPANGLED BANNER.

THE flag of to-day contains forty-five stars and thirteen stripes. The original contained but thirteen stars arranged in a circle, and was designed by Washington and his staff. The Colonial flag, consisting of a red cross on a white ground in the upper right hand corner and the body of red, was used by the New England States previous to the Revolution. This was succeeded in the navy by the Pine-Tree flag. Then came the Rattlesnake flag, representing a rattlesnake coiled ready to strike, and underneath these words in large letters: "Don't Tread On Me." On the breaking out of the Revolution a new national flag was needed, and the stars and stripes were chosen. Since that time we have clung close to the star-spangled banner, and with a few changes it is to-day the same as the original.

What changes the old flag has looked upon! It has looked upon scenes of carnage and death, fields red with human blood, and men gasping in the last throes of death. Again it has looked on peace and prosperity, people happy and contented, on fields of cotton, corn, and wheat where the cannon once boomed. During the bombardment of Fort Moultrie, in the thickest of the battle the flag-staff was severed, and the flag dropped outside of the fort. Sergeant Jasper immediately leaped over the breastworks, seized a sponge staff, and fastened the flag to it, amid the hail of bullets, and sprang inside unharmed. Such is the love of a soldier for the flag under which he fights. The gallant Jasper lost his life not long after while rushing to the front with the national colors. For five years it was cannonaded, and had shot and shell fired into it by its own countrymen. Still, torn and powder-stained though it was, it fluttered true and loyal to the Union. Again the flag, with Gen. Grant at Appomattox, sees another surrender, more imposing than the one which took place almost eighty-five years before.

Now in times of peace, on Decoration day, the flag under which the soldier fought is unfurled over his grave along with the garlands of peace and friendship. On the Fourth of July and Washington's birthday it floats from the highest pinnacles of courthouses and business places. What nation has a more beautiful flag than ours? How long will it be before our old flag is again brought into active play on the field to the time of martial music and bugle notes? God grant that we may never see the day but that it may still wave over contented and happy homes and peaceful people. As the words of our national song go, may it always be, "The Star-Spangled Banner, and long may it wave o'er the land of the free and the home of the brave."—*Homer Daniel, in Treasure Trove.*

AN HISTORIC SPOT.

BY J. W. VETTER.

BATTLEGROUND is a small town of between six hundred and seven hundred people located in Tippecanoe county, Indiana, four miles north of the city of Lafayette, on one of the main lines of the Monon railroad, and is so named because of its being just immediately north of the spot where the battle of Tippecanoe was fought between the United States troops, under William Henry Harrison, governor of Indiana Territory, and the Indians under Olliwacheca or "The Prophet."

The battle ground contains eleven acres, owned by the State, and is inclosed by an iron fence with two entrances, one on the north and one on the east. Over each of these entrances is an arch with the words "Battle of Tippecanoe, Nov. 7, 1811." Each arch is surmounted with a large spreading, screaming eagle bidding defiance to any who shall endeavor to intrude upon the sacredness of the spot and guarding the graves of the thirty-seven brave soldiers who fell in that bloody struggle.

The field lies square at the north end, the east side running square half the length, then angles to the southwest. The west side lies square about one-third the length and then angles southwest over a hillside, again turning south and southeast, meeting in a point similar to the letter A.

The ground contains between one hundred and two hundred large trees which stand as silent witnesses of this decisive struggle, and bearing on their trunks numbers of scars under which lie imbedded the deadly missiles of lead and iron hurled at each other by the facing foe.

History records the cause of this battle being "the accusing of Governor Harrison" by the great chief Tecumseh, "The Crouching Panther," "of defrauding the Indians in the recent treaty made at Ft. Wayne and that the lands should not be given up." Governor Harrison determined to visit the Prophet at Tippecanoe. He took with him a military force of one thousand men and arrived within three miles of their town on the 6th of November, 1811. The Indians met him and asked why he came so near with so large a force, but were assured of friendly intentions and arrangements were made for the council fire the following day.

"Governor Harrison, being accustomed to Indian treachery, ordered his men to sleep on their arms." At about four o'clock the following morning the camp was attacked by the Indians and a bloody battle ensued which lasted until after dawn. "The Indians were defeated, leaving on the ground sixty-one killed and one hundred and twenty wounded."

This was the only battle of any consequence ever fought on Indiana soil, which makes the place all the more prominent, and thousands of people visit the battlefield every year.

The place is also noted for its beautiful summer resort and camp grounds where annually hundreds spend their summers and where good revival services and camp-meetings are held every year.

Plymouth, Indiana.

RADIUM AND THE AGE OF THE EARTH.

FOR half a century and more there has been a controversy among scientists as to the duration of life on the earth, which Lord Kelvin put at probably not more than one hundred million years, basing his conclusions on arguments as to the duration of the heat of the sun and earth, and on the action of tides in altering the period of the earth's rotation. In an article on radium, which he contributes to the February *Harper's*, Prof. Ernest Rutherford, of McGill University, Montreal, refers to these calculations.

Helmholtz, says Professor Rutherford, calculated that the heat generated in the sun through its contraction would be enough for the sun to shine with his present brightness for a period of about forty million years. The calculation is uncertain within limits, for we do not know how the density of the sun varies from the center outward. Kelvin came to a very similar conclusion, and stated that "it seems, therefore, on the whole, most probable that the sun has not illuminated the earth for one hundred million years, and almost certain that he has not done so for five hundred million years. As for the future, we may say, with equal certainty, that inhabitants of the earth cannot continue to enjoy the light and heat essential to their life for many million years longer, *unless sources now unknown to us are prepared in the great storehouse of creation.*"

This last remark, says the writer, seems almost prophetic in the light of the discovery of a body like radium.

The emanations of radium and of other radioactive substances are present everywhere in the atmosphere. These radioactive gases possess the property of being transformed into a nonvolatile kind of matter, which is deposited on the surface of bodies and can be collected on a wire charged with negative electricity. Every falling raindrop and snowflake carries some of this radioactive matter to the earth, while every leaf and blade of grass is covered with an invisible film of radioactive material. These emanations are not produced in the air itself, but are exhaled from the earth's crust, which is impregnated with radioactive matter. As a means of detection of radioactive matter, the gold-leaf electroscope far transcends in delicacy even

the spectroscope; for with only a gram of matter, the presence of radium to the extent of only one part in one hundred thousand million can readily be detected.

As to whether the amount of radioactive matter in the earth is enough to heat it appreciably, Professor Rutherford says that, even with our present knowledge, this question must be answered in the affirmative. That is to say, a source, formerly unknown to us, was all the time prepared in the great storehouse of creation.

If radioactive matter is distributed throughout the whole earth to the extent that experiment indicates, the heat evolved by the radioactive matter would compensate for the heat lost by the earth by conduction to the surface. According to this view, the present internal heat of the earth tends to be maintained by the constant evolution of heat by the radioactive matter contained in it. The calculations of the age of the earth made by Lord Kelvin, which were based on the theory that the earth was a simple cooling body in which there was no further generation of heat, cannot apply, for the present temperature gradient of the earth may have been nearly the same for a long interval of time. On this theory of the maintenance of the internal heat no definite limit can be set for the age of the earth, but some deductions can be made of the probable variation of the internal heat with time. If an immense store of atomic energy is really available in the air, as is supposed, it would suffice to keep up the present output of energy from the earth for about five thousand million years . . . while the duration of the sun's heat in the future may possibly be extended for a hundred times the estimate made by Kelvin.

Nevertheless, there is no escape from the conclusion of Kelvin and Helmholtz, "that the sun must ultimately grow cold, and this earth must become a dead planet, moving through the intense cold of empty space."—*Review of Reviews*.

LARGEST ASPHALT LAKE.

ALTHOUGH the asphalt lakes of Trinidad and Venezuela furnish over ninety per cent of the asphalt used, small deposits are found in the limestone of Val de Trivas, in Switzerland; Seyssel, on the Rhone; Cuba, and America. The largest South American asphalt lake consists of a dark-brownish deposit of a semi-fluid and semi-solid substance, surrounded by banks from three to six feet high. In the center of this lake is a continual ejection of hot fluid asphalt, accompanied by large bubbles of gas.

The dark-skinned workmen excavate it in pieces weighing in the neighborhood of twenty-five pounds, sections forty feet in area and about four feet deep being worked at one time. As quickly as freed from

its surroundings it is placed in large tubs, resting upon small, flat-topped tramcars operated upon a narrow-gauge road. The entire surface is constantly moving, thus necessitating a continual relaying of the tracks.

The freshly excavated asphalt is conveyed to the shore, where the tubs are lifted by hydraulic power to an aerial tramway, by which it is conveyed to the large wharf situated on the Guanoco River, about five miles distant from the lake. Here it is weighed and dumped into the vessels which convey it to the foreign lands.

Upon its arrival at a factory it is heated until the water is expelled and the earthy material cast to the bottom of the large vats, and it is poured through a sieve into barrels, where it solidifies. It is then ready for commerce.

THE IRISH LAND ACT.

THE act of 1903, by which the British government advances money to Irish tenants to enable them to buy at low prices the farms they occupy, may not kill the demand for political independence, but it is making a big hole in the British treasury. Money has been advanced to tenants to the amount of \$23,150,000, and agreements have been lodged with the land commission for advances aggregating over \$84,500,000. The land thus passes from the landlords and the class favoring English rule is being weeded out. Home rule is correspondingly favored. There have hitherto been two main reasons why self-government has been denied; namely, the strategic consideration and the belief that an Irish Parliament would be unjust to landlords. In proportion as the landlords sell out this second objection to home rule vanishes.

FROG-FARMING IN AMERICA.

LESS than a quarter of a century ago only a few people ate frogs, but now they are generally eaten. The United States citizen will not acknowledge that Canada produces finer frogs than the United States. He contends that in the marshes back of the Potomac, the Louisiana swamps, and the swamps and marshes of New York State, are to be found the largest, finest and most succulent frogs in the known world. It is admitted, however, that the Canadians understand the art of preparing frogs' legs for market in a manner superior to the people of the United States, and that this fact has brought the Canadian frogs prominently before the lovers of good things to eat. Frog-farming is one of the most profitable industries in many parts of the country, and already many men are engaged in it.

ONE LEARNS BY FAILING.

BY J. G. FIGLEY.

LIFE is a mighty ocean bearing us onward on its broad bosom from time into the verging shores of eternity. We learn by past failures, for life is made up of a never-ending series of failures and successes. And our success or failure depends a great deal upon our interior knowledge of *self*. Thales, the ancient philosopher of Greece, had for a motto, "Man, know thyself," implying that such knowledge comprised the sum of existence. A study of self familiarizes one with his own possibilities and warns him of his weak parts, and guides him through pitfalls and marshes till his feet are placed upon solid ground.

In childhood our self-knowledge is weak and very limited because our reflective faculty is not yet awakened. But advancing life brings many occasions for observation of self, in failures and in successes. Our outer or exterior characteristics are first recognized, and then those internal. We can always notice them singly, and by more attention we can trace their relation collectively and see how they are all bound together, showing how action, purpose and conscience are interrelated, and also of their relative predominance; and thus we gain a general knowledge of ourselves. From self-knowledge being purely intellectual it broadens till we see the practical side of life showing us the regulation of conduct, development of faculties, and a correction of faults and failings, and a cultivation of excellencies.

As applied to daily life, the pages of history are full of instances where nations and individuals are successful only after many failures. One man learns that a too-trusting disposition has led him into disaster in business, while another man may attribute his successes to the same cause. It requires a good perception of human nature for every person to be generally successful, and they only learn this from repeated failings in the same channel. Mistaken perceptions or constructions of some nature have caused utter failures often life-lasting where a reasonable knowledge of such would have guided men out of such positions. Success and failure, then, depend largely upon the study and knowledge of self.

May we not suggest that a dependence upon and acceptance of the teachings and precepts of him who was crucified, the Great Teacher, himself, as exemplified by his life upon earth, will aid us in our struggle for success in life?

Bryan, Ohio.

HE that hath the Son hath life; and he that hath not the Son of God hath not life.—1 John 5: 12.

TO-DAY IS THE DAY.

Now is the time. To-day is the day of salvation. Not to-morrow. Not yesterday.

The majority of people destroy the beauty, the security, and the comfort that life ought to bring by failing to live in the present. Regrets as to the past, misgivings as to the future, are the devils that possess most people.

To-day demands the full measure of our interest, our vitality, and our appreciation. Yesterday is past. We cannot fix it up at all. If we made mistakes, let them go. Brooding over them will not help the matter one bit. Such conduct only weakens us for the duties of to-day.

Arise each morning on a new day. Let the dead past bury its own dead. Concentrate your whole being into the present. Do not worry about the future. To-morrow will take care of itself, if we do our duty to-day. Take no anxious thought about the morrow. After awhile to-morrow will come, then we will deal with to-morrow the same as we are dealing with to-day.

For millions of years the created universe has been working together to produce to-day. To-day is crowded with all of the improvements of past centuries. To-day is a day that all creation has suffered and travailed to produce, and here it is. Providence has presented us with a new day, which is the consummation of all the days that have passed.

It is a grave offense against ourselves to turn our attention from to-day, to look back with longings or regrets as to what has passed.

Neither ought we to destroy to-day—the greatest of all days that has ever dawned upon this earth—neither ought we to destroy this day by dread or foolish concern as to the future.

Let us live to-day, and enjoy all its benefits. Let us live to-day, and be true to all its responsibilities. Let us live to-day, and use all the strength that we have to make this day the most complete day of our lives.

Forget the past. We should not drag after us the animosities, the disappointments, and the painful experiences of yesterday. Forget everything. Forgive everybody. Begin with a clean score. In the hurry and scurry of to-day we will need all our forces.

If the unrighteousness and treachery of the world about us annoy us to-day, and cause our indignation to rise, and wrathful expressions to leap from our lips, if these things must happen to-day let them end when the peaceful shades of night approach. Let not the sun go down upon your wrath. Let old scores be balanced. Begin to-day with a clean slate, and the scrawls and splotches of yesterday, let them be removed.

To-day is a new day. The last day of the creation of the world. The capstone of evolution. No king or prophet of olden time ever enjoyed the complete fullness and beauty that has come to us to-day. They looked forward to this day, and pronounced their blessings upon those generations that should arise to enjoy these days.

It is a pity for us to turn away from to-day, to give no heed to the hours as they pass, and to the opportunities as they slip away. The only way to atone for the past is to make reparation that it should be. The only way to prepare for the future is to fill this day full of good work and service.

Remember only the things that will help you to-day. Take forethought only of those things as will assist you now. If the past is mispent, whining will do no good. Be up to-day, and make this one day what every other day should have been. Then when to-morrow comes it will find us ready for the privileges and duties which it brings.

Do not allow yourself to become absent-minded, wrapped up in a brown study. Look about you. Speak to those that you have been in the habit of ignoring. Make friends with every one. Strive to touch life everywhere you can. You will accomplish your tasks better by so doing than by going forward blindly absorbed in meditation, or engrossed by internal musings.

To-day is a great day. The greatest day history has ever produced. Crowded into this day is everything that history and art and literature and science and poetry and music has consummated in the past. We have laid at our feet the treasure of the learning of untold generations gone by. Let us make the most of it. Do not allow a guilty conscience, nor an hysterical dread of the future to disturb this present hour.

The way to be healthy is to receive and adjust to the present. Let the present sensations and perceptions do their work unhindered within you.

The way to be wise is to keep your attention on the present. Every little thing that happens to you now is worth your attention.

Do not worry. Do not dread. Do not fear. Just go calmly about the things that are before you now, and the future will take care of itself. You will be a thousand times better able to-morrow and next day to solve your problems after having refused to be bothered with them beforehand. Sufficient unto the day is the evil thereof. Do not borrow trouble from to-morrow. Wait until you get there. Maybe you will find that there is no trouble after all.

Do not becloud your present life by ruminating on what might have been. Let it all go. Enjoy yourself. Bestir yourself. Ennoble yourself, just now. Just now.—*Medical Talk.*

POLICE DOGS OF BELGIUM.

THE police of Belgium have their strongest allies, the rogues their most watchful foes, in the dogs that are attached as auxiliaries to the Police Department of the kingdom. The "dogs of gendarmes," as the thieves call them hatefully, are trained at stations at St. Gilles and Shaerbeek, outside Brussels; Mons Charlerov, Sha Antwerp and Louvain. At the St. Gilles police barracks there is now an auxiliary dog for each man.

The dog's usefulness is widening; they are beginning to train dogs at Antwerp and other frontier posts for the Dutch customhouse service, to catch smugglers.

The Beance shepherd's dog is chosen for the police service; bloodhounds, mastiffs and dogs of other ferocious breeds are not trained for it. The dogs from Beance, the meadow country of France, are supposed to have a far remote wolf cross. They are patient, persistent, tenacious creatures, whether holding a thief or keeping a sheep in the marching line of the flock.

The Beance dog has a stronger scent than it has been credited with. Some police auxiliaries have learned to distinguish the smell of dynamite and other explosives and to understand what this odor may mean when it lingers on the hands of an anarchist.

The Beance dog, too, is taught to take to the water, but it is not so much at home there as a Newfoundland. However, its muzzle is most useful in saving the drowning. A police dog named Tom, promoted for good work from Ghent to Brussels, has saved three children at different times.

THE RIGHT WORD.

ONE day Coleridge was standing in a picture-gallery absorbed in gazing at a new painting. After looking at it for fifteen minutes he deliberately came to the conclusion that the only epithet which could be applied to the picture was the adjective "majestic." Just as he reached this conclusion a gentleman entered the saloon with two ladies. "What a majestic scene!" exclaimed the gentleman, as he stopped before the painting. Coleridge walked up to him, and bowing, said, "My name is Coleridge. I thought I knew the English language, but it has taken me fifteen minutes to discover that the word 'majestic' applied to this picture. You have hit upon the right word at once." "Yes, yes," replied the gentleman, with a gratified simper; "it is a splendid, a beautiful, a lovely painting!" "Ah," rejoined Coleridge, immediately, "I retract my previous statement! You used the word 'majestic' only by chance, and not after deliberation."

QUEBEC.

BY JULIA C. SPRENKEL.

QUEBEC "the Gibraltar of Canada," is the capital of the province of Quebec in the Dominion of Canada. It is the strongest fortified city in America and is the best type of an ancient walled city in the western hemisphere.

Most of the people are of English and French descent and speak both those languages, although one-fifth cannot speak English. Both languages are taught in the schools.

Among the famous historic places, the Plains of Abraham are the most famous. On these a great battle was fought between the French and English in seventeen hundred and fifty-nine, where Wolfe died victorious and Montcalm received the wound which ended his career. In this battle Quebec fell and with it passed away much of its glory.

Another famous historic place is where Montgomery fell in seventeen hundred and seventy-five while trying to scale the cliffs to capture Quebec.

Quebec is divided into upper and lower town. If you take the elevator from lower town to upper town you land on Dufferin Terrace, a fine promenade extending to the citadel.

Martella towers guard the entrance to the city from the west. The Parliament building is beautiful, costing several millions. Some of Quebec's streets are so narrow that it is impossible for one vehicle to pass another. Chateau Frontenac is a fine modern hotel situated on Dufferin Terrace.

The Duke of Kent, the late Queen Victoria's father, had his winter residence in this city and his summer residence at Montmorency Falls, a falls eight miles from the city.

York, Pa.

THE ABSTEMIOUS JAPANESE.

THE Japanese are naturally abstemious in the matter of eating. Rice is the staple diet, with dried fish as almost the only meat and with plenty of vegetables and fruit when they can be obtained.

A traveler in Nagasaki was amazed one day at seeing the swiftness with which the Japanese men and women, boys and girls, passed baskets of coal from lighter to ship, chattering meanwhile as if it were play.

When noon came and they stopped for lunch he went among them and examined their provisions. One had an apple, a tomato, and an onion. Another had about three heaping tablespoons full of boiled rice. Another had two tomatoes and a tiny rice cake. Of the man with the onion the traveler asked:

"Is that all you have?"

"Why, yes," was the reply. "I would not care to

eat more just now, for I have five hours more work this afternoon."

"What did you eat for breakfast?"

"Oh, something very fine, a bowl of rice with some little strips of dried fish."

"And what will you eat to-night, when work is done?"

"Probably some boiled rice, fish, lettuce, tomatoes, onions, and cucumbers."

Accustomed to such a dull diet from infancy, the Japanese build great endurance, and it, endurance which is being tested to the uttermost all. If during the present war,

over them
"I produce only IT."

A SUCCESSFUL business man says there were two things which he learned when he was eighteen, which were ever afterwards of great use to him, namely, "Never to lose anything, and never to forget anything."

An old lawyer sent him with an important paper, with certain instructions what to do with it. "But," inquired the young man, "suppose I lose it; what shall I do then?"

"You must not lose it."

"I don't mean to," said the young man, "but suppose I should happen to?"

"But I say you must not happen to; I shall make no provision for such an occurrence; you must not lose it!"

This put a new train of thought into the young man's mind, and he found that if he was determined to do a thing, he could do it. He made such a provision against every contingency that he never lost anything. He found this equally true about forgetting. If a certain matter of importance was to be remembered, he pinned it down in his mind, fastened it there, and made it stay. He used to say, "When a man tells me he forgot to do something, I tell him he might as well have said, 'I do not care enough about your business to take the trouble to think about it again.'"

"I once had an intelligent young man in my employment who deemed it sufficient excuse for neglecting an important task to say, 'I forgot it.' I told him that would not answer. If he was sufficiently interested, he would be careful to remember. It was because he did not care enough that he forgot it. I drilled him with this truth. He worked for me three years, and during the last of the three he was utterly changed in this respect. He did not forget a thing. His forgetting, he found, was a lazy, careless habit of the mind, which he cured."—*Selected*.

BEAUTY is the mark God sets upon virtue.—*Emerson*.

THE USES OF ELECTRICITY.

CONSIDERED in detail, the possible ways in which electric currents may be utilized are multifarious. Yet, by the way of recapitulation, they may be roughly classified into three divisions as follows:

First, cases in which the current of electricity is used to transmit energy from one place to another, and reproduce it in the form of molar motion. The dynamo, in its endless applications, illustrates one phase of such transportation of energy; and the call-bell, the telegraph and the telephone represent another phase. In one case a relatively large quantity of electricity is necessary, in the other case a small quantity; but the principle involved—that of electric and magnetic induction—is the same in each.

The second method is that in which the current, generated by either a dynamo or a battery of voltaic cells, is made to encounter a relatively resistant medium in the course of its flow along the conducting circuit. Such resistance leads to the production of active vibrations among the particles of the resisting medium, producing the phenomena of heat and, if activity is sufficient, the phenomena of light also.

The third class of cases in which the electric current is commercially utilized is that in which the transformations it effects are produced in solutions comparable to those of the voltaic cell. By this means a metal may be deposited in a pure state upon the surface of another metal made to act as a pole to the battery; as, for example, when forks, spoons and other utensils of cheap metals are placed in a solution of silver compound, and thus electroplated with silver.

THE FLYING-SQUIRREL.

AMONG the small animals which are quite a rare sight to city folks, although familiar enough in the country, is the cunning little flying-squirrel. This is really a wonderful creature, and seems to be a sort of compromise between a bird and an animal. It is about five inches long as to its body, which is black, and gray, and white, and carries a bushy tail about five inches in length, having a peculiar construction, which assists in its flight from tree to tree; but the main apparatus used in flying—or, in reality, leaping—is a loose membrane connected to the front and hind legs on each side, which the squirrel has a power to expand at will, thus increasing the surface presented against the air.

When they desire to go from one tree to another, they first ascend to the topmost branch and boldly leap off into space. Then it is that their kite-like appendages make themselves useful. They spread out, and the little animal, guiding itself by the tail, takes a downward, circular flight toward another tree. When it arrives within six or eight feet of its in-

tended landing-place, it changes its position so as to light upon its feet against the tree, when the membranes become greatly reduced and are not at all in the way.

They live in decayed trees, where, if not disturbed, they become quite numerous. They are difficult to catch, and bite viciously when captured; but they are easily domesticated and make admirable pets, and soon become an unfailing source of amusement to the children. They live upon nuts, acorns and insects.—*Selected.*

HOW TO DRINK A FARM.

BOB BURDETTE gives this simple recipe: "My homeless friend with a chromatic nose, while you are stirring up the sugar in a ten-cent glass of gin, let me give you a fact to wash down with it. You may say you have longed for years for the free, independent life of the farmer, but have never been able to get money enough together to buy a farm. But that is just where you are mistaken. For some years you have been drinking a good, improved farm at the rate of a hundred square feet a gulp. If you doubt this statement figure it out yourself. An acre of land contains 43,560 square feet. Estimating, for convenience, the land at \$43.56 an acre, you will see that it brings the land to just one mill per square foot. Now pour down the fiery dose and imagine you are swallowing a strawberry patch. Call in five of your friends and have them help you gulp down that five hundred-foot garden. Go on a prolonged spree some day and see how long it requires to swallow a pasture land to feed a cow. Put down that glass of gin! there is dirt in it—one hundred feet of good, rich dirt, worth \$43.56 per acre."—*Exchange.*

A DREAM OF FOUR RATS.

A POOR workingman told his wife, on awakening one morning, a curious dream which he had during the night. He dreamed that he saw coming toward him, in order, four rats. The first one was very fat, and was being followed by two lean rats, the rear rat being blind. The dreamer was greatly perplexed as to what evil might follow, as it had been understood that to dream of rats denoted calamity. He appealed to his wife concerning this, but she, poor woman, could not help him. His son, who heard his father tell the story, volunteered to be the interpreter. "The fat rat," he said, "is the man who keeps the saloon you go to so often, the two lean rats are my mother and me, and the blind rat, father, is yourself."—*American Issue.*

TRUTH forever on the scaffold, wrong forever on the throne.—*Lowell.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

SUNDAY SCHOOL ORGANIZATION.

SUNDAY SCHOOLS, like every other religious agency, must grapple with conditions. In speaking of their organization and the rules governing them, as well as the methods of conducting Sunday schools, they do not necessarily need to be alike; neither can they be. It is hardly possible that two Sunday schools are alike,—alike in environment, in size, in constituency and in their relation to the church; all these considerations, and more too, make it impossible for an iron-clad rule of any kind to be applied to Sunday-school work. For example: Brother A might be just the man for superintendent of a certain Sunday school, and for years his work be crowned with success. Let him now become the superintendent of another school, taking with him the methods used in the former school, and he will prove an utter failure; the same thing is true with teachers and other officers of the school.

The organization of the Sunday school is one of the very vital features. A Sunday school, though it has good material, may fail under a poor organization. There is more hope for a Sunday school of crude material, under a good organization, than for one of first-class material under a poor corps of officers.

There are three ways more common than others of organizing Sunday schools:

First, all Sunday-school officers to be selected by the church. This is the ideal way; this holds good when the church is in proper condition. A church which has a membership of really wide-awake Christians, husbanded by a shepherd filled with the Holy Ghost, will love Sunday-school work, will be present at Sunday school, and will have the interest of Sunday school at heart in a ballot. When conditions are such, this church will select the right men and women for their Sunday-school officers. But this plan will not be the ideal, when one-third or one-half of the mem-

bers do not attend Sunday school and a few of them oppose it and absent themselves from it; such people are not eligible to vote on such a question, neither would their vote be intelligent; they do not know the needs of the Sunday school; they do not know the ability of the ones they vote for; their basis for calculations must be from an entirely different angle than that it should be, hence this method is only ideal where a very large per cent of the membership encourage Sunday-school work with their presence as well as their prayers.

Second, when the plan named in the above paragraph is not the ideal, because of conditions, it is often a very good plan to have a nominating committee of Sunday-school workers who will place in nomination names of suitable persons and then allow the church to elect by ballot. This affords suggestion to the church member who wants to do the right thing for the Sunday school, but for reason of distance, sickness or other excusable causes, is hindered from being an intelligent voter. This plan is almost sure to unify the sentiment of the Sunday-school party; besides, it serves as a bond with which to unite the church and Sunday school. It makes the church feel that the Sunday school recognizes her authority, and yet it makes the Sunday school feel as if she had a voice in her own administration. In the majority of cases, under existing conditions, this probably is the most popular method.

Third, in spite of the good reasons assigned above for the methods mentioned, there is still a condition where these could hardly be said to be the best. In certain local districts, where isolated members of the congregation are doing evangelistic work, through a mission Sunday school, and where it is almost absolutely necessary to unite with members of some other denomination, or people who are not members of any church, in order that they may get the use of their house of worship, it becomes necessary for them to act among themselves. The body of the church is too far away to know the conditions; the time of the council is too far away to meet the requirements; under these conditions it is not wrong for the school to organize itself, not as an independent organization, but a union Sunday school as a part of some church; that is, the members in this Sunday school should not fail to make a report of its work to the mother church. At the same time the church would hardly see her way clear to give them an organization while ignorant of the facts necessary to eligibility. Where organization forms the tie between the church and school, the report will have to serve that purpose in the latter case.

Remember that in applying any one of these methods of organization the proper conditions must exist, and in order that the method within itself may be

successful, the rights of the church, the Sunday school, and the officers should be observed respectively.

HAVING A PURPOSE.

SINCE the days of Plato men have dreamed of and planned for successful airships. Quite recently inventors claim to have accomplished this feat, and aerial navigation will, in all probability, soon be a commonplace thing. Like the automobile and other extravagant luxuries, it will, for a while, remain out of reach of the common people, but later on will seek their level.

Between the initial point and present successful experiments, several thousand years have elapsed; but the firm purpose to make such a ship has never been lost sight of in the minds of industrious men. If a purpose concerning airships can be carried for centuries, in the minds of men, why cannot purposes be fully carried out in other directions? It was thought by ancient mariners that there was a world in the west, and the determined purpose of Columbus proved it. The determined purpose of Napoleon made a Simplon road over the Alps.

Purposes are ghosts unless carried out. Men have died in order to accomplish their purposes; there are men alive to-day who will either accomplish their purpose or die in the attempt; these are purposeful men. They never let go; they stick to their aim unceasingly. To keep continually changing purposes means failure. If you would merit life's reward you must stick to your bush. There is little merit, if any, in having a purpose only to dream over it. You should make it a part of your waking hours as well. A good way to get well acquainted with your purpose is to make a companion of it; suit your appointments and engagements to it, in order that there be no conflict; it will ultimately become your intimate friend. Then, too, we must work to carry it out, devise ways and means to make it go. It is only a question of time, with unflinching efforts and a determined purpose, until such work will bring you the shining light of success as a compensation for your battle. You will be better, stronger and happier for having held closely to what you had planned to do. If what you want to do is right, don't let go.

STARTING WRONG.

Boys, did you ever finish buttoning your vest, only to find that one corner protruded much farther than the other? It was evident to you that you had started wrong. No system or series of reasoning would ever change the looks of things, except unbuttoning the whole thing and beginning over. You had started wrong. The result would have been the same had you started at the bottom or at the top. The place of be-

ginning is not so much in question as is the manner of beginning. A man may start wrong any place and he may start right almost any place; of course there are a few places where it is impossible for a man to start right.

The reason why it is so vitally important to start right is because a man has to start, that's one thing. Second, a man has to undo what he has done, and, third, he has to do it over again, that is, by beginning wrong. By beginning right he has to perform the thing but once.

The boy that tells a lie, like the boy who puts the second button in the first hole, has started wrong. He tells another lie to get out of the first and it does not make the first one right any more than buttoning the third button in the second hole. And when done with the whole thing he is still a liar, and a willful one. No matter how much truth he tells later on, it never rectifies the lies which he has told. The boy who has buttoned his vest wrong may button all of his other vests right, that would not remedy that one.

A boy struck his brother, the brother retaliated; mother reprimanded; the boys fought; they became enemies; they submitted to the dictation of hateful dispositions; they dissipated; they became murderers in the end; this was all the result of starting wrong.

SAME WAY HERE.

THE German chancellor asked the national assembly for three hundred million dollars the other day for the annual needs of the navy. The frugal Teutons thought that was a lot of money and they balked. Emperor William himself might not have been able to get the bill through the Reichstag. The chancellor, however, in a tone of vehement sarcasm, reminded the lawmakers that a country which spends \$750,000,000 yearly for spirituous liquors ought not to find it hard to pay \$300,000,000 as an insurance premium for national safety. That argument prevailed. How much more effective it would be in America, where our drink bill far exceeds that of Germany. Here we spend approximately a billion and a quarter dollars each year for drink. One could find better use for that money than by building warships. We might apply it to the public highways and very shortly every country road would be a boulevard. We might use it to reclaim arid lands and shortly we would have a fertile area which would give every head of a family in the nation a chance to own a quarter section of land. Some day the economical folly of the drink traffic will be realized by the majority as it is now by a growing minority.

SET your affections on things above, not on things on the earth.—*Col. 3: 2.*

Current Happenings

MISS ELLA J. MCKEE, daughter of the late Wm. McKee, founder of the *St. Louis Globe-Democrat*, died at Asheville, N. C. Miss McKee owned a controlling interest in the *Globe-Democrat*.

* * *

EMPLOYEES of the First National Bank of Milwaukee have been ordered to give the officials their photographs and submit to certain measurements for the purpose of identification.

* * *

SERIOUS anti-Jewish riots have occurred again at Zhitomir, in southwestern Russia. In this case the Jews were armed and fought bravely for their families against great odds. Hundreds were reported dead and wounded in the streets before the authorities acted. In the province of Bessarabia a general revolutionary movement was reported in progress on Tuesday, the peasants having made an organized attack on several estates.

* * *

THE anti-cigarette law is being enforced to the letter at Marion, Ind. One of the judges sent to jail a man arrested for vagrancy, because one cigarette paper was found on his person.

* * *

A HEAVY storm occurred in Omaha May 3. A four-story brick building, occupied by the Omaha Casket company, was blown down. Three men were killed and six were injured.

* * *

DURING twelve hours' operation of the government quarantine station at New York, May 7, 12,039 immigrants were examined and admitted. These were brought on ten transatlantic liners.

* * *

IN order to meet the competition of the electric trolley lines, the Illinois Central Railroad has announced a reduction of nearly one hundred per cent on passenger fares between Chicago and suburban points.

* * *

THE largest brick-making plant in the world is being planned for by surveyors at Catskill, N. Y. It will be owned and operated by the United States Brick Company, which already owns extensive plants at Reading, Pa., Baltimore, Md., and Buffalo, N. Y. The new plant is supposed to employ one thousand men, and will turn out one million bricks a day.

* * *

THE San Francisco Board of Education has declared itself opposed to the promiscuous association of

white and Mongolian pupils, and in favor of the establishment of separate schools for Chinese and Japanese children.

* * *

THE Federal Supreme Court has decided in favor of the Chicago Board of Trade against outside commission houses, in cases involving the right of a private concern to use the continuous quotations of the Board without paying for the privilege. Judge Holmes claims that dealings in "futures" is not gambling. He says that speculation of this kind by competent men is the self-adjustment of society to the probable. The difficulty is that competent men never get hold of these stocks, because they all lose out in the end, which proves their incompetency. If such injustices were carried on among the poorer class of people, it would be called highway robbery and gambling. But as it is, it has a more pleasant name—dealing in "futures." Nevertheless it remains nothing more nor less than gambling, legalized by law.

* * *

AMONG the laws, recently enacted by a session of the New York Legislature, was one establishing a sort of hospital-jail for drunkards. This is to be located in the City of New York, and the Magistrate of modern Gotham is empowered to commit to this hospital such men and women as are known to be habitually intoxicated by the use of alcoholic beverages, or addicted to the use of opium, cocaine, or other chloral drugs. Victims may be committed to this place on complaint of father, mother, brother, sister, or even children. What a pity it is that, while the legislature is providing for these unfortunate people, it did not provide for life imprisonment of the miserable thieves who sell the drink, and the lawmakers who license it.

* * *

THE United States Supreme court denies John A. Benson's motion for rehearing of the order directing his removal from New York to District of Columbia for trial on charge of defrauding the government in the misappropriation of timber on public lands.

* * *

GERONIMO, an old Apache warrior, to whom President Roosevelt made a visit recently, is homesick and very much dissatisfied. He wants to go back to the wild lands of Arizona. Mr. Roosevelt explained to him that he had been a bad Indian and would have to suffer his punishment in bondage until he was ready to do right. This chieftain is one of the leaders in the massacre of the whites. Mr. Leupp has been given charge of the Indian affairs by the President.

THE White Star and Dominion Steamship lines have given notice of their withdrawal from the North Atlantic conference, first and second-class agreements, and third-class British, Scandinavian and Continental agreements. These two lines are members of the Shipping trust.

THE authorities of London, England, after investigating the large numbers of unfed children in the primary schools, have ordered superintendents and teachers to notify the overseers of the poor in all cases of hungry children. The overseers will then supply the actual food needed. The parents will be given opportunity to supply the necessary provisions before charity is offered. If the parents fail to respond, the Relief Committee takes charge of the work. This is a good move in the right direction. Some of the crowded cities of our country would do well to pattern after this example.

THE Board of Supervisors, of Denver, Colo., is urging the passage of a city ordinance which will prohibit discrimination by landlords against parents with children. The proposed law will compel apartment houses to accept tenants with children unless it can be proved by worthy authorities that the children are unruly, or are detrimental to the interests of other tenants. To date this has been the great barrier in the way of people, having children, renting desirable properties. And, by the way, this has been no small factor in the race suicide problem in our cities.

UNDER the auspices of the Civic Club, the Vacant Lot Association, opened in Philadelphia, recently, the most extensive school gardens in this country. Nearly four acres have been divided into twelve hundred separate gardens, in which pupils have individual instruction by trained and competent instructors. When this proves a success, other gardens will be opened in other parts of the city.

PROF. LUCY M. SALMON, of Vassar College, says: "The college woman of to-day is living a healthy normal life. She marries, has children, takes care of her home, or teaches, practices law, medicine, dentistry, enters business, or the various industrial occupations. Equipped thus, the college woman is said to apply science to the cooking art, home decorations, and sociology to child training."

MR. W. B. RIDGLEY, in his speech before the National Bank Cashiers' Association, declared that the cause of the great bank failures of our country is principally speculation. He claims that no man should be allowed to hold any position of management what-

soever, in banking circles, who deals in any way whatsoever with outside enterprises to profit himself, in addition to the salary he receives in the bank. He says, "Speculation is the greatest financial evil of the day." It is evident that Mr. Ridgley does not see his way clear to agree with Justice Holmes, when he says that speculation is not gambling.

WIRELESS telegraph stations now form a chain from Portland, Maine, to Galveston, Texas. In a very short time each of these stations will be prepared to receive weather reports from all the ships fitted with wireless telegraph apparatus, and will forward same to the weather department, Washington. They will also be able to forecast weather conditions for the use of ships in the neighborhood. Science still moves on.

THE Philadelphia Ship Repair Company is in receipt of their new floating dry dock from the makers at Rondout, N. Y. There can be no question about the increase of facility at the great port of the Delaware for handling commerce. The lifting capacity of the docks is two thousand tons. This new improvement overcomes all difficulties with the tide.

IT is said that South Carolina has no divorce law, and is the only State in the Union which makes no provision for the granting of divorces. A gentleman, who has had a great deal to do in the courts of that State, says there is a degree of domestic felicity existing there that he knows nowhere else. The men who are in a position to know, say that Carolina has the advantage of every other State in this respect.

COMMANDER EVA BOOTH, of the Salvation Army, left Chicago recently when the physicians expected her not to live, and, in spite of her condition, filled her engagement at Kansas City, saying, "I would rather die than to disappoint the people who are expecting to hear me speak."

ELEVEN yachts started from Sandy Hook, May 16, for Lizard Point, England, a distance of three thousand miles in a race for the Kaiser's Cup. It is supposed that two or three weeks will be required to cover the distance. The participants in the race vary from one hundred sixteen tons to one hundred forty-eight tons.

SINCE the investigation of the Postal Department, by the government, proved beneficial, an attempt is now being made by a congressional committee to investigate the extravagance of government printing. Senator Platt, of New York, and Charley Landis, of Indiana, are appointed to investigate.

HOME DEPARTMENT

DON'T TAKE YOUR TROUBLES TO BED.

You may labor your fill, friend of mine, if you will.
 You may worry a bit, if you must:
 You may treat your affairs as a series of cares,
 You may live on a scrap and a crust;
 But when the day's done, put it out of your head:
 Don't take your troubles to bed.

You may batter your way through the thick of the fray,
 You may sweat, you may swear, you may grunt:
 You may be a jack-fool if you must, but this rule
 Should ever be kept at the front:
 Don't fight with your pillow, but lay down your head
 And kick every worriment out of the bed.

That friend or that foe (which he is, I don't know),
 Whose name we have spoken as Death,
 Hovers close to your side, while you run or you ride,
 And he envies the warmth of your breath;
 But he turns him away, with a shake of his head,
 When he finds that you don't take your troubles to bed.
 —Edmond Vance Cooke.

THE POLITE BOY.

Boys, you may turn up your noses as much as you choose at the polite boy, the boy who waits on his mother and sisters, the boy who takes off his hat to a lady, and who does the numerous little things that you boys probably call "putting on airs," but right down in your heart you wish you were like him, and could do as he does, and as easily and gracefully.

Simply because a boy is polite and wellmannered isn't going to always give him success in life, but if all other things be equal, and the other boy stands with his hat on, or tips back in his chair and spits on the floor, or if the person wanting the services of a boy drops a book or paper and the other boy leaves it for the polite boy to pick up, though much nearer him, let me tell you the chance is for the polite boy every time.

Begin all these polite, graceful, obliging helps young. Don't say because it is at home and no one but the family that it isn't any matter if you do lots of things you know you would be ashamed to do in company.

Be particular to eat nicely, and handle your knife, fork and spoon in a proper way at your own table. People in ordinary life are excusable if they do not know the use of a half dozen changes of knives and forks and the numberless things that go with a fashionable course dinner; but no matter where a person is, a plain, simple dinner, or a grand one, there are certain little things that always tell a person's bringing up.

Do not keep your politeness to put it on with your

good clothes, because if you do you will surely forget it some time when you most wish it, even if you remember in which pocket you have it you will be stiff, and plainly show that it is not natural.

Cultivate politeness, not only for what outsiders will say, but because it is the right thing to do, one of your many talents, to make good use of, and anything that improves always increases our self-respect as well as the good opinion of the world.

Begin this young, as young as you can; there will always be some one to help and tell you, and politeness will become so natural that you will never have to stop to think where you are, if you have it with you; but even if you have to put it on, do not do it with a flourish, but as quietly and easily as you can.

Whether at home or in company, or wherever you are, boys, try to learn and practice the numerous little things that help to make the polite boy.—*Selected.*

A WOMAN WITH POCKETS.

WE have seen a woman with pockets. It was at the St. Louis Exposition. In our opinion she was the greatest exhibit of them all—a woman with pockets. She was not on exhibition, but like the rest of the thousands of women who attended the fair, was there to enjoy what others had to exhibit.

From the far off state of Washington she came. Fair to look upon, full of the red blood of the north-west, with springy step, steady nerve and clear eye, as wholesome as sponge cake, business-like, frank, straightforward, and yet she was fair to look upon.

She had pockets. She had a pocket in her jacket, a nice little ornamental but commodious pocket. She had another pocket inside of the jacket, and still another one deeper down in the recesses of her habiliments. These pockets, in all, would hold as much as that universal nuisance, the hand-bag.

This woman (and may her tribe increase) had the nerve to break away from the hand-bag slavery. No rattling chain or leather handle hanging to her arm. Both hands free to help herself with. She had stricken off the manacles of fussy fashion from her fair wrists, and stood forth a free woman, bagless and beautiful, ready to shake with either hand.

This is not all. Her property was secure, her belongings safe. No danger of dropping a chatelaine here, and a satchel there. No rattling of coins and souvenir spoons as she approached. These things

were nicely packed away in the warm security of a pocket, in no danger of being left somewhere, or dangled about to tempt some pocketbook snatcher.

She did not like hand-bags, she said, so she made pockets.

"But the other women do not have pockets in their clothes," we said.

"I don't care," was the laconic reply, and that ended the matter.

She came to see an exhibition. Unconsciously, she gave an exhibition of far greater worth than all the rich gowns and jewel bespangled fabrics exhibited by European royalties.

Said she, "Hand-bags are like hand-cuffs, they are unhandy. I never handle them. I prefer pockets. That's all there is about it." And with a deep inspiration of the crisp morning air she went her way, a queen among her enslaved sisters who have neither the courage nor the tact to free themselves from the clanging chains that fashion has fastened on their wrists.—*Medical Talk*.

SEEK THE SUNSHINE.

DID you ever notice that when animals are sick or tired they seek a sunny place to lie down? The uncivilized races of men do the same. Savages and animals alike lie down in the sun when they are sick or fatigued. It is instinct that prompts them to do this. They know nothing of the color of the sun's rays, nothing as to the size of the sun or its distance from the earth, or the revolution of the earth around the sun. They are simply led by an unerring instinct of nature to seek the sun for healing. They lie in the sun, bask in it, and its potent rays penetrate every tissue and fiber of their bodies, bringing to them a soothing balm, a calming nervine, and the real elixir of life.

Did you ever notice what civilized man does when he is sick or tired? He goes into a house, into an unwholesome room, no sunlight, no fresh air. If he must have heat, he gets artificial heat. He saturates every tissue and fiber of his body, not with the rays of the sun, but with poisonous drugs. The whole atmosphere about him is depressing and ruinous to both mind and body. Sometimes, in spite of it all, he manages to live and get out in the air and sunlight again. Sometimes he doesn't though, and the undertaker comes.

Instinct in some cases is better than civilization. Instinct teaches the savage and the animal that the main sources of life are sunshine and fresh air, that both are necessary to maintain life or to restore health. So the animal and the savage have sense enough, instinct enough, to stay outdoors in the sunlight and fresh air, while civilized man shuts himself up in a

close, darkened room, away from the very elements that would heal him.

HAVE YOUR FARM VACCINATED.

HAVE you had your farm vaccinated? If not, you should proceed to have it done at once. Science has done a great deal for the farmer. It has killed the bugs and worms that prey on his crops, it has treated his animals when sick and saved their lives, it has experimented with seeds and raised the quality and quantity of their yields, it has done a great many things to help him achieve success. The latest service of special interest of which we have heard is that of the process of inoculating sterile ground by which the bringing forth of fruit in abundance is an easy task. Inoculation to prevent smallpox, diphtheria, rabies, etc., we knew about, but it is quite as mysterious as the inoculation of the old worn-out soils to make them fertile. Certain germs make for fertility of the soil. They are collected or generated by the Department of Agriculture according to this veracious authority, and sent by mail in a small package about like a yeast cake. The cake is said to contain millions of dried germs. It is thrown into a barrel of pure water and turns it a milk white. Seeds of grain and grasses are washed with this water, and when planted are said to produce wonderful results even on what is regarded as exhausted soil. The land is really treated to an inoculation and cured of its disease of barrenness.

THE DINING ROOM.

BY MRS. E. H. SILLEY.

THE dining room is where we get our meals day after day. So it should have plenty of windows for letting in the fresh air.

The first thing we should do is to paper our walls in the spring; then they are fresh and clean during summer. Then have screens for keeping flies out so the paper doesn't get soiled.

Oil cloth for the floor is the thing for dining room floors for it is easily kept clean. Straw matting is also nice. For window curtains a dark green shade with a white curtain either of lace or some other nice cloth. Cheese cloth makes very pretty curtains; tie to one side with either red or blue ribbon.

Unnecessary furniture should not be in the room. A table and chairs and a center table is enough, I think. On the walls you may have a few nice pictures, but not too many.

A very convenient piece of furniture is a cupboard in the wall, opening from dining room and kitchen.

Riga, N. Dak.

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

LOYALTY TO CHRIST.—Job 13: 15.

For Sunday, June 4, 1905.

I. Loyalty to His Word.

1. We are begotten by it,1 Peter 1: 23; John 1: 12
2. Preserved by it,John 17: 17
3. Saved by it,Matt. 4: 4
4. Contains no Nonessentials,Rev. 22: 18, 19

II. Loyalty to His Family.

1. An Heir of His Family,Rom. 8: 17
2. His Will has been Opened,Heb. 9: 16
3. The Inheritance Priceless,1 Peter 1: 3, 4
4. The Substance Enduring,Heb. 10: 34

III. True to Our Profession.

1. Made in Good Faith,1 Tim. 6: 12
2. The Covenant is Sacred,Matt. 6: 27
3. Danger of Denying the Faith,Heb. 6: 4-7

IV. Blessings Arising from True Loyalty.

1. Gives Strength of Character,2 Tim. 1: 12
2. Insures God's Blessings,2 Tim. 2: 19
3. Brings Peace and Eternal Joys,2 Tim. 4: 6-8

Text.—Though he slay me, yet will I trust in him.—Job. 13: 15.

References.—1 Thess. 2: 2; 2 Thess. 1: 4; Heb. 13: 13; Matt. 10: 16; Eph. 4: 14; 1 Cor. 15: 58; 16: 13; Mark 13: 9; Matt. 5: 10-12; 20: 22, 23; Heb. 13: 13; 2 Tim. 4: 16, 17; Rev. 7: 13-17; 12: 11.

Loyalty of Daniel.

Our hearts grow warm and our eyes fill at some of the instances of loyalty we know. Think of Daniel, a mere boy, carried away from his home, a captive in Babylon. Loyal to his early teachings, he prayed daily to God, too loyal-hearted to turn aside because persecution awaited him. A good many young men forget God and outgrow churchgoing who have not gained the position of or who do not have half the political honors that Daniel enjoyed at this time. He was the chief of governors over all the wise men of Babylon and he sat in the gate of the king. But these honors did not make him forget God, he needed wisdom and strength, and he prayed to the Lord, who gave him all needed power.

Loyal though Tempted.

It may be that some boy is thinking, "I would almost as lief face the lions that Daniel encountered as to submit to the unspoken criticism and slightly-veiled contempt that I am subjected to. I am not openly sneered at, but I can tell that they think me goody-good because I can't go with them to places of which they say, 'Where is the harm?'" Be patient and wait just a little longer, and you will have an opportunity

of proving that your loyalty to Christ has not made you less a true, honest boy; these things try your mettle, but be true as steel and you will never repent it. When you are tempted to be disloyal to Christ, think of how you scorned the character of Benedict Arnold when you studied the history of our country. You scorned him as a traitor, then resolve to be true yourself at whatever cost.

"In loyalty to Jesus we will ever do his will,
The God that leads our forces will direct and bless us still,

His everlasting promises he will in us fulfill,
As he is marching on."

Loyal, though in Prison.

While the general was away, an inferior officer began to oppress the Christians in Canton, China. He called one and asked, "Are you a Christian?" "Yes," was the unhesitating reply. "Strip off his uniform," was the command to the underlings, immediately obeyed. He was taken to prison. Three other Christians were taken with him. They were taken to an inner prison, placed in a wooden cage fitting closely around their necks. The door was locked, friends were forbidden to minister to them and they were left to starve. They prayed for help and protection, their hearts were lightened and they began to sing. The keeper, attracted by the music, came in astonishment and asked them, "Do you know you are in prison and what fate is before you? How can you be so happy?" They said, "Yes, we know, but we have something in our hearts that gives us peace." The prisoners who could gathered around, and they preached to them, and some of them were converted, and joined church after they left prison. When the general returned these Christians were released. But they were faithful as Paul and Silas when called to endure for Jesus' sake.

What shall Jesus Have?

"All of my life I pledge thee,
All of my ransomed powers,
All of my service and my love,
All of my days and hours.
"My hands to labor for thee,
My feet to walk thy ways,
My life to magnify thy grace,
My lips to speak thy praise."

The Way to be Loyal.

The way from thinking only of self to thinking of Christ is always by the way of defeat of self. Too often our prayers and our wishes all tend toward get-

ting certain blessings from God. Let us surrender ourselves fully and let God get out of us what he is seeking. If we can truly say, "O God, have thy way with me. Give me something or nothing, as seems good to thee," then God can use us in his service.

Not Loyal to his Mother.

If you have read Laddie, you will remember how the famous London physician had almost forgotten his mother,—it had been so long since he had seen her. But to her he was always "her laddie," and so she came to see him one evening, without announcing her coming. And, craven-hearted and cowardly, he was ashamed of her and with a mother's intuition she saw that he was ashamed of her, and she left her bed that night and went out into the streets alone, broken-hearted. Be loyal to your parents and your home. Give them your best, as they have always given to you. And you will be spared the sorrow and remorse of Laddie. God has promised a blessing to those who honor their parents.

Neither Joshua nor Esther could be tempted to disloyalty. Joshua stood out alone before the whole assembly and said, "As for me and my house we will serve the Lord." Esther went in before the king to intercede for her people, saying, "If I perish, I perish." Read again the lives of these two, it will thrill your heart.

Topics for Discussion.

1. Are we safe in putting our trust in God? 2 Sam. 22: 31; Prov. 14: 26.
2. Does God recognize our loyalty? Jer. 17: 7, 8; Nah. 1: 7.
3. Dare we be disloyal in little things? Luke 16: 10; 1 Cor. 4: 2.
4. What is the secret of our loyalty? John 15: 4-9.
5. Will we be tested? Heb. 12: 3, 4; 2 Tim. 1: 8; Rev. 7: 13.

EMPLOYMENT BUREAU.

A Book Plan.

SISTER AMANDA MILLER, of Goshen, Ind., tells us a good plan by which she manages to get the books in their Circle. She says, "I send you six new names for the Circle. We have decided to have each new member buy a book, and so exchange books. We have ordered the books in the Christian Workers' and in the General Course."

From Daleville, Virginia.

Bro. C. S. Ikenberry says they expect to attend the coming Annual Meeting, and will be especially interested in our Circle meeting. Their class is enjoying "Rex Christus."

Need a Circle.

Bro. Amos Yordy, of Roanoke, Ill., says, "Please receive me as a member of your Circle, and then send

me circulars. We sadly need a Circle in our church, but it seems as if no one is willing to make a start; we should have had one long ago."

Circle Meets Once a Week.

Bro. H. M. Hanawalt, of Lordsburg, Cal., says, "We have a missionary study class which meets once a week in the college to study missions. The members find the subject both delightful and interesting."

A Mission.

Sister Eva L. Trostle, from Dixon, Ill., says, "I need some circulars. This is a mission point and I have been placed here by the district board to help build up a church. There are only a few young members, but we are anxious to get them interested in Circle books. I have several I have read and am now loaning them to others to get a start and rouse their interest."

About Thirty in One Class.

Sister Eva Lichty, of Mt. Morris, Ill., says: "We have organized our Reading Circle here, and I am glad to tell you we have one of the most enthusiastic classes that has met here for some time. About thirty are engaged in the work. We want to do that which will serve the best interests of the Circle. God bless the work."

Second Year's Work.

Sister Maggie Bowman, of Oakton, Va., says: "At this place we are reading on the second year of the course. Several have completed it and the others are continuing. We meet every two weeks to talk over this reading, and we find it very beneficial. We are hoping to send some new names soon."

Deserves a Certificate.

Sister Laura E. Jennings, of Brownsville, Md., says, "I have distributed the circulars. The work is moving along slowly. I would like to send more names, but have only one. I have enjoyed reading my books very much, especially 'Do Not Say.' I am ready for my certificate. At school we studied the 'New Era' and liked it."

NEW NAMES.

- 2766. Mary Hoke, Goshen, Indiana.
- 2767. Amanda Miller, Goshen, Indiana.
- 2768. Irvin Miller, Wakarusa, Indiana.
- 2769. I. S. Burns, Wakarusa, Indiana.
- 2770. Susie Miller, Wakarusa, Indiana.
- 2771. Hiram Roose, Wakarusa, Indiana.
- 2772. Mary E. Jennings, Brownsville, Maryland.
- 2773. Amos Yordy, Roanoke, Illinois.

THE greatest incitement to sin is the hope of immunity.—*Cicero*.

THE last day does not bring extinction to us, but change of place.—*Cicero*.

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XXIX.

Malmö, Sweden.

Dear Mr. Maxwell:—

After having seen quite a good deal of the cities and towns of Sweden and the way the people live there, the boys planned for us to take a trip up in the country among the mountains to see how the people live in the rural districts. We were not surprised to find the majority of the people very poor financially.

In some parts of central Sweden, on the higher ground, we find the mosses to be two and three inches thick, which alone is an indication of very poor soil; and, as a matter of course, it does not have the best of cultivation. It is generally to be observed that where soil is best and produces most, the better implements of agriculture are supplied, which in turn brings good results from the land. But, where the soil is thin, it requires all the product of it to support the laborer who has no money left with which to buy improved implements; and when obliged to use the poorer class of implements it handicaps him, and, not only the laborer, but the soil as well must suffer because of it.

We saw many, many fields of wheat and rye that had been sown by hand, raked in with a hand rake or a brush, and when ripe the grain was harvested with the old-fashioned cradle, or scythe and in many instances the old reap hook was yet used; this will furnish you an idea of how far back these people are living. They live in very small houses and, as a rule have very large families; the ground hardly supports them and therefore necessitates a trade or occupation of some sort outside of agriculture; and I remember yesterday that we saw one man who helps to support a family of nine by making wooden shoes at 10 cents a pair, besides he preaches the Gospel one or two days out of a week. We have spent a great deal of time within the last few days, walking over the fields and mountains and coming in direct contact with the people as they live. At one place we saw a threshing outfit; the machinery was run by an old-fashioned horse-power and tumbling-jack like we used to have in America when my father was a young man.

Instead of having a large machine for a separator they have very small ones, with only a cylinder and a very narrow concave which Roscoe says is very similar to our old-fashioned chaff pilers. Some girls throw the bundles of grain to the machine, another one cuts the bands and a man feeds the grain into the machine. At the rear of the thresher a young lady stands with a long-handled rake and rakes the straw and chaff away, leaving the pile of wheat. Some men take the straw outside of the barn and stack it. When the threshing is over and the machine has gone the young ladies, who are hired hands on the farm, winnow this wheat by opening the barn doors, so as to cause a draft and then toss the grain into the air with the winnowing shovel, and the wind literally "Driveth the chaff away." I have gone into detail with this description to show what the life of some of the young women there is; they receive for such

work a handsome sum of thirty-six dollars a year. Young men receive about forty-four dollars a year. Agnes and I have decided that when we get home and we find some girls who are dissatisfied with their lot, who don't get to play the piano all the time, and mother won't hire the washing done and do the rest of the work herself, that we will induce them to come to Sweden and try this life awhile and they will probably enjoy it so well they will stay here. I believe it is a fact the better people have it, the more they are dissatisfied. These people seem to be perfectly happy; you don't see the girls here with pinched-up faces and sallow complexions, artificial colors on their cheeks, penciled eye brows, and false teeth filled with gold, in short devotees to the goddess of fashion, but they wear modest clothing, loosely, and not a superabundance of it, enjoy simple habits and are the very pictures of health.

One thing to which we can hardly become accustomed, is their manner of sleeping. The beds are built as a permanent fixture by some pins being driven in the side-wall, upon which crosspieces are laid so as to form a box couch, and they are invariably too short. They would be long enough for one person or one set of persons, but where houses are so small and every particle of space must be utilized, it is no uncommon thing for three or four people to occupy one bed, two with their heads at one end of the bed and the others with their heads at the other end; this arrangement of things, of course, makes it possible for a little dispute over territory, sometimes in the middle of the night; but as we said before the limited quarters in which they are compelled to live necessitates the utilizing of all the room.

The boys wanted me to tell you about the way the farmers drive their horses; instead of saying "whoa" to stop them, and "get up" to start them, or making the common clucking noise that Americans do, they make a peculiar noise by causing their tongue to vibrate rapidly, very similar to the way the American school-girls attract each other's attention on the street. And the peculiar thing about it is that they use the same signal for both stopping and starting; when they are going it means to stop, and when they are stopped it means to start. Roscoe just now said, "That would be a cinch for a balky team." But here this letter is full again and I must close.

Fraternally,
Marie.

(To be continued.)

I WOULD rather plant a single acorn that will make an oak of a century and a forest of a thousand years, than sow a thousand morning-glories that give joy for a day and are gone to-morrow. For the same reason I would rather plant one living truth in the heart of a child that will multiply through the ages, than scatter a thousand brilliant conceits before a great audience that will flash like sparks for an instant, and like sparks disappear forever.

The Q. & A. Department.

Is there a neutral strip of water called the high seas in the middle of the Atlantic Ocean, and, if so, how far is it out from New York to the line? If a child is born on this strip of water and landed at New York and stayed there would it be an American, with all the rights of a native-born American citizen?

The term "high seas" means the open sea or ocean; the highway of waters. In law the term is used to designate the area within which transactions are subject to cognizance in Courts of Admiralty. This area formerly included the waters of the ocean exterior to low-water mark, but now it is extended with the flow of the tide to high-water mark, returning with the ebb to low-water mark. The term is used in international law to designate the area which is not within the territorial jurisdiction of any nation, but the free highway of all nations, being the waters of the ocean exterior to a line parallel to the general direction of the shore and distant a marine league therefrom. A marine league is equal to one-twentieth of a degree of latitude, or three nautical miles. A nautical mile is 6,089.9 feet, while a statute mile is only 5,280 feet. The distance of the high seas from the shore was fixed at one marine league, because at the time it was done that was the limit of the area of coast water that could be commanded by cannon on the shore. It is measured with reference to headlands, so as to include in the territorial jurisdiction those inlets and arms of the sea over which the nation can justly claim and actually enforce its power. The great lakes are not deemed high seas. A child born of American parents on the high seas or even in a foreign country is considered a natural-born American, and, if a boy, is eligible for the office of President of the United States. This, of course, does not apply if the parents had been Americans but had renounced their allegiance to this country and become citizens of another country. It refers only to those whose parents are Americans at the time that the children are born into the world.

❖

What is the best method to grow peanuts?

Wait until you are sure the frost is over. Plow the soil well, harrow fine. Check two and a half to three feet apart. Plant two kernels in a hill. Cover two inches deep, and be careful not to break the thin skin around the kernel. Plant two and a half bushels per acre. Watch the moles and cut-worms carefully. Manure lightly with good quality, and use some lime or leach ashes. Harvest in dry weather. Stack around a center pole, keeping the stack well ventilated. Market your peanuts before the hulls are discolored.

What is the total capitalization of the steam railroads of the United States; number of employes; miles of railroad; number of railroad companies; number of locomotives; number of cars; earnings and expenses?

The total capital stock is \$6,355,287,335; bonded debt, \$6,722,216,517; unfunded debt, \$448,199,448; sinking and other funds, \$115,201,683. Number of employes, June 30, 1903, 1,312,537. The total single track mileage, June 30, 1903, was 207,977.22 miles; the aggregate length of mileage, including tracks of all kinds, was 283,821.52. Number of persons on the pay rolls of railroads in the United States, June 30, 1903, 1,312,537. Locomotives, 43,871. Cars, 1,753,389, of which 38,140 were for passengers, 1,653,782 for freight, 61,477 employed by railways in their own service. The gross earnings for year ending June 30, 1903, were \$1,900,846,907. The operating expenses were \$1,257,538,852. The net earnings were \$643,308,055.

❖

How did Russia get possession of Port Arthur and Manchuria? Does Mukden belong to Russia?

Russia obtained possession of Port Arthur and Talienshan by agreement with the Chinese Government, March 27, 1898, also the adjacent territories and waters, for twenty-five years. To the north is a neutral zone in which Chinese troops were not to be quartered except by consent of Russia. In 1900, in consequence of the "Boxer" uprising, Russia occupied Manchuria, but in September, 1903, undertook to restore Newchang and evacuate Mukden on October 8, but did not do so. Mukden, as well as the rest of Manchuria, belonged to the Chinese, but Russia had been holding it until driven out by the Japanese.

❖

Please state the chief causes and their antecedents of the present war.

Commercial and political dominance in China and Korea. In the war of 1894 Japan defeated China on land and sea, but the allies, to preserve the autonomy of China and enhance their own commercial interests, ordered Japan to take a money indemnity, which went mainly to London, and relinquish Manchuria, including Port Arthur. Russia, by negotiations with Empress An and her following, secured a lease on Port Arthur and control over that part of Manchuria where the Siberian railroad is located. This made Japan indignant, hence the war.

❖

How wide is Behring Strait?

About twenty-five miles in the narrowest place.

MISCELLANEOUS

LAUGH A LITTLE BIT.

Here's a motto just your fit,
 Laugh a little bit.
 When you think you've trouble hit,
 Laugh a little bit.
 Look misfortune in the face,
 Brave the beldam's rude grimace;
 Ten to one 'twill yield its place
 If you have the wit and grit
 Just to laugh a little bit.

Cherish this as sacred writ,
 Laugh a little bit.
 Keep it with you, sample it,
 Laugh a little bit.
 Little ills will surely betide you,
 Fortune may not sit beside you,
 Men may mock and fame deride you,
 But you'll mind them not a whit
 If you laugh a little bit.

—Exchange.

MT. PELEE DID GOOD.

"MT. PELEE is still boiling and bubbling and smoking, or at least it was when I passed it," says American Consul Ayme, who was the sole representative of the State Department on the island of Martinique after the frightful eruption a few years ago.

"The island of Martinique has prospered marvelously as a result of the great eruption," said the consul, and then, in answer to a look of surprise on the face of his auditor, he explained: "Yes, I know it is remarkable, but true, and resulted from this fact. At the time of the eruption St. Pierre was the metropolis of the island, and everything substantial—all of the wealth in concrete form—centered there. Well, along came this eruption and wiped the town off the face of the earth, almost, but not quite. It did wipe off every single paper and admission of indebtedness, mortgages, notes, I. O. U's, and the like, so that there was no means for any creditor to collect a debt. All the debtors on the island, and most of the people outside of St. Pierre who were more or less in debt at the time, suddenly found themselves free.

"But what the eruption did not destroy was the large store of specie and metallic wealth at St. Pierre, and all this came into the possession of the surviving inhabitants of the island, so that they were really much better off than before the eruption."

EXPERIMENTS IN SOUND.

1. VIBRATIONS.—Tie one end of a rubber string to a nail, and, holding it taut with one hand, pluck the string, and note how its elasticity causes it to vibrate. Hold it more and more taut, and see if you can observe any effect on swiftness of vibration. If you now shorten the string by taking hold of it near the nail and repeat the experiment, you can obtain a musical tone. Find what effect a greater tension has upon the pitch of tone. Each vibration of the cord must condense the air in front of it and send out a condensation as the bursting of the bag did.

2. TO OBSERVE VIBRATIONS.—Hold a sounding fork or a ringing bell against a piece of paper, against the face, in contact with the surface of water, and note the effect. In so far as possible, try the same conditions with a rubber cord. Touch the cord while sounding and note the effect.

3. NODAL LINES.—Remove the end from a paste-board box and replace the cover. Scatter upon the cover dry sand, emery, or powder. Now sing tones of varying pitch into the open end and note the nodal lines; *i. e.*, the lines of no motion, by seeing where the sand lies still. Where the box vibrates with the voice the sand is violently agitated.

4. CONDUCTION—COTTON TWINE.—Take an iron poker and tie strings to the two ends. Suspend the poker, winding the strings around the fingers and pressing them into the ears. Now strike the poker with a stone. What carries the sound to the ears? Instead of a poker any solid piece of metal, as a silver fork, may be used with a single string.—*Selected.*

THE "POOR MAN'S CLUB."

THE saloon is truly the "poor man's club"—to beat and bruise his poor brain into a state where he cannot think or plan wisely. He frequents it to the injury of his body as well as of his soul. It lures him away from his home on the week day and from the house of God on the Lord's Day. It robs him of his hard-earned cash and begets in him habits of idleness and dissipation, which, in the end, unfit him for the duties of life and make him a drain upon society. Andrew Carnegie once said he attributed much of his success to having never entered a saloon and never allowing the contents of a saloon to enter him.

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,
Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

SAMUEL S. THORPE,
Cadillac, Mich.,

The Sick Made Well

—A CURE THAT NEVER FAILS—

YOU NEED NOT SUFFER LONGER.

I hold in my possession the secret whereby any one having female weakness, falling of the womb, leucorrhoea, inflammation, ulceration, irregular painful menstruation, nervousness, headache, indigestion, liver troubles, constipation, piles, fistula, catarrh, etc., can be cured at home and thereby save big doctor bills and embarrassing examinations. I do not ask you to buy a patent medicine, nor to try a free sample.

I HAVE NOTHING TO SELL.

I suffered for ten years, had tried many advertised remedies, and subjected myself to the humiliations which doctors usually require of their patients; and all without being benefited.

Finally, by the help of a noted German doctor, I discovered the secret whereby I was cured, a simple home treatment, which has cured thousands of others where everything else had failed.

SEND NO MONEY.

My great desire to help others justifies me in sending full information, concerning this secret, FREE to everybody.

DO NOT LAY THIS ASIDE.

This opportunity may not come to you again. **SEND FOR IT NOW.** A card will do. Write to-day to Mrs. Ada Warm, Dept. A., Box 198, Indianapolis, Indiana.

Safe and Convenient

If you want a good safe, conservative investment, write the Peoples State Bank, McPherson, Kans., about their "First Mortgage Bonds."

Ten interest Coupons with each bond. The interest is payable Semi-Annually. All you need do is to clip off the Coupon and send to them, and they will collect and remit to you "Free" of charge.

Have had eleven years experience in making First Mortgage Loans in McPherson County, Kans., and have never lost one dollar interest or Principal on any of these loans.

Customers are well pleased.

A SPECIAL TRAIN TO THE ANNUAL MEETING

Leaves Chicago Friday, June 2, 1905, via the

WABASH RAILROAD

For the accommodation of our many friends among the Brethren, we wish to announce that for the Annual Meeting at Bristol, Tenn., to be held in June, the Wabash Railroad will run a special train of high-backed coaches and chair cars, through from Chicago to Bristol without change of cars, leaving Chicago, Dearborn Station at ten o'clock A. M. We invite all living in the city, or in the vicinity, to purchase tickets via the following route in order to take advantage of this special service: Wabash Railroad Chicago to Toledo; Ohio Central Lines Toledo to Columbus, and Norfolk and Western, Columbus to Bristol.

This special train will run through the rich farming lands of northern Indiana, picking up our friends who live in this district, arriving at North Liberty about 12:30 P. M.; Lakeville, 12:50 P. M.; Wakarusa, 1:15 P. M.; New Paris, 1:30 P. M.; Millersburg, 1:45 P. M.; Topeka, 2:00 P. M.; Wolcottville, 2:15 P. M.; arrive Toledo 6:00 P. M.; Columbus, 9:00 P. M., and arrive Bristol 2:00 P. M., Saturday, June 3. It is our desire that train reach the meeting grounds as early as possible on Saturday, to enable our patrons to get comfortably settled before dark. A special train will also be run from Bristol to Chicago at close of the meeting. Representatives of the different lines will accompany this train through to Bristol, thus insuring kind treatment and a comfortable journey, in a train occupied only by the Brethren and their families. A low fare has been named for this meeting as usual. Inform your local ticket agent that you wish to accompany this special train, and he will see that your tickets read as per above route. For further information write to,

R. S. Greenwood, M. P. A., Chicago, Ill.
J. Halderman, T. P. A., Chicago, Ill.
F. A. Palmer, A. G. P. A., Chicago, Ill.

Good Openings in South Dakota

An important railroad extension through Lyman county, South Dakota, is being built by the

Chicago, Milwaukee & St. Paul Railway

Land in Lyman county is now selling at from \$5.00 to \$15.00 per acre and values will probably increase 100 or 200 per cent as soon as the new line is completed.

This is a splendid opportunity to secure a good farm at a low figure. Low rates to South Dakota every Tuesday this summer.

Ask the ticket agent about train service and rates, or address

O. D. LYON,

Reedley, Fresno Co., California.

UPPER PENINSULA LAND CO., Ltd.,

F. J. MERRIAM, Gen. Mgr., 935 First
Nat'l Bank Bldg., Chicago, Ill.

Howard Miller, Elgin, Ill.

Des Moines, Iowa, April 26, 1905.

Dear Bro.:—I have just returned from a visit to the lands you represent in the Upper Peninsula of Michigan. I have purchased a half section of the same, near Rudyard, with the expectation of making it my home in the near future. The soil here is a rich clay loam, from 60 to 300 feet in depth. Hay is the great farm crop at present, and a constant cropping from the same ground for twenty-four years is said to show no diminishing of the yield, which is from 1½ to 2 tons of timothy, and from 2 to 3 tons of clover per acre. The crop is always heavy, as the ground in winter is covered with snow, which prevents heaving, and drouths are unknown. Other farm crops, except corn, are equally profitable, and some of them probably more so, but hay being the easiest farming done, is the most prevalent crop, here, and the farmers seem satisfied with it. The market for it is good, and if nothing else were grown the yield obtained would fix a value to the land of from \$50 to \$75 per acre.

The great vegetable crop is potatoes. In fruits, red raspberries and strawberries run riot everywhere, in a wild state. Peas take the place of corn for fattening, and are sown broadcast, with a resulting yield of from 25 to 40 bushels per acre. Most other vegetables, fruits and grains are successfully grown, but the ones named have been made a specialty, and seem to be so unusually successful that the farmers have not tried to explore the possibilities of the land in all lines. All staple crops common to central United States seem profitably grown except in grains, corn; in vegetables, tomatoes; and in fruits, peaches. The country is well watered, and stock of all kinds do well, and sheep remarkably so.

All the residents say that the south-of-Rudyard-district, where I purchased, is the best soil in the largest body in the upper peninsula, and the country is dotted with farms in a high state of cultivation. There is quite a bunch of wild land in this region from 4 to 8 miles from Rudyard, along good graded roads, with schools near. This is in what is called "the flowing-well region." That is, here wells may be had at a cost of from \$35 to \$100 which flow out above ground the year round. The flow is sometimes raised to the second story of a house with pipes. The water is clear and usually quite soft.

I saw the country at the worst season of the year for looks, and the looks were against it. Timber, timber, and still more timber, and brush without end, in the wild tracts, along good roads. A formidable-looking task is the clearing of it for farming, but investigation proves that it is not as great as it appears to a man from the prairie. The wood is soft and cuts rapidly, the roots run on top of the ground and stumps sprout but little, and they are easily pulled, and there is a profitable market for most of the timber. Were the work of clearing the average wild lands in the Rudyard district hired, an estimate of the cost, to get it into cultivation, is about \$10 per acre, according to the people here who ought to know. The best of the land can be had for from \$5.00 to \$10.00 per acre from the Upper Peninsula Land Company, in this section, and the net value of the timber often runs as high as \$5.00 per acre. That is, it may be sold in the tree at that price. Therefore, while the task of clearing is considerable, the land has a financial value of from two to three times its cost, based upon its yielding capacity, as already shown, and the excellent markets of the Upper Peninsula. If a person does his own clearing, the cost of the land is a trifle and the wood from the land will make his living as he works.

I think the South-of-Rudyard district ought to be taken up by our people rapidly, as I understand this spot will be reserved for them for a short time, and there is no like opportunity open anywhere else to get as rich land as there is in the United States at such cost, were the work of clearing even hired.

The health of the country is excellent. The winters are long, but not usually severe. Last winter the United States Weather Bureau gives the lowest temperature at any time as 21½ below zero. The summers average about two weeks shorter than in central Iowa, and nights are always cool.

I expect to make this my permanent home and would like to have others of our members here with me. There is a splendid market for butter, eggs, poultry, vegetables, fruits and grains. There is a constant demand for heavy horses in the lumber camps, at \$500 per team. Society here is splendid and our people will find a congenial social home in it.

Fraternally,

John E. Mohler.

In going to the Upper Peninsula see that your ticket reads over the North-Western railroad. There is no other way of getting there direct. It connects with the "Soo" line, along which the Rudyard district lies.

We expect to be at the Conference at Bristol, the coming month, and will go on the Wabash Railroad, hoping to meet many friends on the way.

Address all letters of inquiry to JOHN E. MOHLER, Des Moines, Iowa, or

HOWARD MILLER, Elgin, Illinois.

\$14.45 GENUINE VICTOR QUALITY

GOOD BICYCLES at from \$5.45 to \$9.85 are out of the question but we can sell you the machine illustrated here as quoted and guarantee it to give absolute satisfaction in every detail. We could sell you a Bicycle as low as \$7.00 but we do not want the kind of reputation that sort of merchandise brings, neither do you want the disappointment that is sure to come from the purchase of an unreliable article offered at so low a price. WRITE for our SPECIAL DEPT. CATALOGUE of Guns, Revolvers, Ammunition, Foot Ball, Base Ball, and Tennis Goods, Bicycles and Bicycle Supplies, etc. It costs you nothing and will be invaluable as a reference book. DO IT NOW.

One of the Many Who Find the Inglenook an Intensely Interesting Magazine.

CANNOT PERSUADE MYSELF TO DO
WITHOUT IT.

Cumberland, Va.

I appreciate the Inglenook. It is a first-class magazine. I enjoy its style of literature very much; every article in this magazine interests, entertains and instructs. I cannot persuade myself that I can do without it. The members of the family read it and read every bit of it and enjoy it. It seems to grow in interest; each number seems better than the preceding one. Long may it live.

J. J. BALLOW, Cumberland, Va.

ONE PAGE WORTH THE PRICE OF THE
MAGAZINE.

Dear Editor Inglenook:—

I think the page in the Inglenook that is devoted to Christian Workers' meetings is alone worth the price of the paper.

W. FRANK BILGER, Grampian, Pa.

C. S. Morey Makes Remarkable
Prediction in Regard to Beet
Growing Here.

"Colorado as a beet sugar producing state will soon leave Michigan far in the rear, if the present developments continue."

This assertion was made this morning by C. S. Morey, head of the Moroy-Boettcher syndicate. He has just returned from a trip to the East. While there he made arrangements for the transfer of one of the largest Michigan factories from Saginaw to Sterling, Colo. The new factory will have a capacity of 600 tons and will give employment to hundreds of men.

This will make the seventh beet sugar factory in the South Platte Valley owned by this syndicate.

READ THIS!

Do you canvass for a livelihood? Are you a widow without any support. Is your health poor and not able to do much work? If so, write to Bro. F. C. Renner, New Midway, Md. He is a minister in the Brethren church and wants to help you to help yourself. Sister Sophia A. Stong, Newville, N. Dak., sold 3,564 boxes, and Bro. E. B. Stern, Noblesville, Ind., sold over 9,000 boxes. Many widows support their families with it. It is a pleasure to sell it, because it gives full satisfaction and is wanted by everybody. People come to your home for it, if they know that you have it. Here is what Sister Hannah Royer did. She had canvassed for other things, and when we sent our circular to each minister named in the Brethren Almanac, Bro. Koontz got one and he handed it to Sister Royer. Now notice her orders and the dates of them: Aug. 12, \$1.50; Aug. 22, \$5.00; Aug. 29, \$7.60; Sept. 9, 17.00; Sept. 25; \$16.50; Oct. 12, \$30.50. Just two months ago she wrote us that she cleared from \$2 to \$5 a day. Now you can see that it is no fake or catch penny article. Over four million boxes have been sold, and not one complaint. It suits every one. It has gone to all nations, England, Russia, Sweden, Belgium, Palestine, India, Mexico, Canada, Hawaii and the Islands. Many poor widows and orphans are supporting themselves with it. Write for particulars, or send two stamps for a sample and full particulars. Address:

A SPECIAL TRAIN TO THE ANNUAL MEETING

Leaves Chicago Friday, June 2, 1905, via the

WABASH RAILROAD

For the accommodation of our many friends among the Brethren, we wish to announce that for the Annual Meeting at Bristol, Tenn., to be held in June, the Wabash Railroad will run a special train of high-backed coaches and chair cars, through from Chicago to Bristol without change of cars, leaving Chicago, Dearborn Station at ten o'clock A. M. We invite all living in the city, or in the vicinity, to purchase tickets via the following route in order to take advantage of this special service: Wabash Railroad Chicago to Toledo; Ohio Central Lines Toledo to Columbus, and Norfolk and Western, Columbus to Bristol.

This special train will run through the rich farming lands of northern Indiana, picking up our friends who live in this district, arriving at North Liberty about 12:30 P. M.; Lakeville, 12:50 P. M.; Wakarusa, 1:15 P. M.; New Paris, 1:30 P. M.; Millersburg, 1:45 P. M.; Topeka, 2:00 P. M.; Wolcottville, 2:15 P. M.; arrive Toledo 6:00 P. M.; Columbus, 9:00 P. M., and arrive Bristol 2:00 P. M., Saturday, June 3. It is our desire that train reach the meeting grounds as early as possible on Saturday, to enable our patrons to get comfortably settled before dark. A special train will also be run from Bristol to Chicago at close of the meeting. Representatives of the different lines will accompany this train through to Bristol, thus insuring kind treatment and a comfortable journey, in a train occupied only by the Brethren and their families. A low fare has been named for this meeting as usual. Inform your local ticket agent that you wish to accompany this special train, and he will see that your tickets read as per above route. For further information write to,

A NEW EDITION OF THE

Inglenook Cook Book

This cook book has become so pop-
ular that we were compelled to get
out another edition.

We are printing it on much bet-
ter paper this time and are binding
it in our own bindery, insuring a
much better book than previous edi-
tion.

It contains 1,000 recipes by the best
cooks in the country and are all sim-
ple and practical. Many good cooks
tell us they have laid all other cook
books aside and use only the Ingle-
nook Cook Book.

It is being bound in a substantial
paper binding and also good oil cloth.
Price in paper binding, each, 25 cents
Oil cloth binding, each,35 cents

If you do not have a copy, send
now, and you will be pleased.

Brethren Publishing House,
Elgin, Illinois.

ATTENTION!

Are you interested in receiving full value for your
money? Are you opposed to paying jobber's and
middlemen's profits? We deal with manufacturers;
we buy large amounts; we pay much less for goods
than local dealers; if you are interested in Watches,
Silverware, Fountain Pens, etc., send for our spe-
cial catalogue No. 127.

Our goods must be entirely satisfactory to purchaser
or we refund the money. We can fill your order for
most any make or grade watch, though you do not see
it in our catalogue. Be sure you get the value of your
money when buying silverware. There are different
weights, especially in spoons. Get the best Rogers.
They are fully guaranteed. You run no risk.

We also call special at-
tention to our line of fine
Fountain Pens. Every-
thing in our jewelry de-
partment must be just as
represented or no sale.

TRY OUR GENTS'

18 size watch for \$4.42.
The movement is a genuine
Waltham, 7 jewels, cut
expansion balance, Breguet
hair spring.

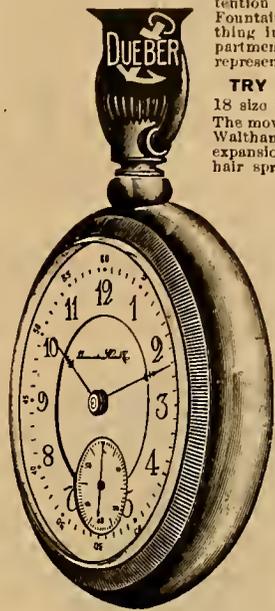

The case is
solid silverine;
stronger than
silver; will not
tarnish. It is
just the watch
for any person
in need of a
good, strong time
piece. You never
could buy it be-
fore at our price,
only

\$4.42

When sent by

PLEASE MENTION THE INGLE-
NOOK.

A Delightful and Profitable California Home for Brethren

As heretofore announced in the Inglenook there is now forming, on the banks of the beautiful Sacramento River, in Glenn County, California, in the heart of the Sacramento Valley, a Colony of German Baptist Brethren.

Feb. 21, 1905, a party of Brethren composed of S. W. Funk, of Glendora, J. Overholtzer, of Colton, Wm. Platt, of Charter Oak (Ministers), T. M. Calvert, M. P. Custer (deacons), M. N. Overholtzer, F. L. Hepner, E. O. Overholtzer, of Covina, Cal., L. S. Ober, of Laotta, Ind., together with a number of friends, including J. P. Funk, of Charter Oak, and C. R. Greider, of Los Angeles, left Southern California on a trip to investigate the land under the Sacramento Valley Land Company's Canal system of irrigation just completed.

Ten of the party were old Californians who have had considerable experience in irrigating, fruit growing and farming in Southern and some in Central California, and are acquainted with the resources, climatic conditions, etc. of this country.

The party spent several days thoroughly investigating the water rights, character of soil, climate, health conditions, etc., in Glenn and Colusa Counties, and were well convinced that the richness of the soil, unfailing and cheap water supply, reasonable prices of land, transportation facilities, cool, pure, soft water for drinking, pleasant and healthful climate, etc., would insure a safe investment and deserve recommendation to others for settlement.

The party selected the Packer ranch of 6,600 acres, as a location, and secured an option at prices ranging from \$25 to \$100 per acre, including water right, according to distance, west from the River, character of soil and drainage. The party bought almost 800 acres, selecting from the cheapest to the highest price.

This tract runs about three and one-half miles west from the new town site of the Brethren, which is located $3\frac{1}{2}$ miles north of Princeton near the banks of the Sacramento, amidst large oak trees. It is about 80 miles north of Sacramento City, the capital of the State.

All the water that is needed for any kind of farming or fruit growing is furnished by the Company for \$1.00 per acre per year, and the Company keeps up the ditches. The water can be had almost any day in the year.

"This is an opportunity that perhaps has never before been offered in California or in any other part of the United States." A number of those who have purchased will soon move to their new location and others are purchasing, and in a short time this tract will all be settled by the Brethren and their friends, especially by those from the eastern States who desire to do general farming in California.

This is certainly an opportunity to eastern people, as they can reap the benefit of the many years of experience these old Californians have had in irrigating and farming in California.

Wm. Platt and J. Overholtzer, two ministers, have already moved to Princeton, Colusa County, Cal. They

will gladly answer any inquiries and welcome those who come to investigate this country with a view of locating. Any of this party will also gladly answer inquiries regarding the new Colony.

A town site will soon be laid out and in the near future there will be a school, post office, stores and preaching services.

There is a trading vessel which comes up the River once a week and will take produce of all kinds in exchange for groceries and pay cash. With the advantages here and the conditions well adapted to general farming, there is no doubt but what one of the largest congregations of the Brethren in California will be located on this tract in the near future, and those desiring to take advantage of this opportunity should do so as soon as possible.

We have a climate that is no doubt equal to any valley of any consequence, for health and agreeableness. There is an occasional case of malaria in the lower and undrained lands of the county where water stands, but as the lands are becoming more thoroughly drained, this has almost entirely disappeared. For throat and lung trouble our climate is excellent. The weather is a little warmer than near the coast in Southern and Northern California, but not so warm as Riverside, Redlands, San Bernardino, etc.

The continual flowing water of the great Sacramento River directly from Mt. Shasta and the Mountains add greatly to the health of the country.

Any one desiring to see this tract will go to Colusa Junction, thence to Colusa on the Narrow Gauge, and, by notifying the Farmers and Merchants Bank of Colusa, they will be taken direct to the Tract in automobiles free of charge.

This is the land where the great oak and sycamore trees grow. The river banks are covered with wild grape and blackberry vines entwined amidst the large trees.

The river abounds in trout, salmon, bass and other delicious fish. The soil is rich sediment, 20 to 60 feet deep. It will produce 10 to 15 tons of alfalfa, 10 to 15 tons of peaches, pears or prunes. Oranges ripen there four weeks in advance of those of Southern California and always command higher prices for that reason. The present crop of wheat and barley will pay 10 per cent on \$100 an acre. It has the best supply of water for irrigation in all the west. I am a native of California. I have been actively engaged in developing California lands for 30 years. I am familiar with every large ranch and every section of California, and I know the Packer Ranch to be the best ranch of equal size in California. Its location is on the banks of California's largest river, where steamboats regularly ply. Its climate and its soil renders it ideal. Its productiveness is certain, not guess work.

Illustrated catalogues will be sent to any address free.

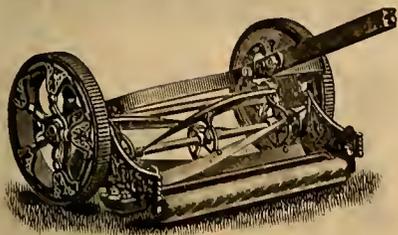

At request of the Brethren who have visited and located on the Colony, I will have a representative at Bristol during the Conference with photographs, and, if possible, I shall be there in person to meet any of the Brethren who may desire a home in California.

C. M. WOOSTER, President,

Sacramento Valley Land Company,

648 Market St., San Francisco, Cal.

SPRING MOHAIRS AT REDUCED PRICES

On account of a delayed shipment just received from ENGLAND, we are closing out these handsome light weight Mohairs at an astonishingly low price. They are 36 in. wide and of an excellent quality. The STOCK is VERY LIMITED and the LATE ORDERS may have to go UNFILLED. After what we have laid in stock has been used, we may not be able to procure any more. A hint to the wise is sufficient. Write for samples at once.

The colors are a pretty dark brown with a raised silk "splash" in self color; a very light champagne color, almost a cream, with a self color raised silk "splash"; a green check on a background of blue, and black with a small figure in silk. They are very handsome, the patterns being selected by a lady, who, naturally, knows best what would suit another lady.

While they last, per yard,....45 cents

ALSO, in Gingham, a pink with a white stripe; a large fancy green and white check with a black line; a large fancy check in pink and white; a large fancy check in blue and white; plain blue; small pink and white check; plain pink. Special price, ...10 cents

Summer Dress Goods in light tan and white with an open work check and the stripes one way in silk. Special price,25 cents

Summer Dress Goods with an open work stripe. Color, black with a small white figure. Price,12½ cents

Coarse Basket Weave for shirtwaists or dresses for summer, in white. Price,21 cents

Calico in dark blue, with a white dot; red with a small white dot close together; pink with a clouded white stripe; gray with a black and white design, and a plain pink. Price,5½ cents

Percalé in red, with a white flower and vine. Price,7 cents

Percalé in buff, with a tiny red and green flower and a scroll design in white. Price,9 cents

White Vesting for shirtwaists with a fancy stripe in self color. Price,19 cents

Silk in turquoise blue with an inch wide lacey stripe in self color. Price,41 cents

Persian Lawn, good quality, white. Price,15 cents

Extra fine dainty India Linen. Price,39 cents

Fine Mohair in navy blue. Price,69 cents

One piece of very dark blue Mohair, excellent quality. Price,67 cents

A few remnants of Broadcloth and Fancy Suitings, length ranging from 1 to 3½ yards in all the leading colors. They are of an extra fine quality and the price which we quote is at a loss to us, in order to get them off of our shelves. Price,75 cents.

Tan summer Dress Goods with an open work stripe and a small green dot. Price,13 cents

Beautiful piece of Swiss mull, white. Price,29 cents

Soisette, the new dress goods which looks exactly like pongee and is often mistaken for same. Sells here in the city for 29 cents. Price to Inglenook readers,24 cents

Finest grade of Sateen made, in black. At a short distance it might be mistaken for satin, it is so glossy and heavy. Special price to Inglenookers,25 cents

Extra fine piece of Butcher Linen, the goods so much used now for shirtwaists and shirtwaist suits. Special price,69 cents

Fine piece of Basket Weave, white. Price,18 cents

Note.—From now on we intend to give the readers of the Inglenook, and our friends, the benefit of the low prices which we are forced to make on remnants and dress goods in small quantities. Watch for them!

ALBAUGH BROS., DOVER & CO.,
 341-343 Franklin St., Chicago, Ill.

Real Estate in Kansas

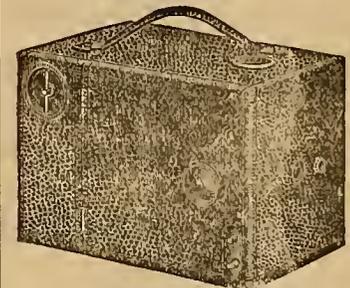

If you are thinking of changing location you had better come to Kansas, where you can get land at reasonable prices and raise nearly all kinds of crops, fruit and vegetables, and be close to railroads, churches and schools. Farms from \$25 to \$60 per acre, according to improvements and locations. Write for full description of special bargains.

N. P. J. SONDERGARD,
 Marion Co. 14113 Ramona, Kans.

You Can GET THE BABY'S PICTURE

or any other picture you may desire with one of our high grade cameras.

TRY OUR No. 2 ANSCO.

Well Worth Twice What We Ask for it \$6.50

Very compact and covered with best grade seal grain leather; metal fittings nickel-plated. Fixed focus and always ready for use. Fitted with high-grade single achromatic lens, and improved form of finger release automatic shutter for both time and instantaneous exposures. Has set of three diaphragms.

The No. 2 Anso is fitted with two of the latest improved brilliant finders and two tripod sockets, enabling the operator to make pictures either way of the film. It uses Daylight Loading Film Cartridges of six or twelve exposures. Outside dimensions, 6 7/8 x 4 7/8 x 4 7/8; weight, 25 oz.

No. 2 Anso, not loaded,\$6.50
 Carrying Case, 1.50
 Six Exposure Film,35
 Twelve Exposure Film,70

If this camera does not suit you as to price or style, send for our catalogue of Cameras and Photographic goods. We can supply cameras of all kinds. Prices range from 99c and up. Catalogue sent free.

OUR NATION'S SILENT VICTORS.

BY CLAUDIA M. FERRIN.

With mystic tread they rally
On battlefields of yore,
And march to present conflicts
Unheeding cannon's roar.
From mountain, plain and valley,
From ocean's pearl-strewn way,
Their spirits come to greet us
Upon Memorial Day.

We feel their martial presence
When foes approach our strand,
And rise to save our country—
Their own beloved land.
We now bring wreaths of laurel
To deck each hero's grave,
And with the wreaths pay tribute
To loyal hearts and brave.

Asleep, but not forgotten;
Unnamed, but victors still;
Each lowly mound is sacred
To those whose dauntless will
Shall seek the slab of marble,
And trace with loving care
The carved or uncarved records
Of him who slumbers there.

SEEDTHOUGHTS FOR THE HEART'S GARDEN.

pieces: the experience gained in failures is often util-
ized to advantage, later.*

Flora, Ind.

"MOUNTAIN OBSERVATIONS."

BY GEO. L. STUDERAKER.

IN our western trip last year we had the pleasure
of crossing the famous Rocky Mountains, one of a
vast system of mountain ranges. The greatest breadth
of this mountain system in the United States is one
thousand miles and their total area is nearly one mil-
lion square miles.

These mountains are very helpful to man. In our
western states we have acres of land that a few years
ago were barren and unproductive. To-day this land
abounds in some of the finest hay, grain and fruit that
our land produces.

The lofty summits of these mountains serve as a
great reservoir, held in the form of snow and ice. In
the summer these gradually melt, and flow down fur-

nishing abundant supply to the plains below, and the dry, barren, sandy plains are thus brought into the highest state of cultivation, and some of the finest oranges, lemons, apples, peaches, pears, apricots, cherries and other fruits, are brought from these plains where they grow almost to perfection.

The nether lip overflows freely when one thinks of the pleasure enjoyed in going into these fine orchards and eating of the tempting fruit to one's heart's content. We, like the ten spies, came back with a favorable report. When Sister Studebaker told of picking seventy-nine cherries from a little twig less than three inches long it was a hard story for some of the eastern people to believe. Not a fish story, but a real cherry story. You westerners know how they grow.

As you travel over, through, and around the mountains you are meeting with scenes that are ever changing. Had our world been formed without mountains, or hills, it would lack many of the beautiful scenes that are now enjoyed by the traveler. How very tiresome it would be to take a trip from the Atlantic to the Pacific, across the United States and all one level plain. No hills to see, mountains to climb, tunnels to penetrate, or canons to cross. How very monotonous it would soon become, and how tedious the journey would be!

After leaving Ashland, Oregon, we soon came in sight of Mt. Shasta. This mountain peak is in the coast range in northern California and is 14,000 feet

MT. SHASTA.

high. Towering high above the surrounding mountains, covered with snow, it presents a beautiful scene of which one never tires.

For one half day we traveled in sight of this snow-capped mountain. At times it seemed as though our train was going to leave it, as it would wind around among the mountains, but soon our train would come nearer to it until we were traveling almost at the foot of this noted mountain. As the evening came on we

were traveling alongside of a deep canon. On looking down we saw some houses. We thought, Can it be possible that people are living between those mountain ranges? Soon we discovered a railroad track, which proved to be our road, and it was evident that we would soon be down from the mountain top to the valley below. So it is in life. We are sometimes on

CREEPING ALONGSIDE THE MOUNTAIN ON THE TRESTLE.

mountain tops and then we go down into the valley. Our life is largely made up of ups and downs.

It evidently required great engineering skill to build a railroad through this country. After winding around considerably we were soon traveling in this deep canon, and came to the famous Shasta Springs. Here, from the mountain gushed forth a stream of clear, sparkling soda water. Our train stopped five minutes and all the passengers could help themselves to this soda water without money and without price. After enjoying the contents of more than two glasses and taking a look at the spring and the surroundings, we heard the call, "All aboard," and we were soon on our way.

Mark, my son, had a desire to bring a bottle of the soda water home with him as a relic. At Ashland, Oregon, he purchased a self-sealing bottle, and at the springs he filled his bottle and sealed it, carefully laying away his coveted prize. Before starting home he went to get his much-prized bottle of soda water, and found only a few pieces of glass to tell the story. This little incident gives one an idea of the strength of this water, and will also show how Mark was disappointed in not getting to bring home with him a bottle of pure soda water.

As the morning came on we were not far from Cal-

ifornia's State capital, Sacramento City. The mountains over which we had passed were now behind us and we were traveling on California's plain.

The impression these mountain scenes make on one's mind can never be forgotten, and we were made to say, "O Lord, how manifold are thy works! in wisdom hast thou made them all: the earth is full of thy riches." Psalm 104: 24.

Muncie, Ind.

STORKS IN GERMANY.

As the return of our robins and bluebirds signifies their message of spring, with warmer airs and greening fields, so the arrival of the storks in Germany is hailed as the most welcome sign to announce the beginning of a new season. The children greet them with songs, and grown-up people when they pass each other on the streets are apt to say: "The storks are here: do you know it?" Such interest is manifested in their presence. Allied to our herons, with long legs and a straight conical bill, both of a bright red color, the body and long neck covered with white feathers, the wings of a deep black, the stork is a remarkable bird, frequenting in its search for food the marshes and low meadows where lizards, frogs, snails and snakes have their abode. Standing about three feet high, nature has provided it with such feet and bill that it can walk in the tall grasses and rushes and approach cautiously with a slow step for the capture of a creature it wants. In the last days of March or the first of April the male bird arrives over night, and is seen standing in his old nest early some morning. When the conditions of food and weather are favorable he departs again, after a few days' stay, and then returns with his mate in three or four days, according as the outlook has been in their favor.

Invariably they occupy their old nest, which is built in the village on the gable end of the houses, preferably those with straw-thatched roofs, and on which the owner fastens two crossboards to invite their nesting. He is always a welcome guest, especially to the children, not alone for bringing the babies, but his presence means luck, and to harm a stork is considered a great wrong. Many people believe a house where his nest is is charmed against evil, and lightning also will never strike it. Occasionally he builds on church towers, if some provision for his safe location is made. Trees he does not frequent. Like the swallows, once mated, the pair is constant in its affection and keeps together during life, which is a long one. The female lays five white eggs, and both parents care for and feed the young. They sleep standing on one leg, the male alone while the female is breeding, but he never deserts the nest at night, but stands guard over her like a sentinel. Their clattering noise with their

bill is the expression of content or of signaling. It can be heard at a great distance.

In the Baltic provinces, in Mecklenburg and Holstein, are very many of them during the summer, while there are extensive meadows to supply their food. In September they migrate to warmer climes. It was long a conjecture where they went, but since steam and telegraph communication has been discovered many doubtful questions of this kind have been settled. It is known that they cross the Mediterranean and inhabit the islands as well as the delta of the river Nile and other points in Africa.—*Cincinnati Enquirer*.

THE RECLAMATION OF THE SAHARA DESERT.

THERE are many surprises in the geography of Africa. One of the greatest of these, perhaps, is the truth about the Desert of Sahara, which has for so long been supposed to consist exclusively of bleak, vast, uninhabitable wastes of sand. The truth seems to be that within the limits of the so-called desert there are vast stretches of land potentially fertile, awaiting only the touch of irrigation to make them blossom like the rose. The increasing importance of French interests in the Sahara and the Soudan has furnished the theme for a book, recently issued in Paris, under the title, "The Sahara, the Sudan, and the Trans-Sahara Railroads." In reviewing this book and analyzing its suggestions, M. Robert Doucet, writing in the *France de Demain*, declares that, after twenty-five years, M. Paul Leroy-Beaulieu's struggle to destroy the legend of the Sahara Desert has succeeded. We now know that there are vast agricultural and economic possibilities in the Sahara. A number of French "missions," says M. Doucet, have proven that, not only is the Sahara inhabitable, as far as nature is concerned, but the bands of robbers and brigands are not anywhere near so frequent or terrible as has been imagined. In the south and central portions, the Sahara is comparatively free from sand dunes, and the oases are frequent and fertile. Moreover, the climate, speaking generally, is healthful. "The heat is not excessive in these regions, and the nightly frosts compensate largely for the fatigues and heat of the day." The temperature throughout the southern and eastern portion is moderate. M. Leroy-Beaulieu, says this writer, advocates a number of railroads across the desert strip to exploit the commercial possibilities of this vast region.—*Review of Reviews*.

THAT is what we are put into the world for—to help one another. You can pass on the kindness by serving my good friends, who, in return, will do their best for you.—*Louisa M. Alcott*.

AIDS TO BIBLE STUDY.

BY J. G. FIGLEY.

It has not been so very many decades since the International Sunday-school lesson system was inaugurated, and lesson-leaves and other helps were introduced, to be followed by beautiful political and topographical maps, illustrations, cards, etc., for the enlightenment of the Sunday-school scholar, especially the little ones.

Formerly the Bible was read from, and very, very often no one but the minister was able to instruct the school in multitudinous points connected with the lesson, describing the life and times of the characters introduced in the lesson. The little children must have been sadly neglected and not fully appreciated, when their little hearts and minds were thirsting for a better comprehension of what had been read and commented upon. And it is not to be so much wondered at that they sometimes disliked to go to church and Sunday school where everything seemed so gloomy and cheerless—to them.

But now, *now*, with the great wealth of helps and conveniences, where children, both of larger and smaller growth, are not too distant from such services, I cannot conceive why there should be a lack of interest in Sunday school and church. When it is not convenient to attend, there is the Home Department in every well-regulated Sunday school to busy the little ones.

Children have now learned that Palestine, or the Holy Land, is not some vague, indefinite, far-off country, they could not tell exactly where, but that it is east of the Mediterranean Sea, in southwestern Asia; that the valley of the Jordan river is east of it, and that Syria is on the north, the dividing line being the Lebanon mountains and the Leontes or Litany river; and the desert of Sinai is on the south; that it extends from thirty-one degrees, fifteen minutes, to thirty-three degrees, twenty minutes, north latitude; and from thirty-four degrees, thirty minutes, to thirty-five degrees, thirty minutes, east longitude. Thus many scenes of the most thrilling incidents in the world's history are found in a small territory, averaging in width 45 miles, and in length 145 miles. The phrase "from Dan to Beer-sheba" has been used so often that, without thinking, many people have supposed that they were probably thousands of miles apart, while the fact is, Dan is near the Leontes river, in the north, and Beer-sheba is a trifle west, at the southern limit.

Every place in Palestine is noted for many things. For instance, take Beer-sheba, or "Bir-es-seba," which means, "well of the oath," or "well of the seven," because at that place Abraham made an alliance with Abimelech, the king of Gerar, a city to the west of

that place, and ratified the alliance with an oath and a gift of seven ewe lambs. Abraham lived here, and here was commanded to offer his son Isaac as a sacrifice. Here Esau was lost to his birthright and blessing. Here Jacob offered sacrifice before going down into Egypt—only a short trip as we would view it to-day. Here Samuel's sons were made judges. And all that now remain of the place are two circular wells of good water, and a stretch of ruins about a half mile long by a quarter of a mile wide. Again, it might be noticed that the visit of the Queen of Sheba to King Solomon could not have been a very great distance, there being some discussion whether Sheba was Abyssinia, Libyan Egypt or toward India.

Jerusalem at present is considerably west of the ancient city, which was about twenty-nine miles from the Mediterranean Sea, and is now called El-Khuds. Bethlehem, or Beit-lahem, meaning House of Peace, is about five miles south of Jerusalem, in a beautiful piece of country. In the east are the mountains of Moab and the plains of the Jordan. The hill of Tekoa is south, and is familiar as the place where the prophet Amos lived. Beyond, and farther to the east, is the wilderness of En-Gedi, where David retreated to escape from Saul, and where the allied armies of the Amorites, Moabites and others, encamped when they were on an expedition against Jehoshaphat. North of Bethlehem is the road to Jerusalem, and the mountains of Judea, and the tomb of Rachel.

The country of Galilee extended from the Mediterranean Sea to the Jordan, occupying the whole northern part of Palestine, and contained the important cities of Cana, Capernaum, Nazareth, and Nain, and of course could not have covered much territory. Here is where Jesus did some of his mightiest works.

Thus we find that a little study of sacred and modern geography will enable us to realize the stupendous workings of an Almighty Father and Creator, in allotting to this small country of the past an almost incredible amount of historical evidence in the space of a few thousand years, the like of which it is difficult to compare with any contemporaneous, preceding or subsequent history, and not only must this be looked at and carefully considered, but a fair knowledge of the rise and progress of the religions of the world, many of which find some mention in the Bible, must be had to clearly understand some parts of it. These must be known to understand why sacrifices of sheep, cattle, etc., were made; why perfumes and incense were burned; what the difference is in worshiping God in person and in symbol, and what the difference is between these and the worship of idols and images; why fishes, and bulls, and birds, and crocodiles, and fire, and the sun, and stars, were considered as sacred by some nations, as the names of the attributes of God were by other nations.

And besides these things, some knowledge should be had of the habits, manners and customs of the people of the world during the Bible time. In hand with the Bible I would recommend the use of Josephus' works on the Jews, to explain much concerning the Jews. Any reliable ancient history could be used to advantage in posting one's self on the ancient peoples, and some good Bible dictionary, such as Smith's, a book on biblical natural history, and a concordance, would be great helps. Bro. D. L. Miller's works are most valuable helps. The Brethren Publishing House has other works of kindred value on sale. At an outlay of a very few dollars, every person, so inclined, could supply himself with the books and materials necessary to make the study of the Bible a recreation of great value to him, and not as some think a dry chronicle of history and things hard to understand. Many churches and Sunday schools have libraries where may be obtained all the books I have named as well as many more that would be of wonderful assistance in studying the Sunday-school lesson.

And considered apart from these things, how beautiful are the nineteenth and twenty-third Psalms! How exalted are the esoteric and spiritual teachings of the greatest ethical sermon ever delivered—the Sermon on the Mount! How deeply spiritual are Paul's writings to the Corinthians! How personal his letter to the Romans! How terrible to contemplate, yet how beautiful to consider, is the account of the crucifixion! In conclusion, if these few thoughts have aided the desire of any to a better or deeper study of the Bible, the World's Greatest Classic and Guide, I shall feel gratified. Rom. 16: 24.

Bryan, Ohio.

* * *

THE SUN-DIAL MOTTO.

WE ran across a motto the other day. It is called the "Sun-dial Motto." It says: "I record none but days of sunshine."

This little motto is full of suggestion. There the sun-dial stands, and on sunshiny days it makes a record of every sunshiny hour; telling them off, one at a time; recording them as they go gladly by. But when the cloudy days come with the dark hours and tempestuous storms and boisterous winds and the gloomy, dreary stretches of time, the sun-dial makes no record. It stands there, the same sun-dial that recorded the sunny hours, its face turned in the same direction, but quietly, persistently and everlastingly refusing to make a record of the hours that creep by in gloom and silence.

If we could each be like the sun-dial, recording only the pleasant things that come into our lives, the happy, joyful days, the things that have added to our happiness and the experiences that have been filled with

the sweetness of love and hope, our bodily health, and our mental activity would be tenfold greater. The trouble with most of us is, we make the deepest and most lasting record of the cloudy days. The days when the sun does not shine, when everything goes wrong. The days when our heads are bowed with sorrow and our hearts torn with grief. The days when troubles gather all about us, and friends disappoint us; the dark dreary hours of life; these are the ones that we are ever prone to give the most vivid record.

One great secret of being healthy both in mind and body, and of being young when old is, like the sun-dial, to record only the sunny days, the experiences that tend to health and happiness.

If as the years go by we adopt the sun-dial motto, "I record none but hours of sunshine," then when old age comes on we will still be young in thought and our whole life filled with the memory of happy, sunshiny hours.

True, troubles and sorrows, erstwhile shadows and clouds, will have done their beneficent work in molding our characters into symmetry and beauty, but they will not have left any deep, dark, black scars that canker-like will eat away the happiness and youthfulness and joy and contentment that should be predominant as years go by.

Yes, it is a pretty good motto. Forget the vexing, troubling things and cherish the memory only of the gladsome, life-giving experiences, recording "none but days of sunshine."—*E. P., in Medical Talk.*

* * *

YOUR DUTY AND A LITTLE MORE.

MR. ANDREW CARNEGIE, in an address before a graduating class in New York, gave some excellent advice to the young men on how to attain success in life. Among other good things he said:

"There are several classes of young men. There are those who do not do all their duty; there are those who profess to do their duty; and there is a third class, far better than the other two, that do their duty and a little more.

"There are many pianists, but Paderewski is at the head because he does a little more than the others. There are hundreds of race horses, but it is those who go a few seconds faster than the others that acquire renown. So it is in sailing yachts. It is the little more that wins. So it is with the young and old men who do a little more than their duty.

"No one can cheat a young man out of success in life. You young lads have begun well. Keep on. Don't bother about the future. Do your duty and a little more, and the future will take care of itself."

THE ORCHARD.

BY S. Z. SHARP.

WHILE studying Latin nearly half a century ago and reading Cicero's admirable work, *De Senectute*, we then decided, should we live to an advanced age, to spend our declining years largely in an orchard. In this book, Cato Major is represented as teaching Lælius the younger how best to spend old age happily, what employments are best adapted to an old man and for which he is better fitted than a youth. By judicious exercise of both mind and body, sufficient strength may be retained to the very close of life to enjoy many innocent pleasures. This exercise is best afforded by the study and practice of horticulture and pomology. These may be pursued without the drudgery incident to some other branches of agriculture. The study of literature treating on the successful pursuit of fruit growing, affords ample exercise for the mind to keep it in a healthy condition, while the pruning, grafting, cultivating, and irrigating of trees and the gathering of fruit, afford ample exercise for the moderate bodily strength of an old man to promote good appetite and refreshing sleep. In the book above mentioned, written about the year B. C. 45, it is shown that at that early age the science of fruit growing had made considerable advancement and the propagation of improved fruit by grafting and by cuttings, was already well understood.

The art of fruit growing should not only be classed among the fine arts, but may well be called a royal art. Cicero mentions that the king of Persia prided himself that he could entertain his friends with fruit from trees which his own hands had planted.

Again, the fruit and flower garden is the spot on earth which most nearly resembles the Garden of Eden. It was into such a garden that man was placed to "dress it and to keep it." It corresponds with God's idea of what is best suited to give employment and happiness to an innocent man.

The orchard affords many rich and harmless enjoyments. We mean one that is a real garden and not a wilderness, one which the Germans call *Baumgarten*,—one that is well pruned, cultivated and kept clean. Among the innocent pleasures afforded by the orchard we may mention first the irrigation. It is a pleasure, at least to us, to turn the life-giving fluid into the little ditches that run along each side of the rows of trees and let them drink and grow. We imagine it affords us about the same kind of satisfaction as it does a mother when she gives her little one to drink from her own fountain of life.

The next pleasure afforded us is when the trees are

in bloom. Apple blossoms are simple roses and belong to the rose family. They are especially beautiful. Their red, white and pink colors most artistically shading into each other, challenge the skill of the greatest masters among artists. We admire a California orange grove surrounded by stately palms, the rich green foliage of the orange trees contrasting strongly with the golden fruit, presenting one of the most beautiful sights in landscape gardening. It is a thing of beauty. An apple orchard of forty, eighty or a hundred and sixty acres, as may be seen on the western slope, all apparently a mass of blossoms, presents a scene of grandeur.

Another pleasure found in the orchard, is afforded by the feathered songsters attracted by the thick foliage offered as protection. Scores of turtledoves, cooing their love to each other, build among the branches their nests from which they peer at you through their innocent eyes as you pass, seeming to say, "You would not hurt me?" Then there are hundreds and thousands of quails, protected by law and making their homes in the orchards. They are none of your somber kind east of the Rocky Mountains, but a gay set, dressed in gaudy apparel and sporting a topknot on their foreheads and waving saucily these few gaudy feathers and saying, "Look, David, look, David." Of course it is the female that says this. She never calls her lover or her husband, "Bob White," as the quails do in the East.

Then there is the pony rabbit. He is none of the big, long-eared gawky Jacks of the plains, nor of your mischievous cottontails which ruin your apple trees, but a smaller kind, wearing a yellow patch on the back of his neck. (Can any of the Nookers tell what it is for?) We never heard of a pony rabbit peeling a fruit tree. If you sit quietly under an apple tree, one may come close to you and look at you so quizzically as much as to say, "May I?"

There is much in a well cultivated orchard to arouse and stimulate the æsthetic and the poetic feelings. Some of the finest paintings of some of the great masters are copied from an orchard or its products. With a little play of the imagination different kinds of fruit trees can be made to represent different ideas. For example, the pear tree, tall and stately, and with such a noble form, may be considered as the aristocrat among trees.

It is a pleasure to have among your neighbors so many persons of intelligence and culture, as lawyers, doctors, ministers, and college professors. It is quite a satisfaction when sitting under your own apple or pear tree to feel that no one of your neighbors is envying you or trying to deprive you of what you have secured by your genius and hard labor, for there is a

kindly feeling among fruit growers, an *esprit de corps*, which rejoices in the neighbor's welfare and success.

To see an orchard at its best one must go to an irrigated country where water is plenty, the climate, soil and elevation favorable to the production of all kinds of fruit adapted to the temperate zone, and then one may see such an abundance that it seems almost fabulous.

Now after an experience of nearly three score and ten years, here in the famous Grand Valley, a few miles from the home of the first seedless apple, we are made to realize the wisdom of Cato's advice to Lælius that in the orchard is found the occupation for a happy old age.

Fruita, Colo.

A FILIPINO WEDDING.

A WEDDING in the Philippines is like a scene from a comic opera. I have in mind one that took place at Cagayan, island of Mindanao, in a picturesque house curtained with jasmine and inhabited by three charming sisters. The bride—the eldest—was a soft-eyed, plump beauty, with a skin like brown velvet. Her white muslin gown would have passed muster in New York, and she wore a veil of costly and delicate pina gauze which would have turned an American bride-elect green with envy. Several necklaces were hung around her neck, while bangles loaded her wrists, and her fingers were stiff with gold and silver rings. The roads were in a deplorable state, being knee-deep in mud in places, and many of the guests wore top-boots. They began arriving early in the morning, on horseback, on bicycles, and driving the famous trotting-bulls of the country, or the rough-coated island ponies hitched to carts or ancient victorias. The majority came on foot, though, and everybody was welcome. Long tables made of planks on empty barrels and guiltless of linen were spread under the trees in the front yard, as it was too hot to eat indoors, also the house was not nearly large enough to accommodate the guests. Directly over the bride's table a magnificent fire-tree (*orbol de fuego*) dropped its flaming blossoms. Every kind of native dish was there, and many imported from the United States by way of Manila, but the chief delicacy was considered to be canned corned-beef, which occupied the place of honor usually accorded to the wedding-cake in other countries, and was flanked by onion omelet and ham and eggs. Other dishes were chicken fried in cocoanut oil, dried fish made in a kind of stew with rice, potatoes, and red pepper enough to raise it to the rank of a curry. Caribou steaks, jam, honey, various kinds of sweet cakes, cocoanuts in the shell, and wine—much wine—completed the menu. While the feast was in

progress the hens scratched industriously under the tables, and a bold rooster flew up among the plates, pecked at a few stray crumbs, and crowed until driven off by Antoine, the bride's brother. The marriage was performed by a very fat priest, who wore a suit of bright red calico under his flowing robes, the wind blowing through open doors and windows lifting his vestments and revealing the incongruous attire beneath. The ceremony was followed by the supper, and that in turn by dancing, the music being furnished by a harp and piano. After supper a man and woman entered and caused much merriment by singing impromptu verses about the guests, introducing each one by name and accompanying themselves on mandolins. Spanish fandangoes were danced, also the spirited yotas, which is like a constantly shifting kaleidoscope when danced by girls wearing dresses of the rainbow-colored native cloth. The bride's mother, Senora Felicita Sulunga (literally Happiness-go-along-now), did a skirt dance and did it well, despite her forty-odd years and *avoirdupois*. The festivities were kept up until long after daybreak.—*Minna Irving, in May Lippincott's.*

A HOLY CARPET.

THE departure of the Mahmal, or holy carpet, on its annual pilgrimage from Cairo to Mecca, has just taken place, with the usual ceremonies. Every year this custom is faithfully carried out by the devout Musselmen of Egypt, and is one of the most splendid of Cairo's street pageants.

The Khedive, escorted by a detachment of lancers, arrives at nine o'clock at Mohammed Ali place, and all the ulemas, or ministers, of the city, and a great many of the noble Musselmen receive him. The camel which carries the holy carpet, a sort of embroidered scarlet velvet dais, is led three times around Mohammed Ali place. The animal is elaborately decked out in gold and tinsel harness, and after it has made three trips around the sacred ground, the Khedive takes the halter, kisses it, and hands it on to the others, who pass it from one to another in succession. When this is done the Khedive then intrusts the holy carpet to the Emil El Hag, and the cortege leaves Mohammed Ali place for Abbassyeh. Troops head the procession, followed by prominent Musselmen and a great number of the faithful. All along the way crowds of waiting pilgrims join the procession of the Mahmal on its journey to the "sacred city."

WHERE there is no confidence in God, there will be no continuance with God. When the wind of faith ceases to fill the sails, the ship of obedience ceases to plow the seas.—*Secker.*

THE BUTTERFLY.

BY KATHRYN YOURTEE.

THIS conspicuous little animal takes its name from the color of a yellow species, and claims its adoption in the great family *Arthropoda* and classes itself under *Insecta*, distinguished by the body being divided into three distinct parts,—the head, thorax and abdomen.

On the head are found the antennæ, eyes and mouth. The antennæ are organs of feeling, and are supposed to be also organs of smelling, and are commonly called "feelers."

In connection with the simple eyes, called ocelli, they have two large, compound eyes. These are quite interesting in their structure. The surface of a compound eye is seen to be marked off in little spores called facets, which are six-sided, resembling honeycombs, and crowded closely together, each eye containing from six to ten thousand facets. Each facet of the compound eye represents, in some way, a single eye, but the animal cannot discern color and movement. The ocelli probably can discern objects very close by—within a half inch.

Another distinctive characteristic is the mouth-parts, which form a long sucking tube; this, when not in use, is coiled into a spiral, like a watchspring. On the second division, the thorax, is the organ of locomotion, consisting of two pairs of wings and three pairs of legs. The wings are large and slow in motion.

One of the most noticeable features of the butterfly is the presence of scales on the wings and body. These scales are modified hairs and on the body they are very slender. And it is this feature that places the butterfly under the *Lepidoptera*, meaning "scaled winged." The scales are of use to the butterfly in shedding water, strengthening the wing and serve as an ornament. When flying they act together as one wing.

The legs are small and weak, and some forms have only two pairs; others have the posterior pair, but do not use them.

Butterflies are not much given to walking, but in the use of their legs they have many little peculiarities which generally mark whole groups. Thus the *Satyrids* always walk by a series of nervous twitches in a very bungling fashion. Others, *Theclini*, never remain on a twig or leaf on which they have pitched, facing in the direction in which they have alighted, but turn part way around to face another way and that with no reference to the sun; they do the same when the sun is wholly obscured.

The butterfly has a complete metamorphosis. In the late summer and the autumn months the butterfly may be seen depositing its eggs on leaves. From the

egg there hatches a worm-like larva. This stage is commonly known as a caterpillar or "worm," but a true worm never has legs. Thus we see "worm" is not the true name for the larva, for they are provided with eight to sixteen legs. Of these, three pairs are on the thoracic segment, while the abdomen has from one to five pairs; and when the new butterfly emerges these three pairs of thoracic legs are seen, while the abdominal ones are lost.

When the larvæ hatch from the egg, they are small, but they are great eaters and may be seen going to and from their place of eating with all their might, and indeed they spend most of their time in eating, therefore they grow rapidly. Growth is made possible to them by frequent moltings of the skin. Finally there comes a molting by which the appearance is greatly changed and the pupal stage is reached. In the pupa the body is shortened and covered with a harder skin in which one can trace the legs, antennæ and wings of the future butterfly, folded over the breast. This stage lasts for months, no food is taken and no motion possible, except of the abdominal rings; then the pupal skin is molted and the perfect insect (the imago) emerges. At first the imago is soft, and the wings soft bags; but they are rapidly distended by blood, dried by the air, and the wings are ready for flight.

While the larvæ are biting insects and have strong jaws, the adult is adapted for taking liquid nourishment by means of a so-called tongue, and may be seen through the long sunny day, visiting the nectaries of flowers, unconscious of its mission in carrying pollen from flower to flower and fertilizing them.

Few species of butterflies do enough harm to require attention on that account. The Mourning Cloak occasionally does some damage to shade trees, and this is about the only species that lays its eggs in clusters, and the caterpillars of which feed close together, so that their damage is conspicuous.

Of the entire group the cabbage butterfly is the only serious pest, and is unfortunately our commonest species. It was brought from England to Quebec about 1860, probably in imported cabbages. In three years it had spread over an area of about sixty miles in diameter, and by 1871 it covered eastern Canada and the New England States. Ten years later it was common over the eastern half of the continent from Hudson Bay to Texas, and, for some years now, it has had possession of every cabbage patch from the Atlantic to the Pacific. Over five hundred ovules, in the ovaries of a newly emerged cabbage butterfly, have been counted; hence a new insect without natural enemies practically owns the earth.

One of the most curious features of a butterfly's life

is its sportive or playful moods and ways. De Garmo noticed this feature. He says that he saw them start vigorously after other insects on the wing, at first he thought in self-defense, but after watching he found it to be the spirit of playfulness; and it prevailed more toward sundown than in the morning, and never in the absence of sunshine. This is true only of some forms; others are sluggish and lazy.

Then, too, butterflies, as a general rule, are very dainty about alighting after flight, appearing to regard the position they shall take with some concern, hesitating more or less about the place they choose; sometimes they hover over a spot, or approach and leave it many times before pitching.

Butterflies go in clusters or swarms. One evening, when about ten miles from the bay of San Blas, we saw a band of them,—countless myriads,—extending as far as the eye could range. Even by the aid of a telescope one could not see a space free from butterflies.

Union Bridge, Md.

EDUCATIONAL GUIDANCE.

MEMORY is the much abused power of the soul. It must act as the hack-horse to carry all sorts of ill-considered loads when a poor teacher is at work. The law is this: Only things understood should be placed in memory. Memory will hold things understood much more readily than it can hold things not understood. Frequent recall makes knowledge facile. The laws of association aid mightily in the recall of knowledge. Thus memory keeps knowledge in the everlasting present. When recalled to consciousness the soul recognizes the past fact for what it is. Thus the identity of one's experience is maintained.

Consider the memorizing of selected material from the Bible and literature. Consider also the value of catechetical and other forms of religious instruction in which the memory is potential. Be very sure to link the new fact with as much of the knowledge in the soul as possible.

In recalling knowledge the soul may recall it (1) as it is (Memory); (2) as it never can be (Phantasy); (3) as it ought to be to meet the soul's own ideal (Imagination). In each case the fundamental data is furnished by memory. Memory moulds the bricks that Imagination builds into an ideal. Memory furnishes the threads that Imagination weaves into a fairy fabric.

What makes the imagination product more pleasing to the child than the memory product? The Soul enjoys to build freely. To recall a series of facts as they are is not always pleasing. To build a

series of facts as the soul loves to have them is pleasing. The freedom of the process is a source of joy.

Note, too, that where the soul is free to build it finds place for rich feeling elements in the system of thought it erects. The imagination is the feeling power of the Soul.

We have an area of thought and an area of feeling in the soul. How are they joined? What is the bridge? The imagination is this bridge. At one end it rests in thought, at the other in feeling. Study the stream of feeling that flows to thought. This complex of thought and feeling is the product of imagination—an ideal. In language it is poetry, etc. In color it is painting. In sound it is music. In stone it is architecture and sculpture. In short, it is art.

This flow of feeling is to be controlled. Note what happens when the feelings sweep in and overcome our thoughts. The soul is under the stress of storm. It is in confusion and in peril. This flow of feeling puts the quality of interest, the basis of involuntary attention, under our thought. Interest is only refined feeling. All knowledge may be figured as interest since all thought begins in feeling.

Memory and Imagination thus use the products of perception to build our knowledge always into the present and into ideal forms.—*Dr. M. G. Brumbaugh, in Rays of Light.*

LENGTH OF ELECTRIC WAVES.

ELECTRIC waves measured by Hertz—and named after him—were found by the great scientist to be 150 feet from the top of one wave to the top of the next. The waves used by Marconi in telegraphing across the Atlantic are much longer. They are said to be 600 feet or more. They travel at the same speed as light, 184,000 miles a second. But the light wave measures only a few millionths of an inch.

IN *Britain's Opium Harvest* we read of an interesting proclamation that has recently been issued by the Governor-General of Sz-Chuan, West China. It is "An exhortation to desist from opium smoking and foot-binding." He says: "Men who smoke opium and women who bind their feet may be classed as cripples or maimed persons. Out of pity for you people," he goes on, "I will expressly point out to you the sufferings which follow the smoking of opium and the binding of the feet." These he sets forth fully, and concludes, in true patriarchal strain, as follows: "Those of you who are my good people will not go against this earnest exhortation, which has been issued with nothing but good intent by me. Do not disobey this special proclamation."

A GLIMPSE OF ALASKAN LIFE.

WHENCE came the native Alaskan, is the question that has puzzled the scientists for the last thirty years. They have searched for proofs without finding many to determine the history of the race. In former years every event was chronicled by picture-signs, suggestive of the chief occurrences, carved on rocks, walls, pillars and on poles. These may be seen in some parts of the country now, but many have been carried away by tourists and collectors for museums. The scientists will never understand them until they can interpret the writings in picture forms, which are just as mysterious as the appearance of the race in this country.

The legends of these people are so vague and shadowy that facts can scarcely be distinguished from myths. However, it was told that Raven, one of the great heroes of the legends, was the creator. We have the story of the flood, and the creator is said to have peopled the desolate country after that. He also caused vegetables to grow, and told the people what to eat and what not to eat. But with all his powers, he was never popular, for it is said he was not honest.

The Alaskans have been a very superstitious people, and believed in witches. The punishments were terrible, the most cruel being to starve the witch until he confessed being one. This punishment is inflicted upon them when a chief or a person of high caste is bewitched, and if they should die, the witch is then starved to death. This may seem a terrible thing to you, but every native was taught to endure hardship and starvation from childhood, so that anyone can go without food for many days and not show much physical weakness. The Puritans and the European nations burned their witches alive, and yet they were an intelligent race and had had Christian teaching for centuries. This evil belief is dying out slowly, but surely. The belief in the Indian doctor was another evil custom. The Indian doctor alone wears long hair, for in that lies all his power. One day, one of these doctors told a tourist that if his hair were cut all the spirits would leave him, and he would become an ordinary man. He gave so much trouble to the missionaries and others that a warrant was sent out for his capture and when caught, he was sent to the states and served a number of years in a penitentiary. His hair was cut, and to-day he is a peaceable Christian man. There are three more yet to be caught. The Indian doctor claims to have the power to communicate with the spirits, and in a trance they tell him what is to happen. He does not use drugs or herbs for his patients, but sings and dances, calling on all the spirits that possess him. The natives also believed in the bad and the good spirits. The souls of the dead are said to live on the other side of an unseen river and this land is spoken of as the "Land of Silence,"

for the spirits do not talk there. When once over this river, they cannot return until a certain time, when the soul migrates to the family of the next generation and lives again. The Northern Lights are said to be the spirits of the braves who were slain in battle. They are seen only when there is to be a conflict among the tribes. When the wonderful crackling sounds of electricity are heard distinctly, they say the spirits are very much excited, causing the bravest men to tremble with apprehension.

The creed of these people, like the Golden Rule of the Christians, is that all men should treat others as they would be treated. If any harm is done to one member of the clan, his friends must avenge that wrong. They have no word for God, so they say for the Great Spirit, "King Above Us" or "Maker of Our Souls." The natives feel that there is a spirit, great and powerful; where this spirit is they do not know, and in order to please it they hold all things in nature sacred. They feel that there is a spirit in the lofty mountains, in the numerous rivers, in the smoky volcanoes, yes, in the very depth of the sea and all that live in it. Thus the Alaskans are pure worshipers of nature. This belief influences them to be kind to the dumb animals. They never kill any but what they need for food and clothing. The Alaskan boys and girls were taught to observe this same reverence for Mother Earth.

From childhood, the Alaskan boy is taught to love the occupation of his father. If the father is a canoe-maker or a carver, a miniature canoe or any carved toy is fastened to the child's cradle and in this way he learns. As soon as he is able to handle tools he begins to make things for himself. The girls are taught to weave blankets, baskets and to make garments. These are their chief accomplishments.

The native Alaskan is very hospitable, and this is one of the teachings of Raven. A man must ever be ready to entertain a stranger, whatever his mission may be. If he is a messenger of war, he is kindly treated at the house of the Chief or his Councillors, and he is allowed to depart unmolested. This is an unwritten law of my people.

Twenty years ago the first mission was started among my tribe. The life of a missionary is a hard one, and what they have done among us is great and they have our thanks. We are striving to show the fruits of their untiring efforts.

The largest mission work is done by the Presbyterians, and there are many other denominational schools, all doing excellent work. Each year, the attendance at school increases and the children are beginning to realize their need of education. They are bright and well-behaved, comparing favorably with children of any community. It is very difficult for them to put into practice the English they learn in

schools, as their conversation at home is carried on in their native tongue. But when they enter any boarding school, they are strictly forbidden to use their native dialect, so that a child can talk English in three months fairly well.

In the history of the Alaskans there are two names that will always be prominent as the educators of these natives, that of Dr. Jackson and Mr. William Duncan.

Dr. Jackson, with aid from the government, started the Sitka Mission school, which has academic and industrial departments where the boys and girls are taught, not only the art of reading and writing, but some trade by which they may be able to earn their living. This school turns out well-equipped students every year. Some take chances to come east where they attend colleges and seminaries and return home as teachers. Dr. Jackson will always be remembered by the natives and all those who are interested in his great work.

Mr. Duncan is an Englishman, who came among one of the most ferocious tribes of British Columbia, some forty years ago. He had many difficulties with the natives, but with tact, patience and love he conquered their savage wills. Having found that the traders interfered with his work, he petitioned Congress for a grant of land in Alaska. It was given him and he with eight hundred men and women made homes in Alaska. Mr. Duncan taught them how to use tools and make things to improve their homes. With his help, the natives erected their own houses, churches, schools and factories, and along with the art of industry, he taught them Christianity and civilization. To-day, you will find these Indians the best civilized tribe in southeastern Alaska.

The Alaskans and the white men have been working together side by side under the same employer in the mines, in the saw-mills, in the fish-canneries and there has never been any trouble between these two distinct races. The government has never spent any money for the support of the natives alone and it need never do so. They are hard-working people and can take care of themselves. They do not ask why you have taken possession of their country, they are glad that you have come to live among them, rather than be controlled by the iron rule of the Russians. We are not a conquered race, our fathers have never smoked the pipe of peace with you. You have not directly driven us from our hunting and fishing camps. You call Alaska yours by right of purchase. The country certainly is yours, but what about the original inhabitants? Are they not yours also? There is not one Alaskan who is not proud to own that he belongs to the United States. There is not one who would not proudly salute the flag of your nation which had set him free. We are proud of your liberal government and all the generous law-makers. To these good

friends we turn for strong laws forbidding all unnecessary work on the Sabbath and laws that would prohibit the sale of liquor, which is taking them on the downward road, and making the natives a curse to the community.

Teach these primitive people the same trade in which any American is engaged and he will learn it, for as a general rule the Alaskans are intelligent and apt. Give him leave to come East and live among you and he will be a blessing and not a blot on the pages of the wonderful American history.—*Mary Kadashon, Alaskan.*

A BOILING LAKE IN NEVADA.

RECENTLY an item has been going the rounds in regard to a boiling lake near Lassen's Peak, California. It is not generally known, but we have in Nevada a similar boiling lake. It is situated at the eastern base of the first large mountain range east of the Sink of the Carson. It lies on the edge of an immense desert—a desert so large and scorching that in summer the Indians never attempt to cross it except at night, and even then they go provided with large supplies of water.

On three sides of the lake are rocks two or three hundred feet high, which are perfectly bare, and are burned to deep brick red. The area of the lake is about two acres. Though steam is constantly rising from the water, the whole surface of the lake does not boil. The agitation—boiling—is confined to the great springs which burst up at several points. These springs force columns of water from a foot to two or three feet in diameter to a height of over twenty inches above the general surface of the lake, causing a loud rippling sound and considerable local commotion.

The water of the whole lake is doubtlessly boiling hot, though not seen to boil, for a brook flowing from it down into the sands of the desert sends up a cloud of steam for a distance of several hundred yards. About a mile from the lake is a great deposit of sulphur, running through which are streaks of pure alum, from two to six inches wide.—*Selected.*

CRYSTALLIZATION.

DISSOLVE a small handful of alum in about twice its weight of hot water. Hang a thread down into the middle of the liquid and stand it aside in a quiet place free from dust. In a few hours or days there will be found on the thread crystals of alum more or less perfect. Similar experiments may be made with copper sulphate, common salt, and other substances.—*Selected.*

LEFT-HANDED PEOPLE.

To understand why some people are left-handed and other people are right-handed requires quite an intimate acquaintance with the structure and workings of the nervous system.

The brain is divided into two hemispheres. The left hemisphere controls the right side of the body. The right hemisphere controls the left side of the body. That is to say, colitions or impulses to move the right side of the body originate in the left cerebrum.

For some reason or other, the development of the left hemisphere begins a little earlier in some infants. In some unaccountable way, the left hemisphere gets a slight advantage over the right hemisphere. The slight advantage which this gives the left hemisphere of the brain causes greater activity on the left side of the brain, and consequently greater activity on the right side of the body. Impulses to move the hands in a very young infant originate oftener in the left hemisphere and hence the right hand is moved oftener. This leads to right-handedness, which is a habit formed long before the infant can be taught anything by word.

For some unknown reason, however, the right hemisphere of the cerebrum gets the advantage in exceptional cases. When this happens the person will be left-handed.

It may be that other causes enter into it occasionally. The right arm may be lame or tender, or some disadvantage placed upon it so that the left hand is used by necessity. Heredity may play a slight part in the matter, too. Left-handed parents may convey their peculiarity to their children in a few cases. But mostly it appears to be in the nature of human anatomy to develop right-handedness.

There are exceptions, of course. It is stated that among the savages left-handed people are more common than right-handed. It is also alleged that underwitted people and idiots are quite as apt to be left-handed as right-handed. It is, however, true that most left-handed people are normal, and quite as active and intelligent as other people. Some writers have inferred that left-handedness indicates a slight inferiority of brain structure. This, however, is probably not true.

It must be admitted, however, that left-handed people are more inclined to awkwardness than right-handed people. This may arise as a sort of prejudice in the mind of the onlooker. We expect to see people use the right hand. The use of the left hand might appear as awkwardness, even though it was done with deftness and accuracy.

Some of the leading baseball pitchers have been left-handed men. Surely, no more trying position can be imagined than that of a pitcher of a professional

ball team. Those who have given the subject much attention state that a left-handed pitcher is more likely to confuse the batter with his manner of pitching than a right-handed pitcher, and therefore makes a valuable pitcher. But, at the same time, a left-handed pitcher is regarded as rather an uncertain man on other parts of the field.

In Japan, it is stated, the children are taught to use both hands. They are taught to draw and write with one hand as well as the other. To the facility of using both hands has been ascribed their superiority in the arts of warfare.

Many carpenters practice using the plane and saw with both the left and the right hand, in order to distribute the labor more equally on both sides of the body.

Farmers, using the rake and hoe, acquire the same facility, to guard against fatigue.

But, excepting a little awkwardness in the appearance of left-handed people, there is nothing about this habit that need occasion any concern. Some of the greatest artists have used the left hand in drawing and painting masterpieces. A few jugglers and athletes have, by practice, acquired an equal control of both the left and right hand.

It may develop in the future that some special advantages will be derived from the ability to use both hands with equal facility. Certainly this would have the effect of developing both sides of the body equally, and muscular strain could be better endured. But the subject of left-handedness, like all other questions of physiology and psychology, is still in its infancy. Very little scientific knowledge has been attained.

At present, it is a good thing for the mother to guard against left-handedness in children. By watching them closely in their first attempts to do things with their hands, the tendency to be left-handed can be discovered very early. A little care and instruction will correct the habit in most cases.—*Medical Talk*.

FOUNDER OF THE STANFORD UNIVERSITY.

THE death of Mrs. Stanford leads a correspondent of the *New York Tribune* to give some new facts relating to the origin of Leland Stanford, Jr., University. He writes:

“Early one morning in 1884, the chaplain of the American Church in Florence, Italy, was called to the Hôtel de la Paix, in that city, by a message that stated Mr. Stanford’s son had just died and that Mr. and Mrs. Stanford would very much like to see him.

“He went at once and was taken into a darkened chamber, where the young man’s body had been temporarily arranged. There he had prayers, Mr. and

Mrs. Stanford and the former's secretary being present.

"When he had finished, Mr. Stanford, who, though a strong man, seemed stunned, said to the chaplain: 'I have just had a very strange experience, and if you will be kind enough to come into the next room I would like to tell you about it, and ask your advice.' As they were about to enter he paused a moment and said: 'Would you object to my asking my wife to come, too?' The chaplain, of course, said he would not, so the three entered the room, and as soon as the door was closed and all were seated Mr. Stanford said: 'Just after my son died I sank into a chair and for a time became unconscious. While I was in this state my son, who seemed to be standing just beside me, said: "Father, I want you to build a university for the benefit of poor young men, so that they can have the same advantages the rich have." After that he left me. Now, tell me what you think of that, and do you think I ought to do it?' This question was addressed to the chaplain, who, with Mrs. Stanford, had been listening intently.

"The chaplain replied: 'It seems to me more important what you think about it; that is, are you in sympathy with the idea, and is it in your power to carry it out?' 'Yes,' said Mr. Stanford, 'I do think it would be a good thing, and we have no one to leave our money to now.'

"'Why not do it, then?' asked the chaplain, 'for it would be a fine and noble life work for you, as well as a fitting memorial to your son.'

"'I will, and I want you to come and advise me what to do and how to do it.' For this the chaplain was unprepared, and he tried to explain that his relations to his work in Florence were of such a nature as to make an acceptance impossible. Mr. Stanford, apparently thinking it was a financial matter, offered to pay all debts or claims, and asked the chaplain what salary he would come for, offering him various sums as high as \$50,000, after which he wished him to state what sum would induce him to go. Nor could he seem to realize that it was not a question of money, or that the chaplain would gladly go with him without any salary, being financially independent himself, if he felt free to do so, as he was deeply interested in this project which had been so unusually and so unexpectedly introduced.

"The conversation then turned upon a memorial marble group of the parents and son, with the latter as the central figure, after which Mr. Stanford made a final effort to persuade the chaplain to accompany him, and when they parted his manner was that of a man who was at a loss to understand what sort of a person it could be that could not be hired if the offer

was big enough. He seemed amazed and perhaps a trifle disgusted, but it did him good, for it diverted his thought in some measure from the blow he had just received.

"It was in this way that the idea of the Leland Stanford, Jr., University originated."

WIRELESS TESTS ON TRAINS.

TRAIN dispatchers may soon be relieved in part of the responsibility now attaching to their post when once a train has passed their station without receiving forgotten orders, if the experiments about to be undertaken at Purdue University result in determining a practical method of adapting wireless telegraphy instruments so they may be successfully used on moving trains. The intention of the professors is to conduct a series of tests, to the end that a receiver may be placed in the cab in reach of the engineer, from which he may take his running orders from the dispatcher without stopping his train. Prof. Kelsey, of Purdue, has already conducted a series of experiments which lead him to believe the difficulties hitherto encountered in working with trains have been overcome, and the university at Lafayette, Ind., is exceptionally well situated to put to a practical test his theories, since the electrical engineering building of the institution commands a view of long stretches of four railroads, and instruments will be placed on various trains for testing purposes.

THE MIRACULOUS SCIENCE.

How Surgeons Piece Out Injured Spinal Cords With Silver Wire.

WHAT can not surgery do? A Philadelphian broke his back. Such a mortal hurt is not necessarily mortal now. A surgeon cut away the injured part of the spinal cord, and sewed the ends together. At this writing, the physicians say that this patient has a good chance of recovery. In Philadelphia, too, a rare operation was performed on a Michigander who had been paralyzed for two years from a bullet in his spine. He heard that a Philadelphia woman had been cured by this operation, and he insisted on having it tried on him. The bullet was removed from the spine. Three shattered vertebrae were spliced with silver wires. The paralysis decreased gradually. A complete recovery is expected.—"*With the Procession,*" *Everybody's Magazine for May.*

Look upon the bright side of your condition; then your discontents will disperse. Pore not upon your losses, but recount your mercies.—*Watson.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglebook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

TAFFY AND EPITAPHY.

BY THE EDITOR.

You're sick at heart; folks do not seem
To understand your worth;
Because the good you try to do
Remains unknown on earth.
No palms of vict'ry in your hands,
No crown upon your head;
Don't be discouraged; wait awhile:
Just wait until you're dead.

You're sad at heart because your faults
Are gossiped far and wide;
While all your virtues seem to be
So gently laid aside.
Why let the thing dishearten you?
Why not rejoice instead?
The vict'ry is awaiting you;
Just wait until you're dead.

Folks do not understand your plans;
Appreciate your deeds.
They do not praise you when you meet
Some weaker brother's needs.
They do not say kind things of you,
Nor credit what is said.
They'll praise you all in goodly time—
Just wait until you're dead.

Wait till you're dead; they'll tell it then;
They'll chisel it in stone,
And put it in a chosen spot
Secluded—all alone.
No doubt your splendid traits will then
In epitaph be read.
At any rate they'll stretch the truth.
Just wait until you're dead.

But work for Christ; he knows your worth
And wants your service, too.
And promises his present help
Lo!—all your journey through.
He recognizes each day's work;
Due credit will be giv'n.
The world may not appreciate:
The record is in heav'n.

Yes, work for Christ; his burden's light;
His yoke is easy, too.
There are so many little things
For each of us to do.

If in Christ's name, or "one of his,"
A quenching draught be giv'n,
The world may never know it, but
The record is in heav'n.

Yes, work for Christ; you'll happy be
If what you know is done,
And all is done in Jesus' name,
The name of God's dear Son.

No monument may e'er be wrought,
No epitaph be giv'n;
The world may quite forget you, but
The record is in heav'n.

A farm like Barnabas you have—
Perhaps a widow's mite—

An alabaster box or two—
Such things are useful quite
When consecrated to his cause.

Your talents may be giv'n.
The world may never recognize:
The record is in heav'n.

A Dorcas' needle you may have
To clothe the orphan child.
Your raiment may be camel's hair,
Your meat, the honey wild.

In prison you may lie in chains;
Your life, if need be, giv'n.
The world indeed may mock and scorn,
The record is in heav'n.

Then work for Christ; toil on each day;
A mansion he insures.

No matter what the world may say
The vict'ry will be yours.

And when your labors all are o'er,
And robes and crowns are giv'n,
You'll then, acquitted and redeemed,
Find rest, sweet rest, in heav'n.

SUNDAY SCHOOL OFFICERS.

LAST week we had something to say about the method of organization, ideal and otherwise; now let us discuss the different officers of the Sunday school. As a superintendent is generally spoken of first, in relation to the Sunday school, it might be well to begin there.

In the first place the ideal way would be to have a superintendent without either an assistant superintendent, associate or a substitute. The superintendent is one of the factors of the Sunday school who ought always to be present. If he has an assistant superintendent he often feels more at liberty, saying that if I am not present to-day the assistant will take my place, and therefore will be absent a great many times when he would not were there no such office as assistant superintendent. This would be better for him individually as well as for the school. When an as-

sistant superintendent is notified by the superintendent to take charge of the school, it is often at a very late date, and almost always gives him an insufficient amount of time to prepare. You say he ought always be prepared; true, so ought everyone else, but we know we are not. Then there is a difference in preparing to recite, preparing to teach, and preparing to superintend. The office of an associate superintendent is worse yet than the office of assistant superintendent; for in the latter case the superintendent has charge of the school and his wishes are to be respected even when the assistant is caring for the school. But in the case of the associate you have two superintendents with an equal share of responsibility and authority; in fact, your school has two heads, and a thing which has two heads is considered a monstrosity, which is an evidence that it is not natural to have such. Oftentimes associate superintendents do not see things exactly alike, with reference to the government of the school, and therefore cause division; division, decay, and then comes the end.

Of course it is impossible for a superintendent always to be present. There are such things as lawful excuses; sickness or death is liable to prevent anyone's presence. In case it is necessary for the superintendent to be absent he should substitute at the very earliest moment when he knows he cannot be present at the next Sunday school. This substitute, if properly selected, will conduct the school just as well as an assistant or an associate. He has just as much time in which to prepare. It leaves the impression upon the school that he is only very temporary and the proper officer will return at the next session. While in the case of the associate the impression goes out, "Well, he has just as much authority as the other superintendent," and thereby two heads are recognized, which is evidently a failure sooner or later. The assistant superintendent leaves a very similar impression upon the school, except that they think he becomes acting president through the absence of the proper officer.

It has been thought for the above-named reasons, by some of our most prominent Sunday-school workers, that the superintendent alone should be the head of the school, the same as the elder is the head of the church, with the same power to substitute, but not to have an associate who is equal in power and authority; or one who assumes his rights in his absence. In a future chapter we will discuss the qualifications of the superintendent.

THE BATTLE TO SAVE.

Nor long since a little book by the above title was placed upon our desk by the author, Rev. A. L. Morse, of Chicago. The book contains two hundred and sev-

enty pages of red-hot matter on the temperance question.

The author has spent several years in the temperance work and the chapters are brimful of life and sparkle like dew before the morning sun, which makes every page very readable.

"The Golden Rule," "A Vivid Vision of Duty," "The Modern Seventh Plague," "An Awakened Church," "Do-ology," "The Inactive Nine-tenths," "Save the Boys," "Save the Girls," "The Poisoned Beverage" "The Slavery of Appetite," etc., are the names of some of the chapters that adorn the pages of the book. The person would be hard to reach, who, when done reading this book, would say that he did not feel that he ought to do something for the temperance cause.

There are forty-three missionary songs in the book, which are either written by the author or carefully selected by him for the use of the temperance people in their work, which makes it very convenient.

Several pages of quotations have been carefully selected from the Bible and from noted authors to be used in the preparation of lectures and sermons along this line.

About one hundred questions and answers have been selected from the Holy Scriptures bearing directly upon the subject, which can not be otherwise than convicting in their very nature.

The book is well illustrated and cannot fail to impress those who read its pages that the temperance work is a great one and that they want a part in that work:

The motto of Rev. Morse is:

Do all I possibly can
In all the ways I can
As long as ever I can
To rescue all the people I can
From sin and the evils of intemperance.

The book may be had for fifty cents of the author, Rev. A. L. Morse, 3548 South Rockwell St., Chicago.

INGLENOOK MEETING.

WE now have permission from the Committee of Arrangements to hold our INGLENOOK Reunion in the tabernacle, Monday, June 5, at 4:30 P. M. This will give us a splendid opportunity for a good meeting. We want just as many of the INGLENOOK family present as possible, and want you to bring your friends along. The editor will have something to say about the future policy of the INGLENOOK, its character and contributors, and several of the INGLENOOK family have promised to be present and tell us what they think about the magazine. Come prepared to offer any advice that you may have that will enable us to make a better paper of it and be more useful to our young people.

Current Happenings

IN riots at Militopol, Russia, thirteen Jews were killed and at Zhitomir, twelve Jews were killed and fifty injured.

PRESIDENT ROOSEVELT has decided to set apart a million acres of land in Idaho as a forest reserve, at the suggestion of the Department of Agriculture.

A SPECIAL train on the Reading railroad, between Camden and Atlantic City, made a run of fifty-four miles in forty-three minutes, making a new record for that distance.

CHINA has fully decided to boycott the United States. American goods will be refused until the United States makes some concessions as to its policy of the Chinese exclusion. What they want is a modification of the law that will permit respectable and well-to-do Chinamen to enter the United States under the same conditions which govern other foreigners. They do not ask that "coolies" be admitted. Thousands of Chinese merchants have signed an agreement not to purchase any article of foreign manufacture until it is examined closely and found not to bear the American trade-mark.

IN New Mexico is to be established what will be known as the "Fraternal City." It will cover 80,000 acres of land and will be used as a sanitarium for consumptives. It will be open to members of all fraternal organizations.

THE price list committee of the Mississippi Valley Lumbermen's association, the Wisconsin Valley association and the Northwestern Hemlock association, has agreed to advance the prices of all classes of lumber fifty cents per thousand.

PRESIDENT ROOSEVELT says that henceforth he will receive no complimentary transportation, but expects to pay his way wherever he goes. His idea of doing this is to discourage the practice among public officers of accepting passes. He also announced that he paid something like three thousand dollars in transportation for his recent trip west.

At a meeting of the Isthmian Canal Commission at Washington recently, it was decided that in the future, material for use on canals will be bought wherever it can be procured the cheapest, whether in American or foreign markets. This is a move in the right direction.

THE Chicago strike seems to be losing its strength. Mayor Dunne has served formal notice upon the strike leaders that he would ask for troops if the strike is extended. He will also revoke the license of every driver who refuses to drive passengers to boycotted stores. The nuisance of the strike has reached the public schools, and thousands of children are acting as silly as their parents. A large force of truant officers has been sent out to enforce attendance at the schools.

THE government report for the condition of the weather during the week discloses the fact that we have had a backward season in nearly all sections of the country. The temperature has been too low for the germination of seeds, especially in the Missouri, Ohio, and the Mississippi Valleys. Excessive rains have suspended agricultural operations in many sections. Conditions for winter wheat are favorable in general, as well as the cotton crop in the South.

A NEW tariff bill was passed by the Austrian Reichsrath, affecting the increase of duties on all importations from every country whatsoever, without discrimination. Of course the bill has not been passed by the Hungarian parliament yet, nor has it been presented to the Emperor for his signature. This measure proves that Austria can provide for home consumption.

A MOVEMENT has been started to make a strong demonstration of the theory of Dr. Frederick Sohon, of Washington, D. C., that a sojourn in the Arctic regions will cure consumption. The doctor speaks from experience, since he was a sufferer from tuberculosis, and has spent two years in an Arctic expedition. He claims that during his long stay in the ice-land he found that he was entirely cured. His views have attracted wide attention in the medical world. A number of prominent citizens have decided to have a test made. The steamer *Havana* is to leave Halifax, June 15, for a health cruise along central Greenland.

STATISTICS show that America expends three hundred thirty million dollars a year on diseases, and that sixteen thousand people are sacrificed each year because of filth.

OWING to the difficulty of obtaining further supplies of uranium, the price of radium has increased to three million dollars an ounce. It is said that not more than half an ounce of this material has been manufactured since it was discovered.

THE Presbyterian church, in session at Winona Lake, Indiana, are having a heated controversy over the Westminster Confession of Faith. Objections have been raised to the unfavorable idea of a real hell at the end of the race for the unfaithful. Rev. Dr. Carter calls this a God-dishonoring theology. It is to be remembered that this same body decided a few years ago that it was not necessary for infants to go to hell, and now possibly they will be able to remove a liability for older people. The doctor thinks such a doctrine would be a farce if it were not so serious, but being so serious it is a crime.

FOR the first time in sixty years the Baptist church North and the Baptist church South have met in a joint session at St. Louis and adopted a constitution, asking for a permanent convention of these churches, which have been separated for three score years. Over three hundred and fifty thousand dollars was contributed to foreign missions.

THE "Coxey Army," of England, has finally made their way to London and are making some demands of the House of Commons. The government has promised to investigate their claims.

THE senior merchants of Berlin, Germany, have decided to found a commercial university.

THE latest reports of the schools of New South Wales, Australia, show remarkable attendance. Ninety-seven per cent of the children between six and fourteen years of age are in attendance, besides many pupils under six and over fourteen, are enrolled.

GENERAL MILES strongly favors a revival of the old Continental uniform of cocked hats and knee breeches, to be worn by the entire militia of Massachusetts, on parade occasions. He reasons from the standpoint that it would inspire respect and raise patriotic interest of both troops and citizens. Governor Douglas is said to approve of the idea.

THE Union Pacific Railway company has filed with the Secretary of State at Salt Lake City, amended articles increasing the amount of its preferred stock \$100,000,000.

THE war situation in the East has taken another grave aspect. The Russian fleet is at the south end of Formosa, toward which the Japs are advancing, who are now near the north end of the island. Oyama is ready, at any moment, to attack the land forces of Linevitch at a given signal of the engagements of the fleets. This may be the decisive battle of the war.

Rojestvensky is contemplating a raid on the coasts of Japan, while the other forces are engaged.

COUNT CASSINI, Russian ambassador to the United States, has been transferred to Madrid. Baron Rosen, until recently Russian minister at Tokio, becomes ambassador to the United States.

AN inkstand, costing \$500, has been ordered for Vice-President Fairbanks. The government will pay the bill. The inkstand will be used by Mr. Fairbanks during his official term and will then become his personal property.

IN various parts of Illinois the farmers are engaged in a battle against the locust, known as the seventeen-year variety. It is feared that great damage will come to the fruit trees.

OKLAHOMA CITY, which is barely sixteen years old, has, during its existence, spent \$250,000 in churches, \$200,000 in school buildings, and \$35,000 in a public library. This is a good example of progress and reform.

AUSTRALIA has 210 churches to every 100,000 people. England has 114, and Russia about 55.

ATTORNEY-GENERAL BROWN, of Nebraska, holds that the State has the right to assess property, money or credits of fraternal insurance companies.

FRANK D. BRANDAGE, of New London, Conn., a member of Congress from the Third Connecticut district, was chosen United States senator to succeed the late O. H. Platt.

A NEW and ingenious pocket calculator, automatic in its action, has been designed by a German inventor. The device comprises a small case about six inches in length made of steel and aluminum. There is a keyboard of nine figures corresponding to the numerals, and it is additionally provided with a small spring for the supply of the tens and hundreds. There is also a small dial, and by pressing the requisite keys the total amount is recorded upon the dial.

THE representatives of the Armour car lines have offered to reduce the icing charges from fifteen to thirty per cent over the entire Michigan fruit belt, if what is known as the "Michigan fruit case" against the Armours is dismissed.

THE director of the census estimates the present population of the United States at 82,518,000.

HOME DEPARTMENT

ECONOMY.

BY D. Z. ANGLE.

ECONOMY is saving the pennies, 'tis said the dollars will take care of themselves.

Economy is saving strength from unnecessary waste.

Economy builds good houses and barns and keeps them in good repair.

Economy forces the farmer to put live stock and farming tools under shelter from inclement weather.

Economy buys labor savers for the kitchen as well as for the farm or shop.

Economy is not present when a grand piano is secured for the parlor, while the farm is secured by a big and growing mortgage.

Economy furnishes plenty of fuel ahead for the stoves.

Economy is found in having plenty of pure water for drinking and cooking.

Economy spends money for education and books, and but little for gewgaws of dress and useless home adornment.

Economy spends nothing for liquor and tobacco, but dollars for church and Bible instruction.

Economy asks the price before making the purchase.

Economy is the conservator of health, the maker of wealth, and aid to a moral, contented and religious life.

Mt. Vernon, Ill.

THE HABIT OF SETTLING DOWN.

DON'T settle down.

Settling down will put you into a rut quicker than anything else. It may be a wide rut, but nevertheless a rut is a rut and not a good thing to stay in.

Some people buy a house or rent one, furnish it and settle down with the thought that there they will remain all the rest of their lives. If anything happens that makes it necessary for them to change, it is tremendously hard for them to do so, because they had it fixed in their minds that they were going to stay here. In other words, they had settled down.

Some people find themselves employed in a certain kind of work, in a position that gives them a fair living, and they proceed to settle down to stay at it as

long as they live or as long as they are able to work. Better opportunities may offer, but they are afraid to venture out, they dread to make a change, simply because they have settled down.

Such people oftentimes put up with all sorts of inconveniences, and even hardships, because to them a change is such a fearsome thing. It is a great bugbear to them, a horrible incubus that weighs them down and keeps them in the same old place, at the same old task, when they might be launching out into more congenial, more comfortable surroundings, wider fields, greater opportunities. But they hesitate and fear to do it because they have settled down.

Don't settle down. Keep yourself open for changes. Welcome them as good things. Many people settle down, not to contentment, but to endurance, simply because to them a change would be appalling. They have lived in a certain place all their lives, and their fathers before them, and their grandfathers and their great-grandfathers, and so they have settled down to live and die there, too. For them to move into another locality would be like breaking up the foundations of the universe.

It is wrong, all wrong to settle down to the thought that we are going to spend our whole life in a certain place or in doing a certain work. Adverse circumstances may drive us to a change, and then it is horribly hard to adjust to it, or favorable openings may beckon to us, and just because we have settled down we permit them to slip by us.

The place we happen to live is not the only spot on the globe. The world is full of fair and beautiful places, teeming with lovable and congenial people, overflowing with honest and remunerative work.

Now this doesn't mean that a person should be forever discontented with the work he is doing or with the place he calls home. Not that. But while he is enjoying the home where he now lives, and is getting all the comfort and joy out of it that is possible, while he is doing with all his might the work he has to do, doing it cheerfully and conscientiously and contentedly, from day to day, yet he can do all this, and enjoy all this and still not be a fixture. He can live and work each day as though he would live and work the same every day forever, and yet be ready to make a change to-morrow if need be.

Don't settle down. Better far be an Arab ready to fold up your tent and steal away, any moment, than be a stick stuck in a hole, which can only be moved by some providential upheaval. Of course, your tent

may be a heavier, more complicated affair than that of the Arab, but you have as good facilities for transporting your more cumbersome tent as the Arab had to transport his more simple one.

No, don't allow yourself to be tethered to any certain place or to any particular work simply because you have settled down. Keep yourself free—free in thought. It isn't things that bind you, and limit you, and hold you—it is your thought. You are compelled to stay in a certain place or do a certain work only because you think so. You are just as big as your thoughts are, just as free as your thoughts are.

Don't settle down. Don't limit yourself. Don't fear changes. Be free. Be an Arab, rather than a stick in the mud.—*E. P., in Medical Talk.*

HOW TO BE BEAUTIFUL, THOUGH HOMELY.

It is entirely possible. It has been accomplished hundreds of thousands of times; so often, indeed, that beauty has come to have in the minds of all close observers but little connection with regularity of feature, color, complexion, or form.

A beautiful face is only the window of a beautiful soul.

What does it matter if the panes of glass are small, and if the sash is a little crooked, if through the window you see a warm, cozy fireside, a bright evening lamp, happy children at their games, a contented father and mother, well-read books, a full work-basket, a bouquet of fresh flowers, and, in the room beyond, a bountiful supper table laid for the family?

Is not that a beautiful scene?

These things are symbols of what any face may reveal—happiness, content, intellectual capacity, joy in work, appreciation of beauty, and a generous spirit.

A face that reveals these characteristics cannot be ugly; it cannot be repulsive; it must be attractive and winning; it cannot help being beautiful in the best sense of the word.

Why bother about the panes of glass or the sash? It is what the window shows us that we care for, not the window itself.

The face may be homely; but "homely" in its original sense, is to be homelike, and what is more truly beautiful than homelikeness? The picture we saw through the window is homelike, and that made it beautiful.

No face can be so plain that it may not be beautiful if through it we show glints of happiness, content, intellect, generosity.—*Rev. F. E. Clark.*

BLESSED BE DRUDGERY.

A WOMAN, who did her own work, complained to a friend that she found the duties of housekeeping to

be frightfully monotonous and uninteresting. "Why," said she, "the other day I washed seventy-five different articles after dinner and sometimes the number is over a hundred. I get thoroughly disgusted with the whole thing."

How different was the experience of the young lady who said to her pastor: "My sister and myself find the work of the house very interesting. We sing over the dish-washing and our hearts are gladdened as we think of how we are helping the other members of the family by leaving them free to attend to other duties."

The latter is the true conception of service. Even drudgery may be made a means of grace if it is regarded as an opportunity of doing God's will. "The trivial round and the common task," if done cheerfully and heartily, will help in the development of Christian character and may be made a great blessing to others. This is a lesson which many people need very much to learn.

STAY ON THE FARM.

Boys on the farm think their lot is very hard. They compare the long hours, monotonous work and severe trials of their lot with other occupations, but fail to compare the freedom of their life in the country with that in the city. While their pleasures are few they are not detrimental morally, mentally or physically.

There is hard work on the farm, but other things also have their early and late hours. The pay may seem small, but the expenses are not what they are in the city. The question is not what you make, it is what you save.

The farm builds character, makes the boy strong, keeps him busy, trains his ingenuity and brings him in contact with nature, while the city will destroy his character, use his strength, train him in idleness, offer no field for ingenuity and can not make him acquainted with nature, as they are strangers.

Think well of what you are doing before you decide to leave the farm. You know farm life and all the rough and stony places, but the new occupation will have its rough places, too, and they will be there ready to meet you.

REMEDY AGAINST OLD AGE.

CURDLED milk of a special kind, prepared only on a Bulgarian recipe, is now supposed to be a remedy against growing old. The substance is called "yag-hurt" and it is said to be death to all the inimical bacteria in the intestines, while not harming the friendly microbes. The substance looks like ordinary cream cheese turned bad and tastes much like it. The solid portion is mixed with a white, thin liquid which is exceedingly sour.

Reading Circle and Christian Workers' Topics

. By **ELIZABETH D. ROSENBERGER.**

IN CHRIST'S SCHOOL.—Matt. 11:29, 30.

For Sunday, June 11, 1905.

I. Study to Show Thyself Approved Unto God.—(a) What to Study.

1. The Bible, John 5: 39
2. Thyself.
3. The Situation, John 4: 35
4. How to Please God, Acts 4: 19

II. A Workman that Needeth not to be Ashamed.—(b) How to Become Proficient.

1. Love the Work, 1 Peter 5: 2
2. Follow Leader's Instruction, 1 Cor. 11: 1, 2
3. Learn by Doing, John 13: 15
4. Don't Graduate too Soon, 2 Tim. 4: 7

III. Rightly Dividing the Word of Truth.—(c) Application of Principles.

1. We Cannot Impart what We do not Have, 1 Cor. 11: 24
2. Generalize, Beware of "Hobbies."
3. Discriminate Between "Milk" and "Meat," 1 Cor. 3: 2
4. All Scripture is Divinely Inspired, .. 2 Tim. 3: 16, 17

Text.—Take my yoke upon you and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls.—Matt. 11:29, 30.

References.—Prov. 5:21; 9:9; Jer. 12:3; Psa. 94:11; 1 Sam. 16:7; Psa. 90:12; 1 Kings 8:36; Psa. 119:33; 86:11; 32:8; 27:11; 119:66; 143:10; 25:9; John 3:2; 7:14; Luke 19:47; Mark 4:2; 12:14; Isa. 28:26; Ezek. 44:23; Gal. 6:6.

Our Teacher.

He is very near and dear to us. We would not willingly grieve him or disappoint him. He is not a harsh disciplinarian, his voice is sweet and his rule is love. When he walked over the hills and through the vales of Galilee, there were many who followed him, and the common people heard him gladly, and others said, "Never man spake as this man." M. G. Brumbaugh says: "He opened no school. He announced no course of study. He is himself the great university of mankind. Every hungry soul becomes his pupil by the very fact of his hunger. He assigns no limited time for study, but requires of each enlistment for life in his service under the will of the Father. He makes it possible for the humblest and the weakest to begin at once and to continue for all time in the service of the Master."

Our Lessons.

Our Teacher has assigned to each learner his lesson; these lessons are sometimes easy, sometimes dif-

ficult; they are always needed lessons. And Jesus, our Teacher, says, "Learn of me." And that is our method of getting our lesson. Am I inclined to be cross, ill-tempered and impatient, I look at Jesus and study his patience. When the scribes derided him, and he was poor and tired, he would go to some mountain-side and spend the night in prayer with his Father; we learn that prayer drives away our discouragement, our discontent and gives us new strength and zeal to continue our task.

Willing Learners.

"My boy shall have a fine education, I'll give him every advantage, here and across the water," said a man to a farmer across whose fields they were walking.

"Ye can pour on all ye want to, but ye can't make it soak in," replied the deaf old farmer, catching only the last word and applying it to the rocky strip of land on which his own eyes and thoughts were fixed. But he spoke the truth, as many a father knows who has tried to educate a son, who did not care for school or education. And it is so in Christ's school. All the home training, church privileges, God's love and his Word, and all the wondrous discipline of life cannot make a fine Christian character, except as we care to have it so.

Discipline.

"This is the hard school kept by Pain
With pupils sad and white:
While some shed tears like falling rain
From dreary morn till night.

"But those that study very hard,
And learn that Pain can bless,
Are sent out in a leafy yard
To play with Happiness."

"I am the Word."

The one subject that we shall never finish is the life of Christ. We learned stories of Jesus when we were children, we studied his sayings and miracles in the Sunday school, and listened to the minister's sermons about him. We read the Gospels and the prophets and the Revelation and still we know only in part—such a little of him. But the more we know about Jesus, the more we want to know; let us study the Bible every day, and then at last we shall be satisfied when we awake in his likeness.

Will you Finish the Course?

The freshman classes enrolled in our colleges and high schools footed up a vast total last fall. No one expects that in four years there will be an equal num-

ber of graduates. Neither do all who are enrolled in Christ's school hold out. The beginners may seem about equal in enthusiasm, hope and zeal. But the steady "keeping at it" day after day is the real test. The enthusiasm of a few dies down like a blaze of shavings, some grow disheartened because the work is harder than they expected. All honor to those who daily take up their cross and their work, be it heavy or light; who are ready to endure all things for Jesus' sake; who never think of turning back, no matter how hard the lessons they must learn. These will one day hear the Master say, "Well done, good and faithful servant, enter thou into the joy of thy Lord."

When School is Done.

It is well to remember that the object of all these lessons in the school of Christ is to make lives that are most fully rounded, most completely developed on every side, beautiful, helpful lives that will glorify God. Look at the men and women who come nearest to you in the way of sympathy and influence. They appeal to you because they are large-minded, sympathetic, and loving; the large, breezy, hopeful outlook is theirs. But when our school days are nearly done, and most of the lessons are learned, excepting the lesson of patient continuance in well-doing which will never be quite perfect, as well as our hope of heaven which will grow brighter as we near the end, then we shall see what our Master meant by many of the lessons which we could not understand, no matter how hard we tried. Let us trust our Master fully, and say with David, "Thou shalt guide me with thy counsel, and afterward receive me into glory."

Topics for Discussion.

1. God promised to teach Moses. Ex. 4: 15.
2. David wanted to learn the Lord's way. Psa. 27: 11; 86: 11.
3. The prophets were anxious to be taught by the Lord. Micah 4: 2.
4. We are to bring up our children to love this school of Christ. Deut. 11: 19; 4: 10.
5. Jesus taught the scribes and Pharisees. Matt. 26: 55; 13: 54; Luke 19: 47.
6. Jesus taught the common people. Luke 23: 5; 5: 3; Mark 4: 1.

EMPLOYMENT BUREAU.

Circle Meeting at Bristol.

PRAY for us that the Holy Spirit may move every speaker to tell us our duty or rather what a blessed privilege we have in being able to do these little things for Jesus. We trust that the meeting will give us new life, zeal and an unflagging enthusiasm. We want to meet as many of the members as possible, get acquainted with each other, exchange views on our

work, help each other all we can. Take all your friends with you to this meeting, and pray fervently for a blessing, that it may prove an inspiration to all.

Program for Our Missionary Reading Circle and Christian Workers' Meeting at Bristol, Tenn.

1. What Contribution Shall the Christian Workers Make to Missions?—J. Kurtz Miller.
2. Symposium: Growth of Missionary Spirit, D. W. Kurtz, Juniata College; Reflex Influence of Missions, a member from Mt. Morris College; Perpetual Claims of Missions, Annie Nelson, Lordsburg College; Some Factors in Missionary Education, D. Owen Cottrell, Union Bridge College; The Financial Side of Missions, C. S. Ikenberry, Botcourt College; Hopeful Signs of Missions, a member from Bridgewater College; The Pastor and Missions, Mrs. E. M. Crouch, North Manchester College.
3. Possibilities of Our Missionary Reading Circle, I. N. H. Beahm.

One Sister at Work.

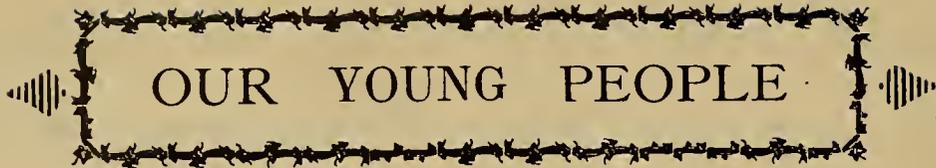

Sister Emma Bowman, of North Manchester, Ind., gives us some of her experiences; we pray the Lord to send us more workers like her. She writes as follows: "About a month ago, I felt that the work must be started again. I succeeded in getting the old members interested. Then we went to work among the students and members and succeeded in sending you fifteen new names. We have a number of young people here in the church and we want to interest them in missions. We are meeting once a week and are studying 'The Key to the Missionary Problem.' What needs to be done is to work up an interest, so that when school closes we can just continue the work. I do feel that we as a church should be doing more for missions. Let us pray to be found up and doing when the Lord comes."

Growing Interest.

"I have the pleasure of sending one more name. We have meetings twice a month, every first and third Saturday night. The interest is growing as well as the attendance. May the work of the Lord prosper and may our every effort be to the honor and glory of God. Oh, that we would all awaken to a sense of our duty. Jesus has left us the task of giving the Gospel to others. Are we doing it, or are we indifferent, slothful servants?"—*Cora N. Ringgold, Bridgewater, Va.*

Encouragement.

"We have great reasons to be encouraged over our Circle here. Much interest is taken in the book, 'The Key to the Missionary Problem.' This book is an excellent one for Circle work. We have chosen Sister E. M. Crouch to represent us at the Circle meeting at Bristol. I enclose one new name."—*Dorothy Shaf-ford, North Manchester, Ind.*

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XXX.

Copenhagen, Denmark.

Dear Mr. Maxwell:—

While we were in Sweden we had many opportunities to get into the homes of the people and see how they really lived. In the morning when you arise you will always find your boots or shoes blackened, for the host considers it his duty to show this mark of hospitality. Wherever we went there was a constant demand for us to sing English songs. The Swedish people seem to be very fond of English music. One place where we stopped the people were weavers, and showed us how they wove some very fine tablecloths and blankets; none of them ever forget their coffee and "tak sa mycke." One peculiar thing we found out from the people, who were not able to own property and were compelled to rent, was this: upon renting a property you rent two rooms lagenhet (leg-gen-hate) or three rooms lagenhet. Lagenhet means kitchen, and these people rent as many rooms as they want, kitchen included; and unless it is included in the bargain, the renter gets no kitchen.

There were plenty of interesting things for the boys as well as for us girls. While the boys were studying the old-fashioned, one-handed plow, similar to the ones they have in Egypt and Palestine, and the harrows the men have made out of brush, we girls were studying some of the preparations for the table; we went into the lagenhet and found a lady making gröt. Gröt is a jelly pudding made from the juice of lignon and whortle-berries. We also saw her make driche, which is a sort of drink very similar to sugar-water beer. The Swedes are very fond of it.

While we were at Hesslehölm we saw quite an extensive glue factory. The material, of course, is bought from the butcher shops, thoroughly cooked in the vats, allowed to form itself into jelly, cut into thin slices by means of a wire and laid on a screen in the sun to dry. When thoroughly dried it is commercial glue and is put on the market.

Miss Merritt said that I should be sure and tell you about some mottoes that we saw in churches at different places. One place we saw this motto painted on the front of the pulpit: "Se Jesus Kommer Snört"—Jesus comes soon. At another place was, "I dag om I hören Herrens röst sa laden icke edra hjartan"—To-day if ye hear the Lord's voice harden not your hearts.

We had the pleasure of visiting a coffin factory; it was interesting, from the fact that their burial cases differ so greatly from ours. The coffin tapers at either end, being larger in the middle and is separated in such a way that the top is just as large as the bottom, that is, on removing the lid half of the casket is taken away. They are made of simple pine boards, painted with black paint and sprinkled with sand before the paint is dry. Everyone of these burial cases are made alike, whether they are for the rich or poor; some of the very wealthiest people have little flowers of plaster of paris placed upon the lids of their caskets. These caskets range in price from \$1.50

to \$7, and serve just the same purpose as the ones in our country do, which cost a great many dollars, that in many cases would be more wisely spent if spent for the good of the wife and children that are bereft. The funeral services are very strange; there are only two burial days in a week,—Wednesday and Sunday. People who die on Saturday are kept till Wednesday, and those on Wednesday till Sunday. The caskets are kept in state in a certain room at the church and when the next burial day comes the priest of the State Church has these caskets set in a row in the yard, and, passing by them, he stops at each and places three small shovelful of sand on each casket, saying as he does so, (1) "Dust thou art." (2) "Unto dust shalt thou return." (3) "Jesus Christ, our Savior, will raise thee up at the last day."

It was with considerable regret that we left Sweden, but the time came when we had to go. We spent just a week there and it certainly was a great schooling. We came by boat to Copenhagen, where we spent the day. The Thorwaldsen Museum was the object of our study almost the entire day. It is the finest collection of statuary we have ever seen, and all one man's work, practically. The statuary hall is built in the form of a hollow square, in the center of which is the grave of Thorwaldsen; it seems his whole life was spent in making a monument for himself.

Another place of great interest to us all was old Round Tower; it is one hundred eleven feet high, and stands in front of an old church; the top of it is reached by a winding drive-way, upon which the king drives his chariot when he goes up to view his city. While we were viewing the beautiful city of Copenhagen Miss Gertrude told us of an instance that once happened at this spot: When Peter the Great visited the king of Denmark, and the king was showing him his city, the Russian boasted that he could command any of his subjects to jump from the top of that tower and he would obey, wanting to demonstrate his power of authority. The king heard him and then remarked: "I can do more; I can lay my head in the lap of any of my subjects and sleep peacefully; this you would dare not undertake." Thus the king showed him how much more power there is in love than fear.

Respectfully yours,

Marie.

(To be continued.)

I HAVE a profound respect for boys. Grimy, ragged, tousled boys in the street often attract me strangely. A boy is a man in the cocoon—you do not know what it is going to become—his life is big with possibilities. He may make or unmake kings, change the boundary lines between States, write books that will mould characters, or invent machines that will revolutionize the commerce of the world.

WHAT, though the field be lost, all is not lost.—
Milton.

The Q. & A. Department.

When and under what circumstances was Booker T. Washington's Industrial Institute at Tuskegee, Ala., founded?

During the time that I had charge of the Indians and the night school at Hampton, I pursued my studies myself, under the direction of the instructors there. One of these instructors was the Rev. Dr. H. B. Friswell, the present principal of the Hampton Institute, General Armstrong's successor. In May, 1881, near the close of my first year in teaching the night school, in a way that I had not dared expect, the opportunity opened for me to begin my life-work. One night in the chapel, after the usual chapel exercises were over, Gen. Armstrong referred to the fact that he had received a letter from some gentleman in Alabama, asking him to recommend some one to take charge of what was to be a Normal School for the colored people, in the little town of Tuskegee, in that State. These gentlemen seemed to take it for granted that no colored man, suitable for the position, could be secured and they were expecting the General to recommend a white man for the place. The next day General Armstrong sent for me to come to his office, and much to my surprise asked me if I thought I could fill the position in Alabama. I told him that I would be willing to try. Accordingly, he wrote to the people who had applied to him for the information that he did not know of any white man to suggest, but if they would be willing to take a colored man, he had one whom he would recommend. In this letter he gave them my name.

Several days passed before anything more was heard about the matter. Some time afterward, one Sunday evening during chapel exercises, a messenger came in and handed the General a telegram. At the end of the exercises he read the telegram to the school. In substance, these were its words: "Booker T. Washington will suit us. Send him at once." I began to get ready at once to go to Tuskegee. I found that about a year previous to my going to Tuskegee, some of the colored people, who had heard something of the work of education being done at Hampton, had applied to the State legislature, through their representatives, for a small appropriation to be used in starting a Normal school in Tuskegee. This request the Legislature had complied with to the extent of granting an annual appropriation of \$2,000.—"Up from Slavery," Chap. 7.

❖

What is the distance from Port Arthur to Mukden?
About 220 miles.

How is Easter day determined?

Thirty days hath September,
Every person can remember;
But to know when Easter'll come
Puzzles even scholars some.

When March the twentieth is past
Just watch the silvery moon,
And when you see it full and round,
Know Easter'll be here soon.

After the moon has reached its full,
Then Easter will be here,
On the very Sunday after
In each and every year.

And if it hap on Sunday
The moon should reach its height,
The Sunday following this event
Will be the Easter bright.

❖

What kind of prizes do you think should be offered in Sunday school?

I do not believe in offering prizes of any sort. I believe in offering rewards, and these rewards should be of the same character as those which one is apt to win in later life if one is faithful. In other words, our rewards should be of the nature of honors and promotions. The greatest rewards we get in this life are (1) recognition for diligence, faithfulness; (2) opportunities to be more faithful and more diligent. Give a pupil a certificate of honor for faithfulness and when he has accomplished a certain amount of work promote him. These are rewards that mean something, that teach something, and that abide. Your cheap jewelry and other flimsy gewgaws given as prizes mean nothing, teach nothing and do not abide.

❖

"My Grandfather Squeers had a singular knack
Of sitting around on the small of his back,
With his legs, like a letter Y, stretched o'er the grate
Where 'twas his custom to expectorate."

Please tell me how "like" and "letter" are used, also the letter "Y."

Like is an adverb of manner, and modifies the verb *stretched*. *Letter* is a noun in the objective case, object of the preposition *unto*, understood. *Y* is in apposition.

❖ ❖ ❖

Real glory
Springs from the quiet conquest of ourselves,
And without that the conqueror is naught
But the first slave.

—Thomson.

MISCELLANEOUS

"GIB ME A PO'TAH-HOUSE."

Two colored barbers, one an old man, and the other a younger one, had the shop. The younger one had taken off his apron and started toward the door.

"You's gwine ter get a drink?" asked the elder.

"That's what I'se gwine ter do," answered the younger man.

"Go an' get you' drink," said the other. "I used ter do the same t'ing when I was young. When I was fus' ma'ried dah wuz a gin mill nex' ter de shop whar a worked, an' in it I spent fifty and sebenty cents a day outen de dollah an' a half I earned. Well, one mo'nin' I went into de butchah shop, an' who should come in but de man what keep' de likkah shop.

"Gib me ten or twelve pounds ob po'tah-house steak," he said. He got it an' went out.

"I sneaked up ter de butchah an' looked ter see what money I had left.

"What do you want?" asked the butcher.

"Gib me ten cents wuf ob libber," wuz my remark. It wuz all I could pay fo'. Now you go an' git you' drink. You'll eat libber, but de man what sells you de stuff will hab his po'tah-house steak. De man behind the bah eats po'tah-house steak, de man in front eats libber. I ain't touched de stuff fo' thirty years, an' I'm eatin' po'tah-house mahself."

This homely philosophy of the old negro applies to many of our acquaintances.—*Metal Worker*.

HIS EXPERIENCE.

A GENTLEMAN high in commercial circles in a western city was relating some of his experiences to a group of friends.

"I think," said he, "the most singular thing that ever happened to me was in Hawaii.

"My father was a missionary in those islands, and I was born there. I came away at an early age, however, and most of my life has been spent in this country; but when I was a young man—and a rather tough young man, too, I may say—I went back there once on a visit.

"The first thing I did was to drink more than I should have done. While I was in this condition an old man, a native, persuaded me to go home with him. He took me into his house, bathed my head, gave me some strong coffee and talked soothingly and kindly to me.

"Old man," I said, "what are you doing all this for me for?"

"Well," he answered, "I'll tell you. The best friend I ever had was a white man and an American. I was a poor drunkard. He made a man of me, and, I hope, a Christian. All I am or ever hope to be I owe to him. Whenever I see an American in your condition I feel like doing all I can for him, on account of what that man did for me."

"This is a little better English than he used, but it is the substance of it.

"What was the name of the man?" I asked him.

"Mr. Blank, a missionary."

"God of mercy!" I said. "He was my father."

"Gentlemen, that sobered me—and, I hope, made a man of me. It is certain that whatever I am to-day I owe to that poor old Sandwich Islander.—*Youth's Companion*.

PITIFUL SIGHT.

JAMES BENNETT is a veteran hero of the civil war. He is blind. Family difficulties and his misfortune have driven him to seek what pleasure he can find in the benumbed senses of the drunkard. He was before Judge Mathis recently in a pitiful condition, charged with being drunk upon the streets.

"What have you to say in explanation of conduct so disgraceful in an old man like you?" demanded the stern old judge.

"Your honor, I'm a poor man; I'm blind and sick. Multiplying misfortune has driven me back from the dearest pleasures of ordinary men until I have lost hope.

"I was once a soldier. I lost my sight in a moment's flash of powder on the battlefield. Uncle Sam pays me fifty dollars a month. I spend it for whiskey because I get more pleasure there for my money."

"How do you live, if you spend your money for liquor?"

"Why, I go about the streets and gather up old shoes and mend them. I feel them over and then remedy the defects. They bring me enough for food. Judge, I don't want to go to jail.

"Very well, you may go home," were the words which caused the old man to turn away with joy and, feeling his way with his cane, groped along the corridor to the door, chuckling with glee.—*Des Moines News*.

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,

Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The possibilities are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground, others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

SAMUEL S. THORPE,

Cadillac, Mich.,

DISTRICT AGENT

Brethren, Mich.,

RESIDENT AGENT

OR

Michigan Land Association.

The 3=C's of Business Competition

"Money Saving Prices" is a hackneyed phrase true in but a few instances. Of forty competing merchants in a town each claims the lowest prices. Investigation proves that their prices are almost alike. **They Must Be. They Are Standard.** All these forty merchants buy their goods from the same or similar sources. Their expenses of business are practically the same.

Business acumen and shrewd management obtains advantages in buying goods and saving expenses as against inferior management; but the advantages gained by good management are not shared by the buying public. They simply make more money for that particular merchant. Money Saving Prices. Prices that save the consumer money.—Prices that are really "Money Saving" can only be established by doing business on a New System. These forty merchants operate under the Old System. They are bound hand and foot by conditions.

Combination

The department store—a combination of small stores—established lower prices, because it did business on a New System, the main feature of which was to sell many things to the same customer. This New System became very popular because it meant convenience to the buying public; the large purchasing power, backed by ability to pay cash for goods, established a lower standard of prices with manufacturers.

The people benefitted because the goods cost less to produce, cost less to sell, and the large volume of business at half the profit still meant greater net profits to the **Combine**. The people quickly saw their opportunity to save their hard-earned money, and so the combined stores secured their trade because the New System made lower prices.

But its patronage was limited, so the next step in this commercial evolution was the Mail Order Department Store. It burst the limitations of city patronage and successfully appealed to the entire country. Here, again was a New System of Trading, a New Plan, and again Prices tumbled.

Co-operation

Now commercial evolution takes its final step in organizing the Mail Order Department Store on the Co-operation plan. An entirely new and original plan aiming to sell still rarer goods to still more customers, through the interested personal selling force of thousands of co-operators in every section of the country.

Co-operation makes a new and much lower standard of Prices; it reduces the cost of selling, and returns to its interested shareholders not only all the excess profit they have paid on their own goods, but their proportionate share of the profits made on the sales to the country at large.

Our plan of Co-operative dealing and profit sharing is entirely original with Mr. H. P. Albaugh, President of our Company, and has never been used in connection with any other business enterprise. The plan has been universally pronounced "Co-operation reduced to a Science."

That American consumers are quick to see an opportunity to save their hard-earned money is shown by the instant appreciation of the advantages offered by Scientific Co-operation. While nearly 1500 Christian people have already become financially interested in our Co-operative Company, it can safely be predicted from the present rate of increase that hundreds more will become interested during the ensuing 12 months.

If you want to know more about this New Plan of co-operative dealing and profit sharing, address our President, Mr. H. P. Albaugh.

BONNET AND CAP GOODS DEPARTMENTS

We will have a very large stock of Cap Goods, Bonnet Straw Cloth, Chenille, Rice Net in colors, Ribbons, Wire, Braids, etc., at Annual Conference this year at Bristol, Tenn. Call and see them. Our new Bonnet and Cap Goods Catalogue will be ready in a short time. Send for it. It is free. We make Bonnets and Caps to your order. Prices quoted in Catalogue.

ALBAUGH BROS., DOVER & CO.,
341-343 Franklin St. Chicago, Ill.

Do You Know

That nine-tenths of the people who have written in, testifying to their restoration to health through the use of Dr. Peters' Blood Vitalizer state that before using this old herb-remedy they had tried doctors and various remedies without avail? The Blood Vitalizer having been used practically as a last resort!

Could a greater tribute be paid to any medicine? What does it signify? It signifies simply this, that this plain household remedy cures when other medicines apparently fail.

Dr. Peter's Blood Vitalizer

Is put up for a specific purpose—the cure of sick people. It had its birth over a century ago, in those days when people believed in rugged honesty, and has been handed down unchanged as a heritage from generation to generation. It occupies a place in the field of medicine distinctly its own. It may have its imitations but it has no substitute. Unlike other ready-prepared medicines, it is not to be had in drugstores, but is supplied direct to the people, through special agents appointed in every community. If you know of no agent in your neighborhood, write to the sole proprietors,

DR. PETER FAHRNEY & SONS CO.,

CHICAGO, ILL.

ART PICTURES

We have just received three new numbers of these "Fine Art Pictures" as follows:

- No. 125--MARRIAGE CERTIFICATE**
- No. 123--FAMILY RECORD**
- No. 121--MEMORIAL**

We have had a number of calls for the above numbers and are pleased to state that we are now prepared to furnish them.

The Memorial picture is printed on black paper, which makes it very appropriate, while the other two are printed on gilded paper in many beautiful colors.

No. 125.—Marriage Certificate.

We have sold more than **5,000** of these Pictures in the last two months and are still receiving many orders each day. A great many order from 12 to 25 at a time, and a number of orders are received for 40 and 50. Our customers are so well pleased that it is no uncommon thing for the same person to send us two or three orders. Size of picture, 16 x 20 inches. **Former price, 25 cts.**

No. 123.—Family Record.

These numbers are all exceedingly fine. Send us an order and we are sure you will be delighted with them.

TWENTY SUBJECTS

Besides these we have 20 other subjects that are very popular.

The Sick Made Well

—A CURE THAT NEVER FAILS—

YOU NEED NOT SUFFER LONGER.

I hold in my possession the secret whereby any one having female weakness, falling of the womb, leucorrhoea, inflammation, ulceration, irregular painful menstruation, nervousness, headache, indigestion, liver troubles, constipation, piles, fistula, catarrh, etc., can be cured at home and thereby save big doctor bills and embarrassing examinations. I do not ask you to buy a patent medicine, nor to try a free sample.

I HAVE NOTHING TO SELL.

I suffered for ten years, had tried many advertised remedies, and subjected myself to the humiliations which doctors usually require of their patients; and all without being benefited.

Finally, by the help of a noted German doctor, I discovered the secret whereby I was cured, a simple home treatment, which has cured thousands of others where everything else had failed.

SEND NO MONEY.

My great desire to help others justifies me in sending full information, concerning this secret, FREE to everybody.

DO NOT LAY THIS ASIDE.

This opportunity may not come to you again. SEND FOR IT NOW. A card will do. Write to-day to Mrs. Ada Warm, Dept. A., Box 198, Indianapolis, Indiana.

IN ANSWERING ADVERTISEMENTS
PLEASE MENTION THE INGLE-
NOOK.

UPPER PENINSULA LAND CO., Ltd.,

F. J. MERRIAM, Gen. Mgr., 935 First
Nat'l Bank Bldg., Chicago, Ill.

There have been so many requests for information concerning the Upper Peninsula Land Co.'s property in Michigan, where the Dunkard settlement is going on, that it has been decided to make personal inspection easy for those who wish to purchase either for settlement or investment.

There are homeseekers' excursions from practically all points to Rudyard, Mich., at the rate of one fare plus \$2.00. Ask your home railroad agent concerning this. As it will vary at different stations we cannot give it correctly here. Your agent can tell you exactly what it will cost to Rudyard and return. Enter into correspondence with the undersigned long enough ahead so that arrangements may be made for your comfort.

The management has arranged for a camp on the edge of the Dunkard settlement, tents, etc., on the banks of Pine river, where there is good fishing, and the tents and their equipment are free to land explorers, both men and women. All that visitors need supply are their blankets and food. One who understands both camping and the lay of the land will be present to show the country free. It is a splendid opportunity to have a business outing. This offer applies only to the Dunkard Brethren and their immediate friends.

Land runs from \$5 to \$10 an acre and the same land, in cultivation, right beside the Dunkard Settlement, can not be bought for \$50 an acre.

In order to take advantage of the camp offer those interested **must** take up the matter in advance with the undersigned. Make up a party in your neighborhood for Rudyard and the Dunkard Settlement and see a country worth while. Those who think they can get up a party will find it much to their advantage to correspond with us for details and an understanding of the situation.

Here's something to remember. While the land is wooded, for the most part, yet clearing is easy, and the ties, ship knees, cord wood, etc., will afford good wages while clearing your own land. Stumps are pulled out by horses, an easy thing, as the roots are spread out on the surface. A drouth is impossible and cyclones are unknown. The water is good, fish are abundant in the streams. It's the best place on earth for stock. A hay field lasts forever and the grass in the woods is knee high. It isn't a "lazy man's paradise" by a long ways, but for live people it offers a good home with ordinary work. Go up and see it, going into camp on the Pine. Don't go to Rudyard without notice to us. Let us know and we'll be ready for you at the station. Write for details of the camp.

How to Get There.—The way to the Upper Peninsula is, from Chicago, over the North-Western and the Soo R'ys. Rudyard is on the Soo R'y. This is the only direct way,—N.-W. and the Soo.

Address.

HOWARD MILLER, Elgin, Illinois.

Paints—Varnishes

Enamels, Stains, Leads, Oils and everything else in the paint line. Only the best material is used in making our paints. We guarantee entire satisfaction when our material is properly applied.

The Reedley Tract

The Gem of the San Joaquin Valley.

Is destined to be the home of many Brethren. Those settled here are well satisfied and are advising others to come.

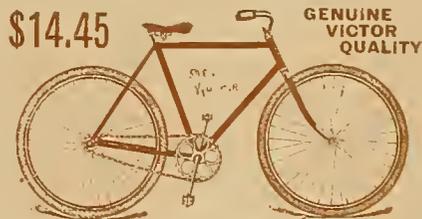

The undersigned expects to be at the Annual Meeting at Bristol, Tenn., and will be pleased to meet the brethren, and talk with them about the Reedley Country. My headquarters will be at the Union Pacific Office, Annual Meeting grounds, Bristol, Tenn.

Elder D. L. Forney, late Missionary from India, has just purchased land near Reedley. Other leading brethren will locate soon.

Write for booklet and full information.

Address:

O. D. LYON,
Reedley, Fresno Co., California.

GOOD BICYCLES at from \$5.45 to \$9.85 are out of the question but we can sell you the machine illustrated here as quoted and guarantee it to give absolute satisfaction in every detail. We could sell you a Bicycle as low as \$7.00 but we do not want the kind of reputation that sort of merchandise brings, neither do you want the disappointment that is sure to come from the purchase of an unreliable article offered at so low a price. WRITE for our **SPECIAL DEP'T. CATALOGUE** of Guns, Revolvers, Ammunition, Foot Ball, Base Ball, and Tennis Goods, Bicycles, and Bicycle Supplies, etc. It costs you nothing and will be invaluable as a reference book. **DO IT NOW.**

One of the Many Who Find the Inglenook an Intensely Interesting Magazine.

CANNOT PERSUADE MYSELF TO DO
WITHOUT IT.

Cumberland, Va.

I appreciate the Inglenook. It is a first-class magazine. I enjoy its style of literature very much; every article in this magazine interests, entertains and instructs. I cannot persuade myself that I can do without it. The members of the family read it and read every bit of it and enjoy it. It seems to grow in interest; each number seems better than the preceding one. Long may it live.

J. J. BALLOW, Cumberland, Va.

ONE PAGE WORTH THE PRICE OF THE
MAGAZINE.

Dear Editor Inglenook:—

I think the page in the Inglenook that is devoted to Christian Workers' meetings is alone worth the price of the paper.

THE INGLENOOK

A WEEKLY MAGAZINE

Spidle, Sarah, January, 1906

THE BIBLE

This book contains the mind of God, the state of man, the way of salvation, the doom of sinners, and the happiness of believers.

Its doctrines are holy, its precepts are binding, its histories are true, and its decisions are immutable.

Read it to be wise, believe it to be safe, and practice it to be holy.

It contains light to direct you, food to support you, and comfort to cheer you.

It is the traveler's map, the pilgrim's staff, the pilot's compass, the soldier's sword, and the Christian's charter.

Here paradise is restored, heaven opened, and the gates of hell disclosed.

Christ is its grand object, our good its design, and the glory of God its end.

It should fill the memory, rule the heart, and guide the feet.

Read it slowly, frequently, and prayerfully.

It is a mine of wealth, a paradise of glory, and a river of pleasure.

It is given you in life, will be opened in the judgment, and be remembered forever.

It involves the highest responsibility, will reward the greatest labor, and will condemn all who trifle with its sacred contents.

—Author Unknown.

The Sick Made Well

—A CURE THAT NEVER FAILS—

YOU NEED NOT SUFFER LONGER.

I hold in my possession the secret whereby any one having female weakness, falling of the womb, leucorrhoea, inflammation, ulceration, irregular painful menstruation, nervousness, headache, indigestion, liver troubles, constipation, piles, fistula, catarrh, etc., can be cured at home and thereby save big doctor bills and embarrassing examinations. I do not ask you to buy a patent medicine, nor to try a free sample.

I HAVE NOTHING TO SELL.

I suffered for ten years, had tried many advertised remedies, and subjected myself to the humiliations which doctors usually require of their patients; and all without being benefited.

Finally, by the help of a noted German doctor, I discovered the secret whereby I was cured, a simple home treatment, which has cured thousands of others where everything else had failed.

SEND NO MONEY.

My great desire to help others justifies me in sending full information, concerning this secret, FREE to everybody.

DO NOT LAY THIS ASIDE.

This opportunity may not come to you again. **SEND FOR IT NOW.** A card will do. Write to-day to **Mrs. Ada Warm, Dept. A., Box 198, Indianapolis, Indiana.**

The 3=C's of Business Competition

"Money Saving Prices" is a hackneyed phrase true in but a few instances. Of forty competing merchants in a town each claims the lowest prices. Investigation proves that their prices are almost alike. **They Must Be. They Are Standard.** All these forty merchants buy their goods from the same or similar sources. Their expenses of business are practically the same.

Business acumen and shrewd management obtains advantages in buying goods and saving expenses as against inferior management; but the advantages gained by good management are not shared by the buying public. They simply make more money for that particular merchant. Money Saving Prices. Prices that save the consumer money—Prices that are really "Money Saving" can only be established by doing business on a New System. These forty merchants operate under the Old System. They are bound hand and foot by conditions.

Combination

The department store—a combination of small stores—established lower prices, because it did business on a New System, the main feature of which was to sell many things to the same customer. This New System became very popular because it meant convenience to the buying public; the large purchasing power, backed by ability to pay cash for goods, established a lower standard of prices with manufacturers.

The people benefitted because the goods cost less to produce, cost less to sell, and the large volume of business at half the profit still meant greater net profits to the **Combine**. The people quickly saw their opportunity to save their hard-earned money, and so the combined stores secured their trade because the New System made lower prices.

But its patronage was limited, so the next step in this commercial evolution was the Mail Order Department Store. It burst the limitations of city patronage and successfully appealed to the entire country. Here, again was a New System of Trading, a New Plan, and again Prices tumbled.

Co-operation

Now commercial evolution takes its final step in organizing the Mail Order Department Store on the Co-operation plan. An entirely new and original plan aiming to sell still more goods to still more customers, through the interested personal selling force of thousands of co-operators in every section of the country.

Co-operation makes a new and much lower standard of Prices; it reduces the cost of selling, and returns to its interested shareholders not only all the excess profit they have paid on their own goods, but their proportionate share of the profits made on the sales to the country at large.

Our plan of Co-operative dealing and profit sharing is entirely original with Mr. H. P. Albaugh, President of our Company, and has never been used in connection with any other business enterprise. The plan has been universally pronounced "Co-operation reduced to a Science."

That American consumers are quick to see an opportunity to save their hard-earned money is shown by the instant appreciation of the advantages offered by Scientific Co-operation. While nearly 1500 Christian people have already become financially interested in our Co-operative Company, it can safely be predicted from the present rate of increase that hundreds more will become interested during the ensuing 12 months.

If you want to know more about this New Plan of co-operative dealing and profit sharing, address our President, Mr. H. P. Albaugh.

C. S. Morey Makes Remarkable Prediction in Regard to Beet Growing Here.

"Colorado as a beet sugar producing state will soon leave Michigan far in the rear, if the present developments continue."

This assertion was made this morning by C. S. Morey, head of the Morey-Boettcher syndicate. He has just returned from a trip to the East. While there he made arrangements for the transfer of one of the largest Michigan factories from Saginaw to Sterling, Colo. The new factory will have a capacity of 600 tons and will give employment to hundreds of men.

This will make the seventh beet sugar factory in the South Platte Valley owned by this syndicate.

We are printing it on much better paper this time and are binding it in our own bindery, insuring a much better book than previous edition.

It contains 1,000 recipes by the best cooks in the country and are all simple and practical. Many good cooks tell us they have laid all other cook books aside and use only the Inglenook Cook Book.

It is being bound in a substantial paper binding and also good oil cloth. Price in paper binding, each, 25 cents Oil cloth binding, each, 35 cents

If you do not have a copy, send now, and you will be pleased.

Brethren Publishing House,
Elgin, Illinois.

A Silent Witness

THE old mill stands where it has stood for years, a landmark to passing generations, but the busy whirl of the old wheel is hushed. All is silent where formerly there was life and activity. A deep quiet reigns. The ravages of time are beginning to show upon it. Here and there are signs of decay. It is but a question of time when the old mill will be no more. What has brought about this change? The brook ran dry! The motive power gave out.

How much like the old mill is not the human body! The food we eat and assimilate is like the water in the brook, it furnishes the power that moves the human mill and enables our vital organs to perform their functions. We speak of appetite as a desire for food and such it is. To a person in good health, food tastes good. This induces him to eat, but it is not the food itself but the proper assimilation of it that gives power and strength.

There are persons who eat a great deal and yet their condition shows that they get very little benefit from it. Others again experience distress after eating, accompanied by belchings and a feeling of flatulency. The cause of the trouble is that the stomach and digestive organs have become weakened. The secretions are scant or lacking, and the food, in place of being properly assimilated and digested, simply ferments—gases are generated, which distend the stomach, oppress the lungs and at times interfere with the action of the heart, giving rise to spells of nervousness, and feelings of dread and anguish.

When our digestive organs are healthy we find comfort in a good meal. The food we eat is promptly di-

gested and the nutriment therein is carried away by the blood to nourish the vital organs, restore loss of tissue and build bone and muscle. Then does the wheel of the human mill move. That is health.

As a remedy for ailments of the stomach, DR. PETER'S BLOOD VITALIZER has no equal. It strengthens the digestive organs, promotes the flow of the gastric juices, cleanses and heals the mucous membrane, and brings about a natural action of the bowels—essential to perfect health. Thousands, young and old, have experienced its happy results.

WAS IN A BAD FIX.

Metropolis, Ill., May 15.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—I was very sick and my folks did not think I would live till Spring. The **Blood Vitalizer**, however, fixed me up. We are out of it now and wish to keep it in the house, so please send a dozen bottles at once.

Yours truly,

F. W. Borman.

WAS ALL RUN DOWN.

Stuebenville, Ohio, Nov. 28.

Dr. P. Fahrney, Chicago, Ill.

Dear Sir:—I find your **Blood Vitalizer** to be all that you claim. I was all run down in health last Spring. I took several bottles of your medicine and it brought me around all right in quick order.

Yours very truly,

J. H. Montgomery.

DR. PETER'S BLOOD VITALIZER is not a drugstore medicine. It is supplied to the people direct through special agents. If there is no agent in your neighborhood, write us at once and we shall give you full particulars by return mail as to how to get it.

"EVER ONWARD."

BY EMERSON COBB.

Tho' the path be rough and stony,
There be many hills to climb,
We will struggle to the summit,
"Ever Onward" in our line.

Tho' great storm-clouds darkly gather,
There be trials to o'ercome,
We will keep our faces forward
Till our rugged journey's done.

There's a white-robed angel waiting
All our labors here to bless.
See her! With her index finger,
She is pointing toward success.

Climbing up the toilsome ladder,
Tho' quite oft a step we drop,
We are seeking a position
That is found but at the top.

"Ever Onward," be the watchword:
Let the coward seek his rest:
Let us see that we are stepping
"Ever Onward" to success.

Elgin, Ill.

SHORT SERMONS.

BY REV. "BILLY" SUNDAY.

It's heaven or hell for everybody.

You can't dazzle God with diamonds.

You are a fool to give a boy a night key.

You can't be a Christian and deny Christ.

You can't get a \$50 boy out of a ten cent man.

Christianity is all right; churchianity is all wrong.

Hit the devil a solar plexus blow; put him out of business.

Christianity and red whiskey don't stay in the same skin together.

❖

Religion is like a bicycle; you've got to keep it going or you'll fall off.

❖

Society is doing more to hamper spiritual advancement than the saloon.

❖

One trouble with our preachers is that they put a new dress on sin.

❖

The church seems to have taken the devil's opiate and gone to sleep.

❖

If there was ever a jubilee in hell it was when lager beer was invented.

❖

The trouble with the church of God to-day is that she has sprung a leak.

❖

The less piety the church has, the more ice cream and oyster soup it takes to run it.

❖

If there is anything in which I profess to be a specialist it is in skinning hypocrites.

❖

There are some people who don't believe in hell—wait; they won't need any demonstration.

❖

You can go to hell even though you have gray matter enough in your brain to fill a hogshcad.

❖

Some people are so stingy that they talk through their nose to keep from wearing out their false teeth.

❖

It is almost as hard to get the church to work as it is to drag a cat backward by the tail over the carpet.

❖

If there is anything that makes me sick it is to see a fool woman hugging and kissing a brindled-nosed pup.

THE RAJAHS OR NATIVE RULERS OF INDIA.

BY D. L. MILLER.

Form of Government.

ALTHOUGH Hindustan, the ancient name of India, is under British rule, yet one finds two sets of rulers in the country. Edward VII, King of England, and Emperor of India, rules over the entire country. The executive authority is vested in the representative of the Emperor popularly known as the Viceroy, or Governor-General. He is appointed by the king and is accorded royal honors. The present incumbent is Lord Curzon, well known in the United States, having married the daughter of one of Chicago's merchant princes, Mr. Leiter. He is assisted in the administration of affairs by a council of some eighteen members appointed partly by the crown and partly by himself. With this council and the sanction of the Secretary of State for India, a member of the Cabinet in England, the Governor-General has power to make laws for all British India.

In addition to the general government of India there is also the rule of the rajahs, or native princes and kings who, at the present time, rule over about one-fourth of the country which, while under British su-

FIRST SON OF THE RAJAH OF BANDSA STATE.
All Rights Reserved.

HIS MAJESTY THE RAJAH OF BANDSA STATE.
All Rights Reserved.

pervision and control, has not yet come fully into possession of the English government. The Emperor of India is the Maharajah, the Great King and the rajahs are little kings, and of these there are many, a hundred or more of them have territory large enough to be called States, while others are mere chieftains. Some rule over as many as ten million people, while others have a following of but a few thousand. Of the former is the Rajah of Hyderabad in south central India, and of the latter the Bhil rajahs or chiefs of the Dangs, fourteen in number, with only twenty-five thousand people for the whole lot to govern. The rajahs are the native rulers and princes found here when the British took control of the country after the Sepoy rebellion of 1857-58. At that time it was the policy of the government to interfere as little as possible with the local forms of government existent among the people and the rajahs were permitted to continue their rule under control and supervision of the Viceroy.

All the rajahs are bound by treaty to acknowledge the supremacy of the Great King, and to submit to his will in the person of the Viceroy. Under the same

treaty they surrender the right to declare or carry on war or to make peace, to establish diplomatic relations with neighboring States or foreign governments, to maintain an army above an agreed strength, to borrow money without the consent of the Viceroy,* or to entertain Europeans who may not be acceptable to the Governor-General. The right to depose a rajah for mismanagement, and determine their rank and precedence in public functions is also held by the British government. A president is appointed by the Governor-General who lives at the capital of each State and he holds the right to veto any law enacted by the local authorities which does not meet his approval.

From what has preceded it will be seen that the native rulers are not independent of the British government. It also occasionally occurs that some of the smaller territories are taken over by the government, as in the case of the Dangs. By agreement six thousand dollars is distributed annually among the fourteen chieftains of the territory by the British and in

*The recent disastrous failure of the banking firm of Thos. Watson and Company of Bombay and London, in which so many missionaries, ours with the rest, lost so much money, was caused in part by a very large loan made to a rajah without the sanction of the government. It was set aside by the courts although the native prince was quite willing to pay the money.

SECOND SON OF THE RAJAH OF BANDSA STATE.
All Rights Reserved.

THIRD SON OF THE RAJAH OF BANDSA STATE.
All Rights Reserved.

consideration of this sum they relinquish all their rights as rulers and the Governor-General takes full control of the entire State.

The three-fourths of India, outside of the rajah, or native States, comes directly under British rule and is divided into provinces, with an executive for each, and these bear about the same relation to the central government as our States do to the government at Washington. In administration, however, it is quite different from ours. Two of the provinces, Bombay and Madras, are known as presidencies because at one time they were governed by a president and council. They are now under control of governors appointed by the British crown and are assisted by executive and legislative councils. The other provinces have lieutenant governors and are appointed by the Viceroy.

But to go back to the native rulers, many of them are wealthy men, are well educated, and under their administration the people enjoy good government. They are very hospitable, and do not hesitate to entertain Europeans or Americans who come to them properly introduced by friends. Some of them possess jewelry, the envy of the kings and emperors of Europe.

MR. PRANSHANKER D. PATHEK, L. C. E., SECRETARY OF STATE OR DEWAN.
All Rights Reserved.

The ruler of Baroda State has great wealth and is the possessor of some of the finest jewels in the world. I had the pleasure of a visit to one of his palaces and

monds of the first water made of five hundred of these great stones, each one worth a large sum of money. It is fringed with polished, pear-shaped emeralds and weighs like a coat of mail, and gives the owner the right to be called a millionaire. The sash worn over the shoulder and under opposite arm of the wearer is made of a hundred rows of pearls and the shoulder tassels of pearls and emeralds. One of the little sons of the prince has a collar of huge diamonds in the center of which sparkles the "Star of the South," once the glory of the French crown and is as large as the Koh-i-nur. It is said that the entire value of this great wealth of jewels owned by this opulent Indian ruler is estimated at a hundred million dollars.

I have already spoken of the hospitality of the Rajahs, and they are careful to entertain friends and even strangers who come to them with proper letters of introduction. Recently we had occasion to pass through Bandsa State in company with our missionary from Bulsar, Brother W. B. Stover, who has a pleasant acquaintance with the Rajah of that part of India as well as his secretary of State or Dewan, Mr. Pranshanker D. Pathek, L. C. E. We were most kindly received and hospitably entertained by the Rajah. He lodged our little party in one of his residences and invited us to visit him. He sent his carriage at the appointed time and we were driven to his palace and received very cordially by him in the audience or throne room. It is a splendid apartment and while the display is not lavish it is fully in keeping with kingly state. The Rajah is a fine looking man

THEY ALL WEAR HUGE RINGS WITH OTHER JEWELRY AND ARE PROUD OF IT.

his armory, where are kept two cannon, the one silver, the other gold, "solid," the attendant said, and they are by no means toy cannon but large enough for actual use. He has a wonderful cape of fine cut dia-

of forty, is well educated, and deeply interested in the prosperity of his people. He was also interested in America and seemed pleased to hear of our people. When propriety indicated that we should take

our leave he insisted on our remaining longer and had his three sons brought in, to whom we were also introduced. They are bright, intelligent young men and speak English fluently. The eldest is the heir apparent to the throne, and if his life is spared he will occupy his father's place in the years to come. He with his younger brothers are at present in school, for it is the father's desire to give his sons a liberal education.

After taking leave of the Rajah we were taken in charge by the Dewan who showed us the royal stables with one hundred and twenty-five fine horses, the carriages, one of the latest improved automobiles and the

Queen of Baroda and Her Son Wearing Diamond Collar with "Star of the South" in Center.

elephants. The Indian rulers keep up the ancient custom of maintaining a herd of elephants. They are used only on state and important wedding occasions, for tiger hunting and for the entertainment of visitors. Splendid howdahs, gilded with gold, are fastened on the backs of the elephants and afford comfortable seats for the riders. It is the remains of the old-time splendor and pomp of the days of great emperors, but shorn of much of its ancient glory. We had a pleasant afternoon and enjoyed it all very much.

We were placed under special obligation when we were informed by the Dewan that the Rajah had ordered that we be taken to the railway station, Billimora, twenty-nine miles away. At five o'clock the next morning we left Bandsa behind a spanking team of swift ponies, in a tonga, one of the Rajah's comfortable carriages. It was a great transition from our slow-going ox cart making two miles an hour, and

rolling along the macadamized road in a comfortable carriage at nearly treble that pace. At Kut-throat a change of horses was provided and we were enabled to drive up to the station just as the nine o'clock train pulled in. We had made the twenty-nine miles in four hours.

We hold in memory our most pleasant visit to Bandsa and shall not soon forget the courtesy and hospitality of the Rajah and the kindness of the Dewan. May the Lord prosper them and lead them into the true Light of the world.

A PARROT UNIVERSITY.

MARTIN HOLTS, an American who established a parrot ranch near Victoria, Mexico, a few years ago, has met with wonderful success, and has accumulated a fortune in the business.

Holts was employed for several years as a passenger conductor on the old Montarey and Mexican Gulf Railroad, now a part of the Mexican Central system. His division was the gulf coast, through the heart of the parrot country. He was always interested in the bright-colored birds, and while running as conductor he collected many of them and taught them to talk English.

The thought occurred to Holts, after selling some of the parrots, that he might make more money by retiring from railroad work and devoting his time to raising the birds. He followed the plan, and purchased a large tract of forest land near Victoria, which was teeming with wild parrots. Wire netting was placed around and over the trees and the birds were confined therein. He has had the greatest success in raising the birds.

It is in teaching the parrots to talk that Holts has had his greatest success. He is a linguist, speaking English, Spanish, French and German fluently. He divided his flock of several thousand birds into four classes, one for each language. He then took a few birds from each class and set to work to teach them to talk. At the end of a few months Holts had taught birds English, Spanish, German and French, and the educated birds were placed in their respective sections. It was Holts' theory that by doing this the educated birds would teach their companions to talk. His hopes were realized to the fullest extent.

GEMS OF THOUGHT.

THE TEMPERAMENTS BRIEFLY ANALYZED.

BY H. B. MOHLER, F. A. P. I.

Part One.

THERE are two great laws, *i. e.*, *quality* and *quantity*, embodied in the human temperaments and their modifications that preëminently determine character, talent, and destiny. These laws cannot be analyzed or utilized except through the study of temperament as the latter is phrenologically classified.

The word *tempero* is Latin, meaning to combine or proportion duly, *i. e.*, the condition of the constitution resulting from the predominance of one or other part or system of the organization. Dr. Gall, the founder of phrenology, divided the temperaments into four, while the present classification has but three, viz: the *motive*, *mental* and *vital*.

The Motive Temperament.

The motive is fundamentally characterized by angular outlines, large bony framework and structure of body. The features are usually heavy and strong, hair rather dark or black, and abundant, with a large nose and long ears. To these may be added a sallow complexion, somewhat depressed cheeks, broad shoulders, a flat chest and small abdomen. This temperament is always masculine, whether belonging to a man or woman. The specifications are (1) the bones; (2) the muscles; (3) the ligaments—these naturally serving well for locomotion, activity, strength and power. This fine mechanical superstructure inaugurates splendid mental qualities for strength of character, influence and leadership.

The corresponding mental developments are the perceptive and executive faculties. The former gives the brow a retreating aspect and to the intellect its acquiring power which all men need who have to do with facts, business and all varied forms of mechanical application. All work like farming, engineering, carpentry, surveying, mining, architectural drawing, typesetting, blacksmithing, electrical work, contracting and construction, etc., is wrought by the faculties of *individuality*, *form*, *size*, *weight*, *order*, *locality*, *calculation*, and *constructiveness*, which are fundamentally the faculties that move the mechanical world.

The latter gives the head usually an exceptional width above and behind the ears in the basilar part which renders the person defiant and defensive, with the resisting spirit of courage and self-protection. With this type of temperament there is also a high crown which always indicates decision, perseverance, and a dignity that cherishes responsibility and leadership. The *foods* essential to this temperament are naturally nitrogenous and carbonaceous in character; of the former wheat and grain preparations, eggs, all kinds of plain vegetables and plenty of fruit, with

meat in moderate quantity seem necessary; however of meat, *pork* should be discarded in all its prepared forms, as the excess of *uric acid* induces largely the following diseases to which, at best, this temperament is predisposed, without doubt. These are rheumatism, different forms of dyspepsia and bilious trouble, bladder and especially chronic affections of the kidneys. Meat will produce local force, but prolonged respiratory power and muscular effort are eventually greatly relaxed by strong meat and especially pork indulgence, so that meat must be avoided as well as tobacco and all forms of stimulants. Examples of this temperament are strongly portrayed in Lincoln, Gladstone, John Brown, Bismark, Dr. Chas. Parkhurst, Admiral Dewey, President Roosevelt, Prof. O. S. Fowler, etc.

The climate best adapted to this temperament is a warm tropical atmosphere that is not so humid and sultry.

Persons possessing this temperament should marry a partner that has the vital-mental temperament so as to form a complementary balance and bring physiological harmony. Two of the same build, form, complexion and approximate development should *not* marry, as health is impaired, the progeny is weakened and happiness is oftentimes relaxed.

The Vital Temperament.

This temperament is fundamentally characterized by roundness and symmetrical outline of body. There is a beauty of form and usually a graceful carriage, with facial features that are soft and pleasing, but a nature that is fluctuating and emotional. This temperament is generally a *blonde* with auburn or flaxen soft hair, a short, plump, but corpulent body, with sloping shoulders, a full chest and large abdomen. The trunk is proportionally longer than the limbs, while the hands and feet are tapering and beautifully outlined. The face is usually round, the eyes light or blue, and the nose and ears quite small. This temperament is always feminine whether possessed by a man or a woman, so that its combination with the former generally gives the person fine balance of power. The specifications are, (1) the lymphatics; (2) the blood vessels; (3) the lungs; these three formulate a substantial basis for nutritive and vitalizing power, so that food, air, and water are easily assimilated into tissue, warmth, life and vigorous health, which gives to the intellect its animation and to the feelings their impulsiveness, intensity and versatility.

This is the *emotional type*, who are responsive in their natures and very warm and confiding in their affections and sympathies. The corresponding mental developments are the strong social and spiritual faculties. The imagination is active, the intellect is generally keen, apt and brilliant, but *not* so original and philosophizing as the mental temperament, although when combined with the motive gives the intellect a

marked form of development and a fine balance of power between the perceptive, retentive and reflective faculties. There is generally a strong development of *time, tune, form, ideality, mirth, comparison, casuality, constructiveness, and acquisitiveness*, which gives to the head a roundness and fullness in the sides upward and forward from the ears. The forehead is always wide at the temples and usually high, with these developments. Persons of this temperament are best adapted to and found generally in the professions of vocal music, as teachers and singers, medicine, druggists, elocutionists, nurses, salesmen, merchants, theology, as ministers and reformers, etc.

Where the desire for money is preëminent the religious activities are neglected so that in this temperament there is also a marked inclination for finance, management, organizing power, diplomacy and legislation. Examples of this temperament are marked in McKinley, John Bright, Moody, Henry Ward Beecher, and many others who are "Steel Trust magnates." leaders in unions and corporations and political grafters who hold high official positions, these lines of thought and work showing just how varied and diversified the avocations of this temperament are.

The foods essential to this temperament are the solids of a nitrogenous character, with free indulgence of fruit acids,—they need the kind similar to the motive to induce muscular power and stronger lung and heart power. Foods like nuts, rich pastry, butter, gravies, and heat producing articles only induce corpulence and adipose tissue or fat that so often hastens the predisposed diseases of this temperament. Those most common are glandular troubles, dropsy, inflammations and neuralgias of the heart and kidneys, erysipelas, tumors, cancer, blood and skin troubles, which can be largely ameliorated by care of the digestive and circulatory system. The climate best adapted is a cold, dry climate where the atmosphere is clear. Hot, low, marshy localities, which have a dense, damp atmosphere must be avoided by this temperament.

The law of temperaments must be obeyed as well in marriage and the plump, blonde-vital should unite with the stronger character of the dark mental-motive to bring a complemental balance and supply the other's lack and make physical harmony.

The Mental Temperament.

This temperament seems to prevail *most* among the American people. In the French, the German, Japanese, Chinese, the Laplander, and other nations, the prevailing type of the vital temperament is well maintained with all their variation of environment; and so with the stalwart Scotchman, Irishman, Englishman, Welshman, and all the stronger types of nationality the original temperament is maintained to a marked degree. We being a mixed race, as Americans, originally possessed more of our ancestral

strength and power; but conditions of life, sedentary habits, prolonged application, through many, many years of sharp competition for prominence and cherished positions of wealth and honor, is inducing an intense nervous strain, so that the nervo-mental temperament is slowly but surely growing preëminent. This temperament is characterized by a rather small, slender body, with angular outlines and finely chiseled features. The nose and ears may be either large or small, the eyes blue, gray or brown, and hair is generally silky fine and of a light, auburn or dark hue. The features throughout are well defined and a showing of *strength of character*. The shoulders are often narrow and the chest congested on account of a sedentary sitting posture. The complexion is sallow, the cheeks also somewhat depressed, the chest is flat and the abdomen is small. This temperament is full of activity and agility and the carriage is graceful and rhythmic. It is a mixed temperament, belonging to either the masculine or feminine sex. Its specifications are (1) the cerebrum; (2) the cerebellum; (3) the nerves; these preëminently serve for that intellectual power and scope of mentality if there is sufficient of the vital and nutritive power to maintain them. The corresponding mental developments are the *retentive intellect*, the executive and *aspiring* faculties.

In this type there is found more of a fullness in the central forehead and at the anterior upper side-head, which gives a marked development of *eventuality, locality, time, tune, constructiveness*, and I may add, also a marked development of the upper central forehead, which indicates the activity of *casuality, compassion, suavity, human nature*, and backward from these are *ideality, sublimity, caution and approbation*, which gives to the person his or her intensity of thought and feeling with generally an unusual sensitivity to public opinion. These latter emotional faculties figure very strongly for weakness or strength in this temperament, as they induce groundless fears, anxiety of mind, depression of power, and relaxation of educational work.

Experience and observation prove what great barriers *fear, embarrassment, sensitivity* and *despondency* are to intellectual growth. Persons of this temperament are much better endowed and adapted for literary and educational work, as they naturally possess greater tact, intuition and retentive power. This type of persons is generally found in our schoolrooms, as teachers, principals, superintendents, and lawyers, editors, reporters, secretaries, printers, clerks and county and state official positions where there is agility and quickness of thought and analysis. Poets, writers and magazine contributors, also need this type of temperament and development to do most competent work. The foods especially essential to this type are the carbo-hydrates, carbonates and phosphatic foods, as

these make nerve and fat. Among them may be suggested milk, eggs, Graham bread, nuts, oils, and butter. If the digestive system is good they may indulge freely in sweet acids, well-baked pastry and desserts with rice, tapioca, macaroni, corn, vegetables and cereals. Meat should be altogether avoided for sedentary mental employment.

The predisposed diseases this type is subject to are especially those of the brain, spine, cerebro-spinal nerves, very often the whole nervous system, lungs, and sexual trouble in all its forms. The best exercises for this class are rowing, swimming, horseback-riding, tennis, running, etc., and plenty of water should be drunk at rising and retiring hours, but avoided at meals. This is the most tenacious and wiry temperament of the three, and gives to us the greatest number of octogenarians. It is remarkable for endurance, grit, and can better throw off disease than the others.

The climate best adapted to it is the warm, dry atmosphere, with a *low* altitude, as the latter is often very derogatory to very sensitive, nervous persons. This being the strongest type mentally and the most plucky and courageous physically, needs a *strong vital* and *moderate mental* to bring a good balance of health power and adaptability in marriage. With this temperament predominating in *both*, the strong will, sharp temper, sensitive and intense nature, emaciated bodies, shattered nerves and diseased conditions oftentimes, must only produce a sickly, deformed or idiotic tendency, which disease will permanently develop in the offspring. The great laws of *quantity* and *quality* must be recognized, studied and assiduously applied if we ever hope to lessen the unhappiness and divorce cases and induce a stronger, healthier and purer race. The study of temperament and their proper combinations in marriage, is the way, the *ONLY* way, to largely ameliorate the appalling conditions that confront us. "*If a man is happily married, his rib is worth all the other bones of his body.*"—Johnson.

Grand Junction, Colo.

TALE OF THE LOCUST.

BY NORMAN VOUGHT.

THE periodical cicada, or so-called "seventeen-year locust," stands without parallel among the insects of the world in point of longevity, and is further remarkable from the fact that for practically the seventeen years of its existence, it lives a subterranean life. The time of its appearance varies with latitude; this is due to the difference of temperature.

Early in April of the seventeenth year the pupæ make their appearance to within about an inch of the surface of the earth, and when they begin to appear, in the latter part of April or the first of May, they

appear with regularity over many thousands of square miles in almost a single night. As soon as the sun is hid behind the western horizon, the pupæ begin to rise and continue till almost nine o'clock. Some few, however, do not make their appearance till midnight.

The eggs of the periodical cicada hatch in from six to eight weeks. The young larvæ are, from the start, quite active; and soon after escaping from the egg-shell, loosen their hold and fall to the ground. Then begins their long subterranean existence. They establish themselves in small earthen cells adjacent to some root or rootlets, from which they secure their nourishment by sucking the sap with their setæ. Their growth is very slow. At first the cell is not larger than a bird shot, but gradually increases in size to accommodate the growth of the insect. The majority of these larvæ are found at a depth ranging from eight to eighteen inches; some are found at a depth of two feet, while others have been found at a depth of four feet, but this is an exception.

In 1881 Mr. Riley, of Missouri, undertook to follow out the life of the larva until it emerged. Later it was turned over to Mr. Barlow, who made observations until 1891. These and later investigations by Mr. Marlatt have resulted in the approximate length of the larval and pupal stages, which have been given by Marlatt as follows:

1. The first stage lasts more than a year; the first molt usually occurring during the second year after hatching.
2. The second stage is entered into during the first two or three months of the second year of the insect's existence, and continues for nearly two years.
3. The larva is in the third stage at the completion of the fourth year of its existence.
4. In the fourth stage the larva is at the completion of the eighth year of its life, and this stage probably lasts for three or four years.
- 5, 6. Following the fourth larval stage the first pupal period is entered. During the pupal period of some six or seven years, the insect molts twice, the last molt being above the ground and just as the insects are emerging into the adult condition.

The skins thrown off in the last molt are very abundant, in case of a large brood, and are left clinging to leaves, the trunks of trees, bushes, or scattered thickly over the ground.

They live an aerial life for a period of about six weeks, the male appearing first, dies first, and does not live as long as the female. About two weeks after molting the last time the female begins to lay her eggs, in the trunks, twigs or branches of some tree, generally young trees. In all, she lays about six hundred eggs, then she dies, or else falls to the ground and is destroyed by her many enemies.

Union Bridge, Md.

THE BOYHOOD OF GREAT MEN.

THE inventor of the railroad engine was Oliver Evans, born at Newport, Del., in 1775. At the age of twenty-nine he built a steam engine. But the credit of first using a locomotive to draw a train of cars must be given to George Stephenson, who was born in England in 1781. George was a poor boy with no education excepting what a night school afforded him. At the age of fifteen he was a fireman in a colliery, afterwards he became a brakeman, and then an engineer. He wanted to emigrate to America, but poverty prevented, so he remained in England, finding employment at about the age of nineteen in James Watt's factory where he began studying the steam engine. He was eager for knowledge, and before he was thirty-one he had planned a railroad and built an imperfect locomotive. About this time, 1812, Fulton's steamboats were running on the Hudson river, but the stage coach did service on land. Ten years later Stephenson's locomotive was employed on a railway eight miles long at Darlington, England. It was not until 1829 the directors of a railroad proposed a prize of five hundred pounds for the best and swiftest engine and Stephenson produced his Rocket, which was really the first locomotive engine to prove successful, and is still on exhibition in the museum at Rensington, London. The first railways were declared to be nuisances and every one foretold their failure. English mobs even threatened to destroy Stephenson's railway and his men had to work under the protection of a guard. Stephenson died in 1848. As a boy he was tall, stout, healthy, industrious and sober. He lived on scant fare and was accustomed to constant toil. He was never discouraged and never repined. His great aim was to be useful to mankind.

From a log cabin with one room to the White House was the career of James A. Garfield. Hard work, little time for reading and few books to read, marked his early boyhood. He learned to read, spell and cipher a little at a country school and during vacations worked at planting and harvesting. He also engaged in carpentering and earned with the saw and hammer enough to give him a few terms at a boarding school. He worked for a time in an ashery for nine dollars a month. He once chopped one hundred cords of hard wood for fifty cents. He often walked as far as ten miles to get a day's work. He took a place as driver on a canal boat and shortly thereafter took sick and went in debt for his doctor bill. He developed a thirst for knowledge, but he had neither money nor friends to help him to an education. He went to an academy at Chester, Ohio, with seventeen dollars in his pocket. With that he got one term of schooling. He began the second term with but a few pennies, which it is said he dropped in the contribu-

tion box at church. Then he began to teach school, and all the money that he earned he paid out for instructions at the academy and afterward at college. All the world knows his subsequent career—Major-General in the army, Member of Congress, and finally President. The leading traits of his character were industry, thirst for knowledge, pluck, loyalty to duty, and mastery of self.

When Benjamin Franklin was a boy he spent all the money he could procure for books. His first acquisition was Bunyan's collection in small volumes. These he sold to buy an historical collection, which consisted of forty or fifty small, cheap volumes. Franklin's father's library was made up principally of theological works and the boy read most of these. Among his father's books were "Plutarch's Lives," in which he read continually. He himself declared that he found in an essay of "projects," by DeFoe, a source of impressions that afterwards influenced some of the principal events of his life. When a boy Franklin used sometimes to sit up all night to finish reading an interesting book that he had borrowed, so that he might return it the next day and secure another. He read Addison's Spectator before he was sixteen. Having read a book on vegetarianism, he undertook to practice and thus economize. By adopting a diet of rice, hasty-pudding and potatoes he saved half of the sum he had been paying for board, and the savings went to a fund for the purchase of books.

Horace Greeley read the Bible through consecutively when he was five years of age. The first book he ever owned was the old Columbian Orator.—*American Boy.*

THE FLAMINGO'S PLUMAGE.

THERE are about seven species of flamingoes, three of which are in America, frequenting the Bahamas, Florida and Cuba. In height the flamingo averages about five feet. If its curved neck were stretched to its full length the bird would tower above the head of an ordinary man.

During May and June, the breeding time, the birds' bright colored plumage is faded, but reassumes its most radiant hues in winter. When first hatched the young have straight bills, which, after a time, develop into a bent shape.

The first plumage is grayish white, and passes through various tints of pink, rose, carmine or vermilion to the full scarlet of the adult, which reaches its deepest shade on the wings. Several years are necessary to perfect the final gaudy plumage.

TRUTH is as impossible to be soiled by any outward touch as the sunbeam.—*Milton.*

A RECONQUEST OF NEVADA.

BY GUY E. MITCHELL.

HAS Nevada always been an arid and desert region? Its geological records, indelibly carved in sandstone and granite, showing the shore lines of ancient lakes, proclaim that it has not but that at one time a vast body of water, as great in area as Lake Erie, covered a portion of the State. To-day, however, the aridity of the country is unquestioned and the 350,000 acres, to part of which Uncle Sam is about to apply water, will practically double its well irrigated area and its agricultural population.

Nevada's ancient inland sea is known as Lake La Hontan; it was one of several great prehistoric lakes distributed over the Great Basin of the arid region, among them Lake Bonneville, of which the Great Salt Lake was the deepest portion. Its area was nine times greater than the Great Salt Lake, or almost as large as Lake Michigan and much deeper.

The contracted remains of Lake La Hontan in Nevada are found in Pyramid Lake and a number of other small enclosed lakes which were the deepest portions of the ancient lake. Since these large prehistoric lakes were land-locked and did not overflow, it follows that the rainfall which fed them was much heavier than it is to-day.

Drowning out the Mormons.

Should conditions revert, many of the important points situated in the Great Basin would be hopelessly flooded, such for instance as the Mormon temple, which would stand in 850 feet of water, while 700 miles of railroad would be submerged.

These prehistoric lakes are said to be of very recent origin—*i. e.*, recent by the geologists' count—perhaps 30,000 or 40,000 years old. Fossils have been found showing the presence of primitive man along their ancient shores and embankments which, in many instances, are as perfect in contour and as distinct as if the waters had receded only a few years since. These lakes included such arid and fear-inspiring localities of to-day as the Black Rock Desert, Skull Valley, Death Valley, and a score of other places where the bleached bones of man and animal attest to an awful lack of water.

Great Government Irrigation Work.

This first irrigation work of the national government, which is to be celebrated by the turning of the water into the gigantic ditches this month, is the largest project which has been definitely outlined and approved under the irrigation act—known as the Truckee-Carson project. When completed it will involve the expenditure of approximately nine million dollars and will reclaim 350,000 acres of desert land. This portion of the system now completed consists of a canal

31 miles long to take water from the Truckee River and convey it to the Carson River, where a large storage reservoir is projected. Just below this reservoir site, the waters of the two streams will be led out upon the plains by two canals, with a combined capacity of 1,900 cubic feet per second. Some 50,000 acres are to be irrigated this spring, for which 200 miles of small distributing ditches have been dug.

The Secretary of the Interior has set aside \$2,740,000 of the "Reclamation Fund" for the initial work, and by the time this is expended about 100,000 acres will be under canals, and the settlers will be returning in annual payments the original investment. The money thus received will be used as a revolving fund for the completion of this project. The land has been divided into farm units of 80 acres, and the cost of reclamation will be \$26 per acre. Work is being commenced this spring on regulating gates at the outlet of Lake Tahoe, located in California, but whose waters will be used to reclaim the fertile Nevada soil. Future plans involve the draining of Carson Sink, 25,000 acres in extent, which overflows in years of heavy rainfall, and the reclamation of lands in the upper Truckee and Carson valleys. As these large areas are gradually brought under irrigation a greater water supply will be required and nine additional reservoirs will be constructed, with a combined storage capacity of over a million and a quarter acre feet (an acre foot equals one acre, one foot deep).

Fruits, Vegetables and Grains Yield Abundantly.

The soil under this project is very fertile, and deciduous fruits such as apples, pears, peaches, grapes, all the berries and vegetables produce luxuriantly. Wheat, oats, potatoes and alfalfa are the staple crops. The lands are tributary to the Southern Pacific, the Nevada, California and Oregon, and the Virginia and Truckee railroads and the recent enormous activity in gold and silver mining in Nevada insures a nearby and profitable market. At the same time the supply of food products will greatly reduce the cost of living and further stimulate mining development.

The fact that a very large portion of the lands included in this project belong to the government and have been withdrawn from speculative entry under the desert and other land laws, is a matter for congratulation. Nevada's past history has been one of land monopoly, in fact it has been said that the State was long since stolen by land grabbers. In area Nevada is three times the size of Indiana, but her population is scarcely sufficient for a single small county. The popular vote of last year was but little over 12,000. The bulk of the inhabitable lands are in the hands of a few great land owners, while the opportunity for settlement and increased population has never been extensive. Nevada's land history is one which can be studied with profit by those who are searching for

light on the question of proper administration of the public domain. With exception of the influx of immigration due to mining excitement, the population is at a standstill and must continue to remain so until farm lands are thrown open to settlement in small tracts through government irrigation.

Stealing Away the State.

When the State was admitted to the Union, in place of receiving the usual donation of alternate school sections—16 and 32 in each township—she secured a flat grant from the government of two million acres of public land to be located wherever her law-makers saw fit. The state legislature passed as much as desired of this great and valuable resource into private ownership of stockmen, at as low a figure as twenty-five cents an acre. These lands have been located up and down the sides of every river and stream and around every spring and water hole, in the State, so that while Nevada has to-day some sixty million acres of public land, there is not a quarter section of it upon which a homesteader could make a living. The land granted to the State for school purposes—disposed of by the State for a mess of pottage—controls the lands of the State.

The government's irrigation, when worked out, will immediately double Nevada's population; it will provide a new lifeblood of settlement and citizenship for a region of unsurpassed agriculture.

This great reclamation scheme for the rebuilding of Nevada is being carried into operation by Engineer L. H. Taylor, under the supervision of Frederick H. Newell, Chief Engineer of the Reclamation Service. It will afford the first practical example of the operation of the new national irrigation law.

Washington, D. C.

THOUGHTFUL AND GENEROUS.

TURNER, the great English artist, was the son of a laborer. After he had obtained fame and wealth, his father remained with him, living in his studio, his most intimate friend. On one occasion, it is stated, a large and brilliant party was examining Turner's pictures in the studio, when the scent of broiling chops filled the room, and a dirty old man thrust his head in at the back door with:

"Them's a-burnin'! If you don't come they'll be spoiled!"

"I cannot go now, sir. My father, gentlemen," said Turner, as calmly and respectfully as though the sire he presented had been a royal duke.

Any attempt to ridicule was quelled by his unconscious dignity.

Another fine trait of the great painter is hinted at in a story recently told of him by Ruskin in a lecture at Edinburgh. His picture of "Cologne" cost him

years of thought and study. It had an exquisite golden sky when brought to the exhibition in 1826. On the evening of varnishing day a friend, passing through the room in which it hung, was dismayed to find the sky a dull dun tint. He hastened to find Turner.

"What has happened to your picture?" he demanded.

"Oh! poor Lawrence's portraits were hung at either side, and it killed them. He was very unhappy. I gave the sky a coat of lamp-black. It will all wash off after the exhibition."

The story is true, but unselfish generosity is so rare among artists that Ruskin states that he never told it to but one man who believed it. The action lives, and is helpful to thousands who will never see the golden sky of the picture.—*Selected.*

FAMOUS TREES.

THE Charter Oak is in Hartford, Conn., and concealed the charter of the colony for several years from 1687.

Washington took command of the army under an elm-tree in Cambridge.

The treaty-elm, under which William Penn signed the famous treaty with the Indians in 1682, was upon the banks of the Delaware. It died in 1829.

The great Linden in Wurtemberg was eight hundred years old. The city of Neustady was for many years known as the City near the Linden. In 1408 a poem was written about it. It was propped up by sixty-seven stone pillars; in 1674 these were increased to eighty-two; in 1832 to one hundred and six. Its trunk then measured thirty-seven feet. It was wrecked in a gale that year.

The famous banyan-tree is in Ceylon, on Mount Lavina, seven miles from Colombo. There are two roads through the stems. Its shadow at noon covers four acres.

The famous cedars are on Mount Lebanon. There are sixteen that measured more than forty feet in circumference in 1696.

The walnut was originally called the gaulinut in England because it came from France (Gaul). Walnuts played an important part at the siege of Amiens, near the end of the sixteenth century, when a party of Spanish soldiers, dressed as French peasants, bought a cartload of nuts to sell, and as the gate opened for them to enter, the nuts were spilled upon the ground and the sentinels stooped to pick them up, when the Spanish soldiers pounced upon them, killed them, and guarded the gates while the Spanish army entered.

THE dutifulness of children is the foundation of all virtues.—*Cicero.*

A UNIQUE PHOTOGRAPH.

ON August 30 of the present year there will take place a total eclipse of the sun, which will be visible on land in Northwestern Canada, Labrador, Spain, Eastern Algeria, Tunis, Tripoli, Egypt and Arabia. As usual, carefully organized scientific parties are preparing to observe and study this interesting phenomenon, and various stations will be occupied by astronomers with elaborate apparatus. One of the novelties to be attempted is to apply color photography to the observation of the eclipse, so that a record can be made of the appearance of the chromosphere and corona. The plan is to employ the three-color process where screens of different colors are used with three different plates, each screen cutting off light of various colors, so that when positives from the three plates are made and used with light of a color corresponding to the screen the resulting picture has the colors of the original. For the eclipse photographs a camera with three lenses and three screens will probably be employed, as it is necessary that the exposures shall be made simultaneously. As the plates are sensitive to the different colors in different degrees, there will be a properly adjusted diaphragm or stop for each lens, so that the same time of exposure will suffice for all. The color phenomena of a total eclipse of the sun are considered most beautiful, and considerable interest attaches to this method of reproducing them.

A STRANGE SUNSET.

ON the north coast of Norway little boys and girls see very queer sunsets. You will notice now that in Michigan the sun at this season is very far to the south, as we say, and instead of rising and going over our heads at noontime it seems to describe a circle near the southern horizon. Farther north this is more apparent and at some seasons it does not disappear from sight during the entire twenty-four hours. A writer who visited the North Sea off Norway this summer writes: "Imagine yourself on a ship at anchor, looking west or straight in front of you. There is a broad expanse of sea a little to your right hand, behind you will be the rugged coast, and to the left the long, narrow fiord between the islands and the mainland that the steamer has just traversed. You watch the sun as it slowly, slowly sets; the island and the coasts look a rich, dark purple, and the shadows cast by the ship's masts grow longer and longer.

"After a bit, when the sun has sunk apparently twelve feet from the horizon, it stops and seems to remain stationary for about twenty minutes; then the very sea-gulls hide away, while the air all of a sudden becomes chilly. Each one has an awed, expectant feeling, and surrounding the steamer broods a silence that

may be felt. Soon the sun rises very slowly again, and the yellow clouds change with his uprising to even greater beauty, first to the palest primrose and then to a bluish pink. The sky, which was just now rose-color, becomes gray, then pale emerald green, and lastly blue. Rock after rock stands out, caught by the sun's bright rays, and the reign of day has begun once more."—*Selected*.

WHAT IS RATTAN?

EVERY one knows the pretty, light, and graceful chairs and other articles of furniture made from rattan, but every one does not know that the extremely tough and flexible wood called rattan is that of the climbing palm-tree. This curious climber, which is more of a vine than a tree, is one of the singular characteristics of forest growth in the Celebes and other Malayan countries. Starting with a trunk a little thicker than a man's arm, it winds through the forest, now wrapping a tall tree in its fold, like some gigantic snake, and then descending again to the earth and trailing along in snake-like curves until it can find some other stately tree to fasten and climb upon in its pursuit of light and air. The forest is so thick and jungle-like that it seems impossible to follow the course of any one of these serpent climbers; but there is little doubt that at last the successful aspirant, which stooped and cringed so long below, will be found shooting up like a flag staff a dozen feet or more above the tree which has helped it to rise.

A use of rattan, which is unknown to those who have not seen it in its native forest, is as a water carrier. The thirsty traveler has at all times a tumbler of cool, refreshing water at his command by cutting off six or eight feet of rattan and putting one of the severed ends to his mouth, or holding it over a dish to catch the water.—*Selected*.

QUEER AFRICAN BANKING.

IN many parts of Africa the system of banking is as yet very primitive. The natives of that part of South Africa which to a great extent is inhabited by bushmen and Hottentots have a peculiar system of banks. These Kaffirs, among whom this curious system of banking obtains, live near Kaffiraria, in the south of the Colony country. The natives come down south from their country to trade in the several villages and towns in large numbers, stay with the Boers for a time, then return to Kaffiraria. Their banking facilities are very primitive, and consist entirely of banks of deposit alone, without banks of discount or issue, and they have no checks. But still they enjoy banking privileges, such as they are. From those who trade, of their own number, they select one who

for the occasion is to be their banker. He is converted into a bank of deposit by putting all the money of those whose banker he is into a bag and then they sally forth to the stores to buy whatever they want. When an article is purchased by any of those who are in this banking arrangement, the price of the article is taken by the banker from this deposit money bag, counted several times and then paid to the seller of the article, after which all the bank depositors cry out to the banker, in the presence of the two witnesses selected, "You owe me so much!" This is then repeated by the witnesses.

NEW MARCONI STATION.

Six months is the time set by Marconi for the practical transmission of wireless messages across the Atlantic. He is now at Glace Bay, N. S., supervising the installation there of transatlantic apparatus. The completion of the station will require five weeks. Experiments will then begin, which he believes will result in the establishment of communication on a practical basis. The station is to be removed seven miles inland to insure safety from bombardment by battle-ships in case of war, and \$200,000 expended in its erection and equipment. It will differ materially in form of structure from the old station, concentric rings of poles being erected whereby the superficial area of the wires will be greatly increased. He does not expect to make a test of his new sending and receiving apparatus by which the speed of wireless telegraphy is increased from twenty-four to one hundred words a minute until the transatlantic circuit is working satisfactorily at the slower speed. Marconi predicts that in two years, when the station at Pisa will have been completed, he will be able to send a wireless message around the world by way of Australia.

ATLANTIC CABLES.

ELEVEN Atlantic cables in all have been successfully laid, and the first two are dead or lost. Of the nine cables, only four are really in good order, the other five being old, and having little chance of continued life. The average life of a cable is only ten years. One of the nine was laid in 1869, another in 1873, a third in 1874, a fourth is the cable of 1876, repaired in 1880, while a fifth was laid in 1875. The more recent are the French (Pouyer Quartier) cable of 1879, the two new Gould and the Bennett and Mackey cables.

The oldest company, the Anglo-American, is the owner of the four oldest cables, including the patched one of 1880. Three of these it laid, while the cable of 1869 was laid by the French company, and came to the Anglo-American when it absorbed that country.

These four old cables are represented by a capital of \$12,582,550, preferred 6 per cent shares, a like amount of deferred shares, and \$9,834,900 of ordinary shares—in all, \$35,000,000. Their total length is 12,318 miles, and the capital is, therefore, \$2,765 per mile.—*Selected.*

VIKING SHIPS IN NORWAY.

A VERY interesting relic of the Viking age in Norway is a ship discovered not long ago in a grave-mound near the Christiania Fjord. This is the second important discovery of the kind, the first being that of the Viking ship found in the grave-mound at Gokstad in 1880, which is now preserved in the University of Christiania. The place of preserving this second ship has not yet been determined, there being a dispute between the authorities and the owner of the ground where the discovery has been made. The ship is about seventy feet in length and pierced by fourteen oars on the side. It appears to have been not a war vessel but a pleasure yacht or state barge. In the mound with the ship were the remains of two human beings besides those of horses, dogs, and oxen, which had been interred after slaughter. Grass was found in the stomachs of some of the animals, which they had eaten just before being killed. The dogs were wearing iron collars with long chains. Among the contents of the ship were articles of domestic use and implements for female work. Outside the ship are also mentioned a magnificent wagon decorated with human heads, a spinning wheel, a loom with part of the woven web still remaining, several beds, etc.

THE QUEER HABITS OF FLOWERS.

FLOWERS have ways of acting very much like people. All flowers love the light, and will turn towards the sun whenever they can. Some shut themselves up at night as if they were going to sleep, and open in the morning. Sometimes the bees get caught in the flower as it closes, and have to stay there all night. The tulips, the little mountain daisy, and the dandelion are some of the flowers that shut up every night, but they are bright as ever on their slender stems next day. The daisy looks just like a round green ball or pea. It was first called "day's eye" because it opened at dawn.

The dandelions look at night like buds that have never been opened at all, in their green coverings. When the sun is very hot the dandelion closes to keep from wilting. Some flowers hang down their heads at night as if they were nodding to sleep, and look up again to welcome the light at a particular time. Some last a good while, and others only a few hours.—*Selected.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglebook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

THE YEARLY MEETIN'.

WHEN this INGLENOOK reaches the homes of the readers a great per cent of them will be on the conference grounds at Bristol. The date that this paper bears is the day when business begins in the tabernacle, but the people will have left their homes on the Friday before and enjoyed the association of friends over Saturday and Sunday.

So when the rural carrier drives up to the post out at the end of the lane, old Fido, who is accustomed to make the daily trip after the mail with his master, will be sitting there to welcome the post carrier and wondering where his master is. In some instances, no doubt, the INGLENOOK will have to remain in the box until Thursday evening or Friday until the folks return home. In other cases the children or some of the neighbors are keeping house for Pa and Ma while they are gone to the meeting.

I tell you it makes one think seriously on the question of the brevity of life, when these annual milestones come around in our path that unmistakably tell us that another year has gone into the past never to return. Friday morning when

Grandpa and Grandma

came out on the porch to get into the spring-wagon to go to the train, I just wondered how many more trips of that kind they would make. I can see them yet; Grandma had that big black basket that they had owned for forty years, and which invariably accompanies them to Annual Meeting. When she goes visiting she either takes her knitting or quilt pieces in that, but when the time comes around for the Yearly Meetin' it is always used for their lunch basket. They have looked forward to this time for weeks, and have talked so much of how they expect to meet certain brethren and sisters there from the valley of Virginia, and some from Pennsylvania. They have received

word too from some in the West who have gone to the Pacific coast to seek their fortunes, and they are returning home this year to visit the old folks, and attend the Conference at the same time.

Grandpa said he wanted

To Get There "Airly"

so as to get a good lodging place near the meeting grounds for him and mother. Besides it is one of the happiest times of his life when he can stand near the entrance to the grounds and watch the people pour in by the hundreds, when the trains from the different parts of the United States unload. As soon as the Lodging Committee has assigned them a good place, and they have spent a little time in scouring the coal dust and smoke from their faces so as to restore vision and make them feel more like Christians, they will proceed directly to the meeting grounds and hunt the *Messenger* and INGLENOOK office and get papers, because they missed getting them at home.

Saturday, on the Annual Meeting grounds, is one of the most enjoyable days of the meeting. The meeting of friends that you always meet once a year and that you expect to meet, before you go to the meeting, is a very enjoyable feature. Then, too, there are always some friends that you haven't seen for five, ten or fifteen years, who have had the opportunity of coming this year and, of course, you are especially glad to see them. Toward the end of Saturday the people of Bristol, no doubt, will conclude that there are several

Dunkards Somewhere in the Country

and that a few of them have come to the Conference. When the beautiful grove of small shade trees is literally alive with brethren and sisters from the North, South, East and West, with their contrasts in vernacular and local customs and costumes, and yet the great comparison and similarity in faith, feature and factor, it will present a motley crowd of witnesses once seen never to be forgotten.

In this case as in all others there will be many present who are attending the Conference for the first time in their lives, and will be utterly astonished to know that the church is such a big concern. Scarcely a newspaper reporter in the country but what gets a glimpse of some of the train loads of people going to the Conference, and then jumping at conclusions makes a write-up that would probably do justice to hermit life on some isolated isle.

The Lord's Day, as a rule, is well kept at the Conference. Almost all of the ministers of the various congregations extend an invitation to the Brethren to fill their pulpits and extend to them a hearty welcome. After the various churches have been well supplied with audiences there usually remains a sufficient number to fill the capacious tabernacle, and, too, quite a number of ministers remain to worship with the

people. What an inspiration it is to meet with hundreds of like faith and assemble in worship in such large audiences. Some of us live in isolated places where services are not so frequent as they should be, while others are under more favorable circumstances. Probably some of the things that make these Sunday services so enjoyable are, first, the manner in which we are thrown together—the high, the low, the rich, the poor, surround a common festal board to eat; kneel around the same common altar to worship, and alike seek the humble cot for slumber. We do not know each other by distinctions and we have gotten into that peculiar condition where

"We be Brethren."

Second, in local congregations it often occurs that some slight differences appeal to our temperaments and annoy us sufficiently sometimes to prevent the proper spiritual development. But here differences are left at home and all we know of each other is good. We are looking on the bright side of things. In fact we have come to the meeting to worship instead of criticise. Did you ever know that it is possible for a man to have two horses that are continually fighting each other at home, but when they are taken away from home they will fight to get together? The same characteristic is found to a large extent in human beings. People that are separated sometimes with little differences are firmly knit together by common interests and aims.

Third, sermons and addresses are often made at Annual Conference which are considered to be

Eloquent and Elegant,

partly because they are given by men whom we do not know personally, and partly because they are not given at home; but more probably because the hearer is in the right condition to receive preaching. Sometimes at home we take it for granted that nothing good will be said, and we go to sleep; other times we think we know the brother well enough to know that he won't say anything wrong, and since we can thoroughly trust him we can go to sleep and let him say what he pleases. But it makes a difference who says it, where he says it and how he says it. At the same time not one man in ten can preach as good a sermon at the Conference as he can at home. He is more or less handicapped by the presence of stronger men, large audiences, importance of the occasion, the wonderful responsibility, and oftentimes his first experience in such a place. Take it altogether, the Sabbath day has been one of enjoyment and spiritual development.

Monday morning comes and with it the great responsibility of the International Sunday-school meeting. The great Sunday-school work of the Brotherhood lies close to the heart of every wide-awake Christian. The live-wire questions, along with up-to-date

methods are things of importance and must be discussed at this meeting. After dinner the

Annual Missionary Meeting

will be held in the tabernacle, and some brother will be selected to present the needs of the world in a missionary way and uncover the altar of sacrifice ready for the sacrifices to be laid upon it, whether they be young men and women who are ready to lay down their lives for the sake of the Master, or whether it be dollars to carry them to their field of labor. For the last few years the collection at the Annual Meeting has been rapidly increasing, and we hope that at the close of this Conference the announcement may be made that at the very least ten thousand dollars has been taken. If the elders of the churches, superintendents of the Sunday schools, and the presidents of the Christian Workers' societies have done their duty, prior to the coming Conference, there will be no question about the results of the collection on Monday afternoon.

Of course the feature to which we look forward with great anxiety is the

Inglebrook Reunion,

which will be held in the tabernacle at 4:30 Monday evening. The editor of the INGLENOOK will call the meeting to order, and after devotional exercises something will be said concerning the policy and scope of the magazine, after which the meeting will be turned over to the NOOK family, who will, in their own way, tell us how we can make the INGLENOOK better, how we can increase its circulation and be of more use to the world. Do not fail to report at this meeting; be there, and be there on time. Have your speech ready. Boil it down. Say what you mean, and mean what you say. Be sure to have at heart the interests of the church, the young people, and the magazine itself.

The next two days will be spent in the discussion

Of the Great Questions

that will come before the Conference by the delegates and the members of the Standing Committee. These days are the real days of council and consideration. They are important days concerning the future of the Brotherhood. Some time during the Conference don't fail to call at the INGLENOOK office. Let us get acquainted. It may be we can make some arrangements whereby we can both become more useful. Bring your friends with you. Show them a sample copy of the INGLENOOK; we will have plenty of them there for distribution. We are going to make special inducements to the end of the year for new subscribers to Sunday schools and Christian Workers. We will also have a box of INGLENOOK Cook Books, with oilcloth covers. Come and see them. New subscribers will receive the INGLENOOK till January, 1906, for only 30 cents.

Current Happenings

AT THE CONFERENCE.

THIS is the first Annual Conference in Tennessee since 1860.

❖

The city of Bristol is divided by the State line between Virginia and Tennessee.

❖

The grove in which the meeting is being held is a most beautiful one.

❖

The scenery around Bristol is fine, especially along the Holston river.

❖

The Brethren are enjoying the old-time hospitality of the southern people.

❖

This is quite an educational center. We have here King's College, Sullins College, the Virginia Institute, and other institutions of education.

❖

Scores of Brethren and their friends who have long since moved to the West, are taking advantage of the rates to this meeting and, after the meeting is over, will visit their relatives "back in Ole Virginny."

❖

This seems to be an overlapping of the North and South and we get a glimpse of what the "sunny south" is.

❖

This meeting will certainly be a great missionary factor. It will give the southern people an idea of the Brethren as a church, and it will give the Brethren an idea of the southern field.

❖

The Brethren Publishing House has very comfortable quarters on the grounds and is doing more than the usual amount of business with their regular customers and making many new friends.

❖

The Standing Committee reports more than an ordinary volume of business to come before the meeting. Some very important matters are to be discussed and decided at this meeting.

❖

The meetings in the tabernacle have been conducted by the following brethren: Saturday evening, J. W. Lear; Sunday morning, I. B. Trout; Sunday afternoon, I. D. Parker; Sunday evening, I. N. H. Beahm; Monday evening, H. C. Early; Tuesday evening, E. M. Cobb.

One familiar face which is always seen at Annual Conference is noticeably absent this year. Perhaps no one realizes this more than the General Missionary and Tract Committee. Their foreman, Eld. D. L. Miller, is in southern Africa in person, but no doubt at this meeting in spirit. He is looking at Africa as a mission field. He will, in the near future, tell the readers of the INGLENOOK many interesting things about Africa, as well as other lands south of the equator. He has a splendid article in this issue on "The Rajahs of India."

❖

The educational meetings, the Reading Circle work, the missionary and Sunday-school efforts are certainly great powers to inspire the meeting and get it ready for the great work of the Conference which is to begin to-day.

❖

The *Bristol Courier* is the official organ of the meeting and is supplying many brethren with the news of the Conference who were unable to attend.

❖❖❖

SENATOR TOM PLATT, head of the United States Express Company, says strikers will not be taken back.

❖❖❖

EIGHT killed and one hundred injured in riots in Warsaw, Russia. Disturbances with the Jews continue.

❖❖❖

W. C. JUTTE, of Pittsburg, lost a million dollars in "Amalgamated Copper," and killed himself.

❖❖❖

PHILADELPHIA is looking for trouble in the strike business as well as Chicago.

❖❖❖

DR. HARPER, of the Chicago University, who has been ill for some time, and who, in spite of his illness, has for the most part conducted one or more of his classes, is now compelled to suspend active service. It is said that cancer of the stomach has been his enemy and more of this trouble has been discovered than was thought at first to be preying upon his vitals. It is thought by the best physicians that he cannot live long. In his biennial report, not long since, he states that the Chicago University is worth nineteen million dollars.

❖❖❖

QUITE a sensation is being created in war circles by the report that Admiral Rojestvensky is dead. It is doubted by some, and yet the news comes from two or three different sources.

THE poor people of the Barbadoes subsist principally on sugar cane, sweet potatoes and flying fish.

A WATCH taken to the top of Mount Blanc will gain thirty-six seconds in twenty-four hours. The thinness of the air, with its increased pressure, makes the poor watch dizzy and leads it to run faster.

NAVAL commanders insist that chronometers be kept on ice to prevent all magnetic influences as well as influences from heat. These are very delicate instruments, placed on pivots, so as to be insensible to the motion of the ship, and practically nothing prevents them from keeping the correct time. The correct time must be kept because it is from this source they are able to get their latitude and longitude.

SUCCESSFUL experiments have been made in the treatment of neuralgia and hysteria with radium at the Salpetriere Hospital in Paris.

It has been decided at Washington that Paul Morton, Secretary of the Navy, will leave the cabinet in about a month. The portfolio will be offered to Victor H. Metcalf, now Secretary of Commerce and Labor.

THE first successful flour mill was erected in London in 1764.

MEDICAL examiners for life insurance societies have added the term "coffee heart" to their regular classification of the functional derangements of that organ. Its effect is in shortening the long beat of the heart.

STATISTICS show that from 1801 to 1905 more than two hundred and thirty periodic comets have been observed with precision.

THE sovereign who reigns over the smallest monarchy in the world is King of the Cocos, a group of islands near Sumatra. The islands were discovered about three hundred years ago.

CERTAIN spiders can be transported by the wind, owing to a very light silken thread that they emit from the spinneret which is blown along by an ascending current of air. A thread a yard long can sustain the weight of a young spider.

A CANTON, Ohio, bank has closed doors, owing six hundred thousand dollars to her depositors, among whom is the city, which has seventy-six thousand dollars deposited.

POISONOUS mollusks purify the water in which they live.

STATISTICS from the German Empire show that the number of cremations is constantly increasing each year.

THE most expensive lace manufactured to-day is valued at \$5,000 a yard.

IN fifty years suicide has increased in Great Britain by two hundred per cent.

THE Presbyterian General Assembly contemplates the erection of a National church edifice in Washington, D. C.

PRESIDENT CASTRO suppressed leading newspapers of Caracas and threw the editors into jail for putting in editorials praising Roosevelt.

MAYOR DUNNE, of Chicago, prefers to ask for a thousand volunteers to assist in quelling the strike, rather than call on the State for militia.

THE new bridge across the Mississippi, at Thebes, Ill., was opened to traffic May 25. Five railroads will use this bridge. This bridge forms a great new gateway to the southwest. It cost three million dollars, and sixteen human lives. It has required three years to build it. It has no draws and clears boats at high water mark. It is four miles long, counting the approaches in both States. It has twelve large arches made of concrete, which required seventy-three thousand barrels of cement. On the bridge are fourteen thousand tons of steel. Governor Folk, of Missouri, and Governor Deneen, of Illinois, made speeches at the opening.

AFRICAN savages take kindly to American patent medicines.

THE Bureau of Insular affairs is having prepared for the Philippine government plates for a series of postage stamps.

J. PIERPONT MORGAN has left Rome for Brindisi, from which place he will go to Piræus and thence to Constantinople.

A GAS boiler, in process of filling, on a government steamer near Kingston, Ontario, exploded, killing one and injuring four of her crew.

HOME DEPARTMENT

THE COUNTRY WOMAN AND THE CITY WOMAN.

WE believe that the woman in the city gives more attention to the care of her health, to the development and preservation of her body, than the country woman does.

One reason for this is that she has better facilities and more conveniences for doing so. But the chief reason, we believe, is that she has a higher appreciation of the value of health and a well-preserved body.

The country woman knows little or nothing about physical culture, and if you try to tell her about it she will say, Bosh and nonsense! and will doubtless inform you that she has enough exercise in doing her work. Housework is splendid exercise, but yet cooking, washing dishes, sweeping, making beds, and so on do not bring into play all the muscles of the body. Even the proverbial overworked farmer's wife would find herself rested by taking a few exercises that bring into play muscles that the treadmill of her household duties never makes use of.

To tell a country housewife, especially she of the strenuous New England type, that she ought to lie down every afternoon for a bit of rest or a short nap, is almost to insult her. No, she "is not so lazy as all that," and the woman who does pause in the midst of household duties to lie down for a few moments to rest the fretted nerves and relax the tense muscles is a "lazy, shiftless, good-for-nothing housekeeper," in the opinion of her energetic, never-resting neighbor. But nevertheless while the one woman is recuperating herself mentally and physically, keeping her face young and her brow free from wrinkles, by her afternoon siesta, the other woman is becoming worn and old and wrinkled, and preparing for a premature breakdown. Her floors may be scrubbed cleaner, her kitchen tables scoured brighter, but it will be at the expense of herself, physically and mentally.

Of course, it is not always possible for a woman to have even a few minutes to rest in the middle of the day. Even the city woman, who is generally supposed to have nothing to do, is not always at leisure to have an afternoon nap. Especially if she is a business woman she has neither the time nor the opportunity for it. But she will generally take a walk at noon, go out for her luncheon, something to make a change in the routine of her work, and the change itself is restful.

Then the country woman does not give the attention to bathing that the city woman does. This is largely because the country woman does not have the facilities

for taking a bath, and then she has never gotten into the habit of knowing the luxury of a daily bath. She thinks if she takes a bath once a week she has done herself credit.

To tell the country housewife that she should take a cold bath on rising every morning, or at least a rough towel rub, take a few exercises to start the blood circulating, breathe deeply twenty times at any open window, clean her teeth thoroughly and brush her hair,—do all this every morning as soon as she gets up, she would simply laugh at you or give you a mild look of pity because you didn't know any better than to talk that way.

The average country woman tumbles out of bed at an early hour and dons her clothes as quickly as possible, with no thought in her mind save that of getting breakfast. A quick washing of her face and pinning up her back hair is about all the toilet preparations she makes at this time.

Now we are not blaming the country woman for not taking a bath in the morning before breakfast. It is necessary that the men folk have their breakfast early in order to go to their work. But at least after the morning work is over, or after dinner, or even in the evening, we contend that the busiest housewife should take the time to give some attention to herself. Perhaps the most practical plan for her would be to take her daily bath in the after part of the day or just before retiring. A tepid bath it should then be, a good, thorough scrub bath.

As we said before, the country woman does not have the facilities that the city woman has. Few country houses have bath-rooms, and the houses are heated only by grates or stoves, the fire goes out in the night, and in the winter time, by morning, the rooms are veritable Klondikes and the water is covered with a thick scum of ice. Under such circumstances we believe the most of us would excuse ourselves from the cold morning bath.

The country woman is very apt to neglect herself. She is liable to place a low estimate upon personal appearance. She prides herself on her good housekeeping. But the woman herself should be more than her housekeeping. A slattern, tired, faded, wrinkled woman is but a sorry picture, even though her house, with all its endless bric-a-brac be spotlessly clean, and her cooking as intricate and fancy as that of a French chef.

But that woman, who, by careful management and forethought, can keep her house orderly and clean, her cooking wholesome and palatable, and yet preserve for herself health and usefulness, keeping herself

dainty and wholesome and clean, though her house may be less elaborately furnished and her cooking more simple, that woman has chosen the wiser course and not only retained for herself the beauty of a healthy and superb womanhood, but is, in truth, the mistress of her home.—*Medical Talk.*

* * *

RELIGION IN THE HOME.

THE only place where real religion can be taught is in the home. The best place, if not the only place in the world, where a genuine respect for religion can be engendered is in the home. If children do not get religion at home they will probably never get it anywhere else. We do not mean religious forms but we mean real religion. We are well aware that at Sunday-school children can be taught to gabble passages of Scripture and receive instruction in the exploits of Moses and the misconduct of David. But this is not religion. It is not even remotely connected with religion.

We are well aware that, in church, people can be taught to sing religious hymns and listen to eloquent prayers, take part in responsive services, read Scripture and all that sort of thing. The church is an excellent place to carry on this kind of instruction, but this is not what we would call giving religious instruction.

Formation of character, training of the animal instincts, the stimulation of the moral sentiments, must be done largely at home if it is done at all. The sort of work done in the average Sunday school leaves untouched the real moral nature. Whatever religious notions children receive at home are very apt to actuate them the rest of their lives.

Of course, children may be brought up in so-called irreligious homes where no attention is paid to the formalities of religion, brought up by non-churchgoing people, and yet these children may afterward attend church and even join the church. They may be taught to believe that their parents are almost as bad as heathen. Nevertheless, it remains true that their earliest impressions of God and righteousness, their attitude toward life and death can be traced back to childhood, to father and mother.

If a child is ever to imbibe the notion that God is the father of all mankind, that we are brothers and sisters, and consequently equal, if a child is to receive this idea at all, he will have to receive it in the home. If father and mother do not practice this in their daily lives, if the child is brought up to believe that some people are to be avoided, others to be held in contempt, and still others to be looked upon as dangerous, all the churches and Sunday schools in the world will never be able to correct such teaching.

* * *

A SOLID fame is better than a sounding one.

CARPETS IN THE LIVING ROOMS.

THE writer of this article grew up on a bare oaken floor, his early years being spent upon an old-fashioned, back-woods puncheon floor—puncheons split from the trunks of large trees, the rougher places being chipped off with a broad-ax, but which had never been touched by saw or plane.

But I do not think this fact is responsible for my prejudice against a carpet on the floor of the living room. It is the dust, the filthy dust, the germ carrying, disease breeding dust, that will gather in the carpet, and that will fill the room every time a person passes through, no matter how lightly that person may walk. And then when two or three or four children play upon it! If you wish to know how full the room is of dust, how laden the air that every member of the family is constantly breathing, admit a ray of sunshine into the room, and note the universe of little moons that are constantly whirling through "space," and giving back to you the borrowed rays of the sun, which enables you to see them. Every portion of the room is just as full of these particles as is the portion through which that pencil of light passes, and each member of the family is taking in myriads of them with every breath drawn!

If you do not like to see bare floors, linoleum, in its various figures, makes a cheap and tasty covering, and one that will not catch and hold the dust, and may be easily cleaned every day. But it is cold, almost always cold to the touch.

If you must have carpets, let us suggest a plan which we have never seen suggested—put them down in sections, and without stretching or fastening, in sections that may be lifted and shaken, dusted, every day or two, like rugs are treated.

We know the objection that will be urged, but if they be nicely fitted, there need not be so much annoyance in getting out of place as one would think. All will soon learn to step and to move things about the room so as not to disturb them. And then the unavoidable dust you can every day give to the winds outside, instead of to the lungs of the dear ones that every day gather in the room! The portions under the permanent furniture need not be so frequently moved.

* * *

ALL we want in Christ we shall find in Christ. If we want little, we shall find little; if we want much, we shall find much; and if, in utter helplessness, we cast our all on Christ, he will be to us the whole treasury of God.—*Bishop Whipple.*

* * *

I LOVE that tranquility of soul in which we feel the blessing of existence, and which in itself is a prayer and a thanksgiving.—*Longfellow.*

Reading Circle and Christian Workers' Topics

By **ELIZABETH D. ROSENBERGER.**

SOUL WINNING.—Prov. 11:30.

For Sunday, June 18, 1905.

I. The Soul is Precious.

1. It is a Part of Divinity, Gen. 2:7
2. It is Worth Saving, 1 Thess. 5:23
3. We are "Saved to Serve," James 5:20
4. Influence Cannot be Measured.

II. It is Lost by Nature.

1. Satan's Power is Strong, Mark 5:4
2. Prayer is His Strongest Enemy, Mark 9:29
3. We Cannot Escape While He Sleeps, ... 1 Peter 5:8
4. The Way of the Transgressor is Hard, Prov. 13:15

III. It Must be Saved.

1. We are Living Finger-boards, Psa. 51:13
2. Eternity is Longer than Life's Journey, ... Dan. 12:3
3. Where is the Danger-line? Gen. 6:3
4. Consider a Starless Crown.

Text.—The fruit of the righteous is a tree of life; and he that winneth souls is wise.—Prov. 11:30.

References.—Psa. 106:8; 119:60; Jer. 20:9; Amos 2:11; Jer. 21:8; Ezek. 18:32; Joel 2:32; Amos 5:4; Matt. 18:14; 24:13; Luke 14:16-24; Luke 19:10; Acts 2:39; 1 Tim. 2:4; 1 Cor. 1:21-25; Hos. 10:12; 1 Cor. 6:20; Matt. 20:28; Luke 24:49.

Soul Winners.

The laborers in the vineyard who commenced work in the morning, murmured because their reward was no greater, yet they agreed to work for a penny a day. The worker who wins souls is not self-seeking. He will not bargain with the Lord, but will work right on without any results if need be. "They that be wise shall shine as the brightness of the firmament; and they that turn many to righteousness as the stars for ever and ever." Sinners know when you are seeking them because you love them. Some who talk to them with sound arguments and eloquent phrases have no power, their words shine like ice in the sunlight, but the glitter is all, love is missing.

Love.

Had I the tongues of Greeks and Jews,
And nobler speech than angels use;
If love be absent, I am found
Like tinkling brass, an empty sound.

Were I inspired to preach and tell
All that is done in heaven and hell—
Or could my faith the world remove,
Still I am nothing without love.

—Dr. Watts.

"What Shall We Do?"

Peter preached on the day of Pentecost and his sermon was about Jesus who had so recently been crucified, the Holy Spirit prompted him, and about three thousand souls commenced to seek Jesus. They cried out, "Men and brethren, what shall we do?"

They were in earnest and they found Jesus and were baptized. When men seek Christ, as they seek wealth or honor, then they will be saved. Men hastened to the Gold Coast or to Alaska in spite of danger and privation, looking for gold. When will men learn to prize their souls' salvation?

One Sunday-school Teacher's Task.

One Sunday-school teacher who was concerned for the welfare of his scholars went to D. L. Moody and told him that he must give up his class on account of lung trouble and go back to his home. And he added, "I am not afraid to die, but I will meet God and not one of my class is converted, what shall I say?" What shall we say when we are called to give an account of our stewardship here? Moody went with him to visit every member of his class. He would pray with each one, and ask him to come to Christ. At the end of ten days, the last one had yielded, and the entire class knelt and prayed with him before he left them. Some of those members became the most active Christians in that church, practical, ready to do valiant service for Christ.

Andrew.

It was Peter who preached on the day of Pentecost, John leaned on Jesus' breast, and some of the other disciples performed miracles and endured persecutions, and Andrew is not spoken of in connection with these events; yet he did a glorious work—he called his own brother Simon and led him to Jesus. It is not always an easy task to lead your own brother or sister to Jesus, most of us would rather talk to people we do not know so well. Philip was called away from a great work in Samaria to go and speak to one man in the desert.

One Talent.

You may think that you are too small, too insignificant to be used in winning souls. There was one man who had ten talents, there were three who had less, and I think the proportion of one-talent men is greater now. At least it does seem as if God uses a great many men and women of average talent to carry out his designs. What we need is to be up and about our Master's work. If we use the means and opportunity we have they will be increased. A farmer's wife had no time to engage in church work, even if she had been able, for she milked and churned, and took care of her children and housework unaided. One day she spoke to their German hired man, "Wil-

liam, have you a Bible?" No, he had not. "Would you like to have one?" William thought he would, and she bought him one. In the spring William joined church and ten years afterward his pastor spoke of him as his right-hand man, untiring in the service of the Lord.

Keep Shining.

Some Christians let the cares of the world rob them of their light and joy. In one of the Grecian games the men ran a race, carrying lights. Their torches were lit at the altar, and the men who came back with their lights still burning won a prize. If in the struggle against sin and temptation your light has gone out, come back to the altar of the Savior's love and light up your torch anew. Then try to lead some soul to Jesus. If you can persuade but one soul, you do not know how many hundreds that one may win, and your work will live after you are dead.

Why Come to Christ?

Because we need him every hour. Sometimes I think that we are inclined to the idea that we come to Jesus so that we can be saved when we die; we are afraid to die without him, and we think of our salvation as a kind of benefit payable upon death. But we have learned by our sad mistakes that we cannot live a single day satisfactorily in our own strength. Christ enables you and me to come nearer to our best than we have ever been able to do alone; he helps me to make life count for the most. Life takes on a fullness and a richness that is only possible through our Savior.

Topics for Discussion.

1. Are there any who cannot speak a word for Jesus? Heb. 13: 6.
2. What kind of characters should we bear if we want to win souls? Psalm 52: 11.
3. What methods are best adapted to revival meetings? Psa. 68: 11.
4. Have you talked to any of your Sunday-school scholars? 1 Cor. 9: 22.
5. Must we have a knowledge of the Bible if we would win souls? Matt. 13: 51, 52; 1 Cor. 1: 27, 28.

EMPLOYMENT BUREAU.

Notes on "Reading Circle."

We are glad to say that the Missionary Reading Circle in our school is larger now than at any previous time, the enrollment numbering about a half hundred.

We have just completed reading, "The Christian's Secret of a Happy Life," and are now taking up, "Modern Apostles of Missionary By-Ways."

In order to give its members work, to increase the interest in the Circle and in missionary work in general, the Circle will render a program April 27 and

also one May 11, both to be given in adjoining congregations.

The Circle has, from time to time, been encouraged and inspired by interesting talks from visitors and also letters directed to the Circle, two of which were recently received, one from Sister Mary Grabill, a former member of our band, but now in the Baltimore mission, and the other from Brother I. S. Long, of India. We much appreciate their continued interest in us, and trust they may yet have the satisfaction of seeing some consecrated workers go out from our present Circle.

The readers of the *Rays* will remember we mentioned in the last issue of enjoying a brief visit from Brother and Sister Ross while on their way to India. A letter from Sister Ross, dated Jan. 22, has just been received by one of the members of the Circle and for the interest of those who know her we quote the following: "We are happy in our new home and surroundings. Found almost everything more homelike and agreeable than we had expected. We have a very nice garden with many of the vegetables you have. . . . In the Orphanage there are 115 boys. Many of them have very sweet faces. We cannot help but love them all. How we long to talk with and come into personal touch with each one of them. We surely can expect at least a few faithful workers from among these boys. Most of the larger ones have already been baptized."

In conclusion she says: "As we look to the 'homeland' from this side we feel more than ever the great need for more earnest, faithful, consecrated lives to labor both there and among such as these people. Yes, the Lord needs so much that every professed Christian should be a 'live coal.' Oh that we might each spend the time that we now spend in thinking and planning for 'self' and 'selfish ambitions' in thinking how we may better those about us. How much happier we and others would be!"—*Anna M. Hutchison.*

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XXXI.

Berlin, Germany.

Dear Mr. Maxwell:—

We certainly all enjoyed the trip from Copenhagen to the northern part of the Jutland Peninsula and return. Some very interesting things were noticed by the party. The country reminds one of southern Iowa somewhat, so far as the undulating prairie is concerned. However, it differs in this, that many little water-ways make traveling a constant change. In going from Copenhagen to Hördum, I believe we changed from train to boat and boat to train five different times in one night. The land is much more fertile than where we have just been in the south central part of Sweden.

The state religion is Lutheran; the churches in the country look as if they might have been built over one pattern. The farmhouses too, are practically all built alike. Here the people actually live in the country. They are not packed away in little villages all together, as in some other oriental countries. Our guide took us through the house of one of the natives in order that we might see how it was constructed. The houses are all one story, and as a rule are only one room wide which makes the length of the house entirely responsible for its size, the different rooms of the house being end to end to each other. In the house which we visited the rooms were as follows: First, the carpenter shop; second, the dining room and bedroom, the latter being in the wall of the dining room like an old-fashioned cupboard; third, the lagenhet (kitchen); fourth, cowstable; fifth, feedroom; sixth, threshing floor; seventh, mow; eighth, wagon shed. The bedroom was the most amusing thing to us. It looked so funny to see the doors opened which exposed the shelves in which the beds are made, but experience taught us that it was no bad place to sleep, and that the chances were poor for falling out of bed.

While we visited this family, of course we had to drink driche and coffee, and eat coffee bread with them. When we were ready to go, every last member of the family accompanied us to the very limit of their possessions as is the usual custom. When the line is reached, the father and mother of the family bids you God-speed. The little boys shake hands with you, and with their feet fixed firmly together they make an exceedingly low bow to show their reverence for you. The respect which the little girls have for you is shown by extending the hand, and while shaking hands with you the little girl lifts her left foot just off the ground and makes a short, quick attempt at kneeling with the right limb. The older ladies do the same thing but not in such a conspicuous way.

All over the country little mounds are to be seen, where prehistoric men have buried their dead. Those who have taken the trouble to investigate say that these mounds are full of the bones of a prehistoric race and that they contain skeletons of horses, tools, implements, etc. Had time not forbidden, we certainly should have tried the pick and shovel on one of them to see what we could find.

We noticed one thing along the railroads here in Den-

mark that we have not seen elsewhere. When the train leaves a station it automatically rings a bell at the next station which apprises the agent and the passengers of the fact that the train has left the last station and will soon be on hands. And, too, their system of checking baggage was quite new to us. You take your baggage to the baggage car and they give you no check for it nor receipt of any sort. When you arrive at your destination you must go in person to the coupe containing the baggage and identify your own piece, pick it up and walk off with it.

At Vamdrup we crossed the line into Germany and were soon on our way to Berlin. The country from Hamburg to Berlin is certainly a very undesirable place to live; it is very flat and sandy. Occasionally you see a large sand-hill and quite frequently large peat bogs which furnish employment for hundreds and fuel for thousands. The principal industry of the people in this section is the raising of telephone poles. They plant orchards of the cypress trees each year and harvest some each year. For example: Suppose a man had twenty-five acres of ground, he would plant five acres each year and at the end of five years he could harvest the orchard that he had planted first, after which he could replant it; and so you see after the first five years he could have an orchard to harvest each year and one to plant. Cultivated as they are they make very nice poles.

Berlin is a very nice city of two and a half million people. Very little English is spoken in the city. Berlin is in the very heart of the Empire and is seldom visited, except by tourists and globe trotters. The royal palaces, government halls, and the soldiers' barracks are all here at the capital. Twenty-eight thousand troops are stationed here in time of peace and twice that number in war. Unter Den Linden is the finest street in the capital city, and is a grand sight. On this street are to be found the University Academy, the Humboldt Palaces, the Palaces of Wilhelmina, the National Museum, and the Cathedrals. At the foot of this grand boulevard stands a Lutheran church which was a Catholic church at the time of the Luther Reformation; a crucifix which was on the cross at the door, was taken off and taken inside, and since that time it has been the Lutheran church and the crucifix remains only as a relic.

We visited some of the museums, and we must confess we were a little surprised to see in their paintings the faces of Christ, Paul, John and others, bearing the features and lineaments of the Germans very distinctly. It showed very distinctly that the artist, who was a German himself, thought of course that Christ, too, was a German. This reminded me of some people who do not like to sing and pray in any other language but their own, thinking that that is the only kind that is used in heaven.

Sincerely yours,

Marie.

(To be continued.)

RICHES certainly make themselves wings.—*Solomon*.

The Q. & A. Department.

Are there trains running through Kentucky which do not have separate compartments for negro passengers?

The laws of Kentucky make it imperative for railroads in that State to provide a separate compartment for colored passengers. This compartment does not consist of a special car, but of one end of the car partitioned off. A notice is placed in the cars designating the compartment that is to be used by white and colored passengers. The white passengers are not permitted to occupy seats in the colored compartment. All through trains in Kentucky have these colored compartments, but it is a question yet undecided as to whether a colored passenger, purchasing a ticket in a State that does not have the "Jim Crow" car law and going through a State which has such a law, can be compelled to occupy a seat in the "Jim Crow" compartment. The Chesapeake and Ohio Railroad officials construe the "Jim Crow" state laws as not to refer to colored passengers who have purchased through tickets, say from Washington to Cincinnati, both of which places do not come under such a law; whether the State of Kentucky could compel the railroads to force such interstate colored passengers to occupy a "Jim Crow" compartment is a question. The C. & O. does not make its interstate colored passengers occupy the colored compartment, but all of the cars of that road have these compartments, as in all through trains considerable local business is done.

❖

Give a biographical sketch of Pestalozzi.

Johann Heinrich Pestalozzi (Swiss, 1746-1827), the founder of "object teaching," was a celebrated educational reformer. He failed as a clergyman, as a farmer and at first as a schoolmaster, but was unexpectedly successful as an author, his "Leonard and Gertrude" (1781) making him famous. This was followed by "How Gertrude Teaches Her Children." When his friends came into power after the French Revolution and asked him what post he would accept, he replied: "I want to be a schoolmaster." He was sent to Starz in 1789 to care for orphan children, removed to Burgdorf next year, and in 1805 to Yverdun, where his school gained a European reputation, attracting pupils and distinguished visitors from all countries.

❖

What were the maiden names of the mothers of all the presidents of the United States?

Washington, Mary Ball; John Adams, Susanna Boylston; Jefferson, Jane Randolph; Madison, Nellie Conway; Monroe, Eliza Jones; J. Q. Adams, Abigail

Smith; Andrew Jackson, Elizabeth Hutchinson; Van Buren, Maria Hoes; Wm. Henry Harrison, Elizabeth Bassett; Tyler, Mary Armstead; Polk, Jane Knox; Taylor, Sarah Strother; Fillmore, Phoebe Millard; Pierce, Anna Kendrick; Buchanan, Elizabeth Speer; Lincoln, Nancy Hanks; Johnson, Mary McDonough; Grant, Hannah Simpson; Hayes, Sophia Burchard; Garfield, Eliza Ballou; Arthur, Malvina Stone; Cleveland, Annie Neal; Benjamin Harrison, Elizabeth Irwin; McKinley, Nancy Campbell Allison; Roosevelt, Martha Bulloch.

❖

Why are so few gray squirrels found in the woods of Maine?

This question has been referred to the Smithsonian Institution at Washington, D. C., and their reply is that all gray squirrels are migratory, and that the flock that is seen in Maine one fall may be seen in Tennessee the next. Why they travel about is another question, and neither the INGLENOOK nor the Smithsonian Institution is able to answer that. They seem to be made that way.

❖

What is known as Eve's apple tree?

On the Island of Ceylon there is a tree known by this name. The fruit of the tree is orange red, and it is beautiful to look upon. The peculiar thing about it is that each apple on the tree looks exactly as if one bite had been taken from it. It simply is a perfect representation of an apple having been bitten. The fruit is very poisonous.

❖

What was the first political campaign emblem?

It was a finger ring made of copper. It was worn by the adherents of John Quincy Adams, when he ran for the presidency. Engraved on the ring were these words: "John Quincy Adams, 1825."

❖

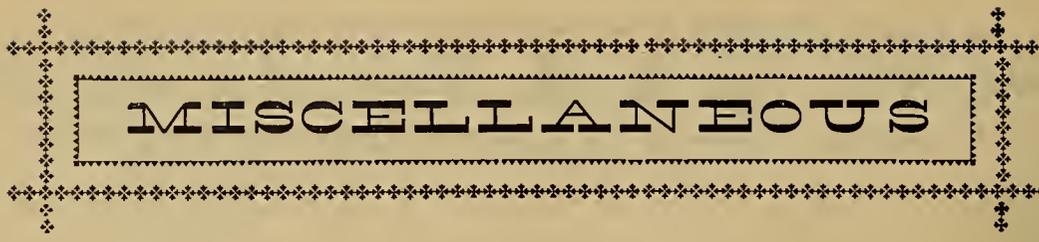

What were the most popular Christian names of the past century?

William, Mary, John, Elizabeth, Thomas, George, Sarah, James, Charles, Henry, Alice, Ann, Joseph, Jane, Ellen, Emily, Annie, Frederick, Margaret, Emma, Robert, Arthur, Alfred, and Edward.

❖

What is the longest stairway in the world?

The longest continuous stairway in the world is probably the one that leads to the tower of the Philadelphia City Hall. It has five hundred ninety-eight steps.

MISCELLANEOUS

THE FORGERY.

Dere teacher, pleze excuse my sun
 Fer absents yisterday;
 I hadd to have him home because
 My servint went away.
 He washes dishes, swepes an' dusts
 As expert as cud be;
 We're all soe proud of him at home,
 He's such a helpp to me.

"Say, mother," he sez yisterday,
 "We kids all luv Miss Drew;
 She's jist ez nice ez she kin be,
 An' mighty pretty, too."
 An' when I maid him stay at home,
 His fase growed awful sãdd.
 "I can't see teecher, then," he sez;
 "Alass! ain't thatt too badd?"

My sun rites all my notes fer me—
 He's ritin' this to you;
 I hirt my hand a weke ago,
 Or maybe it was two.
 But Willie's such a darlin' boy,
 He's helpped me all he cud;
 Excuse his absents, if you pleze.
 Yures trnly, Mrs. Wood.

A NEW CREED.

I BELIEVE in cleanliness of body, mind and soul.
 I believe in kindness to man, woman, child and animals.

I believe in truth because it makes me free.

I believe in the charity that begins at home, but does not end there.

I believe in mercy as I hope for mercy.

I believe in moral courage because I am more than a brute.

I believe in righteousness because it is the shortest and best line between two eternities.

I believe in patience because it is the swiftest way to secure results.

I believe in that kind of industry that takes an occasional vacation.

I believe in that sort of economy that spends money for a good purpose.

I believe in honesty, not for policy's sake, but for principle's sake.

I believe in hospitality because it puts a roof over every man's head.

I believe in obedience because it is the one way to learn how to command.

I believe in self-control because I want to influence others.

I believe in suffering because it chastens and purifies.

I believe in justice because I believe in God.—*Oma-ha News.*

RECIPE FOR BREAKING UP A CHURCH.

DON'T come.

If you do come, come late.

Never come to prayer meeting.

Let the preacher do all the work.

Never speak to any one about Christ.

Be sure and try and run the church.

Don't sing; sit there like a bump on a log.

Never bring any one to church with you.

If you see any one trying to work, stand up and grumble and find fault.

If you see everything is running smoothly, be sure and stir up trouble.

Don't pray for your minister or the church; it would help him and cheer his heart.

Insist on your views being adopted on all questions, and if they are not, kick up a fuss.

Come determined to find fault, and yawn if the preacher trespasses five minutes on your time.

If you see a stranger in the church don't speak to him; never invite him back; then growl and wonder why the church doesn't prosper.

Don't give anything to support the church—hog it all yourself and deadbeat your way to heaven.

Be sure the preacher is always in want financially. Of course, he can work here and board in heaven; he can't live on souls, and if he could it would take a thousand the size of yours to make a dessert for him.

—*Billy Sunday.*

Hast thou plenty? Then rejoice,

Rejoice and freely share.

Hast thou scanty store? E'en then

A little thou canst spare.

And hast thou only bit or crumb,

A donor yet thou mayst become.

Since morsel from thy less or least

For bird or insect makes a feast,

Be the portion small or great,

The loving, generous heart

Will always find it large enough

To give away a part.

—From the Norwegian.

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,

Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

SAMUEL S. THORPE,

Cadillac, Mich.,

DISTRICT AGENT

BRO. JOHN A. MILLER,

Brethren, Mich.,

RESIDENT AGENT

Michigan Land Association.

THE BETHANY BIBLE SCHOOL

CONDUCTED BY

Albert C. Wieand and E. B. Hoff.

The year's work will begin Oct. 3, 1905, and continue eight months—one term before Holidays and two after. The Curriculum provides for thorough courses of study and training in all branches of Christian work. The Bible studies are so outlined as to be both comprehensive and practical. They are also correlated with elective courses in Biblical languages. The Training Department provides for actual field work in all lines of Christian service. Chicago affords unexcelled opportunities for this practical training, and the student, while getting his training, is doing God's own work in Chicago's ripe harvest field. Able instructors, fully consecrated to the work and thoroughly in sympathy with the principles of Christianity as understood by the Brethren church, will be in charge of the various departments. Believing that the deepening of the spiritual life is as important as the development of the intellect that part of the training is especially emphasized.

No tuition. Board, room and incidentals at low rate. For curriculum, circulars, and other information, address:

THE BETHANY BIBLE SCHOOL,
General Delivery, CHICAGO, ILLINOIS.

A Delightful and Profitable California Home for Brethren

As heretofore announced in the Inglenook there is now forming, on the banks of the beautiful Sacramento River, in Glenn County, California, in the heart of the Sacramento Valley, a Colony of German Baptist Brethren.

Feb. 21, 1905, a party of Brethren composed of S. W. Funk, of Glendora, J. Overholtzer, of Colton, Wm. Platt, of Charter Oak (Ministers), T. M. Calvert, M. P. Custer (deacons), M. N. Overholtzer, F. L. Hepner, E. O. Overholtzer, of Covina, Cal., L. S. Ober, of Laotta, Ind., together with a number of friends, including J. P. Funk, of Charter Oak, and C. R. Greider, of Los Angeles, left Southern California on a trip to investigate the land under the Sacramento Valley Land Company's Canal system of irrigation just completed.

Ten of the party were old Californians who have had considerable experience in irrigating, fruit growing and farming in Southern and some in Central California, and are acquainted with the resources, climatic conditions, etc. of this country.

The party spent several days thoroughly investigating the water rights, character of soil, climate, health conditions, etc., in Glenn and Colusa Counties, and were well convinced that the richness of the soil, unailing and cheap water supply, reasonable prices of land, transportation facilities, cool, pure, soft water for drinking, pleasant and healthful climate, etc., would insure a safe investment and deserve recommendation to others for settlement.

The party selected the Packer ranch of 6,600 acres, as a location, and secured an option at prices ranging from \$25 to \$100 per acre, including water right, according to distance, west from the River, character of soil and drainage. The party bought almost 800 acres, selecting from the cheapest to the highest price.

This tract runs about three and one-half miles west from the new town site of the Brethren, which is located $3\frac{1}{2}$ miles north of Princeton near the banks of the Sacramento, amidst large oak trees. It is about 80 miles north of Sacramento City, the capital of the State.

All the water that is needed for any kind of farming or fruit growing is furnished by the Company for \$1.00 per acre per year, and the Company keeps up the ditches. The water can be had almost any day in the year.

"This is an opportunity that perhaps has never before been offered in California or in any other part of the United States." A number of those who have purchased will soon move to their new location and others are purchasing, and in a short time this tract will all be settled by the Brethren and their friends, especially by those from the eastern States who desire to do general farming in California.

This is certainly an opportunity to eastern people, as they can reap the benefit of the many years of experience these old Californians have had in irrigating and farming in California.

Wm. Platt and J. Overholtzer, two ministers, have already moved to Princeton, Colusa County, Cal. They

will gladly answer any inquiries and welcome those who come to investigate this country with a view of locating. Any of this party will also gladly answer inquiries regarding the new Colony.

A town site will soon be laid out and in the near future there will be a school, post office, stores and preaching services.

There is a trading vessel which comes up the River once a week and will take produce of all kinds in exchange for groceries and pay cash. With the advantages here and the conditions well adapted to general farming, there is no doubt but what one of the largest congregations of the Brethren in California will be located on this tract in the near future, and those desiring to take advantage of this opportunity should do so as soon as possible.

We have a climate that is no doubt equal to any valley of any consequence, for health and agreeableness. There is an occasional case of malaria in the lower and undrained lands of the county where water stands, but as the lands are becoming more thoroughly drained, this has almost entirely disappeared. For throat and lung trouble our climate is excellent. The weather is a little warmer than near the coast in Southern and Northern California, but not so warm as Riverside, Redlands, San Bernardino, etc.

The continual flowing water of the great Sacramento River directly from Mt. Shasta and the Mountains add greatly to the health of the country.

Any one desiring to see this tract will go to Colusa Junction, thence to Colusa on the Narrow Gauge, and, by notifying the Farmers and Merchants Bank of Colusa, they will be taken direct to the Tract in automobiles free of charge.

This is the land where the great oak and sycamore trees grow. The river banks are covered with wild grape and blackberry vines entwined amidst the large trees.

The river abounds in trout, salmon, bass and other delicious fish. The soil is rich sediment, 20 to 60 feet deep. It will produce 10 to 15 tons of alfalfa, 10 to 15 tons of peaches, pears or prunes. Oranges ripen there four weeks in advance of those of Southern California and always command higher prices for that reason. The present crop of wheat and barley will pay 10 per cent on \$100 an acre. It has the best supply of water for irrigation in all the west. I am a native of California. I have been actively engaged in developing California lands for 30 years. I am familiar with every large ranch and every section of California, and I know the Packer Ranch to be the best ranch of equal size in California. Its location is on the banks of California's largest river, where steamboats regularly ply. Its climate and its soil renders it ideal. Its productiveness is certain, not guess work.

Illustrated catalogues will be sent to any address free.

At request of the Brethren who have visited and located on the Colony, I will have a representative at Bristol during the Conference with photographs, and, if possible, I shall be there in person to meet any of the Brethren who may desire a home in California.

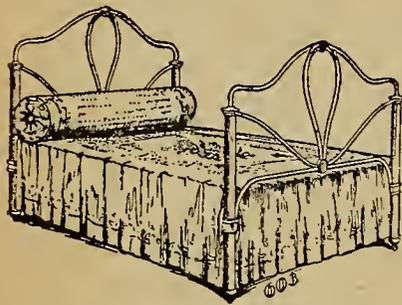

C. M. WOOSTER, President,

Sacramento Valley Land Company,

IRON AND BRASS BEDS.

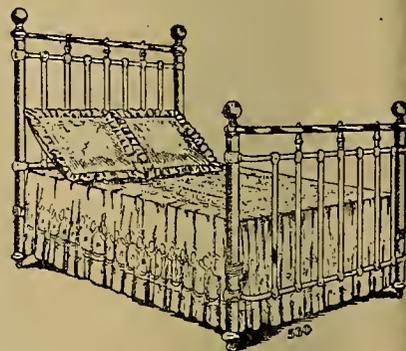

The increased use of brass trimmed iron beds throughout the country during the past two years and the constantly increasing demand has been met by our furniture buyers. We have taken the condition into consideration in making our selections and have placed the iron bed department in the hands of a thoroughly experienced manager, who is familiar with every detail of the business. In bringing before you this line, we have taken as a basis of your wants the designs which have led the New York and Chicago markets during the past months together with many exclusive patterns. The wooden bed is fast becoming a thing of the past, and before many years it will be entirely displaced by this elegant and sightly article of bed room furniture. Our Iron Beds are made in the following lengths and widths only: 4 ft. 6 in.; 4 ft.; 3 ft. 6 in.; and 3 ft.; and unless otherwise stated in the description of the bed we can furnish them in all sizes. All beds are finished in high grade white enamel thoroughly baked to make them lasting. Freight Charges are Very Low on Iron Beds. We ship them knocked down. They go in a small package, are accepted by the railroad companies at a low rate. You will find the freight will amount to very little compared with what you will save in price.

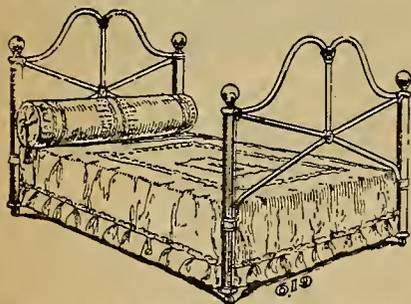

2444—All iron bed. This bed is well made strong and durable; is 50 inches high at head, posts $\frac{3}{4}$ inches thick, top rod $\frac{1}{2}$ inch. A very neat bed at a low price. Finished in best white enamel. Made in 3 sizes.

\$14.75

This Bedroom Suite is one of the most attractive looking and the best low priced on the market. It is built according to the very latest and adopted by our factory for constructing furniture of this kind. The throughout of solid golden oak with the exception of the panels in the bed and the drawer fronts, which are all made of three-ply, built up stock, finished in perfect imitation of quarter sawed oak. Ornamented with elaborate scroll carvings. The bed is 6 feet 1 inch high and 4 feet 6 inches wide. The dresser is 20 inches wide and 42 inches long. Has a 22x28-inch bevel plate mirror mounted in a handsome frame. The top drawer is swell front, and the same on the commode. All knobs and handles are fancy cast brass, and the casters bearing. This suite is exceptionally well made and finished. We consider great bargain. Shipped direct from the factory at Sheboygan, Wis. Shipping weight, 235 pounds.

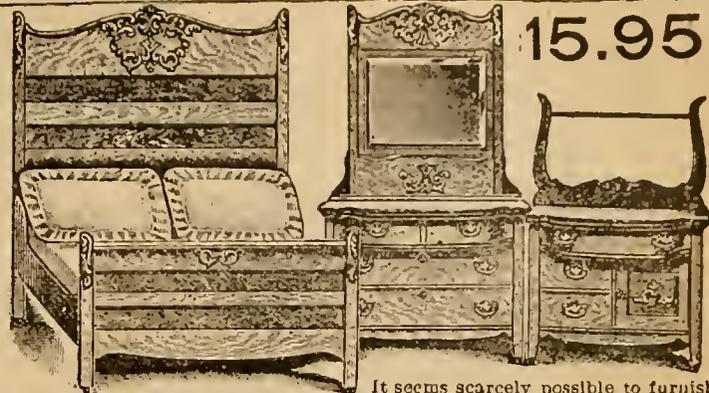

No. 470 Price of the complete suite. \$14.75

\$14.90

Bedroom Suite, made of the best selected northern hardwood, finished in a dark stain. We can recommend it as being good, substantial, well finished and neatly constructed. This bedroom suite consists of bed, dresser and commode, and is one of the best values shown this season. The bed is nicely made, and is 6 feet high and 4 feet 6 inches wide; sides are thoroughly substantial. The construction of the bed is such as will give you years of good service. The dresser is handsome; is fitted with extra quality bevel plate mirror, 22x28 inches; top and sides of mirror frame are artistically carved; dresser top is double and 42 inches in size; drawers are very large and roomy. Commode has 30-inch swell shaped front top, top drawer, two small drawers, and a large cupboard.

15.95

It seems scarcely possible to furnish a strictly first class bedroom suite, made of solid golden oak, at \$15.95. It is a handsome in design, beautifully finished and decorated with tasteful carvings. The dresser and commode are fitted with best quality brass trimmings and all three pieces are fitted with ball bearing casters. The bed is full size, being 6 feet 4 inches high and 4 feet 6 inches wide. The dresser is 44 inches long and 20 inches wide, has double top and French bevel plate 22x28-inch mirror, handsome double swell top drawers, besides two full size roomy straight front drawers. The washstand measures 18x34 inches, has a full swell top drawer to match the dresser, two lower drawers and a large roomy cupboard. We ship this suite direct from our factory in Northern Indiana, but reserve the privilege of shipping from our store when convenient.

\$17.55

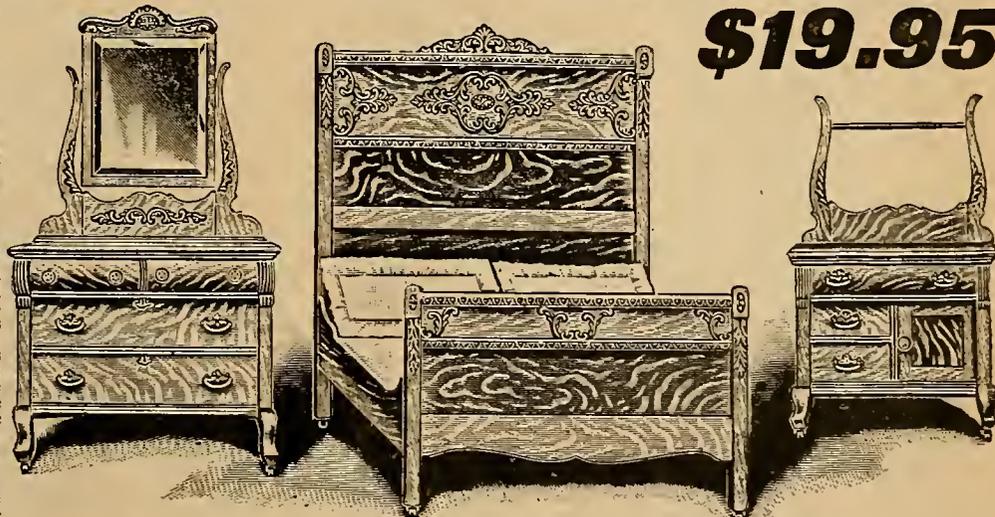

This suite should not be compared with suites offered by other dealers at anywhere near our price, as it is equal in quality and finish to suites that retail regularly at \$28.00 to \$35.00. It is made of golden elm or maple mahogany finish, handsomely carved and decorated, as shown in the illustration. The trimmings are best quality brass, and each piece is fitted with ball bearing casters. The bed is full size and measures 6 feet 4 inches in height and 4 feet 6 inches in width. The dresser measures 21x42 inches, and has double deck top, double swell top drawers and two large, roomy, straight front drawers. The mirror is French bevel plate, 21x30 inches. The commode is 18x34 inches, has splashier back and swell drawer to match the dresser, besides two lower drawers and a roomy cupboard. We ship this suite direct from our factory near Grand Rapids, Mich.

An Excellent Oak Bedroom Suit

\$19.95

No. 540 In buying this 3-piece Bedroom Suit it puts you in possession of one that will always be admired by your friends and be a source of pleasure to yourself, knowing that it is a suit artistically designed, honestly made, well finished and will always give your room a cozy and neat appearance. In designing this suit our uppermost thoughts were to give you style, good material and good construction, and these points were not overlooked. In order to quote this low price we ship the suit direct from factory in Central Indiana, saving all unnecessary expense in handling, freight charges and drayage; you benefit by the saving and receive it in the quality. THE BED stands 78 in. high and is 4 ft. 6 in. wide; head and foot are heavily paneled, finished with carved moulding extending full width of bed. Has beautiful raised scroll carvings; the posts are handsomely ornamented and have fancy carved bracket on top. THE DRESSER is very handsome and attractive, is designed after dressers that sell separate from the suit at \$18 to \$25. Has a double top, 42x20 in.; the two top drawers extend out from the base and have shaped fronts; stands on full French legs, which gives the whole piece a very rich effect. The toilet standards are correctly proportioned in keeping with the base and are beautifully outlined and carved, is fitted with a 24x20 French bevel plate mirror. THE COMMODOE matches dresser, having the same style shaped drawer, French legs and carved towel rack, two small drawers and cupboard. Top is 34 x19 in. The suit is finished in golden oak, casters and fitted with solid brass handles and knobs. Dresser has locks and keys. Securely packed. Shipping weight, 350 pounds. Sold in full suit only. No. 542

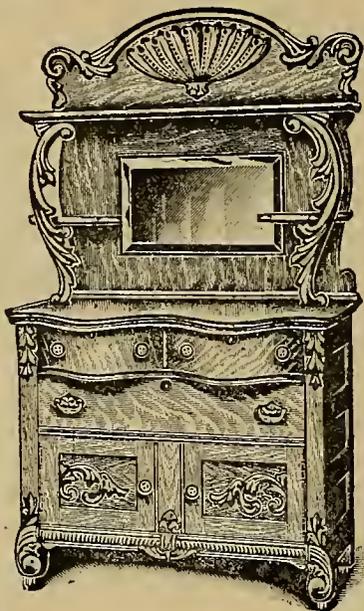

Three-piece Suit. Price..... \$19.95

OUR SPECIAL LOW PRICE
SIDEBOARD

\$9.95

Honest Value, Dependable Construction and a good finish is what you get when you purchase this SIDEBOARD. It is made of selected oak instead of common, cheap cull oak, such as you will find in boards sold by other houses at a so-called low price, and which in reality is very high for what you get. This board has a rich golden finish; the surface is smooth and even, not rough as in other makes. The mirror is 24x14 inches French bevel plate. The dimensions are: width, 42 inches; depth, 20 inches; has two separate top drawers; one is velvet lined for use of silverware; one large drawer for linen, and a two door cupboard below. The base and top is nicely carved in raised scroll patterns. The standards supporting the top shelf have graceful curves; two small shelves on either side are convenient for fancy dishes in decorating the board, which adds to its appearance. Carefully crated; shipping wt., 165 lbs. **\$9.95**
No. 387. Price.....

OUR SWELL DESIGN

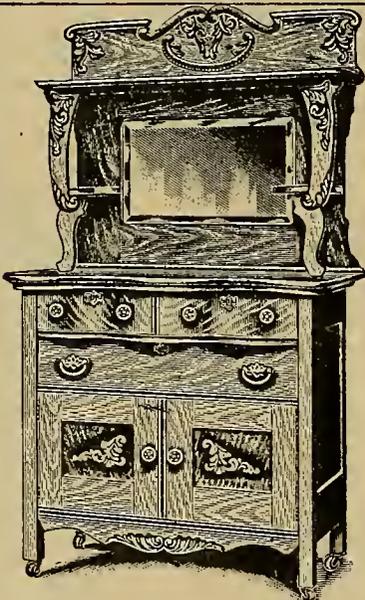

\$14.65

This is an extremely handsome SIDEBOARD and will be attractive in any dining room. In large dimensions, the top being 45 inches wide and depth 21 inches. It is made of selected oak, highly finished in a lustrous golden color; has two double serpentine quarter oak top drawers; one velvet lined for silverware; directly under is a very large drawer for table linen and double door cupboard below. The base and top are elaborately carved; has handsomely shaped and all carved standards, with shelves at either side. The mirror, 24x14 inches, bevel plate. The trimmings are all cast brass; drawers are fitted with lock and keys. Sold in retail furniture stores \$21.00. Securely crated; shipping weight, 175 lbs. **\$14.65**

OUR BARGAIN LOW PRICE
SIDEBOARD

\$10.98

At our low price there never before has been such value offered. While we cannot show you the actual sideboard, we do wish to impress upon you that we are giving you 50 per cent better value than you can purchase a sideboard elsewhere at the same price. While illustrations may favorably compare, there is a vast difference in the actual piece of furniture. This board is constructed in a workmanship manner; strongly built, made in the best oak, highly finished in a golden shade; is 42 inches long, 20 inches deep; shaped top, two serpentine shaped top drawers; one lined for silverware; one large drawer for table linen, etc. Large cupboard below, carved doors, carved standards and top. 24x14 inches French bevel plate mirror; fitted with polished brass handles and knobs, locks, keys and casters. Carefully crated; shipping weight, 125 lbs. **\$10.98**
No. 388. Price...

SWELL FRONT SIDEBOARD

\$15.95

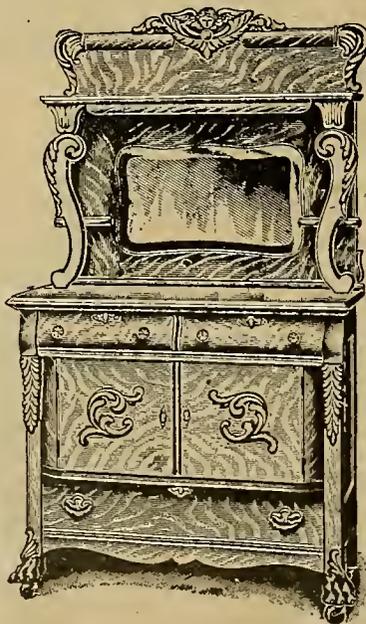

The price quoted on this Sideboard is about 40 per cent less than you can purchase from your dealer or elsewhere. It is shipped direct from factory and sold to you at cost of labor and material, with but our one small per cent added, which gives you a beautiful piece of furniture for your dining room at a very low price. It is made of selected oak, having a quarter sawed front, highly finished in a rich golden shade. The two top drawers, one being lined for silverware, and the long drawer for table linen, are double swell front. The top is shaped in keeping with the lines of drawer, 42 inches wide by 22 inches deep. Below is a double door cupboard. Has a fancy shaped French bevel plate mirror, 28x16 in. The standards supporting top shelf are of handsome design and beautifully carved; has shelf on either side of mirror. The carvings are all raised scroll design. The trimmings are all cast brass; fitted with locks, keys and casters. Securely crated; weight, 190 lbs. **\$15.95**
No. 391. Price...

THIS BEAUTIFUL OAK SIDEBOARD ONLY

\$13.45

The notable features of this Sideboard are the size and handsome design. It is entirely new this season, and so far has proven to be very popular for a low price sideboard. It is one of our special designs and is entirely different from any ever before catalogued, and is in every sense of the word a bargain. It is 45 inches wide and 22 inches deep, is made entirely of best selected oak and has a lustrous golden finish; has a heavy shaped double top; the two top drawers are full swell and quarter sawed fronts. One is velvet lined for silverware; below is a long drawer for table linen, etc., below this is a large cupboard the full length of board, fitted with handsome carved doors; has fancy shaped legs with strong casters. The top is very artistically designed; the standards supporting the shelf are gracefully curved and handsomely carved; has a 26x16 French bevel plate mirror, which is an unusual large size for sideboards at such a low price. On either side of mirror is a shelf convenient for use in decorating with china; the top is very attractive, has large carved ornament in center, carved moulding and end pieces; is fitted with locks and keys and brass handles and knobs; shipping wt., 200 lbs. **\$13.45**
No. 390. Price...

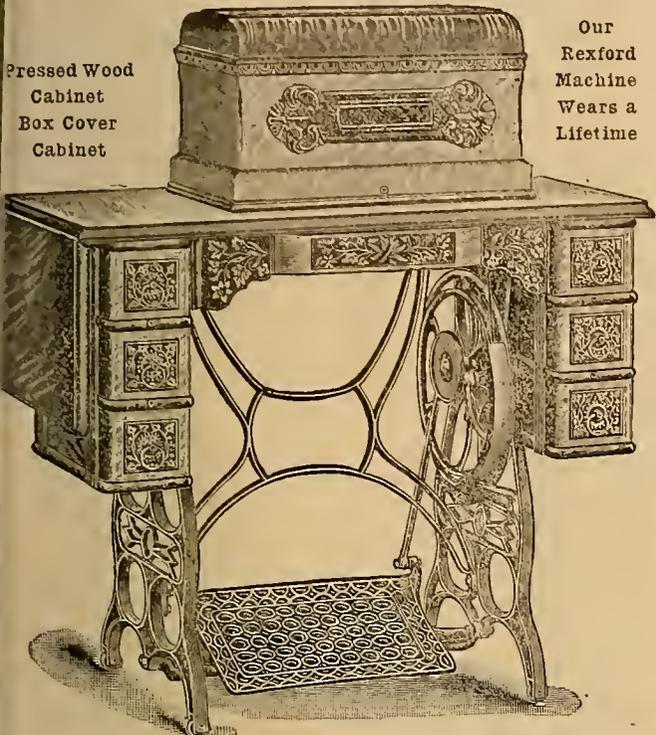

\$15.98

You would probably look a long time and then you would not find a sideboard to compare with this one in construction, finish, design at our low price, \$15.98. It is a wonderful bargain and should not be overlooked by those wishing to purchase a sideboard. The workmanship is the highest standard. The material used is the highest grade. Made throughout of solid oak, with a full quarter sawed oak front. The top is 45 inches long, 23 inches wide and stands 80 inches high. It is highly finished in golden oak, has two small drawers, one being lined for silverware, have shaped fronts the doors to the large cupboard below are set out from the base, are hinged to a shaped moulding, giving the board a swell appearance. The design is entirely new and promises to be very popular. Just below the cupboard is a long linen drawer the posts on either side are nicely carved; has heavy carved claw feet heavily casted; drawers and door are fitted with locks and keys and brass trimmings. The top has gracefully curved standards supporting a large shelf and two small ones on either side; the ornamentation on the back, consisting of hand carved figures and scroll work, gives the sideboard a rich effect; has a fancy shaped 28x16 in. French bevel plate mirror. Is securely packed. Shipping weight, 260 lbs. **\$15.98**

C. S. Morey Makes Remarkable Prediction in Regard to Beet Growing Here.

"Colorado as a beet sugar producing state will soon leave Michigan far in the rear, if the present developments continue."

This assertion was made this morning by C. S. Morey, head of the Morey-Boettcher syndicate. He has just returned from a trip to the East. While there he made arrangements for the transfer of one of the largest Michigan factories from Saginaw to Sterling, Colo. The new factory will have a capacity of 600 tons and will give employment to hundreds of men.

This will make the seventh beet sugar factory in the South Platte Valley owned by this syndicate.

A NEW EDITION OF THE

Inglenook Cook Book

This cook book has become so popular that we were compelled to get out another edition.

We are printing it on much better paper this time and are binding it in our own bindery, insuring a much better book than previous edition.

It contains 1,000 recipes by the best cooks in the country and are all simple and practical. Many good cooks tell us they have laid all other cook books aside and use only the **Inglenook Cook Book**.

It is being bound in a substantial paper binding and also good oil cloth. Price in paper binding, each, 25 cents. Oil cloth binding, each,35 cents.

If you do not have a copy, send now, and you will be pleased.

Brethren Publishing House,
Elgin, Illinois.

A Delightful and Profitable California Home for Brethren

As heretofore announced in the Inglenook there is now forming, on the banks of the beautiful Sacramento River, in Glenn County, California, in the heart of the Sacramento Valley, a Colony of German Baptist Brethren.

Feb. 21, 1905, a party of Brethren composed of S. W. Funk, of Glendora, J. Overholtzer, of Colton, Wm. Platt, of Charter Oak (Ministers), T. M. Calvert, M. P. Custer (deacons), M. N. Overholtzer, F. L. Hepner, E. O. Overholtzer, of Covina, Cal., L. S. Ober, of Laotta, Ind., together with a number of friends, including J. P. Funk, of Charter Oak, and C. R. Greider, of Los Angeles, left Southern California on a trip to investigate the land under the Sacramento Valley Land Company's Canal system of irrigation just completed.

Ten of the party were old Californians who have had considerable experience in irrigating, fruit growing and farming in Southern and some in Central California, and are acquainted with the resources, climatic conditions, etc. of this country.

The party spent several days thoroughly investigating the water rights, character of soil, climate, health conditions, etc., in Glenn and Colusa Counties, and were well convinced that the richness of the soil, unfailing and cheap water supply, reasonable prices of land, transportation facilities, cool, pure, soft water for drinking, pleasant and healthful climate, etc., would insure a safe investment and deserve recommendation to others for settlement.

The party selected the Packer ranch of 6,600 acres, as a location, and secured an option at prices ranging from \$25 to \$100 per acre, including water right, according to distance, west from the River, character of soil and drainage. The party bought almost 800 acres, selecting from the cheapest to the highest price.

This tract runs about three and one-half miles west from the new town site of the Brethren, which is located $3\frac{1}{2}$ miles north of Princeton near the banks of the Sacramento, amidst large oak trees. It is about 80 miles north of Sacramento City, the capital of the State.

All the water that is needed for any kind of farming or fruit growing is furnished by the Company for \$1.00 per acre per year, and the Company keeps up the ditches. The water can be had almost any day in the year.

"This is an opportunity that perhaps has never before been offered in California or in any other part of the United States." A number of those who have purchased will soon move to their new location and others are purchasing, and in a short time this tract will all be settled by the Brethren and their friends, especially by those from the eastern States who desire to do general farming in California.

This is certainly an opportunity to eastern people, as they can reap the benefit of the many years of experience these old Californians have had in irrigating and farming in California.

Wm. Platt and J. Overholtzer, two ministers, have

already moved to Princeton, Colusa County, Cal. They will gladly answer any inquiries and welcome those who come to investigate this country with a view of locating. Any of this party will also gladly answer inquiries regarding the new Colony.

A town site will soon be laid out and in the near future there will be a school, post office, stores and preaching services.

There is a trading vessel which comes up the River once a week and will take produce of all kinds in exchange for groceries and pay cash. With the advantages here and the conditions well adapted to general farming, there is no doubt but what one of the largest congregations of the Brethren in California will be located on this tract in the near future, and those desiring to take advantage of this opportunity should do so as soon as possible.

We have a climate that is no doubt equal to any valley of any consequence, for health and agreeableness. There is an occasional case of malaria in the lower and undrained lands of the county where water stands, but as the lands are becoming more thoroughly drained, this has almost entirely disappeared. For throat and lung trouble our climate is excellent. The weather is a little warmer than near the coast in Southern and Northern California, but not so warm as Riverside, Redlands, San Bernardino, etc.

The continual flowing water of the great Sacramento River directly from Mt. Shasta and the Mountains add greatly to the health of the country.

Any one desiring to see this tract will go to Colusa Junction, thence to Colusa on the Narrow Gauge, and, by notifying the Farmers and Merchants Bank of Colusa, they will be taken direct to the Tract in automobiles free of charge.

This is the land where the great oak and sycamore trees grow. The river banks are covered with wild grape and blackberry vines entwined amidst the large trees.

The river abounds in trout, salmon, bass and other delicious fish. The soil is rich sediment, 20 to 60 feet deep. It will produce 10 to 15 tons of alfalfa, 10 to 15 tons of peaches, pears or prunes. Oranges ripen there four weeks in advance of those of Southern California and always command higher prices for that reason. The present crop of wheat and barley will pay 10 per cent on \$100 an acre. It has the best supply of water for irrigation in all the west. I am a native of California. I have been actively engaged in developing California lands for 30 years. I am familiar with every large ranch and every section of California, and I know the Packer Ranch to be the best ranch of equal size in California. Its location is on the banks of California's largest river, where steamboats regularly ply. Its climate and its soil renders it ideal. Its productiveness is certain, not guess work.

Illustrated catalogues will be sent to any address free.

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime. (Signed) E. L. Dotson.

No. 24.

THE CALL FROM THE HEIGHTS.

BY MARY C. STONER.

When the radiant sun is shining,
And the thrush his carol sings;
When the heart has ceased repining,
And all doubts have taken wings;
When the crystal streams are flowing
By the dewy pastures green;
When the earth with joy is glowing,
And no trace of death is seen;
Then the youth in life's fair morning
Stands upon yon distant height,
Looking forward thro' the dawning,
Filled with longing and delight.
How his free heart thrills with rapture
As he upward lifts his eye!
For the guardian of the future
Points a pathway to the sky.
But in accents softly falling
On this then enraptured morn
Comes the voice of Duty calling,
Which by sainted lips is borne;
See yon distant height of glory
Tow'ring upward to the skies?
If thy life would win this glory
It must be a sacrifice.
For life's triumphs, how'er noble,
Viewed from Hermon's lofty height,
Have their depths of tribulation
In the journey to delight.

See, the Summer's sun is shining
And the sweat is on his brow,
As his weary feet are climbing
Steep and rugged pathways now:
Fiery trials, grievous heartaches,
Many burdens hard to bear
Fill the soul with bitter anguish,
Mark the manly brow with care.
But a flood of radiant beauty
Bursts upon his vision clear,
For beside his path of duty
Shady nooks and flow'rs appear;
Pause a moment ere we leave him
'Mid the scenes of life's midday,
For the sun shines bright upon him
And I hear him softly say:
Lovely flow'rs to cheer the fainting,
Bloom along life's great highway.—
Their sweet mission,—simply waiting,
Just to bless a pilgrim's way.

Now the Autumn leaves are falling,
Summer's tasks have come and gone,
Dost thou see yon peaceful vet'ran
Trav'ling tow'rd the setting sun?
Yes, his face with joy is brightened,
And the path is shorter grown,
Now the heavy burden's lightened
For all doubts and fears have flown:
He is reaping life's great harvest
In his Autumn, bright and grand,
Doing noble deeds of kindness
Till he joins the angel band.
But he pauses, looking upward,
For he hears a glad refrain,
And his soul is filled with rapture.
As I hear him now exclaim:
Sweetest music for the weary
From our Father's home above,
Makes the rough way, once so dreary,
Now a paradise of love.

See, the Winter's snow is falling,
Borne on silent wings of night,
And the sunlight passed forever
From our pilgrim's feeble sight.
Through the valleys, dark and thorny,
Through the triumphs and the strife,
Up the mountains, steep and stony,
Through the tangled maze of life,
With the eye of faith turned upward,
While he kissed the chast'ning rod,
He has journeyed ever onward
In the strength of Israel's God.
Now he's waiting at the threshold
Of a bright and glorious dawn,
List'ning for the Father's summons
To his weary child, "Come home."
Now, methinks I see the angels
From the golden courts above
Bear him on their shining pinions
To the realms of heavenly love;
And the beauty of that city
Mortal tongue can never tell,
Dwelling with the hosts triumphant
Sainted pilgrim, fare-thee-well!

Ladoga, Ind.

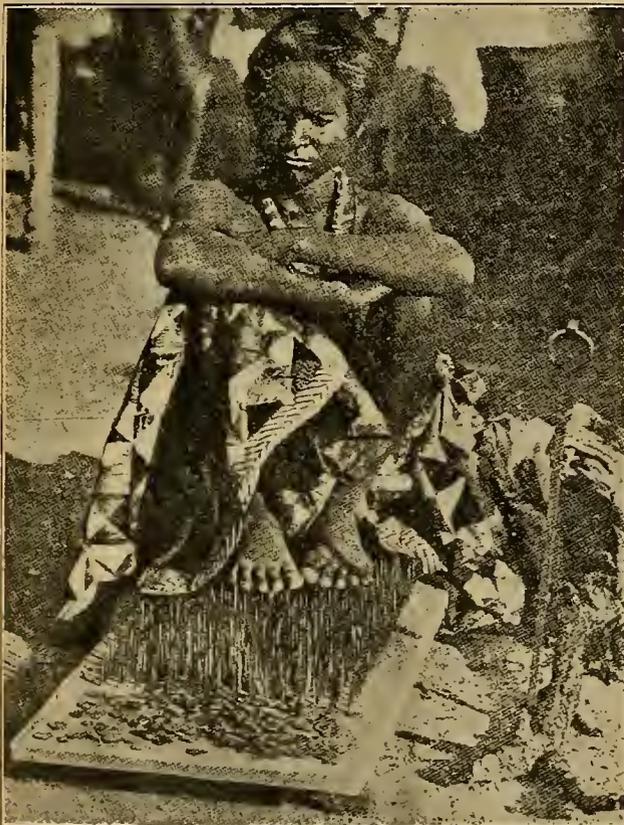

Tell me how much you read your Bible, tell me how much you pray, tell me how much you give to the poor, and I'll tell you how much you register upon God's thermometer.

FAKIRS, DEVOTEES, HOLY MEN, JUGGLERS AND RELIGIOUS BEGGARS IN INDIA.

BY D. L. MILLER.

IN no other country in all the world, outside of India, are to be found so many so-called holy men, devotees and religious fakirs. Their name is legion and you will find them by the wayside in the country, in the native village, in town and city all over this populous land. The reason for the prevalence of this class of leeches on the body politic is to be found in the ignorance and superstition of the great mass of the people. They regard the wandering fakir, the juggler and the snake charmer with a kind of superstitious awe and religious favor that is hard for us to understand. These human sponges wander about the country and secure a much better livelihood by their imposition than their helpless dupes ever enjoy.

You will find all kinds of these tramps, from the fat, sleek, well-fed beggar who goes from door to door and, under the guise of a religious mendicant, receives his daily food from the mouths of the hungry natives, to his brother with face and hair daubed over with slaked lime and his body covered with unmentionable filth, naked except the merest pretense of a figleaf-like covering, and this worn only because the English government has forbidden the disgusting spectacle of a naked man, smeared with lime, paint and filth, beg-

The Spike Man Sits on His Plank with all the Indifference of a Stoic.

He Has Held His Arms in the Upright Position for Twenty Years and in all that Time Has not Trimmed His Nails.

ging the poor, deluded laborer for his hard-earned pice. It had been a great blessing had the law forbidden the entire business, but the English have been exceedingly careful not to interfere in matters religious, and so the mendicants, devotees, jugglers and what-not flourish by the thousands, drive their business and thus secure a comfortable living from the poor people who can ill afford this great and permanent tax on their scanty store.

The genuine holy man is the one who attracts the most attention from the people and gathers in the richest store of pice from his credulous countrymen. These are able, from long-continued usage, to undergo all kinds of physical suffering and never show signs of pain. They show the most stoical indifference to bodily suffering and really do perform some feats that seem almost incredible. The photographs will help the Nook reader to better understand what these people can endure.

The first one is the spike man. Hundreds of long spikes have been driven through a two-inch plank and on this the sufferer sits in the posture common in India, and with folded arms and closed eyes seems to enjoy the situation. The coins thrown on the plank in front of the spikes no doubt add greatly to his complacency, for while he does not open his eyes his ears are open to the jingle of the coins as they are dropped in great numbers by his admirers who regard him with the superstitious wonder, born of ignorance, and attribute to him divine power. There is also the com-

mon belief that the man who can endure great suffering has corresponding power with the gods, hence they flock around the spike sitter and throw down their coins, hoping in this way to obtain favors which otherwise would be denied them. One wants his son healed of some disease, another an enemy's house destroyed, another a good harvest, another asks the god to send him a son, another asks for the wholesale destruction of his enemies on the one hand and the success of all his friends on the other, and so it goes until nightfall when the holy man rises from his bed of many sharp points, cooks his evening meal and after eating and gathering up the money wraps himself in his blanket and lies down to sleep by the side of his instrument of self-torture.

And yet it is said they suffer but little from the spikes. The soles of their feet are calloused, for like the great majority of the people they never think of wearing shoes and as a result their feet, by long usage, are soled with a thick, heavy skin almost as hard as leather. The parts of the body which come into contact with the spikes are also hardened by long usage in much sitting, for this is the common position when

All the Roads Leading to the Temple are Crowded and Devotees are Measuring the Distance with their Bodies.

the native sits down to rest. Then, too, in sitting the weight of the body can easily be thrown on the feet. After all one need not be surprised that this class of devotees suffer but little inconvenience from what seems to us an impossible seat.

There is no question about the spikes. They are pointed and sharp and would easily pierce the flesh of an ordinary body. I have seen them and then, too, the camera makes no mistakes. Sometimes instead of a seat as shown in the photograph the devotee prepares a bed of spikes, long and narrow, on which he reclines naked except the loin cloth, which in this case is of unusual thickness.

More astonishing, however, than the spiked seat and bed is the feat of actually burying the head in the ground. The devotee digs a hole in the ground and then covering his face with a cloth rakes in the earth with his hands about his head until it is completely buried up to the shoulders. A great crowd stands around to witness the performance. These feats are usually performed at the great religious feasts held at Benares and other sacred places in India. At these places pilgrims assemble by tens of thousands and the devotees and holy men come also in great numbers and reap a rich harvest in these fruitful fields.

I have not witnessed one of these self-burials, but give a brief synopsis of a description by an eyewitness of the scene. The photograph also gives a realistic picture of the scene:

We are piloted about the streets of the fair. Vast lines of booths, smothered in dust and sunshine by day, and ablaze with twinkling fires by night. The terrific human uproar is infinitely augmented by the trumpeting of many elephants. When night has fallen you may see long processions of elephants swaying through the bazaars with lighted lanterns hanging from their tusks. Retiring with a body of pilgrims I stopped to see the strange spectacle of a man with his head

He Has Buried His Head with the Clods of the Earth Through which he is Enabled to Breathe.

buried. His body was all covered with dust. He had his head buried in a deep hole. How he managed to breathe I do not know. I made a careful examination of the ground around the body, but could find no hidden bamboo tube for air suction, nor anything that was likely to aid him.

Had the writer been a careful observer he might easily have solved the thin veil of mystery that seemed to hang over the scene he witnessed. The explanation lies in the fact that by long usage these devotees can live a considerable length of time on a very scant supply of fresh air they are able to breathe through the ground with which the head is covered. They dig the hole themselves and the ground is removed in clods and it is usually hard and dry. The head is covered

One might continue these descriptions indefinitely, but let another one suffice for this time so far as fakirism is concerned. Here is a man who had his arms held up until they became absolutely rigid and he can no more lower them than he could at will remove his head. For more than twenty years his arms have been held thus upright and it will be noticed that they are shriveled and deformed by being held in this unnatural position. This deformity was willingly and purposely caused so that the man could pose as a devotee. The man sitting near the devotee with peculiar dress is his attendant. He feeds him and looks after all his wants.

Holding the arms in this way for so many years is thought to have great merit and the superstitious be-

"At these festivals sometimes tens of thousands gather."
Weile & Kline, photographers.

with the cloth in such a manner as to keep the clods and dust from coming into contact with the face. The head is placed in such a position in the hole that when the clods are raked in they lodge against the head and the sides of the hole, thus leaving an air space of considerable size below the face. As the clods do not fit closely together the solution of the mystery is apparent. An examination of the photograph will show that the finer portions of the earth which he has scraped on top of the clods is coarse and would not prevent the circulation of the air.

A great crowd surrounds the man and his open palm extended toward his admirers is the recipient of many coins which he drops on the cloth at his side. Of course the motive is for the money he may secure in this way from the densely ignorant pilgrims who verily believe the man is performing a miracle.

lieve that the fakir can have great favor with the gods in their behalf if he will. This favor is sought by the usual giving of their money and food. All the years the arms are held up the nails are allowed to grow and are never trimmed. Note the long ribbon-like nails hanging from the devotee's fingers in the photograph.

The large photograph is a remarkable evidence to what extent the art has been carried. It was taken at one of the great festivals and shows more than a thousand faces, many of which would be recognized by their friends as a separate individual portrait. When the photo was taken the crowd of pilgrims forgot for the moment the sacred tank and gave their attention to the camera. It is a picture of the noted Hindu Temples and Sacred Tank of Conjevram near Madras. It is here, at these great festivals, that the devotee does a thriving trade and he is never slow to take ad-

vantage of the field ripe for the harvest of pice that fall to his lot.

Northwest of Calcutta is to be found a large stone god, called Tarokanetis, worshiped annually by immense numbers of Hindus. Here prevails the peculiar and most fanatical custom of the worshipers measuring the roads to the temples with their bodies. Along the roads leading to the temple of the god are crowds of infatuated men and women lying at full length on the dusty or muddy road, as the case may be. With outstretched arms a mark is made with the fingers, and then after pressing the face to the ground the wor-

Snake Charmers and Jugglers who Show their Skill to the Europeans and Americans.

shippers get up, toe the mark and fall forward again and so the measuring is repeated over and over again. From the sacred tank and along the roads come the worshipers measuring every inch of the way with their bodies. They are covered with dust or mud and when they finally reach the temple present a sorry sight. Here they bow in worship to the idol, giving an offering to the chief priest and are dismissed with his blessing. No other mode of approaching this stone god is supposed to be so meritorious or so pleasing and acceptable to the idol.

And then there are the snake charmers and jugglers who, like Jannes and Jambres, are, by their jugglery, long practice and quick motion, apparently able to turn their serpents into rods and to do all sorts of

tricks which to the simple-minded native are entirely inexplicable, but which are easily detected by those having the slightest knowledge of sleight-of-hand performances. They handle the deadly cobra and are apparently exempt from his poisonous bite. For the most part the poisonous fangs have been extracted, so that the reptile is harmless, but it is said on good authority that in rare cases some of these men pet the snake with his dangerous fang intact. These men usually are found at the hotels and in the European quarters of the cities where they are almost sure to be rewarded by an exhibition of their skill by residents and travelers.

CASTOR OIL.

ACCORDING to the *Indian Review*, the castor-oil plant grows freely almost all over India. It thrives, however, in any soil in warm countries, and in any situation will develop rapidly in one season after sowing. In Southern India the castor-oil plant is usually cultivated with other crops, such as grain or pulse. It does not require a great deal of cultivation. It grows very rapidly and begins to bear fruit in about four months.

The chief trouble in raising the castor-oil plant is that caused by the white ant and other insects that get on the tree, working through the stem and perforating it in all directions. Some authors assert that mosquitoes also like to feed on the juicy leaves of the castor plant, but other writers claim that mosquitoes are averse to this plant and will not come near where the plant grows.

In its native country the oil of the castor plant is used for lamp oil and for lubricating machinery. It is also, as in this country, used as a mild purgative in medicine. The oil as used in this country is made from the seeds. First the seeds are cleared of small stones, and any other foreign substance, and after heating them a little they are beaten into a mass in stone mortars. This mass of jelly-like substance is then boiled, when the oil will float to the surface. This is skimmed off and heated twice again. The residue which remains at the bottom of the vessel after the first boiling is afterward made into cakes and used as fuel. It is also sometimes used as manure. Cattle are fed on the leaves of the castor plant, which they seem to relish very much and the result is that the secretion of milk is increased. The leaves are also used in a medicinal way, being applied to wounds and bruises, a coating of oil having first been applied.—*E. P., in Medical Talk.*

“COMING nearer and nearer to Christ,” we say. That does not mean creeping into a refuge where we can be safe. It means becoming better and better men, repeating his character more and more in ours.—*Phillips Brooks.*

RIVERS.

BY GEO. L. STUDEBAKER.

WATER is one of the greatest blessings of God. Without it animal or vegetable life could not be sustained. With it acres of dry, barren, unproductive land have been brought into the highest state of cultivation, and produce some of the finest fruits our country affords.

Of the many bodies of water on the earth I want, in this article, to speak of rivers. To travel along a meandering stream is fascinating, and the enchantment afforded must be experienced to be appreciated. Nature has provided our land with these charming scenes, and the panorama of rivers and valleys delight the eye.

The rivers of the world are very great in number, and are of incalculable value. The Rhone is the principal river of Europe. Its length is four hundred and forty miles, and it drains about seven thousand square miles. The Rhine has a length of seven hundred miles, and carries to the sea the waters of a vast territory. The Danube draws its water from an area of fifty-five thousand square miles, and traverses a course of one thousand eight hundred miles.

Asia is traversed by a magnificent system. In China we find two rivers, each over three thousand miles long. In western Asia are the rivers of sacred memory, Euphrates, and Tigris. The Euphrates is mentioned in the Bible as one of the four rivers of the Garden of Eden. It is called the "great river." The city of Babylon was situated on its banks, and Nebuchadnezzar had locks and dikes made to enable large vessels to ascend it as far as the city.

British India has rivers whose united length is more than ten thousand miles. The Ganges, which is the most noted, draws its waters from an area of four hundred thousand square miles.

Africa has but few rivers. The Niger is over two thousand miles long. The Nile is over three thousand miles long, and the last eight hundred miles it does not receive a single tributary.

The most charming and inviting streams are found in America. The Mississippi is four thousand miles long, and draws the water of one million square miles. The Saint Lawrence draws the water of three hundred thousand square miles. The Amazon draws the water of a region three times as large as that of all the rivers of Europe, and near its mouth it is a stream of gigantic size, one hundred miles wide, and six hundred feet deep.

Along the banks of these rivers are built the most renowned cities of the earth. The waters of these

rivers have been brought into use, and large manufacturing industries give employment to an army of people.

In possessing active movement rivers imitate animal life, and thus they seem to have a life of their own. Ascend a river and trace its branches to their many sources; the streams and brooks are all found busy feeding the main stream. Follow the river down its course, and it deepens and widens as it empties into the sea.

The more rivers are studied, the more wonderful they seem to be. They work and travel on untiringly. John, who was on the isle of Patmos "for the word of God, and for the testimony of Jesus Christ," and who was permitted to behold the beauties of the Celestial Country, was shown a "pure river of water clear as crystal proceeding out of the throne of God and of the Lamb."

Last summer, on our western trip, it was our pleasure to travel for miles along one of the most beautiful, attractive and noted streams of our land, the Columbia. For more than half a day we traveled along the banks of this picturesque stream, at times so close we could look from the car into the water almost directly below. Points of interest could be seen at every moment.

At the historic Multnomah falls our train stopped four minutes. The passengers all left the cars to see this beautiful sight, as the water came tumbling down a distance of eight hundred and forty feet. As we drew nearer Portland, towering high above the surrounding hills and mountains in the distance we could see the beautiful snow-capped summits of Mount Adams, Mount Hood and Mount Saint Helens. How majestic they did look, and how these scenes make one think of the wonderful works of God.

Some miles before coming to Portland we leave this beautiful Columbia, and pass through an open section of country. Crossing one of the fine steel bridges which span the beautiful Willamette river we soon enter the elegant Union Station, and are in the metropolis and pride of the Pacific Northwest, Portland. Portland is beautifully situated on both banks of the Willamette river, surrounded by mountains in the distance, and makes a beautiful scene for Indianians.

Volumes could be written on the noted rivers of our world. We have here given a few points that we trust will be of interest to many readers of the Nook. How we do wish that the readers of the Nook might enjoy the pleasure of taking trips and seeing some of these beautiful scenes of nature.

"The heavens declare the glory of God; and the firmament sheweth his handiwork." Psalm 19: 1.

Muncie, Ind.

SCHIAPARELLI ON THE ASTRONOMY OF THE OLD TESTAMENT.

IN view of the problems raised by the Babel-Bible controversy, a recent book by the famous Milan astronomer, Giovanni Schiaparelli, entitled "L'Astronomia nell' Antico Testamento," is of exceptional interest; not because it makes any effort to harmonize the Scriptures and natural science, but because it gives the views of a savant of international reputation on the actual teachings of the Old Testament in reference to the heavens and the earth. These views are in substance as follows:

The idea of the world as entertained by the Hebrew writers shows that the picture of the earth and its surroundings was not unlike that of other peoples of antiquity. The earth is regarded as a rounded plane, which divides the universe into two parts. Above is the arch of the heavens, the extreme ends of which rest upon the earth; beneath is the deep, the abyss. The distance from the heaven to the earth can not be measured, and the same is true of the expanse of the earth. The center of the earth is found in Palestine, especially in Jerusalem (Ezekiel 5: 5), a view which was entertained by Dante. The Hebrews knew of the other peoples of the earth only to the extent of about thirty degrees. Beneath the earth were to be found the great masses of the waters, the sources of the seas. These are the lower waters in contrast with the upper, which are found above the firmament. Through openings and canals the subterranean waters come to the surface of the dry land and produce rivers and springs; and they are also connected with the seas and cause these to have the same height. In this way the Hebrews explain why the seas, although rivers constantly empty into them, do not rise, and the fountains and springs do not dry up; "which explanation for its time was exceedingly thoughtful." In the depth of the abyss is Sheol, the abiding-place of the dead. Above the earth is the expanse of the firmament, firm and fixed as a mirror of metal (Job 38: 18). It is a transparent vault, through which the light of the stars can be seen. On the sides above the firmament there is a second wall, which contains the receptacles of the rain, snow, and hail (Job 38: 22). Beneath this space, on the same level with the earth and the sea, are the receptacles of the winds (Jeremiah 10: 13; 61: 16; Psa. 35: 7).

Above the firmament are the stars, and also the sun, which moves constantly around the earth, to rise at its accustomed place. Eclipses of the sun and moon are regarded as premonitions of divine wrath and punishments (Joel 3: 3, 4; Amos 8: 9). Eclipses of the sun were exceedingly rare in Palestine, and in the times of Joel and Amos could be observed only on August 15, 831 B. C. and April 2, 824 B. C. Between 763

B. C. and the destruction of the first temple there was no total eclipse of the sun in Palestine, so that Micah 3: 6 and Isaiah 13: 4 can refer only to reports of earlier prophets.

Above the sun and the moon the stars are found. While the firmament is a fixed and firm vault, the starry heavens are compared with a tent curtain. As in the case of other peoples of antiquity, special groups of stars attracted particular attention, such as the big bear, Orion and the Pleiades. The totality of the stars is often called "the host of heaven." Only two planets are mentioned in the Old Testament, namely, Venus (Isaiah 14: 12) and Saturn, which is doubtless referred to in Amos 5: 26. Assyrian astrology, much to the credit of the Hebrews, was sharply antagonized by the prophets.

The Jewish division of time depended upon their astronomy. The Hebrew day began in the evening, in accordance with the universal custom of those nations that begin the month with the first appearance of the new moon. The division of the day into hours appears in a later period, and in the book of Daniel is found for the first time the word translated by the Vulgate *hora* (hour). The Hebrew year in the earliest times began in the fall; but already in 2 Kings 11: 1 a new year in spring is mentioned. The Hebrew week of seven days is the same as that of the Babylonians, and is dependent on the phases of the moon, but not on the seven planets. The Sabbath is the only day that had a special name.

The theological and biblical importance of these conclusions of the Milan savant are being eagerly utilized by the religious journals, especially as in general they are regarded as favoring a conservative conception of the Scriptures and their contents. In the *Leipziger Kirchenzeitung* (No. 35) special emphasis is laid upon the fact that not one of these conclusions in any way antagonizes the idea of revelation in the Old Testament. Mythological and superstitious elements nowhere appear in the astronomical ideas of the Old Testament writers; indeed, Israel's ideas on these subjects are superior even to those of the gifted East Indians. The Hebrews have religiously purer conceptions of nature and its phenomena than even the educated Greeks and Romans. Here, too, this journal claims, are seen the evidences of the providential guidance and education of Israel by Jehovah.—*Translations made for The Literary Digest.*

Love is the finest fruit of life as well as its governing principle; it is the essence of all nobleness, all majesty, all sublimity whatsoever it is the only possible point from which to project real character and aims, the only lasting foundation upon which to build a true civilization and a true society.—*Where Dwells the Soul Serene.*

THE MOSQUITO.

BY GEO. E. ROOP.

THE word signifies "little fly" and is of Spanish origin. It is popularly applied to all small, annoying, dipterous or two-winged insects that suck human blood; and therefore includes what we know as "sand-flies," "midges," etc.

The mosquito flourishes best in warm countries and is most abundant near large bodies of stagnant water. Unusually hot seasons generally cause the species to become more numerous and more ferocious.

The development of this insect is indirect and its metamorphosis is complete. The female deposits the eggs in boat-shaped masses on the surface of the water. The larvæ which hatch from these eggs have a well-developed thorax, are very active and are called "wrigglers," from their movements. The next stage is the pupa which, unlike that of most other insects, is active, like the larvæ. From the pupa emerges the adult.

Some insects preserve their species over winter by laying eggs in the fall, from which the next summer's crop hatches, when the warm weather of spring comes. But the mosquito is not of this sort. Like the house-fly, it survives the winter in the adult state. In the autumn a few individuals creep away into some sheltered place and remain until the warm spring calls them forth, when they proceed to replenish the earth with their kind.

They increase very rapidly. A female may lay from two hundred to four hundred eggs. These generally hatch in the afternoon of the same day they are laid. After they are hatched it takes from seven to fourteen days, according to the weather, to develop into adult mosquitoes. An arithmetical calculation shows that the progeny of a single female may, in one month, multiply to three or four millions.

In the larval stage the mosquito lives off of the larvæ of very minute creatures. The adults do not require much food. What little they do eat consists of juices sucked from plants and the small amount of blood they get from the animals they bite. It is only the female that bites. The piercing and sucking tube is barbed at the end.

Scientists hold different opinions as to what causes the irritation which follows the bite. Some claim that it is simply due to the wound that is made by the rough piercing tube. Others believe that a poisonous saliva is used. The latter seems the more probable. The chief enemies of the mosquito are tadpoles (which destroy the larvæ), frogs, toads, fish, the dragon-fly and man.

The greatest problem which confronts us in the study of this insect is how to avoid the pest. Different means are used. In moderately warm climates they

may be warded off by anointing the body with fish oil. In some of the warmer countries, mosquito curtains are a part of the ordinary bed furnishings. The most effective way yet discovered of destroying them is by pouring kerosene on the water where they breed. The oil is fatal to the eggs, larvæ and adults. As it spreads out over the water in a very thin film only a small amount is required, about one ounce to fifteen square feet of surface. One application of the kerosene will last one or two months if not washed off by heavy rains. All stagnant pools of water in the neighborhood should be drained; or, if this is impossible, apply the oil.

The main object of the mosquito's existence seems to be the annoyance of man. In addition to the pain it afflicts, close investigations seem to prove that this insect is the principal, if not the sole means of the transmission of malaria. It is held that yellow fever is also spread by it. Scientists think that this may be done by biting a diseased person and then a healthy one; or by carrying the germs into the drinking water. Mosquitoes are nocturnal in habits; they seem to "love darkness rather than light, because their deeds are evil."

It is said that every specie of animal and insect that has been created is of some use to the world, but it is very difficult to find what benefit this pest confers upon the human race, unless it is very indirectly, by furnishing a small amount of food to the fish, a part of what the sea and rivers contribute for the maintenance of man.

Union Bridge, Md.

THE MOON.

THE moon is the nearest of all the heavenly bodies, being distant from us about thirty times the diameter of the earth, or two hundred forty thousand miles. Her mean daily motion, in her orbit, is nearly fourteen times as great as the earth's, since she not only accompanies the earth around the sun every year, but, in the meantime, performs nearly thirteen revolutions about the earth. As the moon, while revolving around the earth, is carried with it at the same time around the sun, her path is extremely irregular, and very different from what it seems to be. Like a point in the wheel of a carriage, moving over a convex road, the moon will describe a succession of epicycloidal curves, which are always concave to the sun.

The moon revolves once on her axis exactly in the time that she performs her revolution around the earth. This is evident from her always presenting the same side to the earth; for if she had no rotation upon an axis, every part of her surface would be presented to a spectator on the earth in the course of her synodical revolution. It follows, then, that there is but one day and night in her year, containing, both

together, about twenty-nine and one-half days. As the moon turns on her axis only as she moves around the earth, it is plain that the inhabitants of one half of the lunar world are totally deprived of the sight of the earth, unless they travel to the opposite hemisphere. This we may presume they will do, were it only to view so sublime a spectacle; for it is certain that from the moon the earth appears ten times larger than any other body in the universe.

As the moon illuminates the earth, by reflecting the light of the sun, so likewise the earth illuminates the moon, exhibiting to her the same phases that she does to us, only in a contrary order. And, as the surface of the earth when full, to the moon will appear thirteen times as large as the full moon does to us, that side of the moon, therefore, which is toward the earth may be said to have no darkness at all, the earth constantly shining upon it with extraordinary splendor when the sun is absent; it, therefore, enjoys successively two weeks of illumination from the sun, and two weeks of earth-light from the earth. The other side of the moon has alternately a fortnight's light and a fortnight's darkness.

As the earth revolves on its axis the several continents, seas and islands, appear to the lunar inhabitants like so many spots of different forms and brightness, alternately moving over its surface, being more or less brilliant, as they are seen through intervening clouds. By these spots the lunarians cannot only determine the period of the earth's rotation, just as we do that of the sun, but they may also find the longitude of their places, as we find the latitude of ours.

As the full moon always happens when the moon is directly opposite the sun, all the full moons in our winter must happen when the moon is on the north side of the equinoctial, because then the sun is on the south side of it; consequently, at the north pole of the earth there will be a fortnight's moonlight and a fortnight's darkness by turns for a period of six months, and the same will be the fact during the sun's absence the other six months at the south pole. The moon's axis being inclined only one and one-half degrees to her orbit, she can have no sensible diversity of seasons; from which we may infer that her atmosphere is mild and uniform. The quantity of light which we derive from the moon when full is at least three hundred thousand times less than that of the sun.

When viewed through a good telescope the moon presents a most wonderful and interesting aspect. Besides the large dark spots which are visible to the naked eye, we perceive extensive valleys, shelving rocks and long ridges of elevated mountains, projecting their shadows on the plains below. Single mountains occasionally rise to a great height, while circular hollows, more than three miles deep, seem excavated in the plains. Her mountain scenery bears a striking resemblance to the towering sublimity and terrific rug-

gedness of the Alpine regions, or of the Apennines, after which some of her mountains have been named, and the Cordilleras of our own continent. Huge masses of rock rising precipitously from the plains, lift their peaked summits to an immense height in the air, while shapeless crags hang over their projecting sides, and seem on the eve of being precipitated into the tremendous chasm below.

Around the base of these frightful eminences are strewn numerous loose and unconnected fragments, which time seems to have detached from their parent mass; and when we examine the rents and ravines which accompany the overhanging cliffs, the beholder expects every moment that they are to be torn from their base, and that the process of destructive separation which we had only contemplated in its effects, is about to be exhibited before him in all its reality. The range of mountains called the Apennines, which traverses a portion of the moon disc from northeast to southwest, and of which some parts are visible to the naked eye, rise with a precipitous and craggy front from the level of the Mare Imbrium, or Sea of Showers.

In this extensive range are several ridges whose summits have a perpendicular elevation of four miles and more, and though they often descend to a much lower level, they present an inaccessible barrier on the northeast, while on the southwest they sink in gentle declivity to the plains.

There is one remarkable feature in the moon's surface which bears no analogy to anything observable on the earth. This is the circular cavities which appear in every part of her disc. Some of these immense caverns are nearly four miles deep, and forty miles in diameter. They are most numerous in the southwestern part. As they reflect the sun's rays more copiously, they render this part of her surface more brilliant than any other. They present to us nearly the same appearance as our earth might be supposed to present to the moon, if all our great lakes and seas were dried up.—*Medical Talk.*

THERE is nothing more hardening to the sensibilities than the failure to translate pity into action. Christ's pity was practical. We are told that he had compassion on the hungry multitude, and the immediate result of it was how many loaves had he. This is finely illustrative of the way in which Christ's whole nature moved at once and in unison.—*Rev. Dr. George D. Baker.*

SOMEWHERE along the path of life, the kindness that we have shown will come back to us. Every deed of love goes on forever, and in its journeyings to and fro it will sometimes pause at the gate of our own lives, or burn its incense upon our altars.

THE NEW BIRTH.

BY MARY I. SENSEMAN.

EVERYBODY is born into the world with a body and a mind. With years these both develop, but always retain their predominating congenital features. That is, a body with a "small-boned" framework is so throughout life; and the brain, which is but the mind's storehouse, becomes merely a larger specimen of phrenological "bumps."

The mind shows its higher organization in having power, limited, over itself as well as over the body with which it is conjoined.

The "build" of a person, especially the shape of the head and face, is evidence as to the general cast and trend of mind of that individual. For the sake of logic we may say that the power of the mind over itself is limited by the shape of the body, including head. If this power were not restrained by some means nobody would ever forget, or would repeat a mistake, the person with crime-outlined skull could as easily be a missionary as a criminal.

We inherit these bodies and minds from our ancestors, and they did from theirs.

If one's mind cannot place the individual on a plane of perfect living, where are we going to get the power? I'll tell you. We must begin life all over again. That is impossible in nature. Then it must be in spirit. God says that by baptism of water and the Holy Spirit the new birth is brought about. He says, too, that the Holy Spirit is power. Again, he shows that the Holy Spirit comes only by means of prayer. Prayer is absolute dependence upon God, entire resignation to him. Power will come if these conditions are complied with.

But this spiritual power does not change the form of this body. The power has to be given forth through the same old medium, through the same old physical and mental characteristics. Do you understand how one's acts do not seem to be especially changed although he is undoubtedly converted? There is yet "a law of the body," but there is also "a law of the spirit." And this acceptance of the Holy Spirit, made evident by one's "Thy will be done" is alone the password into future life.

We cannot be saved by our "faith-bumps," our pleasant dispositions, our natural goodnesses. If it were so it would be but reasonable to say that the brutal, vicious, criminally-inclined characters are irremediably lost. If that were the case Christ's mission would have been nothing.

The Holy Spirit is of the highest organization. It has power over the mind. The chief characteristic of the Holy Spirit is "bringing to remembrance" or opening the understanding. Now, nobody ever wills himself into doing a good thing unless he himself

considers it good. So this Spirit, bringing its power to bear upon the mind, opens the understanding to better things. The mind, in turn, directs the body, and all individuals, good, bad, indifferent, improve in works.

Covington, Ohio.

A DISTINCTION WITHOUT A DIFFERENCE.

A POOR man drinks too much. He is a no-account fellow. He may manage to pay his debts and keep together a large family. But he drinks too much. He gets drunk occasionally.

At last he dies. Maybe he dies in a drunken stupor. Maybe he dies of some disease acquired from the effect of too much alcohol.

The doctor is called. He pronounces the case chronic alcoholism. Or maybe he calls it plain drunkenness. The word gets out all over the neighborhood that the man has died a drunkard. The neighbors all hold up their hands in horror. Such a wretch! Isn't it terrible?

A rich man drinks too much. He drinks choice brandies and champagnes. He sports with questionable company, and spends large sums of money. He drinks too much every day. His face gets red, his stomach gets larger. He consults a doctor again, who gently warns him that he must let up a little. But he keeps on drinking too much.

Some day he is found in a deep coma, or perhaps dead, with little or no warning. At least, he dies very suddenly.

The doctor is called, of course. Nothing said about alcohol. Not one word about drunkenness. Maybe it is called pneumonia, because there was a little gurgling or wheezing just before he died. But more likely it will be called heart failure, prostration from overwork. Some term will be invented by the doctor to cover up the affair for a rich customer.

It is simply a question of money whether a man dies a drunkard, or whether he dies of nervous prostration. It is simply a question of money. The ordinary workman drank himself to death. But the millionaire died of heart failure. Alcohol is the cause of death in each case. But the difference is the alleged respectability. One drank his glass of beer over the counter of an ordinary saloon. The other sipped his champagne in expensive wine parlors, where fashionable wickedness and costly debauchery are rife.

The poor man fills a drunkard's grave, because alcohol was the cause of his death. The rich man, who died from exactly the same cause, occupies a prominent lot in the cemetery, with a costly monument marking the spot where "one of our first citizens lies, where a great and useful life ended." The poor man, who drank beer or common whiskey, has but few words said at his funeral, halting, hesitating words.

vague hints at the blackness of sin, and the needless calamity that has been visited upon an innocent family.

The rich man drank expensive wines and champagnes. At his funeral an eloquent preacher dilated with beautiful diction upon the virtues of the deceased, and the loss to the community of a representative business man.

And so the farce goes on. The doctor and the preacher, and all those who worship wealth and despise poverty, contribute to this cruel falsehood, this senseless prevarication.

One man gets drunk, and he is taken by the police officer to the city prison, where he is starved, or suffocated with foul air, and his name branded as a drunkard and a common offender against the law.

A rich man gets drunk, and is taken home in a cab. Anxious attendants and trained nurses attend to his every want. The papers all contain sympathetic notices of the sudden illness of Mr. So-and-So. The doctor in attendance plays into the hands of the whole farce and gives the ailment some equivocal name.

Alcoholism is an epithet that is only used when the pauper or the peasant or the hard-working man is involved. Neurasthenia, heart failure, nervous prostration, grip, these are the terms used when a rich man makes himself sick by the free use of stimulants.

The best way out of this dilemma, of course, is to leave all stimulating drinks alone. Rich or poor, high or low, good or bad, every one is better off without them. Leave them alone. Then, when sickness overtakes you, your friends will not be obliged to prevaricate, your doctor will not be compelled to tell a professional falsehood, in order to cover up your shame. Keep sober and enjoy life. Alcohol doesn't contribute to happiness or health. Leave it alone.

If you want to exhilarate your heart's action, and intoxicate yourself with vitality, get up in the morning early, just as the sun is coming up over the eastern horizon. Stand out in the open air. Inhale a dozen deep breaths. The morning air is loaded with oxygen. It will cause your blood to tingle to your finger tips. All day you will feel the beneficial influence of your deep inhalations of the early morning.

This is cheaper than champagne. It is less troublesome to obtain than beer or whiskey. It is better for the nerves. It is better for the stomach. It doesn't take you into bad company, and in the end will produce a thousand times more happiness than indulgence in drink.

One man gets up in the morning, breath hot, tongue dry, head aching, from last night's debauch. He takes a sneak to the nearest drug store, or the corner grogery, for his dram, to pull him together. He calls this having a good time. It is an awful mistake.

Another man gets up in the morning from a refreshing sleep, jumps up with a new inspiration, gets out into the morning air, and in exuberance of health

and vitality he catches the sunshine and the ozone, and can scarcely restrain crying out in his excess of good feeling. This man is really having a good time.

Why such a life should be called denying oneself, and resisting temptation is hard to tell. As if any normal man could be tempted to live the life of the ordinary sputter. There is more genuine happiness in one week of natural living, free from the deranging influence of any stimulant, than there is in a lifetime of drunkenness and debauchery.

If you are a poor man, and wish to avoid the ignominy of filling a drunkard's grave, or having it hinted at your funeral that you drank too much, leave the stuff alone entirely. That is the best way. And it is lots more fun.

If you are a rich man, and want to save your friends and relatives the humiliation of doing some tall lying at your funeral, stop drinking. Touch not. Taste not. Handle not. Die a natural death. Let the only regret at your funeral be the regret that a good and true man, a faithful and honest friend and relative has died. These are the regrets that make a funeral tolerable.

But when one has lived such a life as to make it absolutely necessary for sympathizing relatives to tell a thousand falsehoods in order to hide his shame, he has spoiled the wealth that he may be able to bequeath, and poisoned the benefits which his money may enable him to bestow.—*Medical Talk.*

❖ ❖ ❖

SIN.

SIN is still as black and hideous as when a world was drowned to exterminate it or the cities of the plain burned to destroy it. It is the plague of hell and as vile as ever. It is fashionable nowadays to treat sin as if it were a misfortune rather than a crime; but the man who deliberately tramples the laws of heaven under his feet is guilty of a terrible offense. From head to foot he is full of wounds and putrefying sores, and all the washing with water and soap will not cure him. Salvation can be obtained only by surrendering to and trusting in the "Lamb of God who taketh away the sin of the world." Thank God that the worst sinners can be washed and made whiter than snow, for

"He breaks the power of reigning sin,
He sets the prisoner free,
His blood can make the vilest clean
His blood avails for me."

—Living Waters.

❖ ❖ ❖

If my soul has grown tares when it was full of the seeds of nightshade, how happy I ought to be! And that the tares have not wholly strangled the wheat, what a wonder it is! We ought to thank God daily for the sin we have not committed.—*F. W. Faber.*

NUT CULTURE IN WESTERN OREGON.

BY GEORGE C. CARL.

ABOUT thirty miles southwest of Portland, Oregon, in Yamhill county, adjacent to the town of Dundee and Newberg, many walnut trees have been planted by different people, Mr. Thomas Prince, of Dundee, having the largest orchard, mostly of the Mayette, Granquette and Parisienne varieties, which, so far, are the best known varieties that have ever been purchased.

Mr. Prince's trees are mostly seven or eight-year-old trees. Many fine nuts were gathered from these trees last year. Mr. Prince has reserved, from last year's crop, enough nuts to make an excellent display at the Lewis-Clarke Exposition.

Mr. Felix Gillet, of Nevada City, Cal., who is one of the best informed and experienced men on nut culture in America, propagated in his own nursery the trees that planted Mr. Prince's fine walnut grove; he has this to say of Mr. Prince's walnut trees, in the *Rural Northwest*, Feb. 1: "The nuts sent me from these young trees are the most splendid nuts ever sent me from any part of the Pacific coast, southern California not excepted. I visited this orchard a short time ago and measured an eight-year-old tree that was thirteen inches in diameter, and twenty-nine feet across the top of the tree, or from one side of the tree to the other side. Men who are familiar with the walnut culture say that finer trees were never seen anywhere."

Newberg, Oregon.

ARABIC MULTIPLICATION.

A GENTLEMAN who, in his youth, lived in Constantinople, and who was familiar with the methods of the schools as they were in his time, recently employed the hours of a rainy afternoon in teaching his son the Arabic method of multiplication.

The rule was to take the two numbers to be multiplied together and first to add them. The right hand digit of their sum was taken for the left hand digit of the product. Each number was then subtracted from ten, and the remainders multiplied together for the right hand digit.

Suppose 7 and 8 were to be multiplied: 7 and 8 equal 15; hence the left hand digit of the product would be 5. Then subtracting 7 and 8 from 10, and multiplying the remainders: 2 times 3 equals 6, the right hand digit, making the answer 56.

There are about twenty subsidiary rules, by which this clumsy method was made to cover all cases, and it is a wonder that the small boys of Constantinople of the last generation learn to multiply at all. The American boy to whom all this was explained was

much interested, but he grew more and more perplexed as the talk went on.

"Papa," he said at last, with a sigh of sympathy for the Turkish schoolboys, "do you suppose they were given that kind of multiplication to punish them for being heathen?"—*Selected.*

EASY TRAVEL IN AFRICA.

It is possible for the traveler in search of comfort and excitement to visit nearly every part of Central Africa with ease. He can now reach the Congo country in a short time. A railway connects the lower reaches of the river with the plateau, and thence he can take steamers to any part of the system, going thousands of miles amidst the most astonishing scenery in the world. Or he may go up the Nile by railway to Khartoum and thence to Lake Victoria Nyanza by boat. He can go down the east coast and take a railway to the same place from the region of Zanzibar, can go farther south and can go by the Portuguese line to Victoria Falls or reach them by the various lines from the Cape. All this has been accomplished within twenty years, most of it within ten. Men now middle-aged used to study a map of Africa on which there was nothing of importance except around the edges. Now the modern transportation line from the Cape to Cairo is more than half completed. In a short time it will be a mere winter excursion to make the trip and a few side runs into the Congo country.

WAVES GENERATE POWER.

RIVERS and streams have long been utilized for generating motive power, but it has only recently been found practicable to employ waves for the same purpose. A very compact apparatus for obtaining power from waves has been made for mounting on piers. Connected to a main driving wheel, which is about thirty feet in diameter, is a hub, with a metal extension, having an inner periphery provided with teeth. A bar is secured to a weighted float, and connected with a quick-acting ratchet clutch in the hub of the driving wheel. The motion of the waves is transmitted to the float, which moves the bar up and down, rotating the flywheel. Choppy waves transmit power at a comparatively high speed.

MAKING MARBLES.

MANY of the agate marbles that wear holes in the pockets of schoolboys are made in the state of Thuringia, Germany. On winter days the poor people who live in the villages gather together small square stones, place them in moulds something like big coffee-mills,

and grind them until they are round. The marbles made in this way are the common, printed, and glazed china, and imitation agates. Imitation agates are made from white stone and are painted to represent the pride of the marbles-player's heart—the real agate. Glass alleys are blown by the glass-blowers in the town of Lancha. The expert workmen take a piece of plain glass and another bit of red glass, heat them red hot, blow them together, give them a twist, and there is a pretty alley with the red and white threads of glass twisted inside in the form of the letter S. Large twist glass alleys with the figure of a dog or a sheep inside are made for very small boys and girls to play with. But the marbles that are most prized are the real agates.—*Selected.*

HORNETS TAKE POSSESSION OF A SALOON.

HORNETS, real, live ones with stingers, took possession of the bar-room in the Empire hotel, of Akron, the other day, although snow covered the ground on the outside.

A few days ago the proprietor purchased a hornets' nest from a farmer, and hung it over the bar. The entrance hole in the nest was closed by a piece of paper being pasted over it. It was much admired, and everything went well until recently.

The heat in the room brought the nest to life. The hornets thought it was summer again, and, being hungry, began to get busy. They burst the paper closing the exit and in a few minutes the room was full of hornets.

The bartender ran out covered with the insects, and a number of other persons followed suit, yelling like Indians. The hornets held possession until a big policeman, covered with netting and heavily gloved, carried out the nest. The bartender was taken to the hospital with both eyes closed.—*Exchange.*

NEW TUNNEL IN ALPS.

THE Alps are not to be climbed in the future, but pierced. A favorable report has been issued on the possibility of tunneling the Alps by a railway connecting the Bernese overland and the Simplon without, as the present day trains from Berne to the Rhone valley, running westward to trunk lines bordering the lake of Geneva. It would connect Berne with Brigue, in the Rhone valley, the Swiss terminus of the tunnel, by a total route of 72½ miles, running south through the Blumenstein and Wildstrubel mountains to the Rhone, and then turning east through the canton of Valais to Brigue. The greatest elevation reached would be 11,128 feet. The region supplies abundant water power for electrical working.

A GREAT FORCE FOR GOOD.

How the Salvation Army has Outlived the Public Prejudice Originally Felt Against It.

IN the last week of March the Salvation Army celebrated the twenty-fifth anniversary of its establishment. It has outlived most or much of the prejudice originally felt against it. "By their fruits ye shall know them." The success of its American farm-colonies has brought Mr. Rider Haggard to the United States to study its methods. It provides 3,000,000,000 beds a year for the poor. In the cities it reaches and relieves portions of the population that hardly anybody else seems to be able to deal with. It inculcates self-support, self-control, and hopefulness, physical and moral cleanness. It "gets right hold" of people and tries to lift them up. The suspicion or contempt with which it was looked upon has passed away. The work of its more than three thousand six hundred workers speaks for itself. People know it is no humbug. Its success is something that all of us without distinction of religion or irreligion ought to be glad of.—"*With the Procession,*" *Everybody's Magazine for May.*

THE JOURNEY'S END.

A SMALL boy sat quietly in a seat of a day-coach on a train running between two of the western cities in the United States. It was a hot, dusty day, very uncomfortable for traveling, and that particular ride is perhaps the most uninteresting day's journey in the whole land. But the little fellow sat patiently watching the fields and fences hurrying by, until an old lady, leaning forward, asked sympathetically:

"Aren't you tired of the long ride, dear, and the dust and the heat?"

The lad looked up brightly and replied with a smile: "Yes, ma'am, a little. But I don't mind it much, because father's going to meet me when I get to the end of it."

What a beautiful thought it is, that when life seems wearisome and monotonous, as it sometimes does, we can look forward hopefully and trustingly and, like the lonely little lad, "not mind it much," because our Father, too, will be waiting to meet us at our journey's end.—*Sunday-school Chronicle, London.*

SOME wait for God in the morning or in the evening, but we need to pray that the Holy Spirit may bring us into the blessed attitude of waiting all the day upon God, waiting continually for instruction, and for supplies of grace and strength. Blessed are all they that thus wait for him.—*Andrew Murray.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

ON THE ROAD HOME.

OUR Annual Conference is again a thing of the past. Hundreds and thousands of friends have again met and parted. The very meeting and parting at such a place constantly remind one of how time is fleeting. How often was the remark heard on the Conference grounds, "Is it possible it has been that long since I saw you?" The numberless times that this expression was made is an evidence of the fact that "time is winging us away."

Another unquestionable testimony was the presence of our children. It was quite a common thing at the meeting to see friends meet and introduce their children who were infants but a few years ago, and now almost ready to bloom into manhood and womanhood. Though these evidences are unmistakable, in many instances one can hardly realize they are true.

What an inspiration the meeting has been to us all. Everyone feels that he has been to the Yearly Meeting. The presence of the long rows of tents, the tabernacle, the spacious dining hall, and necessary offices and buildings, and the thousands of busy people hurrying here and there, completely lift one's mind from the things of this world and set him down in heavenly places. The spiritual strength that one receives from the services held is something wonderful. How many times last week we gathered in the tabernacle and sang the songs of Zion, filling the very grove with heavenly music. What a beautiful witness of the Spirit it is to sit in such a congregation, where you feel and know that all are of kindred faith, and at the same time you are unable to recognize a single face near you. It throws all personalities out of the question. The personality of the speaker is gone. He seems to be in another sphere altogether from what he is at home. The personality of the congregation is lost to view, because each one is actually cut loose from every other environment save his immediate one. Your own per-

sonality is lost, but you cannot tell why, but somehow in your own breast you don't feel as you usually do at church. This shows us the real value of forgetting ourselves when we come to the house of the Lord. This same rich spiritual blessing might characterize every meeting we have if we would forget ourselves as Peter did on the Mount of Transfiguration.

We could not help but notice, too, at the Conference, how the meeting is improving as a social factor. As the years go by we see a great deal less of family and relative gatherings, but the people are becoming acquainted more with larger numbers of people, which, as a matter of course, compels each one to speak to so many more people. And, if no other benefit was derived from the meeting except in a social way, the money would be well spent. As much may be said of the spiritual blessing. It is to be noted that at very few Conferences all classes of people in nearly every honorable occupation in life, from nearly every State in the Union, assemble in the same way and for the same purpose as we did last week. People with a common interest are often made to forget local differences and are greatly benefited by having their minds broadened by this social intercourse.

From the church point of view the Conference was certainly a success. Some of the vital questions of the church, which have been ventilated for months, and some of them even for years, were taken up and ably discussed; and while not all of us obtained the decisions that suited our individual tastes in the matter, yet we believe that what has been done has been done for the best and by the people who wish to have the best done. The questions before the Conference were of more than ordinary import in their character. It is not every Conference that has so many questions which the entire Brotherhood feels it their duty to act upon; hence the interest that was taken in this meeting.

The increase of interest in the missionary meeting was commendable. Year by year, we as a church, are learning the art as well as the importance of saving souls. We are fulfilling the desire and wish of the Master to the extent that we devote our time, talent and money to the missionary cause.

The Sunday schools, Christian Workers' Society and Reading Circle organizations certainly will receive an inspiration from this meeting. The number and quality of speeches made in these various lines of work, not only show a sort of delegated report of enthusiasm, but, as well, give abundant testimony of the fact that the people are going to take home with them a great deal of inspiration received at this meeting, and diffuse it among the working forces of the church. The most hopeful feature of all the different branches of work of this year's meeting is the fact that emphasis was placed upon the salvation of souls more or less in all the sessions of the Conference. We hope that the

time may speedily come when we can spend more time at these Conferences, arranging for the reception of souls than in quibbling about church names and the interpretations of Bible doctrine, which are so plain that, "The wayfaring men, though fools, shall not err therein."

Of the many blessings of the great meeting, the INGLENOOK was the recipient of its share. The INGLENOOK meeting on Monday evening was certainly a success, and nothing but good can result from it. The recognition which it received from the hands of able thinkers, and the influence it is reported to wield in the field are evidences of its character. We believe that it has more ardent supporters to-day than it ever had. The list is growing nicely and not a few were added to the list at the Annual Conference.

OTHER OFFICERS OF SUNDAY SCHOOL.

In our last discussion of the Sunday-school officers we had the superintendent under consideration. It might now be well to consider some of the officers who assist him in the management of this department of the church. Having said in the other article that an assistant superintendent or an associate superintendent are neither ideal, the next officer in importance would be the secretary of the Sunday school.

It is generally conceded and expected that the duty of the secretary is to visit each class during the recitation, make a few notes, read them at the close of the school, and repeat the operation Sunday after Sunday. Perhaps ninety-five per cent of the secretaries in the United States are perfectly satisfied with this routine, nothing more being required of them. It may never have been impressed upon their minds that they are vitally responsible for a report of the absentees. The secretary ought to know, not only how many are in each class, but what the name of each one is. Absent members should be reported to the teacher, to the superintendent, and to the visiting committee whose duty it is to call upon all the absentees and ascertain the reason of their absence. If their absence is excusable it should be reported so; if not, they should be dealt with accordingly.

In the next place the secretary should keep a careful enrollment of the names of new scholars, which should be handed to the superintendent, who, in conference with the executive committee, at teachers' meeting, will assign these new ones to the proper classes. The various reports made by her should be kept in such a manner that a synopsis could be taken from the report at any time for the convenience of the District Sunday School Secretary, or the Sunday School Secretary of the Annual Meeting. These statistics are of vital importance. She should keep in touch with the Sunday-school supplies as to the quan-

tity and quality needed in each department, and see that they are provided for, that the Publishing House has time to reach them with supplies before they are needed. The teachers should not be tardy in informing her how many *Children at Work*, *Young Disciples*, or INGLENOOKS they want for their various classes; each scholar in each class should have a quarterly according to his grade, and the teacher should have a teachers' quarterly according to her grade; then each class should have a few leaflets for the convenience of the new scholars brought in by the older scholars of the class.

The treasurer of the Sunday school is seldom seen or heard except possibly once when he makes his report of the cash on hand. Here is another mistake; the office of treasurer is not often used but abused. The treasurer of the Sunday school, like any other organization, ought to have a policy by and through which to manage his finances; he ought to be wide-awake to the needs and possibilities of the local Sunday school, the needs of the district, the organization at large, as well as the great amount of work to be done in a missionary way. With the right kind of encouragement and management he might be able to direct his collections in such a way that the literature of the school might be provided for, and a certain amount of money given for expenses of keeping in touch with the district and Brotherhood. After these necessary things are cared for he should be ready to suggest ideas to the school that will aid them materially to grow. For instance, if he has the care of a large school, he might be able to manage his finances in such a way as to send a missionary to the foreign field; if his forces are not so large, his school might support a native worker, or at the very least support an orphan. Yea, verily, the treasurer has more to do than to count a few pieces of red money on Sunday, while the rest are reciting their lesson. Any Sunday-school treasurer who talks about *penny* collections ought to be dealt with at once; it is well enough for little tots to give pennies when they are beginning to learn, but those who have been promoted in other things should be promoted financially as well.

THAT TOWN.

DID you ever hear of the town of No Good, on the banks of the river Slow, where the some-time-or-other scents the air and the soft go-easies grow? It lies in the valley of What's the Use, in the province of Let Her Slide; it's the home of reckless I Don't Care, where the Give-it-ups abide. The town is as old as the human race, and it grew with the flight of years. It is wrapped in the fog of the idler's dreams; its streets are paved with disordered schemes and are sprinkled with useless tears.—*Exchange*.

Current Happenings

THE most serious problem before the reorganized Panama Canal Commission during the past few weeks has been the problem of sanitation. Yellow fever has made serious headway in both Panama and Colon, and several government officials have been its victims. But in analyzing the real conditions as they have prevailed prior to the beginning of active operations by our government, it is not at all strange that the fever persists there. Colonel Gorgas is putting forth every effort to get rid of the plague-spots as quickly as possible. It is reported that before the end of the present year the towns will have good supplies of pure water, sewer systems, and street paving. These three improvements ought to go a long way toward eradicating the scourge. The latitude of Panama makes the problem quite serious. The recent outbreak of fever, however, is now well under control. The work on the canal is in progress, and the consulting board of engineers will meet in September to decide on the final plans.

USUALLY expositions in this country are open five or six months at least, but the Portland Fair, which is now open to the public, will possibly continue only four and a half months, beginning with June 1.

IT was announced at Pittsburg that a new route for the Wabash, direct through central Pennsylvania to New York, has been granted. This line is expected to have the lowest grade crossing of the Allegheny Mountains.

THE Czar of Russia has made another great concession to his people—this time a concession of religious freedom. Nothing is more paralyzing to a nation's development than laws or decrees which forbid the following of one's conscience, and with this a new era opens before Russia. Whether this concession is due to the war, or whether it could have been secured without the war, still it will probably be regarded as a result of the embarrassment brought about by the war, and will go far toward making the people forget their hardships which have been imposed upon them by the conflict between Russia and Japan. The restriction which has heretofore been placed by the Russian government upon liberty of conscience, of thought, and of tongue, have contributed largely toward the uprisings which have embarrassed the Czar. In this step the Czar will have the hearty congratulations of the American people, who will hope for still further concessions until the people of Russia at last enjoy freedom to worship God according to the dictates of their own conscience,

freedom of thought, and expression of tongue and pen, and a full participation in the government under which they live.

PRESIDENT ROOSEVELT is receiving some criticisms in regard to his late hunting trip. A Boston naturalist contends that the President should not slay any beast, particularly at this season of the year when nearly all the denizens of forest and plain have young dependent upon them. The school board for the District of Columbia recently issued an order prohibiting the circulation among school children of a juvenile publication dealing with kindness to animals. The President's hunting trip evidently causes considerable comment.

IT seems that some newspaper writers have taken it for granted that if the government purchased abroad, it would not be required to pay duties on its imports. Secretary Taft, in reply to some such statements, says that the law provides that, where supplies are bought in foreign lands, the government must pay duty the same as an individual purchaser; and that for the army, the price and quality being the same, American goods should be preferred. In the Philippines the army has constantly bought where it could get the cheapest, buying frozen meats from Australia at six cents that would have cost fifteen cents from the United States. Of course the government proposes to follow the same policy in Panama.

E. M. NASH, president of the American Smelting and Refining Company, was stricken with paralysis at Omaha, a short time ago.

THE Goldfield Bank and Trust Company, at Goldfield, Nevada, with liabilities of \$78,227, has failed. Steps are being taken to arrest the officers. Although it is known that several hundred dollars was deposited in the bank just two days before it closed, examination of the vaults revealed only \$15.05 in nickels and dimes, and a five-dollar gold piece.

THE Illinois Southern railroad, of which John R. Walsh and C. F. Weinland, of Chicago, are, respectively, president and secretary, has filed at Nashville, Ill., a certificate of increase in capital stock from \$3,000,000 to \$5,000,000.

COUNT CASSINI, the Russian ambassador to the United States, will be transferred to Spain, and Baron Rosen will succeed him at Washington.

THE Russians, to some degree, have proved that they know how to build a transcontinental railroad and to transport and to maintain thousands of troops thousands of miles from home, but they have also shown that they positively do not know how to get ready in time for the emergency.

❖ ❖ ❖

DR. W. C. SULLIVAN, in a scientific study, calls attention to the fact that excessive drunkenness is comparatively harmless, compared with alcoholism. Convivial drunkenness prevails most among miners, who are comparatively free from alcoholism. Alcohol engenders diseases, and it is the constant habit of nip, nip, nipping that poisons the drinker. Heavy drinking, after work is done, however regrettable as a proof of a low standard of manners, is not of very great moment in causing the worst evils of intemperance.

❖ ❖ ❖

THE "three illustrious scholars and patriots" whose combined labors gave the Welsh their Bible were Richard Davies, Bishop of St. David's; William Salesbury, the scholar-squire of Llanrwst, and William Morgan, Bishop of St. Asaph. Davies, though a Catholic priest, was married. In 1563 he undertook the task of translating the Bible into Welsh, and called to his aid Salesbury, an Oxford friend. Salesbury took in hand the version of the New Testament, Davies of the Prayer Book. In 1567 these tasks were completed and given to the world. The two scholars were proceeding with a joint translation of the Old Testament when they quarreled hopelessly over the etymology of one word, which is not recorded, and parted company. Davies died in 1581, seven years after which Morgan published a complete and revised translation of the whole Bible and Apocrypha. "The final version of 1620" was the work of Bishop Richard Parry and his brother-in-law, Dr. John Davies, of Mallwyd.

❖ ❖ ❖

A NEW discovery in the way of milk bottles has recently been made by Dr. A. H. Stewart of the bacteriology department, Philadelphia Bureau of Health. It is made of heavy spruce wood fiber paper, conic in shape to facilitate nesting, and with an ingenious locking device to retain the bottom. An important feature of the bottle is its saturation with paraffin by being dipped in that substance at 212 degrees Fahrenheit, and then baked. This sterilizes the bottle and prevents the milk coming in contact with the paper itself and adhering, as it does to the glass bottle. Sample bottles received from the manufactory have been thoroughly tested and none were found to contain microorganisms. Closed bottles were sent to several dairies near Philadelphia, a glass bottle and a paper bottle and each one was filled from the same lot of milk.

When received at the bureau, the glass bottles invariably showed slight leakage around the caps, the paper bottles did not. In every instance the milk in the paper bottles contained fewer bacteria than did that in the glass bottles, the average being a fourth as many in the latter. Certified milk in the paper bottles kept sweet two days longer than that in the glass bottles. If these paper containers give such results in general use, the delivery of milk in cities bids fair to be revolutionized. They are light, tightly sealed, perfectly clean and sterile, and are to be used only once. Their cost is such that they may be used without increasing the price of milk to the consumer. The bottles are packed in nests of twenty, three nests being sealed in a sterile bag, and shipped.

❖ ❖ ❖

THE wedding of Frederick William, the crown prince of Germany, to Grand Duchess Cecilia, of Mecklenburg-Schwerin, occurred June 6. The future German emperor is just twenty-three years of age.

❖ ❖ ❖

A NEW constitution for the Transvaal of South Africa has been drafted and transmitted to Lieutenant-Governor Lawley, together with the announcement of the British Government, that the time is not yet ripe to grant complete autonomy of the Transvaal. The Boers consider the new constitution a violation of the peace treaty made May 31, 1902, by which self-government was promised as soon as the country was in a settled condition. A good part of the English press criticises the government for surrendering elementary education to the Dutch, and some agree with the Boers in condemning the new constitution as a breach of faith. As a result of this it is reported that a large number of the Boers, disappointed at what they consider failure to observe the terms of the peace treaty in granting self-government, are moving to German East Africa. Certainly, as many of the British leaders prophesied when the war ended, Great Britain is having as much trouble in reconstructing the Boers as she had during the time she was fighting them.

❖ ❖ ❖

DR. HENRY HEAD, of the London Hospital, has recently made a very satisfactory scientific study of the nervous system. He had the sensory nerves of one of his arms divided and studied the sensations. Then he had the nerves united by stitching and studied the process of recovery. The result was that he found two distinct sets of sensory nerves—one that conveys the sensations of pain, heat and cold and the other the sensations of touch. The discovery also makes possible the accurate localization of the sensations. For this important discovery the doctor was awarded the prize, given every five years by the Royal Medical Society of London.

HOME DEPARTMENT

LIFE INSURANCE.

BY J. G. FIGLEY.

I HAVE no recommendation to make for fraternal life insurance as exemplified in certain secret organizations, which by such inducements lure misguided people into their societies under the guise of being godly, beneficial concerns. I was in one of them once upon a time, and had the satisfaction of having my family benefited for the time being, otherwise it was a rank failure. The monthly assessments were raised twice in a few years, and shortly after I had considered discretion the better part of valor, as far as my pocketbook was concerned, and left the knightly conclave, the rates were again valiantly boosted, so that had I been vain enough to stay in the rest of my natural life, the "legal tender" of my policy would have been of no value to this "Sir Knight" after he was fifty-five years old, without paying three solid dollars per month thereafter, whereas the policy in hand certified that it should continue till the age of seventy. So I concluded to "be strong and of good courage," and bade good-bye to the most ancient order with its mysteries and ceremonies and made the best use of my change I could, in place of feeding it into the capacious and rapacious maw of a friendship, charity and benevolent assimilation institution that took twelve per cent of the hard earnings of the workingmen's wages paid therein to salary the kind gentlemen who engineered the aforesaid knightly order at \$6,000 per year and expenses.

Candidly, were I to indulge in life insurance, I should unqualifiedly do so from a purely business standpoint, the same as I would place deposits in a savings bank, or invest in any business enterprise. I would endeavor to secure a twenty-year endowment policy on the participating annuity plan. Thus, at the end of three years my annual premiums paid would begin to bring in a small dividend, gradually increasing each year, which I could apply on the payment of each succeeding policy, or I could let it remain on deposit and accrue interest or additional dividends till the end of twenty years. Then I could accept the cash value of my policy which might be, say three-fifths, of the face value, and have it canceled, or let it remain on deposit, and without further payment, have the benefit of it for a given number of years. Or I could

continue making payments and receive still greater additional dividends. Of course if I died in the course of the run of the policy the face value of it would be paid to the beneficiary.

At any rate I would be indulging in a legitimate business transaction, wherein the insurance company would be earning for me a far better per cent on my investments, having much superior facilities, than I could possibly have to do so. There are other forms of life insurance reasonably profitable from a purely business standpoint, but the one I have described is the best of all, in my humble opinion. From a moral standpoint I cannot see any harm in such a business investment, whatever others may think.

Bryan, Ohio.

DANCING.

Know thou, that for all these things God will bring thee into judgment.—Eecl. 11:9.

It is a stirring fact that in many of our public schools to-day dancing is taught. Our boys and girls from twelve years old and up are taught to believe that by learning to dance they will thereby become more graceful in posture. Many parents are unaware of the fact that their children are both learning to practice and enjoy this evil habit; while others who sanction it little realize the downfall to which it may lead their children.

Not only are young folks partakers of the dance with its evil influence, but often wives and mothers or husbands and fathers seek the ballroom there to satisfy their hell-born passion or lust. I have in mind now a woman who leaves her husband at home to care for the children while she goes to the ball. There you will find her in the arms of other men, enjoying the giddy whirl of the dance. Can any one say there is no harm in it? Think of it! Three-fourths of the poor, fallen women start in the downward road through the dance! Out of the half-million prostitutes three hundred and seventy-five thousand have been led to their ruin through the dance. One, speaking of the dance, says, "The dance is the hot-bed of immorality; a feeder of sensual passion, and in that worse than the saloon." It is said that the women of France "began to dance with their soles and ended with their souls, and the latter became more soiled than the former." Are the people of fair America likely to fare better than they? Nay. "But know

thou, that for all these things God will bring thee into judgment."

If you sanction the dance, can you answer at the bar of God this question, Am I my sister's keeper? Never! For you thereby become her murderer, both of soul and body. Young girls can not retain their modesty and be partakers of the dance. It will ere long rob them of their purity. Some may profess religion and dance, but none can enjoy salvation or favor from God and indulge in the least of its pleasures. What God wants is men and women who will dare to be pure in word, thought and deed.—*Flora N. Ellis.*

GETTING RID OF THE BLUES.

HALF the time when people say they have the "blues" all they need is to go out and get a breath of fresh air. People who have "blues" stay in houses too much, they don't exercise enough, and they eat too much. The body is clogged with a surplus of food, the lungs are vitiated with bad air, and the whole machinery of the body is working at low gauge. The motor wheels of the machinery drag and run heavy.

This physical condition is reflected upon the mental faculties, and they become torpid and sluggish, and everything takes on a depressed, "blue" look. All the little worries, troubles and perplexities are magnified, and the world seems a dismal, desolate place indeed, and the poor "blue" person is enveloped in a fog of misery and despair. He thinks the whole world is topsy-turvy, and all the elements are combining to make him wretched, that everybody is just as mean as he feels.

And yet all the while this whole worldful of misery is centered right within himself. Outside the sun is shining, the birds are singing, the grass is growing, the skies are radiantly "blue," and the hills are tipped with a roseate hue. People everywhere are going to and fro about their affairs, with sympathy in their hearts and kindness in their eyes. The world is running over with joy and the people in it are not as bad as they seem.

What the "blue" individual needs is to get outdoors and absorb some of the happiness that is going to waste. He has been absorbing all sorts of indigestible food and vitiated air until his body has rebelled. What he needs to do is to let up a little on eating, skip a meal or fast for a day or two, take a long, brisk walk, breathe in great drafts of pure oxygen, drink plenty of water.

This will help to eliminate the poison from the body, that has been making things "blue." The machinery will commence to run easier, the wheels will quit dragging and begin to run merrily round and round, humming a little tune that will quiet the fretted nerves.

The fog will clear away, and the mind will become active, alert and buoyant, and the dark, deep blue will begin to lighten into a pale blue, and then a little pink tint will creep in, and finally everything will be rose color, and the whole world and everybody in it will be beautiful and good once more.

Yes, the world is all right. The trouble is all within your own little self. You have overfed the body, or given it bad air, or deprived it of its needed rest. You may be sure when you feel "blue" you have done something or omitted to do something that was required to keep your body in perfect working order. One ought to feel ashamed to say he has the "blues," for it is really an admission that he has been mistreating his body. So, if you ever get the "blues," don't tell any one, but just quit eating for awhile and go outdoors and run and walk and breathe until you get rid of them, and then don't do the wrong thing any more.—*E. P., in Medical Talk.*

LABOR AND LIQUOR.

THE Prohibition year book gives the following:

If a laboring man buys \$100 worth of boots and shoes he buys \$20.71 worth of labor.

In buying \$100 worth of furniture he buys \$23.77 worth of labor.

In every \$100 worth of clothing he buys \$17.42 worth of labor.

In every \$100 worth of liquor he buys \$1.23 worth of labor.

They who spend money for useful goods contribute much to labor and at the same time supply their families with something for their comfort. They who spend money for liquor rob their families and contribute almost nothing to labor. Liquor is labor's worst enemy.—*Brethren Evangelist.*

RESTING AT NOON.

GET into the practice of taking a rest at noon. Lie down, if it is only for ten minutes, or five minutes. If you cannot lie down, lean back in a chair and close your eyes. Do not think over what has happened. Do not plan what is going to happen. Just forget everything. Rest. Relax. Even if you do not sleep, rest.

This practice will make you live longer. It will make you healthier while you do live. It will probably make people want you to live longer. It will take the tangle out of your nerves, the irritability out of your temper, the wrinkles out of your face. It will make your eyes brighter, your face fuller. Try it.

You must make peace with God before you can make war with Midian.—*Matthew Henry.*

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

DORCAS.—Acts 9: 36-42.

For Sunday, June 25, 1905.

I. She Let Her Light Shine.

1. By Being Full of Good Works,Acts 9: 36
2. By Almsgiving.

II. She Made Friends.

1. The Widows Were in Her Death Chamber,Acts 9: 37
2. They Wept at Her Untimely Death.
3. They Showed the Garments that She Made,Acts 9: 38
4. Her Works Followed Her, ..Rev. 14: 13; Heb. 11: 4

III. We Preach Our Own Funerals.

1. We are Created for the Master's Use, Luke 18: 18-24
2. We Must Assist the Needy,Mark 14: 7
3. Our Lives are the Only Books that Some People Read,2 Cor. 3: 2
4. The Power of God was Shown Through Peter,Acts 9: 40
5. The First Resurrection will Manifest Christ's Power,1 Cor. 15: 22

Text.—Now there was at Joppa a certain disciple named Tabitha, which by interpretation is called Dorcas: this woman was full of good works and almsdeeds which she did.—Acts 9: 36.

References.—1 Tim. 2: 10; 5: 10; 6: 18; Titus 2: 7; John 15: 8; Matt. 5: 16; 1 Peter 2: 12; James 1: 25; Matt. 20: 11-15; Matt. 21: 28-31; Luke 13: 6-9; 1 Cor. 3: 6; Acts 10: 4; Heb. 6: 10; 1 Cor. 13: 1-3; Eph. 2: 8, 9.

A Worker.

All over this land are numerous sewing circles named Dorcas societies in honor of this one woman who forgot herself in her work. We are told that she was full of good works and almsdeeds which she did. So many people are full of good works and almsdeeds which they talk about, and discuss and argue and proclaim, but they never do them. Dorcas had but little time to explain to admiring neighbors how useful she was, and how the people praised and appreciated her. We know that she did but little boasting, because when Peter entered her death chamber, the widows who stood around were weeping and they showed him the garments she had made; she was too busy to sound a trumpet before her and have her good deeds proclaimed to the listening multitude as did the Pharisees.

Living for Christ.

"We lose what on ourselves we spend,
We have, as treasures without end,
Whatever, Lord, to thee we lend,
Who givest all,—who givest all.
Whatever, Lord, we lend to thee,

Repaid a thousandfold will be;
Then gladly will we give to thee,
Who givest all—who givest all."

The Man Behind the Deed.

Every young man, every young woman whose purposes in life are right will try to acquire the highest possible development in character and life. An exalted character and upright life will be a magnet to lift others up to a higher level of thinking, living and doing. The act of daring or sacrifice is meaningless if we know it is done for effect. When character is not behind what we say or do our work is worthless. When Christ's own image and superscription are on our work, then a blessing is assured.

Another Dorcas.

Miss Wright is at the head of a large boarding school for girls in New Orleans. But in spite of the numerous claims upon her time, she sought out further opportunities of helpfulness. Nearly twenty years ago she established the first free night school in the city. There was one pupil to start with, but she was not discouraged, and the school now numbers fifteen hundred. This is but one of the public services which have made her life a blessing to others. She gives herself and her time and her money, as if the Lord Jesus stood before her and accepted the offering in his nail-pierced hands.

How Much Does God Expect of Me?

God never insults us by asking less than the best of us. Am I so consecrated to Christ's service that it is become a labor of love—a work of very joyfulness? We believe that Dorcas sang while she sewed, and those garments were her best work; she sewed them without dropping stitches. God does not ask us to do impossible things. If he should say that we are too poor and weak to respond to his demands, it would weaken our self-respect and cut the sinews of spiritual effort.

Dorcas-like Deeds.

One little woman in a rapidly settled oil town gathers, each Sunday, representatives of ten sects, builds the fires in the schoolhouse, rings the bell, and prays and talks with the miners and their families. One poor boy walked ten miles to get her to give Christian burial to a neighbor's baby, and while he led the procession, carrying some wild flowers, she walked up and down the steep hills behind the rude cart the mother drove, steadying the rough little coffin. She knows the everlasting blessedness of doing good.

A Humble Worker.

We like to think of Dorcas as a sewing-woman who plied her needle daily; she cut the cloth to the best advantage, and worked early and late, and grew weary just as we do. Too many of us would be willing to work for Jesus if we could achieve some grand results in which those about us could recognize our superior skill. But Dorcas only served for the poor. Almost any woman can do that much in these days of sewing societies. A Dorcas who works heartily and lovingly has often put new life into a band of discouraged serving women. Mary gave expression to her love by breaking the alabaster box of ointment, Dorcas made a warm robe for some poor widow; both glorified God.

"God pours his soul in different molds,
And none may choose the form or size.
One but a scanty measure holds;
Another, all infinities."

When Work is Done.

At the last we will see many things more clearly than we do now. We must often work on when it seems no one cares! When our work is not for one glorious, honored day, but for weary stitching or plodding day after day! When even if our work is done it will bring us no applause on earth! Under such circumstances we dwell in the secret of his presence, and work on, awaiting his approval.

"Oh, kind taskmaster, let thy rest
Be to tired workers manifest,
And unto all who do their best,
Say thou: 'Well done!'"

Topics for Discussion.

1. What did Jesus teach us in regard to the poor? Mark 14: 7.
2. How did Jesus advise the Ruler? Luke 18: 18-24.
3. What can Christian Workers do?
4. Is it necessary to work for Jesus? 2 Thess. 2: 17; Heb. 10: 24; 13: 21.
5. How shall we give alms? Matt. 6: 1-4.

EMPLOYMENT BUREAU.

SISTER L. W. asks the following questions, and as others ask the same ones frequently, we answer her at some length: "After reading your programs in the INGLENOOK, and knowing of your work, I write for some suggestions. We have in our church a score of young members who have nothing to do, and they should be busy. I think that if our church has an organization with plans of work and programs for meetings, we should be using them. These young people are as many others, timid, afraid to face an audience, and keep saying they can't do anything. How shall we begin?"

This church is like a harvestfield waiting for the reapers. In some churches there are no young members and not even one interested, aroused soul like Sister L. W. So she has many things to encourage her in this undertaking. First of all she must talk to these young members about it, and after she has approached each one on the subject, we are confident that there will be one or two out of the number who are willing to assist her all they can. Let her make them her helpers, they can distribute circulars and perhaps persuade one or two more to work with them. Ask them to join the Circle at once. Some will refuse, but a few will be willing and ready. Then lay your plans for a meeting. Look over your INGLENOOKS and choose a good subject for your first meeting. You can take them up in their regular order later. Then decide on some one to preside at the meeting. If none of these young people are willing, get one of the Sunday-school teachers or one of the ministers to be the first leader. Ask these young people what they are willing to do. Some may refuse to do anything, but there will be few so timid that they cannot recite or read a verse of Scripture. Give these to all who will promise to recite them when called upon by the leader. Then cut out from the INGLENOOK our comments on the subject, and let them be read by some who are less timid. Give the "topics" to those who can talk before an audience. Find a good leader for your singing and sing hymns that are familiar so that all can join in singing. After the meeting is over, shake hands and give a bright word of encouragement to every one who took part. Be sure that all the young people are made to feel heartily welcome, and that they enjoy each other's society in these meetings.

There is no meeting so interesting as the one in which you yourself have a part. Never forget this, and persuade the children to learn Bible verses, or hymns and recite them. As time goes on you will feel the need of the books on missions, because we will have missionary subjects, and you will need the books to find material for your programs. Only begin at once, and try to interest the entire Sunday school as well as the entire church in our Circle. You will soon be able to form an abiding organization.

*

Two Circles Close Together.

They are doing good work at Overbrook, Kans., as the following letter from Brother Norman Flora informs us: "I send you five names and hope to get more soon. There is another Circle already organized on Route 1, but we are in another congregation, and are almost too far apart to be in one Circle. We pray and hope that many will join the Circle and labor for the cause of missions."

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XXXII.

Strasburg, Germany.

Dear Mr. Maxwell:—

I might have mentioned in my previous letter written from Berlin, something concerning the religion of the place. In the way of churches there are thirty-two Lutheran churches, three Roman Catholic, three Jewish Synagogues, one Church of England, one American, and six other Protestant churches. This is comparatively a small number of churches for the size of the city. Germany is not what it once was in religious circles. She is fast losing in religious power. A wave of skepticism has swept over her from which she will not recover for many a year. Many of her ministers and professors, and even the Emperor himself, are sorely afflicted with doctrines of materialism, substantialism, spiritualism, fanaticism, and a good many other characteristics of infidelity, which are just as sure to degrade the church as they are present in the church. And what is true of Germany is true of any other country in the world. I am sure our own blessed country has been suffering from this very thing, whether it has been imported or not.

Before we left Berlin we spent two or three days visiting the "Royal Charite Hospital." It is one of the largest institutions of its kind in the world. It has a clinical capacity of not less than eighteen thousand. The poor are operated upon free of charge. There is a hospital for children only. The Germans are exceedingly fine in surgery, in fact they lead the world as surgeons. There are fifty-six surgeons at this hospital. While it is a sickening sight to see so many people sick and crippled, yet it is something for which we should be thankful that such are provided for the comfort of those afflicted. And the life of many a person, no doubt, has been saved who otherwise could not have received help.

The Thiergarten is a beautiful natural park, two miles long and three-fourths of a mile wide, with thirty-two statues of white marble on marble rostrums, lining the principal avenues. They represent the nobility of the empire, not by any means forgetting Frederick the Great. There are dozens and dozens of piles of sand hauled and placed at different places in this park in which the children are allowed to play. The little fellows that have been penned up in the great city certainly enjoy to shovel the sand and wade in it. The principal statue in the garden is that of Prince Bismarck, at a cost of two million marks. It was unveiled June 26, 1901. The principal outdoor exercise seems to be horseback riding, and many men and women are engaged in it. We had the pleasure of meeting the American consul here and found him to be a most estimable gentleman.

The eleven-hour ride from Berlin to Frankfurt-a-Main was a very enjoyable journey. It was such a contrast from the northern part of the Empire. The natural scenery was simply splendid; the quality of the soil surpasses anything we have seen in Germany. Of course the land is more or less undulated, but is considered very productive. Farther south there are a great many coal mines which are being very well worked. Instead of the

usual tram found in American coal mines, their coal here is carried or transported on wires supported by poles. And, as the Inglenook readers well know, the coal at the American coal mines is generally assorted by a dumping tram on a grate or rather a series of grates, which separates the coal into the different grades which adapts it to the market; but here how different, instead of these separating screens the women sort the coal by hand.

Many girls were seen making hay, working on the railroads and performing all sorts of manual labor of the most arduous kind. At one place Roscoe called our attention to a team of thirty-two yoke of oxen, hitched to a gang plow which very much resembled our John Deere plows, of Moline, Ill. And at one place we saw one set of these gang plows drawn by a steam engine which made us think of our prairie farms at home. Large crops of potatoes are cultivated and harvested by the women. No farm houses in the country. I have mentioned this several times in my letters, but it seems so queer that we cannot get used to it. Here and there are little villages, dotted over the country and these farmers go to their farms each morning and back to the village each evening, from one year's end to another as long as they live.

On the top of many mountains we see the castles of the Dukes who seem to have a supervision or jurisdiction over a part of the country, something like what we call counties. Frankfurt-on-the-Main has about three hundred thousand inhabitants and is a fine city. The German Empire controls Prussia, Bavaria, Saxony, et. al., which makes her one of the recognized powers of the earth.

Soon after we left Frankfurt we entered a more fertile country. Broad valleys of tobacco, beans, cabbage, etc., are seen, and in the distance a bold ridge of mountains which is literally covered with beautiful vineyards. The vineclad hills of southern Germany and southern France make one feel as if he were in a veritable paradise. And I assure you we shall never forget or regret the time spent among them. We noticed a great deal of the coal mined here is of a very soft nature, and must be pressed into cakes and allowed to harden before it can be used as fuel. The cakes are about four inches square and a foot long and make exceedingly fine fuel. This city of Strasburg is near the line between Alsace and Lorraine, where the Franco-German war played such a great part in the revolution of the schools of this country. I'll tell you more of this city in my next letter.

Sincerely,
Marie.

(To be continued.)

* * *

God's love runneth faster than our feet
To meet us stealing back to him and peace,
And kisses dumb our shame, nay, and puts on
The best robe, bidding angels bring it forth.

—Edwin Arnold.

By falling before God we rise toward him.—*Ivan Patin.*

The Q. & A. Department.

What does a man get from a bushel of corn if made into whiskey?

The distiller gets four gallons of whiskey which re-tails at \$16.40.

The farmer gets from twenty-five to fifty cents.

The government, through its taxes, gets \$4.10.

The railroad, for transportation, gets \$1.

The manufacturer gets \$4.

The drayman who hauls it gets 15 cents.

The saloon-keeper gets \$7.

The man who drinks it gets drunk.

The man's wife gets abuse, hunger and sorrow.

His children get rags and insufficient food.

I have heard it said that one could use a watch as a compass. How is this done?

Get the number of hours from midnight; divide that number by two; point that hour at the sun so that the shadow of match or leadpencil falls directly across the center of the watch; twelve will be north; six, south; three, east, and nine, west. For example: Suppose it is 9 A. M. The number of hours from midnight is nine; one-half is four and one-half; point 4:30 at the sun, and 12 will stand at the north.

Was the giving of vinegar, mingled with gall, to Jesus an act of annoyance or of mercy?

There are four things in the Orient which are supposed to be of the very highest insult: (a) To smite one with an insignificant reed. (b) To spit at one. (c) To offer one vinegar to drink. (d) To offer one an onion to eat. Three out of four of the most heinous insults were offered to our Lord.

What is the oldest ship in the world now in use?

Probably this honor belongs to a Swedish vessel which is a schooner by the name of *Emmanuel*. She was first a privateer, but is now in the timber trade.

What is a splint on a horse?

It is an osseous tumor on the splint bone of a horse, due to the inflammation of the periosteum. Also a bony callosity resulting from a disease of the splint bone.

Could you favor us with the name and address of the Consul at Montreal?

A. W. Edwards, Montreal, Canada.

Did not Job make a mistake when he said, "The Lord gave, and the Lord hath taken away," etc? Was it not Satan that visited these calamities upon Job?

The devil has enough to answer for without holding him responsible for doing what God gave him permission to do. God is the responsible party. If evil had come out of Job's affliction then we might be sure it was the devil's work, for God is incapable of bringing evil upon his children. But it was not evil. He got back twice as much as he lost and learned a great deal besides. The devil was God's agent. He "thought to do evil," and when he got permission to handle Job it was a pleasing prospect; but God who was handling both, "meant it for good."

What is the largest steamship in the world, its size and speed?

The new White Star liner *Baltic* is the largest vessel in the world. Its length over all is 725 feet, 9 inches; beam, 75 feet, and depth, 49 feet. Its gross tonnage is 23,000 tons, its cargo capacity 28,000 tons, and the total displacement at the load draft approximates 40,000 tons. The total complement of passengers is 3,000 and a crew of 350. Its speed is about 16½ knots an hour. Her maiden trip from Liverpool to New York occupied 7 days, 13 hours and 37 minutes.

Give the date of the birth and death of Elbridge Gerry, John C. Breckenridge and Hannibal Hamlin.

Elbridge Gerry, born July 17, 1744, died Nov. 23, 1814; John C. Breckenridge, born Jan. 21, 1821, died May 17, 1875; Hannibal Hamlin, born Aug. 27, 1802, died July 4, 1891.

When was the Bible first translated into English?

The translation of the Vulgate Old Testament into English by John Wycliffe and Nicholas was finished in 1382. This was the first Bible in English.

Is it wrong to study the Bible simply for its literary excellence?

It isn't wrong to analyze a loaf of bread, but a hungry man will eat it.

Where can I ascertain the amount of the daily receipts of the United States Treasury?

Write to the Secretary of the Treasury.

A NEEDLE passes through eighty operations before it is perfectly made.

MISCELLANEOUS

HITCHED TO A STAR.

WALLISVILLE, TEXAS, receives all its freight by boat from Galveston or Houston, and as it happened one day, the captain of a two-masted schooner found his helper too sick to return with him to Galveston. His search for a roustabout was unavailing until, just before dark, he found a negro on the landing who had never before seen a boat or as large a body of water as the Trinity River. A bargain was, however, struck, and the negro agreed to go with him to Galveston. After getting through the river into Trinity Bay, the Captain called the negro to him at the helm, and after explaining to him at great length and with much care how to steer by the rudder, he pointed to a bright star directly ahead and said, "Now, Bob, you see that star directly over the nose of the boat?"

"Yessir."

"Well, that star is right over Galveston Island, and if you will keep the nose of this boat pointed at that star we will butt into Galveston. Now, you remember all I told you about steering, do you?"

"Yes, Boss."

"You can keep the nose pointed right at that star, can you?"

"Sure, Boss."

"All right, I'm going to sleep for awhile, and then I'll steer and let you sleep."

"All right, Boss."

When the Captain woke up the first thing he did was to look for his star, and to his consternation saw it over the stern of the schooner. "Say, you black rascal, where you steering for?" he roared.

"Don't know now, Boss, you got to give me another star. I done passed dat un."—*May Lippincott's Magazine.*

NEARER HOME.

BY PHOEBE CARY.

The text of this poem given here is from "The Poems of Alice and Phoebe Cary." (Houghton, Mifflin & Co.) In the version given by the late Epes Sargent is the following fourth stanza:

But the waves of that silent sea
Roll dark before my sight.
That brightly the other side
Break on a shore of light.

In Whittier's "Songs of Three Centuries" (Houghton, Mifflin & Co.) the first stanza has "welcome thought," omits "my" in the third line and has "I've ever" instead of "I ever have"; the second stanza has "jasper sea," the third stanza has "that bound," the fourth stanza has "dimly" for "darkly," has "Lies the dark and uncertain" instead of "Is the silent, unknown," and "Us at length" instead of "at last." In the same book the next to the last and last stanzas are:

Father, perfect my trust!
Strengthen my feeble faith!
Let me feel as I shall when I stand
On the shores of the river of death;
Feel as I would, were my feet
Even now slipping over the brink,
For it may be I am nearer home,
Nearer now, than I think.
One sweetly solemn thought
Comes to me o'er and o'er;
I'm nearer my home to-day
Than I ever have been before.
Nearer my Father's house,
Where the many mansions be;
Nearer the great white throne,
Nearer the crystal sea;
Nearer the bound of life,
Where we lay our burdens down;
Nearer leaving the cross,
Nearer gaining the crown!
But laying darkly between,
Winding down through the night,
Is the silent, unknown stream,
That leads us at length to the light.
Closer and closer my steps
Come to the dread abysm;
Closer Death to my lips
Presses the awful chrisim.
Oh, if my mortal feet
Have almost gained the brink;
If it be I am nearer home
Even to-day than I think.
Father, perfect my trust;
Let my spirit feel in death
That her feet are firmly set
On the rock of a living faith.

* * *

NEARNESS of life to the Savior will necessarily involve greatness of love to him. As nearness to the sun increases the temperature of the various planets, so near and intimate communion with Jesus raises the heat of the soul's affections toward him.—*Spurgeon.*

* * *

MEN ought to be annoyed by sufferings which come from their own faults.—*Cicero.*

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,

Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

PEOPLES STATE BANK,

F. A. VANIMAN, PRES. McPHERSON, KAN.

Every man's ideal is a pleasant, happy HOME,
surrounded by modern advantages, in a congenial
climate, and located in a growing, resourceful
and prosperous community. Washington county,
Idaho, possesses these advantages to a fuller de-
gree than any other section of
the United States. Her fruit is
incomparable and includes ev-
ery variety known to horticult-
ure outside of the tropics.

HOMES

Her irrigated farms produce crops of hay, grain
and vegetables that are the marvel of farmers in
the middle West. Her
cattle, and sheep com-
mand top prices in
markets. Her forests
will make a lumberman's paradise. Her mines
of gold, silver and copper rank with the richest
discovered. To call her climate
"Italian" would be flattery to
Italy. Extreme heat, extreme
cold, cyclones and droughts are
unknown. The U. S. Weather
Bureau reports 336 sunny days in Idaho in
1904. Weiser, the county seat of Washington Co.,
is a modern little city of 3,000 pop., on the main
line of the Oregon Short Line Ry., owns its water
and electric light plant, has modern sewerage
and is the gateway to the stock, timber and min-
ing sections. Splendid business openings, and
great opportunities for farmers are offered. Don't
delay. Investigate! Write for illustrated book-
let and special information to Secretary Weiser
Commercial Club, Box V, Weiser, Idaho. 2413

The Will-o'-the-Wisp

"ONCE upon a time," grandmother would begin, as we sat around her in the twilight, listening with eager faces to the fascinating tales of "Snow-white," "Little Red Riding Hood," "The Beauty and the Beast," and other wonderful stories of our childhood—never-to-be-forgotten fairy tales of our folk lore.

We would hear stories told of the mystic light, the *ignis fatuus*, or, as it is commonly called, the "Will-o'-the-wisp," and "Jack-o'-lantern," with wide-open eyes and wonder at the thrilling narratives of how people believed, before education had dispelled the fogs of superstition, that these strange lights represented poor, lost souls sent to perdition in expiation of their sins.

Many of us have seen these weird lights do their hobgoblin dance over marsh and meadow and, although we were aware of their cause and origin, a peculiar feeling would creep over us as our eyes noticed the mysterious illumination.

The lone traveler in the darkness of the forest frequently hails the light as the gleam of a friendly lantern. He follows its inviting rays farther and farther through the darkness until he realizes that he is on treacherous ground. Sinking deeper and deeper into the mire in an effort to reach the mocking light, his cry for help dies unheard in the still, dark night.

We meet many of these "Will-o'-the-wisps" as we journey through life, and they often lead us into dangerous pitfalls before we are aware of it. Our health begins to fail, the usual energy is gone. We feel unfit, nay, unable, to fulfill our customary duties and wander in the darkness of despair. Then the "Will-o'-the-wisp" appears. Madly we follow the alluring rays of this and that medicine in our efforts to regain our health, our lost energy. We try various remedies with high-sounding names—pills and powders—but find that they do us no good. As a result of our disappointment, we cry out for help—and help is near—there is a strong hand able to pull us out. DR.

PETER'S BLOOD VITALIZER is not a "Will-o'-the-wisp" in the realm of medicine: it is the powerful arm which will pull us out of misery and sickness. Its constant growth in public favor for over a century bespeaks its merits. It acts where other remedies fail. It builds up where others pull down. It is a medicine out of nature's own store-house, the product of deep study and years of research. It is a regenerator of the human system. Thousands have found it a help in time of need.

CAN WORK AGAIN.

Lone Rock, Iowa, Dec. 28, 1903.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—I take great pleasure in telling you what your **Blood Vitalizer** did in my case. Two years ago last spring I was taken sick. I suffered from indigestion, constipation and lack of appetite. Through the healing power of the **Blood Vitalizer** I was quickly restored to health. I am now well and able to do my work again. I have full confidence in both you and your remedies. Please send me terms for an agency.

Yours very truly,

Mary McElwain.

LIVELY AS EVER.

Shippensburg, Pa., April 2, 1904.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—We are greatly pleased with your **Blood Vitalizer**. We have a boy nine years old who took sick last August. The doctor said he had symptoms of typhoid fever, but that he had checked it before it had developed very far. The boy, however, did not get well, and so we doctored all winter, changing doctors along the holidays, but there was no noticeable improvement in the boy.

Finally we resorted to your **Blood Vitalizer**, and before he had taken it a week he commenced to improve, and is now as well and lively as ever.

Yours very truly,

Joseph Burkhardt.

No mistake is made when DR. PETER'S BLOOD VITALIZER is resorted to. No case has been reported where this old herb-remedy failed to do good. Its record of success extends back over one hundred years. Not a drugstore medicine. It is supplied to the people direct. Address:

DR. PETER FAHRNEY & SONS CO.,
112-118 South Hoyne Avenue,

ART PICTURES

We have just received three new numbers of these "Fine Art Pictures" as follows:

- No. 125--MARRIAGE CERTIFICATE**
- No. 123--FAMILY RECORD**
- No. 121--MEMORIAL**

We have had a number of calls for the above numbers and are pleased to state that we are now prepared to furnish them.

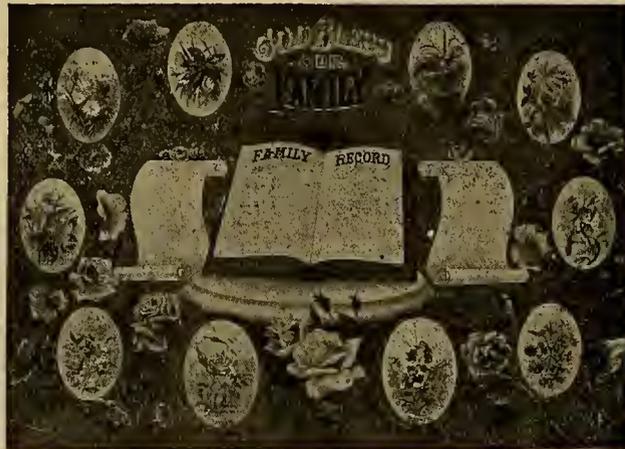

The Memorial picture is printed on black paper, which makes it very appropriate, while the other two are printed on gilded paper in many beautiful colors.

No. 125.—Marriage Certificate.

We have sold more than **5,000** of these Pictures in the last two months and are still receiving many orders each day. A great many order from 12 to 25 at a time, and a number of orders are received for 40 and 50. Our customers are so well pleased that it is no uncommon thing for

the same person to send us two or three orders. Size of picture, 16 x 20 inches. **Former price, 25 cts.**

No. 123.—Family Record.

These numbers are all exceedingly fine. Send us an order and we are sure you will be delighted with them.

TWENTY SUBJECTS

Besides these we have 20 other subjects that are very popular.

OUR SPECIAL PRICE

BRETHREN PUBLISHING HOUSE, Elgin, Ill.

No. 121.—Memorial.

UPPER PENINSULA LAND CO., Ltd.,

F. J. MERRIAM, Gen. Mgr., 935 First
Nat'l Bank Bldg., Chicago, Ill.

There have been so many requests for information concerning the Upper Peninsula Land Co.'s property in Michigan, where the Dunkard settlement is going on, that it has been decided to make personal inspection easy for those who wish to purchase either for settlement or investment.

There are homeseekers' excursions from practically all points to Rudyard Mich., at the rate of one fare plus \$2.00. Ask your home railroad agent concerning this. As it will vary at different stations we cannot give it correctly here. Your agent can tell you exactly what it will cost to Rudyard and return. Enter into correspondence with the undersigned long enough ahead so that arrangements may be made for your comfort.

The management has arranged for a camp on the edge of the Dunkard settlement, tents, etc., on the banks of Pine river, where there is good fishing, and the tents and their equipment are free to land explorers, both men and women. All that visitors need supply are their blankets and food. One who understands both camping and the lay of the land will be present to show the country free. It is a splendid opportunity to have a business outing. This offer applies only to the Dunkard Brethren and their immediate friends.

Land runs from \$5 to \$10 an acre and the same land, in cultivation, right beside the Dunkard Settlement, can not be bought for \$50 an acre.

In order to take advantage of the camp offer those interested must take up the matter in advance with the undersigned. Make up a party in your neighborhood for Rudyard and the Dunkard Settlement and see a country worth while. Those who think they can get up a party will find it much to their advantage to correspond with us for details and an understanding of the situation.

Here's something to remember. While the land is wooded, for the most part, yet clearing is easy, and the ties, ship knees, cord wood, etc., will afford good wages while clearing your own land. Stumps are pulled out by horses, an easy thing, as the roots are spread out on the surface. A drouth is impossible and cyclones are unknown. The water is good, fish are abundant in the streams. It's the best place on earth for stock. A hay field lasts forever and the grass in the woods is knee high. It isn't a "lazy man's paradise" by a long ways, but for live people it offers a good home with ordinary work. Go up and see it, going into camp on the Pine. Don't go to Rudyard without notice to us. Let us know and we'll be ready for you at the station. Write for details of the camp.

How to Get There.—The way to the Upper Peninsula is, from Chicago, over the North-Western and the Soo R'ys. Rudyard is on the Soo R'y. This is the only direct way,—N.-W. and the Soo.

Address,

HOWARD MILLER, Elgin, Illinois.

The Reedley Tract

The Gem of the San
Joaquin Valley.

Is destined to be the home of many Brethren. Those settled here are well satisfied and are advising others to come.

The undersigned expects to be at the Annual Meeting at Bristol, Tenn., and will be pleased to meet the brethren, and talk with them about the Reedley Country. My headquarters will be at the Union Pacific Office, Annual Meeting grounds, Bristol, Tenn.

Elder D. L. Forney, late Missionary from India, has just purchased land near Reedley. Other leading brethren will locate soon.

Write for booklet and full information.

Address:

O. D. LYON,
Reedley, Fresno Co., California.

READ THIS!

Do you canvass for a livelihood? Are you a widow without any support. Is your health poor and not able to do much work? If so, write to Bro. F. C. Renner, New Midway, Md. He is a minister in the Brethren church and wants to help you to help yourself. Sister Sophia A. Stong, Newville, N. Dak., sold 3,564 boxes, and Bro. E. B. Stern, Noblesville, Ind., sold over 9,000 boxes. Many widows support their families with it. It is a pleasure to sell it, because it gives full satisfaction and is wanted by everybody. People come to your home for it, if they know that you have it. Here is what Sister Hannah Royer did. She had canvassed for other things, and when we sent our circular to each minister named in the Brethren Almanac, Bro. Koontz got one and he handed it to Sister Royer. Now notice her orders and the dates of them: Aug. 12, \$1.50; Aug. 22, \$5.00; Aug. 29, \$7.60; Sept. 9, 17.00; Sept. 25, \$16.50; Oct. 12, \$30.50. Just two months ago she wrote us that she cleared from \$2 to \$5 a day. Now you can see that it is no fake or catch penny article. Over four million boxes have been sold, and not one complaint. It suits every one. It has gone to all nations, England, Russia, Sweden, Belgium, Palestine, India, Mexico, Canada, Hawaii and the Islands. Many poor widows and orphans are supporting themselves with it. Write for particulars, or send two stamps for a sample and full particulars. Address:

ROSE JELLY CO.,
Frederick Co., New Midway, Md.

Victor Headache Specific

Cures all Sick and Nervous Headaches, Neuralgia, Brain-Fag, Sea and Train Sickness. Eleven cures 10 cents. Mailed on receipt of price.

Victor Remedies Co., Frederick, Md

An Easy Way to Make Money

Agents everywhere are coining dollars selling the

Co-ro-na Medicator

Men, women, boys and girls who want employment, NOW is your opportunity. The **Co-ro-na** sells itself. Everybody who tries it, buys it after a few minutes' use. Write for terms NOW, as this announcement will not appear again.

The **Co-ro-na** treats with medicated air. Cures catarrh and all diseases of the air passages.

GOLD DOLLARS EASILY MADE.

I have made over \$1,100 a year for four years selling the Co-ro-na Medicators. It is the best thing for Catarrh and diseases of the air passages I ever saw. I only need to show it and let a person use it a few minutes and it is sold. I seldom clear less than \$10 a day and have cleared \$35 in a single day. I am selling in California and cannot reach the whole country. If any reader of the Inglenook wants to make money easily, write to E. J. Worst, 5 Elmore Block, Ashland, Ohio, and ask for his best terms for the Co-ro-na and you can make money, too. You can get one on 5 days' trial if you wish; that is the way I began and now making my fortune. A. L. Tabor.

To readers of the Inglenook this is my

SPECIAL OFFER!

For a short time I will mail my new Co-ro-na Medicator with medicine for one year's treatment to any person naming the Inglenook on 5 days' trial free. If it gives you perfect satisfaction, send me \$1.00 (half price), if not, return it at the expired time, which will only cost you 3 cents' postage, and you will not owe me a penny.

We are making large shipments of CO-RO-NA to England and other foreign countries. We sell only through agents, never in drug stores. We give exclusive territory. Our CO-RO-NA stands the test anywhere and everywhere for Catarrh, Hay Fever, Hard Hearing, Headache and all diseases of the air passages. Write to day and secure your territory and go to work. A great field for doing good is now open to readers of the Inglenook. Send for a CO-RO-NA on 5 days' trial free and terms to agents. Address:

E. J. WORST,

5 Elmore Block,

Ashland, Ohio.

SUMMER is the time to cure Catarrh, as the winter blasts no longer irritate the mucous membranes and a cure is made in half the time.

Never take medicine in the stomach to kill germs of Catarrh in the head. Nothing but air can reach their hiding places and the **CO-RO-NA** kills them on the spot.

Omaha, Neb.

THE GOVERNMENT WILL RECLAIM 50,000 ACRES

Big Irrigating Ditch Near Reno, Nev., to be Opened Saturday, June 17.

[Special to the Record-Herald.]

SALT LAKE CITY, Utah, June 11.—Near Reno, Nev., next Saturday, exactly three years since the national irrigation act became law, the first of the government irrigation canals designed to transform the West will be flooded. In the presence of distinguished representatives of science, engineering, legislatures, state and federal, and a great throng of settlers the water will be let into a system of canals just completed by means of which 50,000 acres of Nevada's arid land will be reclaimed. The event marks an epoch, for it is only one item in a colossal plan of land improvement, the greatest the world has ever seen. It means the ultimate reclamation of 100,000,000 acres of arid land.

The portion of the Nevada project now completed is known as the Truckee-Carson system and consists of a canal thirty-one miles long to carry the water of the Truckee River to a mammoth storage reservoir on the Carson River having a capacity of 236,000 acre feet (an acre foot equals one acre one foot deep). Directly below this reservoir two canals having a combined capacity of 1,900 cubic feet per second will lead the water of the united streams out upon the plains, where 200 miles of small ditches will distribute it in all directions over an area of 50,000 acres.

The whole project hinges on the storage of flood waters. The engineers are using all the natural storage basins where the water is most readily impounded in the construction of dams. In the Nevada region there will be seven or eight such reservoirs, large and small. The largest of them is Lake Tahoe in California, which is fed by the ice-cold streams from the Sierras. This lake lies in the drainage basin of the Truckee River and millions of cubic feet of water can be dammed up in it to be let down as needed for irrigation.

The work of the Nevada project so far has been accomplished under the direction of Government Engineer L. H. Taylor and supervised by Frederick H. Newell, chief engineer of the reclamation service. For the initial part of the work in Nevada, \$2,740,000 of the reclamation fund was set aside by the Secretary of the Interior. When this sum is spent at least 100,000 acres will be supplied by canals.

The reclamation act provides that the farms in the Nevada project shall be forty acres each near the towns and eighty acres each elsewhere. The original cost of a homestead to the settler is about \$15—the amount necessary to file and record his claim. Before the title to the land passes to him, however, the government asks that he pay back the amount expended for reclamation, which in the Nevada project is \$26 per acre. The settler must reside upon his land, water it from the government ditches and pay the amount charged against his farm in ten equal annual installments.

Stop Off at Reno, Nevada,

And investigate the irrigated Government land. Call on Mr. H. B. Maxson, U. S. Engineer, for information.

C. S. Morey Makes Remarkable Prediction in Regard to Beet Growing Here.

"Colorado as a beet sugar producing state will soon leave Michigan far in the rear, if the present developments continue."

This assertion was made this morning by C. S. Morey, head of the Morey-Boettcher syndicate. He has just returned from a trip to the East. While there he made arrangements for the transfer of one of the largest Michigan factories from Saginaw to Sterling, Colo. The new factory will have a capacity of 600 tons and will give employment to hundreds of men.

This will make the seventh beet sugar factory in the South Platte Valley owned by this syndicate.

A NEW EDITION OF THE

Inglenook Cook Book

This cook book has become so popular that we were compelled to get out another edition.

We are printing it on much better paper this time and are binding it in our own bindery, insuring a much better book than previous edition.

It contains 1,000 recipes by the best cooks in the country and are all simple and practical. Many good cooks tell us they have laid all other cook books aside and use only the Inglenook Cook Book.

It is being bound in a substantial paper binding and also good oil cloth. Price in paper binding, each, 25 cents

If you do not have a copy, send Oil cloth binding, each,35 cents now, and you will be pleased.

Brethren Publishing House,
 Elgin, Illinois.

Bookbinding

Do you have some magazine that you would like to have bound? Perhaps you have some books or Bibles, of special value to you, that you would like to have rebound. If so we can accommodate you.

We have an equipment equal to the best, in the book-binding line and can give you good and prompt service.

Write us, giving full particulars, size, etc., of what you want bound and we will quote you prices.

BRETHREN PUBLISHING HOUSE
 Elgin, Illinois.

AN OLD-FASHIONED REMEDY

Prepared in the old-fashioned way of honesty of purpose
with an unbroken record of success is

Dr. Peter's Blood Vitalizer

Solomon said: There is nothing new under the sun. The human system is very much the same to-day as it was over a century ago, when this famous herb remedy first came into prominent notice as a system-builder and health restorer. It has been doing this grand work of healing men and women ever since. No case has been so bad, no ailment so serious but what the **Blood Vitalizer** has done good.

If you have become discouraged at heart and broken in spirit owing to your un-availing efforts at finding relief, do not despair. Take hope from the experience of others, who have found health and strength in this plain old remedy.

The Secret of its Success

Is based on a principle as old as the hills; it strikes at the root of the disease by eliminating impure and waste matter from the system. Having purified and enriched the blood, the vital organs are again in a position to do the work which nature requires; the result is health—sound, robust health.

Do not inquire at the drug store for **Dr. Peter's Blood Vitalizer**. It is not a shelf-worn drug store medicine. It comes fresh from the laboratory, charged with the essence of health, and is supplied direct to the people through special agents. For further particulars address the sole proprietors,

DR. PETER FAHRNEY & SONS CO.,

CHICAGO, ILL.

A Delightful and Profitable California Home for Brethren

As heretofore announced in the Inglenook there is now forming, on the banks of the beautiful Sacramento River, in Glenn County, California, in the heart of the Sacramento Valley, a Colony of German Baptist Brethren.

Feb. 21, 1905, a party of Brethren composed of S. W. Funk, of Glendora, J. Overholtzer, of Colton, Wm. Platt, of Charter Oak (Ministers), T. M. Calvert, M. P. Custer (deacons), M. N. Overholtzer, F. L. Hepner, E. O. Overholtzer, of Covina, Cal., L. S. Ober, of Laotta, Ind., together with a number of friends, including J. P. Funk, of Charter Oak, and C. R. Greider, of Los Angeles, left Southern California on a trip to investigate the land under the Sacramento Valley Land Company's Canal system of irrigation just completed.

Ten of the party were old Californians who have had considerable experience in irrigating, fruit growing and farming in Southern and some in Central California, and are acquainted with the resources, climatic conditions, etc., of this country.

The party spent several days thoroughly investigating the water rights, character of soil, climate, health conditions, etc., in Glenn and Colusa Counties, and were well convinced that the richness of the soil, unfailing and cheap water supply, reasonable prices of land, transportation facilities, cool, pure, soft water for drinking, pleasant and healthful climate, etc., would insure a safe investment and deserve recommendation to others for settlement.

The party selected the Packer ranch of 6,600 acres, as a location, and secured an option at prices ranging from \$25 to \$100 per acre, including water right, according to distance, west from the River, character of soil and drainage. The party bought almost 800 acres, selecting from the cheapest to the highest price.

This tract runs about three and one-half miles west from the new town site of the Brethren, which is located 3½ miles north of Princeton near the banks of the Sacramento, amidst large oak trees. It is about 80 miles north of Sacramento City, the capital of the State.

All the water that is needed for any kind of farming or fruit growing is furnished by the Company for \$1.00 per acre per year, and the Company keeps up the ditches. The water can be had almost any day in the year.

"This is an opportunity that perhaps has never before been offered in California or in any other part of the United States." A number of those who have purchased will soon move to their new location and others are purchasing, and in a short time this tract will all be settled by the Brethren and their friends, especially by those from the eastern States who desire to do general farming in California.

This is certainly an opportunity to eastern people, as they can reap the benefit of the many years of experience these old Californians have had in irrigating and farming in California.

Wm. Platt and J. Overholtzer, two ministers, have

already moved to Princeton, Colusa County, Cal. They will gladly answer any inquiries and welcome those who come to investigate this country with a view of locating. Any of this party will also gladly answer inquiries regarding the new Colony.

A town site will soon be laid out and in the near future there will be a school, post office, stores and preaching services.

There is a trading vessel which comes up the River once a week and will take produce of all kinds in exchange for groceries and pay cash. With the advantages here and the conditions well adapted to general farming, there is no doubt but what one of the largest congregations of the Brethren in California will be located on this tract in the near future, and those desiring to take advantage of this opportunity should do so as soon as possible.

We have a climate that is no doubt equal to any valley of any consequence, for health and agreeableness. There is an occasional case of malaria in the lower and undrained lands of the county where water stands, but as the lands are becoming more thoroughly drained, this has almost entirely disappeared. For throat and lung trouble our climate is excellent. The weather is a little warmer than near the coast in Southern and Northern California, but not so warm as Riverside, Redlands, San Bernardino, etc.

The continual flowing water of the great Sacramento River directly from Mt. Shasta and the Mountains add greatly to the health of the country.

Any one desiring to see this tract will go to Colusa Junction, thence to Colusa on the Narrow Gauge, and, by notifying the Farmers and Merchants Bank of Colusa, they will be taken direct to the Tract in automobiles free of charge.

This is the land where the great oak and sycamore trees grow. The river banks are covered with wild grape and blackberry vines entwined amidst the large trees.

The river abounds in trout, salmon, bass and other delicious fish. The soil is rich sediment, 20 to 60 feet deep. It will produce 10 to 15 tons of alfalfa, 10 to 15 tons of peaches, pears or prunes. Oranges ripen there four weeks in advance of those of Southern California and always command higher prices for that reason. The present crop of wheat and barley will pay 10 per cent on \$100 an acre. It has the best supply of water for irrigation in all the west. I am a native of California. I have been actively engaged in developing California lands for 30 years. I am familiar with every large ranch and every section of California, and I know the Packer Ranch to be the best ranch of equal size in California. Its location is on the banks of California's largest river, where steamboats regularly ply. Its climate and its soil renders it ideal. Its productiveness is certain, not guess work.

Illustrated catalogues will be sent to any address free.

C. M. WOOSTER, President,

Sacramento Valley Land Company,

648 Market St., San Francisco, Cal.

HOMES FOR 1,000 FAMILIES

May be Found in the Beautiful Valleys
Along the

Oregon Short Line Railroad

IN SOUTHERN IDAHO

Where Crops Never Fail, because Farming
is Done by Irrigation.

Three crops of alfalfa hay are made each season. Fine timothy and clover are also grown. Wheat, rye, oats and barley also yield abundantly. Fruit growing is a very profitable industry.

The climate is healthy; winters short and mild. We solicit the homeseekers to come and investigate these valleys before locating elsewhere. Parties wishing to visit Idaho may also take advantage of the very low rates authorized to Portland and return on account of the Lewis and Clark Exposition, on which liberal stop-over privileges are allowed.

Exposition rates from some of the most Eastern points for tickets to Portland and return (not including trip through California), are as follows:

Omaha & Kansas City,	\$45.00
St. Paul & Minneapolis,	45.00
Chicago,	56.50
St. Louis,	52.00
Peoria,	53.00
Dayton, Ohio,	62.50

Tickets will be sold daily to September 30th, with final limit of ninety days from date of sale, but not beyond November 30, 1905. Stop-overs will be allowed on the Oregon Short Line at any point going or returning within final limit of tickets, but on return journey tickets must be deposited with the agent at point of stop-over.

Settlers' cheap one way rates will be in effect September 15th to October 31, 1905.

THE LIGHT OF CONSCIENCE.

BY MARTHA SHEPARD LIPPINCOTT.

Do the right and fear no thought
That another may express;
Whom your conscience has not taught
And your life may never bless.
Do what conscience says is right,
Then life's safest rule is yours:
And you follow in the light
That forevermore endures.

Men will differ and may change;
And if them you seek to please.
You may often think it strange,
That you find no path of ease:
For no matter what you do,
Some will think it is not right:
So to your own souls be true,
Then you'll follow God's own light.

Moorestown, N. J.

PORTLAND WORLD'S FAIR.

BY MILLARD R. MYERS.

Chicago, May 9, 1905.

Mr. E. M. Cobb,
Elgin, Ill.

Dear Brother:—I hand you herewith first of a number of articles, which I am preparing for your paper. As you probably know I went from Chicago to Portland over the Union Pacific Railroad and the Oregon Short Line taking in the cities of Denver, Salt Lake, Boise and Spokane on the way.

The most interesting part of a trip to the great World's Fair is what one can see on the way. In the articles that I am to send you I hope to be able to say some things that will be of interest to the readers of your paper and will be of value especially to those who will be fortunate enough either this summer or some time in the future to visit this great section of our country.

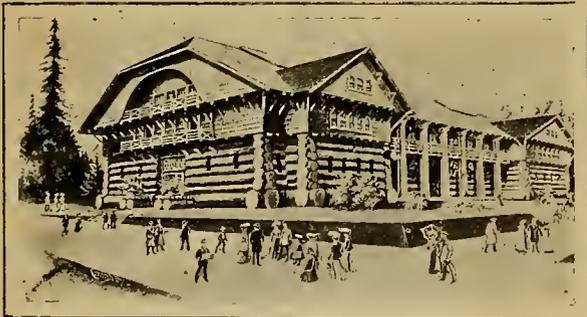

Trusting that what I have sent you will be satisfactory, and promising to do my best, I beg to remain

Yours fraternally,

M. R. M.

ONE might easily say that of the making of World's Fairs there is no end. Every event of national importance seems to hold up its hands and call for a meeting of the nations in celebration.

Columbus discovered America and 401 years later Chicago held the Columbian Exposition. The Declaration of Independence was signed July 4, 1776, and 100 years after that date Philadelphia announced the celebrated Centennial. Thomas Jefferson purchased the great western plains in 1803 and that event was commemorated by the Louisiana Purchase Exposition in 1904.

FORESTRY BUILDING.

This World's Fair, the most gigantic and colossal of all, had scarcely closed in a blaze of glory when it was announced to the world that the great Northwest was almost ready to throw open the gates of a new exposition in honor of the thrilling trip of Lewis and Clarke, who fought their way through deserts and mountain passes, climbed over rapids or floated down quiet streams, enduring patiently the danger of attack from savage men and still more savage nature, until they had pierced the great West and given to the world the wonderland of wealth and beauty.

I was convinced in my recent visit to Portland, Oregon, that the forthcoming Fair will be one of the most attractive and beautiful ever produced. Natural

valleys, winding between hills, from whose slopes on clear days seven snow-capped mountains may be seen in the distance, at whose feet lie placid waters, reflecting all the glories of the surrounding country and the skies overhead, in the center of which an island covered all over with a wilderness of flowers, rises like a paradise, certainly transcend description. The goddess of the hills and plains, of mountains and valleys,

THE OVERLAND LIMITED ON UNION PACIFIC.

has created the beautiful natural resort to which the Board of Directors have added all the experience and genius at their command.

As one enters the grounds from the southeast gate he comes directly into the midst of the large exhibit palaces with the Oregon Building on one hand and the Liberal Arts on the other. These structures, differing in architecture, are both exceedingly comely and attractive. They are not so large nor so massive as the buildings erected at some of the earlier expositions, but they are exquisite in finish and large enough to contain the exhibits of the great Northwest as planned by the Directors of the Portland Fair.

In the center of the open court between these buildings are fountains and flower beds, which in variety of color and fragrance furnish an extravaganza of elegance and beauty that lifts the soul of every viewer. As one lingers awhile until compelled by time or circumstances to proceed, he finds his eyes straying back again and again. A little farther in advance the picture changes, for a series of steps lead down to Guilds lake, in the center of which the Government Building, with two towers each 260 feet high, erected at a cost of \$260,000, rises as if in rivalry with the distant mountains. No man can stand here and take in the creations of man and nature without feeling a thrill of admiration for his fellows and a reverence for the Almighty Creator that will go with him until the end of time.

Turning a little to the left one comes to a bridge

THE CASCADES.

one-half mile long and broad enough to contain large side attractions on either edge and afford a wide passageway between.

This pier is styled the "Bridge of all Nations," and will be known instead of the "Midway" or the "Pike" as "The Trail." This bridge leads across the lake to the Government Island.

Turning again to the left and following around the gorge through the park, in which is to be found nearly every known variety of tree, one comes to the Forestry Building, which is the most remarkable structure ever erected for exhibition purposes.

It is made entirely of large logs taken from the Oregon forests and cut into lengths suitable for erecting a gigantic log house. The smallest of the timbers used is five feet in diameter and the largest thirteen feet in diameter. This wonderful structure has a ground floor space of 211x107 feet and is 65 feet from the floor to the roof. There are 44 columns, one might call Roman, each fifty feet long, which support the upper part of the structure. There are in all 152 columns inside and 12 columns outside, each one weighing, as calculated by water displacement, about 70,600 pounds. A woodsman would call these timbers ordinary saw logs with the bark on.

These mammoth trees were cut on the lower banks of the Columbia river and floated by way of the Willamette river through Guilds lake to the grounds. From here they were pulled by a wire cable operated by a donkey engine over a skid road in an iron cradle. They were then lifted into place by a large movable swinging crane controlled by a smaller engine 7x10.

This building, which contains about 2,000,000 feet of timber has been erected at a cost of from \$50,000 to \$60,000. The

same building would have cost in New York State \$250,000. Steps are now being taken by the State of Oregon to place a cement foundation under this building and keep it as a permanent State Exhibit Palace.

As I stood in the midst of these large and beautiful structures my mind went back to the night when all the nations were together to witness the closing splendors of the fair in St. Louis. Every one stood still at the moment when the President of that achievement turned off the lights for the last time and was compelled to say that the saddest part of the making of a World's Fair is the short life it enjoys.

'Tis true that they have served their purpose by bringing together thousands of people from every civilized and savage portion

of the globe, yet it seems too bad that so many millions of dollars should be expended and that in a few weeks the grandeur and sublimity should give place to a wreck of wood, stone and mud, yet after all this is the end of all things physical, the spiritual alone enduring.

The thousands who have met and mingled, exchanged ideas, criticised and quarreled, loved and parted, have taken back to their old homes new ideas from around the world and humanity has been ennobled, art made more beautiful, science more analytical, and the world better.

26 Carlisle Place, Chicago, Ill.

THE wings of a fly are used with great quickness and probably six hundred strokes are made per second. This would carry the fly about twenty-five feet, but a seven-fold velocity can easily be attained, making one hundred and seventy-five feet per second, so that under certain circumstances it can outstrip a race horse.

OREGON STATE BUILDING.

RELIGION OF MORALITY—WHICH?

BY MARTHA B. SHICK.

MORALITY, in its truest and deepest sense, is impossible without faith in God, or religion; yet there is a morality, a worldly morality, to which a person may attain without accepting Christ as his personal Savior, or the Scriptures as his guide through life.

The moral man, in the eyes of the world to-day, is he who is honest and upright in his dealings with his fellow-men, whose character is pure and who possesses a certain degree of hospitality and benevolence. When man has adjusted his political and social relations to his fellow-men, we say he is a moralist.

A religious character possesses all the qualities to be found in the moral one, but in addition to adjusting his relations to his fellow-men, he has adjusted his relations to God by the acceptance of his Word as revealed to man, and the acknowledgment of Jesus Christ as the Savior of the world.

Personal morality begins when man takes his first step in the path of duty, and this beginning makes its appearance in the tender years of childhood. Even before the child is old enough to distinguish good from evil, it is prompted to obey the parent from a sense of duty. As years come and go, and the child grows older, the duties multiply and reach beyond the parent and children in the home to playmates, neighbors, friends and society. During this time the child has grown to manhood, and his morality has increased in proportion to the duties performed by him. It is the fully developed moral man that we wish to consider.

There are many qualities possessed by a moral man which we admire. When we take into consideration the sin, wickedness and gross crimes that are being committed about us each day, such as lying, stealing, gambling, blaspheming, committing murder and the vilest of deeds, how our hearts are made to rejoice that many, many citizens of our country, although not Christians, are opposed to these forms of evil, take no part in them and strive to make this land of ours the best place on earth in which to live. We are glad that the human being is so much interested in the welfare of his brother. We could not conceive of the existence of the human race for any length of time were it not for the fact that most of *us* are moralists.

The mere moralist considers his whole duty in life to live in such a manner as will bring to himself the greatest degree of happiness without conflicting with his obligations towards his fellow-men, as imposed upon him by law and society. When this has been accomplished, he believes he has lived a complete life.

The aim in the life of the moral man is happiness. To be happy he desires to have a harmonious, self-

satisfied, worldly existence. To reach the desired haven he is guided by his own conscience, justice and public opinion.

Let us first investigate the moralist's purpose in life. He is seeking earthly happiness, that which extends to the grave but not beyond. Starting out in search of this something called happiness, reaching after a possible good to be attained, he finds himself in the midst of a great undertaking, with no sustaining power except the efforts of his own feeble will. The length of the journey is very uncertain, and the probabilities are that he may travel for years before reaching the goal, then only to realize his anticipations for a short period, when suddenly time shall cease with him, and all for which he has striven vanishes.

Is the conscience a safe guide? Does it always lead in right paths? There are men living to-day, noble, honorable men, who say we cannot go astray if we follow the dictates of our conscience. This would be true were it not for the fact that Satan succeeded in wrecking the conscience of our first parents in the garden of Eden, and never since that time have any of their children been able to restore it to its original purity. Although the conscience can be trained to a certain extent to discriminate between right and wrong, so much depends upon the teacher that we can readily see that the conscience of the pupil would be like unto the conscience of the teacher, and therefore far from being a safe guide. It is often in error and needs correction, enlightenment, cultivation, development. It needs to be roused from sleep and sharpened.

In order to live a harmonious life, it is very necessary to render to every man his dues—to be courteous, honest, sober, upright, virtuous—to fulfill all the duties as required by political and social laws. These rules are very strictly followed by the moralist. The law tells him to pay his debts, and he is never known to let an obligation for payment pass by default; the law tells him to give some of his property for charitable institutions, and he promptly remits the few coins demanded; it tells him he must not abuse dumb animals, and he is careful in the treatment of his horses and cattle; it tells him to regard the rights of his neighbor, and he makes good fences at the right place to protect his neighbor's fields from invasion by his stock; society tells him to be polite and courteous, to refrain from the use of vulgar and profane language, intoxicants and other similar forms of evil; society bids him to aid in charitable deeds and acts of mercy. All of these demands the moralist promptly obeys.

But why does he have such respect for the dictates of law and society—for their commands and prohibitions? What is the motive which prompts him to obey? Is it because he has a deeply-rooted love in his heart for that which is good and right? We

are willing to acknowledge that he has love in his heart, but it is not that pure and perfect love which is demanded of every man and woman. It is a proud, selfish love, born of a desire to escape the punishment inflicted upon those who disobey the law, or a desire to gain the reward of obedience—a good name among his countrymen, their esteem and exaltation.

From the facts related, we are made firmly to believe that the moralist is laboring under a bondage of duty. He cannot always love duty, but he has respect for it. Can a man be truly happy who is in bondage—a slave? When we were under the control of the British flag, did we not fight for liberty? Were we to be placed under the same yoke to-day, there is not one of us who would not say with Patrick Henry, "Give me liberty or give me death." Oh, that every soul who is treading the path of life as a slave of duty would cry out, "Give me liberty or give me death!" Then would the fetters that bind moral progress be broken, light would dawn upon the earth, and as its rays would penetrate the hearts of men they would behold their sinfulness in so long rejecting him who said, "I am the light of the world," and "I am the way, the truth and the life"; they would then be made to acknowledge that because they had rejected his Son, they had not been the children of God, but the children of Satan; that they were not only slaves of duty, but slaves of sin; then would they see that moral progress is not limited, but with the liberty and freedom gained through Christ they would press on and on and on throughout life and eternity.

And now since the moralist has been transformed into a religious man, instead of being simply a citizen of this world, he is a citizen of the kingdom of God; instead of depending upon his own conscience and the ideas of man for guidance, he follows the divine law, the Word of God; instead of being impelled to action by a sense of duty, he cannot refrain from being helpful to others because of the love of God which abounds in his heart; instead of trusting in his own strength of will for the fulfillment of duty, he now is led step by step, with the strong arm of Christ helping him over the rough and rocky places, and lifting him upwards where the road is steep; instead of devotion to this world, he is consecrated to God and his work; instead of desiring others to serve him, he is anxious to serve others.

The religious man can now take a retrospective glance over his life and wonder at his former blindness. He had no positive ideal to allure him onward and upward. He was always searching for one. His ideal now cannot be surpassed by any example in history, for Christ, the pure, the perfect, the One in whom guile was never found has become his pattern, and by following in his footsteps day by day, he grows more and more like his Savior.

Faith in God is the root of all virtues. The Gospel is the one power that can make an individual free. Christianity extends to all departments in life. It is not enough to respect the rights of men—their life, health, property, honor—to be honest and not take advantage, but we should have an unselfish readiness to help all mankind. Religion seeks to help, not merely the physical needs, but those of the soul, which are, in the sight of God, of great value. Religion brings with it gentleness, kindness, diligence, virtue, knowledge, temperance, patience, godliness, brotherly kindness and love, and "If these things be in you and abound, they make you that ye shall be neither barren nor unfruitful in the knowledge of our Lord Jesus Christ."

My dear young friends, do you wish to trust to your own wisdom rather than trust to the mercies of God? Do you, like the Pharisee, have no feeling of guilt? Are you self-righteous? Do you feel no need of the grace of God? Are you trying to climb the ladder to heaven, steadied only by your own hands, when Christ is standing with outstretched arms waiting firmly to support the ladder for you and help you from rung to rung? Why not break the power of sin and become a free man through the Gospel? Put on Christ, clothe yourself with his righteousness and be free from the old nature, for, "If the Son shall make you free, ye shall be free indeed." But if you prefer to remain in bondage, what will be your reward?

After all the duties of life have been performed and the cup of earthly happiness has been filled, the moralist bids adieu to everything that is near and dear to him, and his friends wrap the death cloak about his lifeless form and lower it into the small cavity in the earth which has been prepared as his last resting place. In only a few years nature has healed the scar on the face of mother earth and covered it with a rich carpet of green, dotted with violets and daisies. The little marble slab that marks the empty grave is all that reminds us of the one who has returned to dust.

How different the Christian's exit from life! Although he has had much happiness in this world, he closes his eyes in a peaceful sleep, knowing that only this physical body is taken to the tomb, and that the soul—the real man—shall awaken at the dawn of the perfect day when the heavenly Father calls all his children home. Then shall he be borne on the wings of angels through the pearly gates into the Holy City, where he shall meet his loved ones gone before, and live in perfect bliss in the presence of his loving Savior throughout eternity.

Elgin, Ill.

Music hath charm to soothe the savage breast.—
Congreve.

FISHING INDUSTRY.

BY A. C. WINE.

To fully realize to what extent the fishing industry is being carried on we must stop for a moment and think how many fish must be caught to supply the daily demands, and of how many people are dependent upon fishing for a living.

The fishing industry has become so great only since the railroad and telegraph systems have come into the country and made the mode of transportation of products very easy. Before the use of railroads the fishermen could only catch a small number of fish and these, when brought home, were given to the wife to dispose of in the immediate vicinity. But now they can be shipped to all parts of the world, and it has become a great industry.

The railroads afford every facility to the increase of the fish transportation. This was brought about because there were prospects of establishing a regular and profitable traffic that would benefit the world in general. The government has taken it into her hands to see that the fish are protected from people in certain seasons of the year, and they have also said that the time has passed when any one could fish at any time. Common sense teaches one that fish should not be caught at certain seasons and under a certain size. The government has taken great care in distributing the fish in water where they may grow rapidly and be beneficial. Many States have fish hatcheries, where fish are artificially hatched and sent to various waters where they will thrive and replenish the stock that has been diminished by over-fishing, etc.

It is with the fisherman as it is with the farmer, if the weather is bad and the crops poor they both cry, "Hard times." There are fishing seasons just as true as there are times of harvest with us. Mr. Samuel Hewett, who was a great fisherman, through investigations and experiments, discovered the plan of packing fish in ice to preserve them; this was a great step in the fishing industry. Mr. Hewett had over fifty large fishing vessels under his supervision.

The regular fishermen of England, Wales, Ireland and Scotland number two hundred thousand men, and they own over forty thousand fishing vessels. This is but a small number compared to those who ply upon the water of other foreign countries, our own not included.

There are different ways of fishing. One is by trawling; this is with a long net that drags the bottom of the sea, which is chiefly used by the fishermen of the Dutch, French and Belgians. The other way is with a line that is sometimes several miles long; it is a long rope with little short lines running out on both sides. The line has over eight thousand hooks on it,

and uses over twenty-five bushels of bait in a single day.

Some fish are valuable as food, and afford a staple food for the poor, and are a food of choice by the middle class, and are, in the estimation of the rich, held as delicacies. To supply the desires of the increasing population for fish, great must be the harvest of the sea.

Union Bridge, Md.

LOUIS THE GREAT'S ARCH.

THERE are different ways of marking the noteworthy events of nations. When the Romans achieved some great military victory, they erected a splendid piece of masonry in the form of an arch, carving it elaborately with scenes of battle, and inscribing it with dates and names. This was considered one of the most impressive ways of commemorating a great occasion. In the same manner the French people have placed archways in their capital, on historic sites, or on elevations that throw the stone work into bold relief.

One of the most significant of the arches in Paris dates back to 1670. It is called the triumphal arch of Porte St. Denis, and it was built to mark the campaign of Louis XIV, along the Rhine. It is eighty-one feet broad, and eighty-two feet high, and is inscribed to Louis the Great. It is placed at the intersection of two streets—no particular site when chosen, but since the days of King Louis, his arch has been the scene of three revolutionary engagements. The stone-work shows still the marks of the bullets showered upon it by the communists in 1871.

With Louis the Fourteenth's reign the French government grew to be the most powerful of any on the continent. His army was the largest and finest in all Europe. His generals and engineers were among the ablest of any age. Louis had encroached upon other kingdoms, and added portions of neighboring countries to his own. These conquests alarmed the nations about him, and they got together to form an alliance to resist this devouring monarch.

Louis pretended to be very angry that Holland, feeble in size and military strength, should attempt to resist his forces. In reality, he was trying to get an excuse to march into Holland, and secure it to his other possessions.

With every advantage on his side, a hundred thousand soldiers well disciplined, a body-guard of a thousand young nobles, and boats for water travel mounted and carried along, Louis and his party pushed along the unprotected states of Holland that bordered on the Rhine. The whole country on the left bank of the Rhine was taken by the French, scarcely an hour passed that the king did not receive the news of some new conquest.

It was for this series of victories that Louis caused the arch to be built; but hardly had the workmen completed it when the king was compelled to call back his troops from Holland. His demands upon the Dutch people to submit to his rule and give up their city of Amsterdam had aroused a people desperate with the injustice of Louis' unnecessary war. By getting other countries to help them the Dutch made a bold stand, and then the terrible French king was thwarted.

It was during the reign of this Louis, a reign that extended over seventy-two years, that one of the first efforts at revolution was made by the people of France. What became a few generations later an entire overturning of kingly authority, was now merely a suggestion of things to follow. The common people and nobles each made an effort to resent the insufferable tyranny of the royal government. Each effort was crushed out, and Louis celebrated this much of his power by having a statue of himself erected in which he was represented as triumphantly tramping on the helpless people of France.

Louis XIV, besides being a political leader of great power, bending all before him, counted himself a worthy patron of literature, calling himself "The Protector of Letters." With his reign, directly or indirectly, are associated such men as Corneille, Racine, Moliere, La Fontaine, Fenelon, Madame de Sevigne, Pascal.

His perfecting of the palace and grounds at Versailles at the expense of millions of money and the loss of thousands of workmen, was another feature of his reign. But the glory that stretched out through the greater part of his rule began to wane. Army and navy were reduced and given up; the treasury was empty, and his people desperate. His son and grandson, whom he had depended upon to succeed him, were both dead. The joy of the people at his death showed the oppression they had been under during his lifetime. A holiday of rejoicing attended his funeral day, and singing and drinking, the people watched the procession to his grave, and heaped curses upon their "Great Louis," the "Grand Monarch."—*Selected.*

HOW CROCKS AND JARS ARE MADE.

THE raw material from which crocks, jars, and other common earthen vessels are made is called potter's clay, which is found in many parts of the world, including our own country. It lies in deposits, or veins, usually near the surface, varying in thickness from a few inches to several feet. It is of a grayish or lead color, free from grit, and very heavy. The deposit is laid bare by "stripping" or removing the earth from above it, when it can be easily dug with an ordinary pick. Before the clay is ready for use it

must be well ground in a mill made especially for the purpose, and which consists of a combination of large iron knives, and crushing wheels revolving in a large iron pan. The clay is taken from the mill and made into blocks about sixteen inches square, which are placed in a cellar or other damp place where they will keep moist.

A "turner" (the operatives in a pottery are called turners) or his helper takes one of the blocks or "balls" of clay to a bench near his wheel, and makes it into small balls proportioned to the size of the vessels to be made. The potter's wheel is a flat metal disk sixteen or eighteen inches in diameter, which revolves horizontally, and is operated with a treadle by the "turner's" foot. The turner places one of the small balls of clay on the center of the wheel which is made to revolve rapidly, and with his hands fashions the crude mass into symmetrical and artistic shapes. In much less time than it would take to describe the process, the ball of mud has been transformed into a shapely crock or jar. The wheel stops and the newly formed vessel is detached from it, and removed to a board near by. When the board is full the ware is taken to the drying room where it remains until it is dry enough to be "blued" (decorated and stenciled) and glazed inside. It is then ready to be burned. The kilns in which the stone-ware is burned are built of stone, or brick, or both. They are round structures ten feet in diameter and fifteen or sixteen feet high. The floor of the upper chamber is four or five feet from the ground, and is full of holes, so that the blaze and heat from the fire in the flues below may pass up through it. The ware is placed in the kiln very carefully, bits of sanded clay being placed between the pieces of ware to keep them from sticking together. When the kiln is full the door is closed with bricks and mortar, and a slow fire is started in the flues below. The fire is gradually increased until it blazes out through the holes in the conical top of the kiln.

Two or three days are required to complete the burning of a kiln of stone ware. Just before the burning process is completed a quantity of salt is thrown into the kiln from the top, which, melting and running over the ware, gives it the glassy appearance noticed on stone-ware of good quality. The fire is then allowed to die out, and in a day or two the ware will be cool enough to be removed from the kiln, assorted and stored away for sale.—*Selected.*

WHEN your mind has been drawn aside do not fret or let yourself go down the stream of nature as if it were in vain to attempt to swim against it; but confess your fault and calmly resume your former endeavor, but with more humility and watchfulness.—*Fletcher.*

THE TRAIL OF THE BLACK FOX.

THE train was three hours behind time, and the half-dozen of us gathered in the little station on the Northern Pacific sat in a sort of gloomy silence listening to the clatter of the telegraph keys inside the agent's office, or contemplating the red-hot stove that roared with a temperature of thirty-two degrees below zero.

It was an irksome task to sit there for three hours and wait for the train. I had neither book nor paper to read, and I was greatly relieved when the grizzly-bearded man in the corner began to talk.

"This winter is a pretty good match for the one I spent on Mouse river nearly forty years ago," he said. "I shall never forget it. Many of the settlers in Northern Dakota froze to death in their shanties on the prairie, and whole villages of Indians perished from starvation and-cold.

"I was a young man then, just twenty-one, and was holding a claim in the Willow Creek Basin. It lay right out on the prairie, with not a stick of timber nearer than fifteen miles. I had no money, my crops had been almost a failure, and the prospect of staying there and hauling wood fifteen miles merely to keep from freezing was not pleasant. It set me to thinking, and I talked the matter over with Dick, a younger brother, a lad of sixteen, who was living with me. I think it was he who first suggested that we get rid of the task of hauling fuel by removing for the winter to where it could be had ready to hand. It was easier to go to the fuel than to bring it to us, so we finally decided to go up on Mouse river and spend the winter hunting and trapping. This would give us employment during a period when we could have done nothing by remaining on the claim, which was the best part of it.

"There was a fine spell of weather in November, and we took advantage of it by tumbling our provisions, feed and other necessaries into the wagon and striking the trail for Mouse river. We got there and had established our winter quarters, as luck would have it, before the first big snow fell. We could hardly have found a better place. It was right under the wall of a projecting cliff, in a little cove where hardly a breath of the north wind could reach us. There we built a cabin about ten feet square, which we daubed as tight as a jug with mud, making a roof of poles and pine boughs. We soon had a good-sized chimney erected, and, when we had kindled a fire in the fireplace we found our quarters quite comfortable.

"We piled a good quantity of wood against the cabin, and thus provided against a heavy fall of snow. We set to work with a will, for the weather remained fair enough, though it was now December. We put out what traps we had, and, inside of a week, we had caught five wolves, seven minks, a wild-cat and three

beavers. In addition to these we had killed a deer and two antelopes. So, taking it all in all, we had done exceedingly well.

"'If we can keep this up,' said Dick, 'we shall soon make enough to pay for the claim.' But our good luck did not last. About the middle of December a foot of snow fell, the thermometer dropped to thirty-six degrees below zero, and winter shut down in earnest. All the hollows and ravines drifted full of snow, and we got up one morning to find our cabin in the middle of a drift ten feet deep. It took us most of the day to tunnel out in front of the door and scoop the snow from the roof. For nearly a week we hardly left the cabin. The cold was fearful, and must have been pretty close to fifty degrees below zero. But our cabin, with the snow piled about it, was as warm as a cave; and, when we thought of the people living far out on the bleak prairie, I want to tell you that we thought of our blessings and felt well contented with our lot.

"Our main trouble was getting water to our horses. We had found a nook for them under the projecting shelf of the cliff—a sort of grotto, the entrance to which we closed with pine boughs; and this was so walled in with the drifting snow that it was impossible to get the horses out to water, so we were compelled to melt snow in our teakettle and carry the water to them.

"While this task was not an easy one—for the water often froze before we could get it to our horses—it gave us something to do, which served, in a manner, to relieve the monotony.

"We were completely shut off from the outside world. It was like being in prison. We had brought neither books nor papers with us, and had nothing to read. I never realized till then what it is to be without books. I remember how we lamented our misfortune, and what our joy was when Dick discovered a part of an old newspaper pasted on the inside of our grub box. How carefully we dampened it so as to soften the paste; and, when we had detached it, we dried it by the fire; and, by the light of a torch—we had no windows in our cabin—we devoured its contents over and over.

"During the last week in December another snow fell, and again we found our cabin covered with the drifting snow that came over the cliff. We had all our work of tunneling and shoveling to do over again; but, as we needed exercise, we did not mind it much. All the ravines and hollows were filled with snow; and once, when we ventured to try to get our traps, we went down in a drift fifteen or twenty feet deep, and came near being frozen before we got out.

"After that experience we made us some snowshoes and avoided any similar mishaps. But it was near the middle of January before we ventured very far from our cabin. The weather remained fearfully

cold, and often at nights, as we lay snugly tucked in our blankets listening to the cutting wind right from the Arctic whistling through the canon, we could hear the trees in the river bottoms cracking with frost like the explosion of heavy guns.

"One evening, just before sunset, as I was bringing some wood into the cabin, I saw something run swiftly along the edge of the creek on the ice. At first glance I thought it was a black dog. It was coming up the creek in the direction of the cabin. I stood perfectly still. As it came from behind a clump of willows there was that in its movements—the shifting, nervous lifting of the head, the stealthy tread and alert manner—which proclaimed it to be something different from a dog.

"It came swiftly from behind the willows, and then threw up its head and came to a halt. A single glance at its bushy tail, its pointed nose and glossy coat told me what it was. For an instant I was too greatly surprised to move. There before me, not forty yards away, stood a black fox with a superb coat on him worth three hundred dollars in gold!

"It was enough to astonish an older hunter than I, and for a moment I stood looking at it as if I were powerless to move. Then I shot into the cabin, seized my gun and dashed to the outside. But the delay had done the mischief. The game was gone. Dick, who had witnessed my excitement, followed me from the cabin, bringing his gun, evidently expecting to be confronted by a bear. A glance showed me the fox more than a hundred yards away, running down the creek, but, before I could bring my rifle to bear on him, he had disappeared behind a thicket that skirted the creek.

"When I explained to Dick what it was, he was as greatly excited as I, and we lost no time in getting on our snowshoes and starting on the trail. We followed it for nearly a mile, but darkness had set in by this time, and we returned to the cabin, disappointed but not discouraged. To bag that black fox would be a good winter's work in itself, and I didn't sleep much that night for thinking of it. We were up and had breakfast long before daylight the next morning; and, as soon as it was light enough to see our way, we put on our snowshoes, took our guns and struck for the trail of the black fox.

"We took up the trail where we had left off the night before and followed it as fast as we could travel over the snow. It led us a merry dance. I can tell you; out onto the open plain, in and out of ravines, back to the bottoms, and through mazes of underbrush and thickets. The trail was plain, and we followed it with the eagerness of bloodhounds on a fresh scent. But the black fox is almost as cunning as his red brother, and we soon found that he began doubling on his trail. This caused us to lose it several times, but we kept on. Once we came to where the fox had

feasted on a hare, and, later, where it had scratched around an old log for wood mice. We had little hope of coming on to the fox in daylight. It is not a common thing for them to be abroad during the day, excepting in cases of extreme danger. But we might trail him to his lair. Should this prove to be a hollow log or tree, our task of getting him out would be easy. On the other hand, if his den should happen to be a hole in the cliff we would have little chance of capturing him unless we could do so by setting a trap at the hole.

"There seemed to be a good many chances in favor of our capturing him. It was hardly possible that we should lose the trail, and the trail must lead us to his den. We were in the best of spirits. It is not every day that a creature with a coat worth three hundred dollars can be picked up.

"As we made our way into a deep ravine we saw something dark moving along the edge of a little stream. We came to an abrupt halt, not knowing what the creature might be. A moment later it came into full view from behind a clump of bushes, and a single glance told us that it was an Indian.

"We dropped our guns. The Indian staggered a few steps and then sank in a heap in the snow. We waited for just a moment to make sure that he was alone, then we approached the spot. It didn't take us long to find out what the matter was. The Indian, probably weakened by starvation, was at the point of being frozen to death. We endeavored to get him to his feet, but he seemed in a sort of stupor and made no effort to help himself.

"We could not let him stay there and freeze. We had to get him to the cabin. But how was this to be done? There was no time to lose, and we set to work with a will. Luckily we were not more than a half mile from the cabin, the trail of the fox having led us in a circuitous route.

"We got a couple of long poles from a mass of driftwood, and binding them together with pine branches, we constructed a sort of sled. Lifting the Indian on to this, we started for the cabin. It was a hard job, but we finally accomplished it. As soon as we got the Indian into the cabin, we made a good fire and fell to rubbing him with snow. It didn't take long to revive him, and, inside of two hours, he was sitting up and stowing away food in a way that was amazing. I think he would have killed himself eating had we not wisely allowed him.

"We could not get him to talk much, though he could speak English brokenly. All we could learn of him was that he was a Sioux, and that he had been on a visit to some tribes in the north and was returning when the blizzard came on. He had stayed in a cave for a long time, living on some dried meat he had brought with him. Then he had started on south,

but had become weak, lost his gun, and must soon have perished had we not found him when we did.

"That was his story as far as it could be gathered. Night was coming down by this time, and with it another storm set in. Dick and I sat by the blazing fire feeling gloomy enough. 'It's good-by fox now!' muttered Dick. 'This snow will cover the trail so that we can never follow it. It is just too bad, that is what it is! If we had only gone on while the trail could be followed—but of course we couldn't let the poor fellow freeze. I'd do the same thing over again, but it's our hard luck I'm complaining of.'

"'It is pretty hard,' I admitted. 'But it's just as you say; we'd do the same thing over again.'

"'And just to think,' went on Dick, 'the skin of that fox would have brought enough to pay for the claim!'

"While we were talking the Indian sat on a blanket by the fire smoking contentedly—for he had pipe and tobacco, though he had come very near perishing for want of food. 'Mebby so git um fox next time,' he said, with a grin that was exasperating. He not only seemed devoid of gratitude for what we had done for him, but seemed to be amused over the loss we had sustained in the operation.

"It was not a pleasant prospect to have an unknown Indian in the cabin with us. We both felt some misgivings at allowing him to stay, but we could not turn him out.

"When we got ready to turn in, we took our guns and placed them under our pillows, then carried the blankets for the Indian to the far corner of the cabin. He rolled himself in them and was soon fast asleep. Then Dick and I turned in, but I did not sleep much. In my dreams I was haunted with visions of hostile Indians and hand-to-hand combats with them, and I would wake with a chill of fear. But I always found the Indian sleeping quietly and the night passed without incident.

"We had some work shoveling snow the next morning before we could get out of the cabin. The Indian watched the process with evident interest, but with no disposition to assist.

"For several days we did little but sit in the cabin and keep up the fire. The Indian remained with us, showing not the slightest inclination to return to his people. I suppose he considered our accommodations equal to any in his own village and did not care to make any change. His name, we learned, after he had been with us three days, was Dogface. It was a belated introduction, but, as the name was not one to inspire any increase of confidence, it would have been just as well to leave us in ignorance of it.

"Although we spent nearly a whole day tramping through the bottoms, we could not again strike the trail of the black fox. This was disappointing. However, we bagged considerable smaller game, and re-

plenished our stock of provisions. This was fortunate for us, for Dogface had an appetite like a sawmill, and he showed no inclination to desert us.

"During the next week after the arrival of Dogface the weather moderated, and we were able to dig our traps from the snow and reset them. About this time we met with a surprise. One morning when we got up, we found that Dogface had quietly taken his departure during the night, at what time we could not tell. That was not all. He had taken our best gun with him. How he had managed to get it from under our heads without awakening us, I cannot tell. But the gun was gone and so was Dogface. You'd better believe that we were angry.

"'It serves us right for trusting an Indian! Dick declared. We followed the Indian's trail to the sough through the river bottom, but did not think it advisable to try to overtake him. He had our best gun, and it would be easy for him to lie in ambush for us.

"As for myself, I was glad enough he was gone, though I would have been better pleased if he had left the gun. But the thought that we were now rid of him partly consoled me for its loss. I had not felt entirely easy with him in the cabin with us.

"We were just in the act of going to bed one night when we heard something at the door. The next moment it was opened, and Dogface came in. He deposited the rifle in one corner and drew a hatchet from his belt and laid it on the floor. The hatchet belonged to us, but we had not missed it. Then he took something from under his blanket and tossed it to Dick. It was the skin of the black fox! I think you might have knocked Dick or me down with a feather. We sat feasting our eyes on the prize and running our fingers caressingly through the fur, as if we could never trust it out of our hands. And Dogface, of whom we had thought so many hard things since he left, had, as we learned later, walked more than twenty-five miles to get it for us.

"Dogface staid with us for nearly a month, and when he took his departure he again carried away our best rifle, but this time it was as a present. I never saw him again, but I am not likely to forget him, for there is a good farm up in Northern Dakota which was in large part paid for with a black skin—though the records do not show it—and I am the owner of that farm."—*Gertrude Norton, in Young People's Weekly.*

PHIL'S REFERENCES.

ONE crisp November day an afternoon train was just leaving an eastern city when a youth entered the car with a middle-aged lady of delicate appearance leaning upon his arm, and conducting her down the aisle and deftly arranging shawls and satchels, he seated her by the window and sat down beside her.

In the midst of the bustle of the last minutes before the train should leave, an old woman, wearing an antiquated bonnet and her hands filled with bundles, came slowly along the narrow aisle, endeavoring to find a seat.

Just then there was a sudden movement of the car, and the old woman, clutching at the back of a seat to save herself from falling, dropped one of her bundles, which rolled near three stylishly-dressed young men, who had adjusted two seats facing each other, and were having a good time. Instead of handing the woman her bundle and offering her the unoccupied seat, one of the young men remarked, "Old lady seems to have taken too much beer."

But the youth first mentioned came to the old woman's relief, saying, "Here is a seat, madam," and picking up her bundle he was leading her to his own place, when a lady touched his arm and said, "The woman can have a seat with me."

"I'm real glad," said the woman; "for I'm always dizzy when I am standing up to ride. I'm going to Derbyville where my daughter Jane lives, and I got belated in getting on the cars. I thank you, young man, for helping an old woman."

As the youth returned to his seat he said to the lady beside him, "I could not help thinking what if it had been my mother who was traveling alone! I am sure I should have wished some one to be kind to her."

A portly gentleman, with gold bowed spectacles, who was sitting in the seat back of the youth, touched him on the shoulder, saying,—

"Have you a situation? or do you want one?"

"Oh, sir, that is just what I have been seeking for some weeks!"

"I see that your ticket is for the town where I live," replied the old gentleman. "Come to see me at this address this evening at eight o'clock. Perhaps we may arrange something."

Punctually at the hour the youth was ushered into the room where his new acquaintance awaited him. As soon as they were seated the old gentleman asked,—

"How comes it that you have been seeking a place for weeks without finding one?"

"I have not found a place I could accept yet," was the boy's reply.

"Particular, are you?" and the man eyed him keenly.

"I am particular what I do. Mr. Skeels wanted me to sell beer for him, and I would not. Mr. Powell wanted me to sell cigars for him, but I do not consider that very much better."

"I have been looking out for some one that would suit me. I am particular too. My business is the retail dry goods business, and I endeavor to do an honest one. What is your name and age?"

"Philip Sheridan Knowles, and I am sixteen. If you could give me a situation, sir, I would strive to do my very best. My father is not living, and I wish to make my mother very comfortable, and after I have done that I want to take a couple terms in some good commercial college. Hitherto my mother has taught me nearly everything I know. My mother's education is very good. I have some references at home which I will bring to you to-morrow."

"You can come to my place to-morrow, but you need not trouble yourself about the references, for you had the best of references along with you. I noticed the care you had for your mother when we were on the journey, and your kindness to the old woman, and I knew that you had been brought up to observe the Golden Rule. I have helped several youths climb up the ladder to a good business, and should be glad to help another.—*Selected.*

THE CURVED BALL.

Most any ten-year-old youngster can curve a ball, even though he does not know why he can do so except that the leather must be held in a certain way. Possibly a half dozen of the major league twirlers know something about the science of the curve, but comparatively few understand why they can produce their "benders." The *Scientific American* gives the following as the scientific explanation of the matter:

"The pitcher in the field tells us that the ball curves because he gives it a twist, but scientifically this will not do. Why will the twist make the curve? If a ball were thrown in a certain direction and if the force of gravitation were not at work the ball would continue on in a straight line forever. Some force of resistance is then at work when a ball is made to deviate in a curve from its straight course. If a feather is dropped in a vacuum in an exhausted receiver of an air pump it will drop like a shot, but if it is dropped out in the air it will go down irregularly and slowly, shifting from side to side.

"It is the atmosphere which causes the ball to curve. Bearing in mind that the atmosphere is a compressible, elastic gas, we find that when the ball leaves the hand of the pitcher with a rapid rotary motion it "impinges upon a continuous elastic cushion," and this moderate resistance, or friction, changes its course in the direction which is given to the rotary motion. Take an out shoot of a right-handed pitcher, for instance. He impresses upon the ball a rapid centrifugal rotary motion to the left, and the ball goes to the left because the atmosphere, compressible and elastic, is packed into an elastic cushion just ahead of the ball by the swift forward and rotary motion, and the friction, which is very great in front of the ball, steers it in the direction which it is turning."

A MIGHTY REASON WHY WE SHOULD BE TRUE.

BY LULU C. MOHLER.

How may we become a Christian? Why, simply sanctifying ourselves is all. How do that? Jesus prayed the Father, "Sanctify them through thy truth; thy word is truth." From the Father through Jesus we have the truth. Truth means a principle and a reality. Can you think of a better demonstration for the world to know what this truth is than a Christian living by this principle and showing it in its reality? Christianity spells principle every time and makes of this life and the one to come a wonderful, glorious reality. Sanctify means to free from sin. So then, you see, free yourself from sin by living the truth, the principle, and realize the reality—of what? Answer that and your soul is thrilled.

If we are Jesus' own, we are united together, united with Jesus, united with the Father; then we have a unity to work together that the world well might believe in Jesus, the Father, and in Christianity.

Now if we are so united, just ponder the promise of Jesus that we shall be glorified. First and least, we have earthly glory. I have in mind a man who lives a saintly life. For a reward he has an abundance of this world's goods, is looked to by his brethren as a pattern and a leader. He has many flattering honors bestowed upon him of which the world seldom learns. So, living for Jesus pays in this life; but let us go to the better glory. I shall quote from John's Gospel.

"And the glory which thou gavest me I have given them: that they may be one, even as we are one. I in them, and thou in me that they may be made perfect in one; and that the world may know that thou hast sent me, and hast loved them, as thou hast loved me.

"Father, I will that they also, whom thou hast given me, be with me where I am; that they may behold my glory, which thou hast given me: for thou lovedst me before the foundation of the world.

"O righteous Father, the world hath not known thee: but I have known thee, and these have known that thou hast sent me. And I have declared unto them thy name, and will declare it: that the love wherewith thou hast loved me may be in them, and I in them."

"If any man serve me, him will my Father honor."

Living with Jesus and to him obedient, we receive more than we can ever give. Never say "fail"; there is too much at stake.

Lecton, Mo.

WHOEVER fails to turn aside the ills of life by prudent forethought, must submit to fulfill the course of destiny.—*Schiller.*

"A TEMPERATE USE OF GOOD LIQUORS."

"A GLASS of beer can't hurt anybody. Why, I know a person—yonder he is now—a specimen of manly beauty, a portly six-footer; he has the bearing of a prince. He is one of our merchant princes. His face wears the hue of youth; and now, at the age of fifty-odd, he has the elastic step of our young men of twenty-five, and none more full of wit and mirth than he; and I know he never dines without a brandy and water, and never goes to bed without a terrapin or oyster supper, with plenty of champagne; and more than that, he was never known to be drunk. So here is a living exemplar and disproof of the temperance twaddle about the dangerous nature of an occasional glass, and the destructive effects of a temperate use of good liquors."

Now it so happened that this specimen of safe brandy drinking was a relative of ours. He died a year or two after that with chronic diarrhea, a common end of those who are never drunk, but never out of liquor. He left his widow a splendid mansion uptown, and a clear five thousand a year, besides a large fortune to each of his children, for he had ships on every sea, and credit at every counter, but which he never had occasion to use.

For months before he died—he was a year dying—he could eat nothing without distress; in the midst of his millions he died of inanition.

That is not the half, reader. He had been a steady drinker, a daily drinker for twenty-eight years. He left a legacy to his children which he did not mention. Scrofula has been eating up one daughter for fifteen years; another is in the madhouse; the third and fourth were of unearthly beauty—there was a kind of grandeur in that beauty—but they were blighted and they paled and faded into heaven, we trust, in their sweetest teens; another is tottering on the verge of her grave, and only to one of them is left all the senses.—*Hall's Journal of Health.*

THE TOWERS OF SILENCE.

LADY DUFFERIN, in visiting Bombay, thus describes the "Towers of Silence": "Sir Jamesetjee Jeejeebhoy came to do the honors of the place. It is really most interesting and curious, and although it would be hard to reconcile one's self to the idea of laying out one's dead to be torn to pieces by vultures, yet undoubtedly, the system has much to be said for it in a hot climate. The Parsee idea is that the earth should not be contaminated by any decaying matter, and their funerals are conducted in these 'Towers of Silence' in the following way: The towers are round, but not very high, and are uncovered. Inside there is a stone platform running all round, with three sets of grooves sloping downwards toward a deep, empty

well in the center. The outer circle of graves is for men—'good actions'; the second line for women—'good words'; and the third for children—'good thoughts.' When a person dies, he is placed on an iron bier and carried by official corpse-bearers, accompanied by a procession of friends and mourners, all walking and kept together by holding the ends of white pocket handkerchiefs between them. When they reach the place the friends stand at a distance from the tower, the corpse-bearers strip the corpse at the entrance, and place the body naked in one of the grooves. The vultures are all sitting on the trees and walls watching, and in less than five hours after, they have reduced it to a skeleton. In about eight days the bones are completely dried up, and they are lifted with tongs and thrown into the central well, where they crumble away into dust. The rain washes down into this well, and gradually carries all away into the drains provided for that purpose, and which have large filters at either end, so that when the water reaches mother earth, there is no contaminating matter in it."—*Selected*.

* * *

A NEW DEFINITION OF SLAVERY.

SLAVERY: the absolute, irresponsible ownership of one class of human beings by another class; a contract in which the only factors are might on the one side and helplessness on the other; servitude exacted by force.

Slavery has existed in all countries from the earliest recorded periods. The most enlightened philosophers of ancient Greece and Rome were unable to conceive a community of which a section was not enslaved by the rest.

As a system, slavery by its long-continued, universal practice, and the simple solution it affords to what in our modern world is referred to as the labor difficulty, appeals to two powerful human instincts: conservatism and cupidity. The ethical unfairness of one man's being made wholly subservient to the will of another; forced to labor for him without reward; his chattel to retain, sell or slay, as though he were a horse or dog, was perceived from the earliest times. But those most interested in the overthrow of the system, the slaves themselves, being ignorant, and purposely kept in that condition by their taskmasters, suffered on, century after century, finding no champion for their cause until the advent of the Redeemer of Mankind, preaching universal brotherhood and equal rights for all men.

But the greater the wrong the longer it takes to right it, and Christ's words were but the seed from which has sprung our great harvest of freedom. It has been a harvest of slow growth. For ages after the divine words were spoken on behalf of the slave by the first and greatest of his advocates, slavery was

still regarded by many nations as indispensable to their existence. Indeed, eighteen centuries elapsed before there was any appreciable awakening to the deep infamy of slavery.—*From "The Story of the Congo Free State," by Henry Wellington Wack.*

THE STORY OF ELEVEN POOR BOYS.

JOHN ADAMS, second president, was the son of a grocer of very moderate means. The only start he had was a good education.

Andrew Jackson was born in a log hut in North Carolina, and was reared in the pine woods for which the State is famous.

James K. Polk spent the earlier years of his life helping to dig a living out of a farm in North Carolina. He was afterward a clerk in a country store.

Millard Fillmore was the son of a New York farmer, and his home was a humble one. He learned the business of a clothier.

James Buchanan was born in a small town in the Alleghany mountains. His father cut the logs and built the house in what was then a wilderness.

Abraham Lincoln was the son of a wretchedly poor farmer in Kentucky, and lived in a log cabin until he was twenty-one years old.

Andrew Johnson was apprenticed to a tailor at the age of ten years by his widowed mother. He was never able to attend school, and picked up all the education he ever had.

Ulysses S. Grant lived the life of a village boy, in a plain house on the banks of the Ohio river, until he was seventeen years of age.

James A. Garfield was born in a log cabin. He worked on the farm until he was strong enough to use carpenter tools, when he learned the trade. He afterwards worked on a canal.

Grover Cleveland's father was a Presbyterian minister with a small salary and a large family. The boys had to earn the living.

William McKinley's early home was plain and comfortable and his father was able to keep him at school.—*Rocky Mountain Advocate.*

* * *

No action, whether foul or fair,
Is ever done, but it leaves somewhere,
A record, written by fingers ghostly,
As blessings or curse, and mostly
In greater weakness or greater strength,
Of the acts which follow it, till at length
The wrongs of ages are redressed,
And the justice of God made manifest.

—Longfellow.

LOOK within. Within is the fountain of good, and it will ever bubble up if thou wilt ever dig.—*Marcus Aurelius Antoninus.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

SUNDAY SCHOOL CHORISTER.

To complete the organization of the Sunday school of which we have spoken in the last two numbers, the election of a chorister and librarian are very necessary. Of course the selection of these officers should be made the same as the others by the church if possible, and this possibility remains altogether with the question as to whether it is a Sunday-school church or not. If the members of the church are wide-awake in the Sunday-school work they are alive to the needs of the Sunday school; and they are also acquainted with the characteristics and qualifications of the people who are eligible to the leadership in music.

In this question as well as all others there is a chance for difference of opinion. Some think that the chorister of the Sunday school should be the same person as the chorister of the church. There are advantages and disadvantages both in this. One advantage is that the chorister being sole director of the song services, is able to classify and outline his work very systematically, and accomplish a great deal of good. He, too, can set apart certain hours for the development of talent. The disadvantages are that it concentrates the work too much and does not afford work for a sufficient number of workers. That is, one may have charge of the church music and one of the Sunday-school music and one the music of the Christian Workers' society. This affords opportunity for three different people to become proficient as leaders, instead of one. And in case of sickness, death or removal, workers may be supplanted without any serious results, and the music is not made to suffer. The latter way is probably the better.

While it is true that organizations may be organized to death, yet it is a very poor organization that is not strong enough to stand organizing. Some people claim that they do not feel free to sing because a certain one has been chosen chorister, and that there

is not the proper amount of freedom, but this should not be. Because one is chosen as leader is no more reason that the rest should not sing, than that we should not all pray when one is asked to lead vocally. And whenever one finds himself ready and willing to refuse to sing or pray on account of the leader the right spirit does not prevail.

A very effective work can be accomplished by either electing a chorister for the primary department or the chorister of the Sunday school to appoint from time to time leaders for the primary department. To teach the little ones to sing is a very essential thing and it requires one who has both a knowledge of music and a knowledge of children. It is not every church that affords a separate primary department; some churchhouses have only one room. In such cases it is almost impossible to place the primary work in separate apartments. Under these circumstances this idea could not be fully carried out. But this sort of church building is rapidly becoming a thing of the past and the new church buildings of to-day contain ample provisions for the Sunday-school work.

The supervision of the song service is no small thing. To make such selections of music as will be specially adapted to the lesson in hand, will meet the approval of the respective classes in matters of taste, is no small task. Sometimes some of our best songs and hymns for some reason are rejected by Sunday schools and churches because a special distaste for them has been created, through some inefficiency of the leader or some vocal condition, and it is only the wide-awake chorister that knows these conditions. It is so often that Sunday schools fall into the rut of using five or six hymns only and using them nearly every service; this should be avoided as much as possible.

* * *

THE GREAT DILEMMA.

In this generation no greater battle has been fought than is raging at the present time. Our social condition, the situation in a religious way, and the labor question have all contributed to the present condition of affairs.

The people, as a rule, are not inclined to believe what the Scriptures say until they are fulfilled and many times not then. Even the men and women who profess to be Christians and say openly that they believe the Bible, have very grave doubts about the statements made in the Bible. It is stated in the Bible, "The love of money is the root of all evil." Some believe this and some do not. Some think they believe it, but when they come into actual contact with conditions that put them upon their merits, they, after all, are convinced that in reality they do not believe. The prevalence of unbelief in this Bible statement is shown very plainly by the condition of things to-day.

In our churches all over the land we hear a complaint of stringency in money matters. This means one of two things, either the laity has too much love for money, which renders them so stingy that they will not make the proper amount of sacrifice for the good of Zion, or the officials of the church, and especially the ministry, have become so greedy after filthy lucre that they exact more than is proper for them to do. The prevalence of fairs, festivals and suppers is evidence that the members of the church provide church funds in some of these dishonest ways rather than to give their tithe to the Lord as a freewill offering.

Again, from the minister's standpoint it looks like a case of jeopardy, for when the congregation pays him his salary, they expect him to preach as they want him to preach or he loses his job. It requires much more backbone for a man to tell the people of their sins when they are paying him than when they are not. On the other hand, it requires a great deal of grace to reject money that is donated. The casual observer will notice that something has happened lately in religious service. These very churches which have been engaged in various things in order to secure money for church purposes have, of late, become so conscience smitten that they are wanting to know where the money comes from. Some of our millionaires and philanthropists have been offering great sums of money for charitable and philanthropic purposes, and even missionary purposes. There have been instances already where this money has been flatly refused. Somehow we fail to see the consistency in this. Which is better, for Rockefeller to raise the price of oil a fraction, declare a dividend and make a bequest, or for the local church to raise the price of ice cream or oysters, and donate the proceeds to the same purpose? Where is the consistency in rejecting the coal-oil money and accepting the ice-cream money. The whole thing exposes an insatiable desire for the money. Whether God can use coal-oil money, festival money or saloon money, is a question to be settled by the individual and the Bible.

If the Christian life demands real blood and sinew sacrifice, it needs no philosopher to tell what to do with these questions of trying to evade face to face contact with the problem. The love of money to-day causes the Sabbath to be desecrated by Sunday excursions; and the Christian people help to form the procession. The love of money makes the empty benches at church services. The love of money causes the treasurer's report to continually stand in arrears. It is the love of money that causes the churchhouse to be the most poorly furnished, poorly painted and poorly kept house in the neighborhood.

Reflect for a moment upon the embarrassment of the congregation if, when the collection basket is being passed, the question would be asked, "Where

did you get that dollar that you are throwing in the basket?" How many of the Christians to-day could testify that they had earned that dollar in an honest, Christian-like way and that it was really a sacrifice to give it. But this embarrassment would be insignificant compared with another case we have in mind. Suppose a missionary would be consecrated and set apart and sent to a foreign land. Upon his arrival a body of cannibals meet him at the landing. The chief steps to the front, and demands to know what kind of money is sending him there. If it is hard-earned, honest money of real Christian sacrifice he may come in and teach them Christianity. But if it is policy money, or "frenzied finance," he may pass on to another island. While this may never have occurred in the abstract, the question is, "Should the missionary really ask himself that question before he starts, and what kind of money, blood and prayers he wants behind him as a motive power to do real missionary work?"

In a social way our dilemma is no better. To-day the charity of the public is being dwarfed with Carnegie libraries, Carnegie heroes, and Carnegie superannuated professors. The people are anxious to get rid of appropriations to schools and other institutions, by allowing some philanthropist to do their giving for them. The so-called philanthropist is given a great name, is presented with a great monument, while he smiles behind the curtain and congratulates himself that he has made another pretty good business investment.

It is love of money that propagates our gambling scheme and lottery; that causes our illegitimate, green goods business and blue sky traffic. It is the love of money that has alienated the laborer and capitalist. It is the desire to get something for nothing, that has caused the strikes, and the retaliation of the same that has caused the present great difficulty. It is the love of money that has brought in our midst the great system graft that has corrupted our politics and polluted our church and menaced our nation.

HOW ABOUT YOUR SCHOOL?

A GREAT many Sunday schools are ordering INGLENOOKS for their advanced classes to begin with the opening of the new quarter. The time for ordering supplies for the next quarter is here, and your secretary should make up her order at once and be sure that she has instructions from the school to order a sufficient number of INGLENOOKS to supply your needs. Our special price to Sunday schools and Christian Workers' Societies is 25 cents per copy to the end of the year, where it is sent in clubs of not less than five to one address. This is half price for the INGLENOOK and if you have never had the INGLENOOK in the Sunday school give it a trial.

Current Happenings

THE long-expected break between Norway and Sweden has come. The king of Sweden is no longer the king of Norway. The State Council was authorized to exercise full power in the government of Norway; and an address to King Oscar was adopted, declaring that no ill feeling was entertained toward him personally or toward the Swedish nation. The king was asked to coöperate in the selection of a prince of his own house. It is to be hoped that the two nations will not entangle themselves in consequence of their separation.

A WORLD'S agricultural institute has been organized at Rome.

BOTH the Pennsylvania and the New York Central railroads have launched eighteen-hour trains between New York and Chicago.

ALL efforts to end the Chicago strike have as yet failed.

A RECORD-BREAKING price of six hundred dollars a square foot for real estate has been reached in America's metropolis.

PENNSYLVANIA is enforcing the child labor law.

IN his message, the President of Venezuela speaks of the relation to the United States as "a slight difference," and he thinks that matters will be adjusted satisfactorily in the near future.

FIVE hundred Hindu laborers were killed by a hurricane last week, which swept over Natal.

AN electrical storm, passing over Northern Indiana and Southern Michigan, did considerable damage to persons and property.

A BRITISH submarine boat was sunk off Davenport, England, while practicing. Only four of the crew of eighteen were saved. This is the third boat of this kind England has lost in this way.

THE Rev. Minot J. Savage expresses himself as believing that divorces, as we now have them, are a blessing to women. He says it gives oppressed women another opportunity for a sweet, wholesome life. We think the brother has a very queer idea of freedom.

THE honorary degree of LL. D. has been conferred upon Postmaster General Cortelyou by the University of Illinois, at its commencement exercises. Mr. Cortelyou delivered an address upon the occasion. Subject, "Education and Citizenship."

THE Gunnison tunnel near Mont Rose, Colorado, has caved in, burying a large number of workmen. Six bodies have been discovered to date.

CABLEGRAMS from Japan say that another sea battle has been fought, with a heavy loss to the Japanese. About one hundred and thirteen officers and men were killed and over four hundred wounded. Togo, however, is very hopeful as to the ultimate results.

A TOKIO dispatch says Japan is to have a Monroe Doctrine for Asia, and that she will be able to maintain it. There has been considerable talk of this kind among the European capitals for a long while, but now there seems to be some official confirmation. Even a commission has been appointed, consisting of naval and military men, who are among the strongest in the empire; they are formulating plans and methods for its promulgation and its enforcement. In fact the "doctrine" is in a measure completed, but no action will be taken until peace has been arranged for with Russia, or until the Russians shall have been driven from Manchuria. Japan, in a general way, claims to hold the same relation to the eastern hemisphere that the United States does to the western. It is rumored that France will feel the first effects of the new doctrine.

THE war spirit seems to be developing throughout the countries of Norway and Sweden. Preparations are being made that within a day's notice many volunteers will be ready for the battlefield. The Norwegians are hopeful that Sweden will accept peace terms.

ANOTHER good railroad system has been formed by the consolidation of the Cincinnati, Hamilton & Dayton, Pere Marquette, Monon, Indianapolis, Decatur & Western, Chicago, Cincinnati & Louisville, with all their branch lines and divisions. The new system takes the name of the "Great Central." Noticeable improvements are already being made in the way of depots, track and ballast. The schedules are not materially changed as yet, but a stronger effort is made to meet the ones they already have.

THE Lewis-Clark Exposition, of Portland, was formally opened by President Roosevelt June 1.

ALPHONSO, king of Spain, has been paying a visit to President Loubet, of France. While they were out riding in a carriage, a bomb was thrown, which resulted in the injury of several of the parties attending. Alphonso said this was the fourth time Providence had saved his life from the hand of an assassin.

THREE persons were drowned and one seriously injured, shortly after 8 o'clock, last Saturday evening, in Chicago. The Rush street bridge, crossing Michigan avenue, had been opened to let a vessel through. An automobile was speeding northward on Michigan Avenue at a fast rate of speed. The chauffeur, not noticing the condition of the bridge, dashed ahead and into the river before he had time to stop the machine. Two of the party were rescued by men from a passing scow in the river.

THE Sultan of Zanzibar wants an American warship present at his coronation services. As the Sultan does not owe us anything, his request will probably be denied.

THE Erie Railroad is making some important changes of station agents throughout Indiana. It is found that the women do this work better than the men.

THE car works of Harrisburg and two other Pennsylvania points have received orders for 1,000 steel gondola freight cars for the Japanese Imperial Railway, to be made as soon as possible. They are to replace cars which have been transferred to the Manchurian Railway in the conquered territory.

LUTHER BURBANK, the wizard of plant life, has announced another achievement of vast importance, namely, the crossing of different varieties of walnut trees so as to produce one that grows with great rapidity.

It has been recently reported that at a meeting of the Board of Trustees of the University of Mississippi it was decided to reject the offer of Andrew Carnegie, to furnish \$25,000 toward the erection of a library, on the ground that the money offered was not justly earned. Governor Vardaman, formerly a member of that Board, said he would rather see the walls of the State University and our colleges crumble into dust, and the buildings be battered and grimy than that they should be built up and handsomely

painted and furnished by this money, which has been coined from the blood and tears of the toiling masses, demanding the usury of self-respect, which no people can afford to pay. Tainted money merits no honors.

THE annual report of the Pennsylvania Railroad, at a recent meeting of the stockholders at Pittsburg, shows the gross earnings to be \$36,390,582; net earnings, \$10,347,220, an increase of \$860,968 as compared with 1903.

A REPORT of the recent activity of the Vesuvius volcano, covering a period of thirteen months, was made by director Matteucci, of the Mount Vesuvius Observatory. He attributes the occurrence of the eruption to the pressure of dust, stones and other materials in the crater, thus causing crevices in the upper comb. The crater is still emitting sand, ashes and stones, accompanied by loud detonations, but all indications are that the volcano will soon become completely quiescent.

ARRANGEMENTS have been made by the Chicago & Alton Railway Company for the establishment of a wireless telegraph system on all trains running between Chicago and St. Louis, which would be extended gradually to the entire system. Experimentally it was shown that it could be so used, by sending messages from Chicago to the officers on the road traveling on a limited train. While this train was making a run of fifty miles an hour, messages were received from the offices at Chicago and replies sent back. Thus train dispatchers will be able to communicate with each other, or with any train and at any time. Also messages for passengers will be handled commercially.

PROF. ELIHU THOMPSON, of Massachusetts, by means of an apparatus of his own design, vividly demonstrated that he could let 500,000 volts of electrical force pass through his body without the slightest sign of physical discomfort or danger. There was a flash from his finger-tips and great sparks flew into the air, lighting electrical lamps held two feet from his fingers.

A SHORT time ago a thief entered one of the department stores of Milwaukee and stole a toothbrush, retail price fifteen cents, wholesale price about five cents, and in less than a week the thief was sentenced to jail for one year. About the same time a Milwaukee banker stole \$3,400,000. The banker is not even in jail. The only difference in the two instances is that in the latter case the poor lawyers saw a chance to shove a few thousand dollars more into their pockets.

HOME DEPARTMENT

THE GRAPEVINE SWING.

When I was a boy on the old plantation,
Down on the deep bayou,
The fairest spot of all creation
Under the arching blue;
When the wind came over the cotton and corn,
To the long, slim loop I'd spring,
With brown feet bare, and a hat-brim torn,
And swing in the grapevine swing.

Swinging in the grapevine swing,
Laughing where the wild birds sing,
I dream and I sigh
For the days gone by,
Swinging in the grapevine swing.

Out—o'er the water lilies bonnie and bright,
Back—to the moss-grown trees;
I shouted and laughed with a heart as light
As a wild rose tossed by the breeze.
The mocking bird joined in my reckless glee.
I longed for no angel's wing;
Swinging in the grapevine swing.
Swinging the grapevine swing.

Swinging in the grapevine swing,
Laughing where the wild birds sing,
Oh! to be a boy,
With a heart full of joy,
Swinging in the grapevine swing.

I'm weary at noon, I'm weary at night,
I'm fretted and sore of heart,
And care is sowing my locks with white
As I wend through the fevered mart.
I'm tired of the world with its pride and pomp,
And fame seems a worthless thing;
I'd barter it all for one day's romp,
And a swing in the grapevine swing.

Swinging in the grapevine swing,
Laughing where the wild birds sing,
I would I were away
From the world to-day,
Swinging in the grapevine swing.

—Samuel Minturn Peck.

GOING AFTER FIRE.

"TELL us a story, grandma," pleaded Jennie, "of when you's a little girl."

"Yes, grandma, of when you lived in the woods, and heard the bears howl at night," said Edna. "I wish I could see one—a real live one."

"I never saw but one live one," said grandma, "and that was one morning when I ran over to our neighbor's to borrow some fire."

"Borrow fire!" cried the children together.

"Yes," laughed grandma. "You know so long ago they didn't have any matches. There were none made then. If we let our fire go out we had to borrow some. Mother usually covered up a heap of big knots deep in the ashes over night. On raking them open in the morning there would be a bed of live coals to begin the day.

"But one night, late in the fall, the knots did not burn, and there was no fire to get breakfast. I was the oldest—about as big as Edna. Mother pinned a woolen blanket over my head with a thorn, for we didn't have any pins. Giving me a little iron fire-kettle, she bade me be spry, for the children were hungry.

"Well, I got my kettle full of bright coals, with a blazing knot on top. I ran off through the forest, the wind keeping the coals and the knot all ablaze.

"When I got about half way home I heard a crackling through the thick bushes. Almost before I had time to stop, a great, black bear ambled out into the rough, narrow road. I was so scared that I dropped my kettle flat on the ground and stared at him. And he stared at me, sniffing and sniffing.

"But he didn't like the smell of the burning knot, and the next moment he leaped out of the path and went crashing off through the bushes.

"I didn't stop for the coals, but scooping the knot into the kettle, I fled toward home in a great panic. A little time after that father and Mr. Noble, our neighbor, caught the bear in a trap, and father had a coat made out of his skin."—Christine Stephens, in *Our Little Ones*.

ELECTRIC FARMING MACHINERY.

THE electric current is crowding the horse on his own stamping ground in Italy, where the Electro-Technic Society of Turin has taken up the manufacture of electrical machinery for agricultural purposes. The plowing system consists essentially of two motor winches, mounted on trucks, one stationed on each side of the field to be plowed. A gang plow similar to that used for steam plowing is hauled across the field in either direction by the winches by means of a steel cable. The winches are equipped with a twenty-horse-power induction motor, connected with the windlass by a reduction gear. An hour and a half suffices for the plowing of an acre, the plow turning three furrows at any depth from ten to twenty-four inches at the rate of one thousand feet in eight minutes.

HOUSEHOLD HINTS.

A LITTLE lemon juice added to the water for mixing pastry improves the flavor and helps to make it light.

Insects, it is said, will never attack books which are dusted once a year with powdered alum and white pepper.

A cup of milk added to the water with which an oilcloth or oiled floor is to be washed gives it a luster like new.

It is better to keep baked pastry in a cupboard rather than a refrigerator, as it would be apt to get damp and heavy in the latter place.

Some cooks soak salt ham over night in milk before broiling before breakfast. Salt mackerel is said to be improved by soaking in sour milk.

A box filled with lime and placed on the shelf in a pantry and frequently renewed will absorb the damp and keep the air pure and dry.

Fried potatoes will be tough if washed after being cut, and potatoes will be dark if fried in boiling fat, but light golden brown if cooked for five minutes in hot fat.

Put a teaspoonful of ammonia in a quart of water, wash your brushes and combs in this and all grease and dirt will disappear. Rinse, shake and dry in the sun or by the fire.

Sprinkle a little lime occasionally on the shelves in the preserve closet to prevent mold forming in the jars. The lime loses its power after a time, and should be renewed at intervals.

Muffins and gems made without eggs, but with more milk and butter, the batter beaten with a wooden spoon till it is very light, are said to be indistinguishable from those made with eggs.

A good floor polish is made from melting old candle ends and adding an equal amount of turpentine to the grease. After cooling the mixture will be found excellent for both floors and oilcloth.

Never allow meats to boil while they are being cooked in water. Hard boiling in salted water will toughen the tenderest piece of meat ever sold. Let the water simmer gently, keeping the pot on the back of the range.

Embroidered and lace-trimmed window blinds are generally placed in sitting rooms now. Those trimmed with cluny and point d'arabe lace are very handsome, while still more elaborate are some embroidered Duchesse blinds deeply flounced with lace.

Whenever a pickle or preserve jar is empty wash it well in cold water, dry it thoroughly and put it in a dry place. If you wash the jars in hot water it will crack their glazed surface and make them porous, which spoils them for use, as pickles and preserves require to have the air kept from them.

To avoid that flat taste, boiled water should be

poured back and forth several times from one pitcher to another after it has cooled.

Should ants get into the refrigerator a saucer of tartar emetic mixed with sugar and water should be placed there. It will drive them away.

When washing knives be careful not to put the handles in the water, as if this is done after a time the blades will become loose and the handles discolored.

Rubbing with a piece of flannel dipped in right hot water in which a generous pinch of soda has been dissolved will remove paint splashes from the window glass.

To clean looking-glasses you must first wash the glass all over with lukewarm soapsuds and a sponge. When dry rub it with a buckskin and a little prepared chalk, finely powdered. A splendid gloss may be given to glasses by rubbing quickly with newspapers.

When you wish to use glass bottles which have contained oil for some other purpose and find it difficult to remove traces of the oil try the following: Fill the bottle with ashes and place it in cold water, which should be heated gradually till it boils. Let it boil for an hour and let the bottle remain in the water until cold. Then wash it with soapsuds, rinsing in clear water.

ELECTRIC YEAST.

BY MAUD HAWKINS.

I FIND this yeast much easier and better than any other I ever used, and I am always sure of good bread when I use it.

If to-morrow is baking day, save the water which you drain from your potatoes to-day noon; put it into a quart fruit can, add to it one-half cup of sugar, and a half of a yeast cake. Have the can two-thirds full, put on the cover, but do not screw it down tightly; set it in a warm place till evening. You will find that a thick froth has gathered on top; pour this off; do not stir it, but pour off into your dough about three-fourths the contents of the can, leaving the sediment in the can, and set in the cellar for a "starter" for the next baking. Then repeat the process, leaving out the yeast cake. This starter can be kept for years.

Towanda, Pa.

IN sour paste, the milt of a codfish, or even in water in which vegetables have been infused the microscope discovers animalculi so small that millions of them would not equal the size of a grain of wheat. And yet nature, with a singular prodigality, has supplied many of these with organs as complete as those of a whale or an elephant.

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER,

LIBERTY.—James 1:22-25; Luke 4:18.

For Sunday, July 2, 1905.

I. Civil Liberty.

1. The Year of Jubilee, Lev. 20:8-17
2. Political Liberty, Judges 17:6
3. Use of Civil Liberty, Acts 22:28

II. Religious Liberty.

1. Gained Through Christianity, Luke 4:18
2. Not Enjoyed in Russia, Turkey and Some Other Countries.
3. Enjoyed in England, United States and in Others.
4. Proper Celebration of July 4th.

III. Liberty of Spirit.

1. By the Truth, John 8:32
2. By the Son, John 8:36
3. Freedom From Sin, Rom. 6:18
4. Remain Free, Gal. 5:1

IV. Free Yet Bound.

1. In Debt, Rom. 1:14
2. Bound Because of Hope, Acts 28:20

Text.—But whoso looketh into the perfect law of liberty, and continueth therein, he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed.—James 1:25.

The spirit of the Lord is upon me, . . . to set at liberty them that are bruised.—Luke 4:18.

References.—Lev. 25:8-17; Jer. 34:8-11; 2 Chron. 36:23; Gal. 5:1; Ezra 1:1-4; Eph. 6:24; Rom. 8:21; 1 Cor. 10:29; 2 Cor. 3:17; Isa. 61:70.

Liberty.

The cause of liberty has the names of many martyrs blazoned on its record. We, who have always known the pleasures of freedom, cannot imagine the miseries of bondage or imprisonment; nor can we sufficiently praise the Lord for this greatest of all blessings. But James speaks of a perfect law of liberty, which he wants us to look into and examine and then continue therein. We believe that there are many who make a mistake in regard to this matter; they think they are enjoying full liberty, when they are really going into bondage. They have not studied this perfect law carefully enough to know. It is the law of God, a correct standard of conduct; it is entirely free from all defects and if we continue in it, it will produce freedom from the servitude of sin.

"I Want to be Free."

"I want to be free, I don't want to be bound down by any promise," said a boy when a friend was urging him to give up taking an occasional glass of wine or beer. "You will be bound fast by a very hard master unless you quit now," answered his friend. And when the boy grew to manhood, he was a drunkard, unable to quit. He lost his wife and children, he went about in rags and slept wherever he could find shelter.

Even if he did realize then what a slave he had become, it was too late. Sin always enslaves, God gives liberty.

Studying This Law of Liberty.

Boys and girls should study the Bible daily, carefully, for that will help them to remain free. If we cannot understand a verse to-day, some experience makes it plainer; and the more we try to follow its teachings, the better we understand it; these things are revealed to those who trust in his name, and practice what they know.

Liberty of Conscience.

Jesus is our Master and we are his servants. We are told to walk in love, then we will be careful not to grieve our brethren. For instance, Christian people have different ideas as to Sunday observance. Some think it very wrong to ride in the cars on that day. They will make almost any sacrifice rather than ride in the cars on Sunday. Then others do not regard the matter in that light and they travel on Sundays. It should be possible for the first brother who has strenuous views on this subject to bear patiently with the one who travels on Sunday, and on the other hand the one who is not troubled with scruples should be careful not to offend his brother; thus, neither of them will be sinning against the law of love.

Judging.

When we weigh our brother's actions in the balance, and say whether they are right or wrong, we are judging him, trying to deprive him of liberty in action. In the wake of judgment follow denunciation, exclusion and persecution. This judgment was the mother of the Inquisition. It is the cause of many a heartache and bitter regret. A merchant was annoyed by boys gathering at his door, and he drove them away. One day a ragged little fellow came and stood there in spite of the merchant's remonstrances. The merchant beat him with a stick, but he made no outcry, only struggled to get away; and when he did get away he stood on the opposite side of the street rubbing his eyes. He looked so little and ragged and hungry that the merchant's heart smote him for his cruelty. "I'm looking for a little boy," said a woman just then to the merchant. "His father was killed by a railway train day before yesterday. Since then he won't stay in the house; his mother has been dead for years. Sometimes he comes in the yard, then he bursts into tears and runs away. We cannot make him understand what death is." Then catching sight

of the boy opposite, she exclaimed, "There he is! The poor little fellow is deaf and dumb." Quite as unjust and as cruel are most of the judgments we pronounce upon others. If my brother feels free to do something of which I disapprove, I should not criticise and judge him.

"None of Us Liveth to Himself."

I may feel free to do many things that might influence some people towards evil. This liberty of mine must not lead others wrong. Bishop Warren says, "Going up the Matterhorn we were all tied together. In the perilous places, icy precipices, if any one would have slipped it would have involved peril and almost certain death to all. In the first party that ever got up young Haddow slipped, and not only he fell nearly 4,000 feet, but he pulled two other men with him." We are all bound together. I have no right to do what is even safe for me if it is dangerous for others.

Christ Has Made Us Free.

Paul tells us to stand fast in the liberty wherewith Christ has made us free. Satan is always near us, ready to enslave us if possible. We must watch and pray and strive against temptation if we want to remain free in Christ. Bad habits, bad associations, bad books, are all pathways that lead to the haunts of sin where our boys and girls are made captives.

Topics for Discussion.

1. Should Christians prize this liberty? Rom. 8: 21.
2. Describe some of Satan's methods of enslaving men.
3. Where is this liberty found? 2 Cor. 3: 17.
4. What caution is given in regard to this liberty? 1 Cor. 8: 9.
5. Does sin enslave? Isa. 59: 2; Prov. 14: 34.

EMPLOYMENT BUREAU.

Good News from Elizabethtown, Pa.

THROUGH the great missionary spirit of Bro. J. M. Pittenger, who was with us last year, there has been a fire kindled in the hearts of some dear brethren and sisters that finally resulted in the organization of a Missionary Reading Circle. It is a great pleasure to enclose a list of thirty-two names, who are desirous of reading the prescribed missionary course. Our band numbers just thirty-seven.

Our Circle will be divided into two classes, one at the college and the other at the church in town. As the spring term will soon be ended we are anxious to have the "Do Not Says" as soon as possible, that the work may be well done ere the close of the year. We sincerely pray God's blessing upon the work, that it may be an inspiration to us to do more for the Master. We hope that from this Circle may come

men and women who will not shirk any duties to which the Lord may call them, but instead they may be willing to work in any place where his name may be most glorified.—*Bessie M. Rider.*

Volunteers for Mission Service.

Brother A. G. Longanecker, of Elizabethtown, Pa., says: "We are glad to say that we met last Sunday evening to organize our Circle more completely. We hope that the Lord will bless this work, and that many of our dear young brethren and sisters may become volunteers in the Master's field through the Circle reading."

We have said before that we can almost tell from year to year who will volunteer for foreign fields, as we have usually had a number of letters from them expressing their desire to go anywhere the Savior leads. They have read our books on missions and the Spirit has driven the truth home until they feel that they must yield themselves for service; and there are so many places where they are needed. Almost all of our missionaries were Circle members first, and missionaries afterwards.

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XXXIII.

Strasburg, Germany.

Dear Mr. Maxwell:—

Just as I was finishing up the other letter the boys came in and called us, to see one of the wonders of the East. I suppose Strasburg has one of the most wonderful clocks of the world. It certainly outdoes all the pieces of mechanism that any of us have ever seen. In the tower of an old church this wonderful clock is visited by thousands every year. The face of the clock is not unlike the faces of some other large clocks we have seen, but the interior part is what attracts. When the guide opened the door of this great clock it seemed as if he was opening the door to some small room or large closet, which, in reality, he was. In the corner lay a shapeless mass or pile of bones. It seemed as if a dozen or more men might have been murdered and their bleached skeletons thrown into this closet. As good luck would have it when we arrived at the place the clock stood 9:50, so that by the time the guide had explained to us some of the outer details, it was ready to strike ten. When it lacked one minute of striking the guard hastily arranged us in a semicircle before the door, so we could see the pile of bones.

The first thing we knew we saw a few of those bones beginning to move. A sufficient quantity of bones left the pile to make one skeleton. Bone went to bone until there stood in front of us a real skeleton, which began to walk; we could hardly believe our eyes; poor Agnes fairly trembled, and the boys kept continually giving expressions of surprise, while Miss Gertrude said, "Wonderful! wonderful!" But the most wonderful part of it had not come.

When this one started to walk, enough bones for another skeleton left the pile and hastily made another man which followed the first. The first man walked over to the corner of the closet and deliberately stooped down and picked up a mallet (for there was a bunch of twelve mallets lying there), swung the mallet upon his shoulder, and started on a march around the room; by this time a third and fourth skeleton had come from the pile, and in turn followed their leader. This continued until ten real skeletons had been formed and were encircling the closet. Skeleton No. 1, by this time, had arrived at a great big brass gong; he stopped immediately in front of the gong, gave his mallet a swing and with deliberate aim let drive at the gong. The aim was accurate and the sound produced by the blow was almost deafening, and could be heard all over the city. As soon as he had dealt his blow he hurried to the place where he got his mallet, threw it down, then made another circle which brought him back to the place of beginning, where the pile of skeletons were. There were just two skeletons left there that had not joined the procession at that time. When he arrived at the exact spot he made a polite bow and then literally tumbled all to pieces. The second skeleton did the same thing, and the third and so on till the tenth; each picking up his mallet, striking the blow, replacing the mallet, walking back to the pile, and falling to pieces.

When it is one o'clock only one skeleton makes the round, and when it is twelve o'clock every last bone leaves

the pile, forms a procession of twelve skeletons and their several blows tell the public of the noonday hour.

Since we have left home we have seen a great many interesting things; things that were awe-inspiring, things that were puzzling, that we could not account for, but this wonderful clock in the Strasburg Cathedral is the most wonderful sight that we have beheld. The keeper is a very old man, and he says that this is the expression of everybody that comes. He told us that the twelve men represented the twelve Apostles, but we could not see why this should be or what relation it had to the time of day. We suppose that he probably told this because the number of hours in a day corresponded with the number of Apostles, perhaps nothing more.

I, perhaps, owe an apology for taking up so much of this letter with the story of this old clock, but Roscoe and Oscar are sitting here by me, telling me what to say and keep begging me not to leave this out, or that out, and that you will be interested in this or that, and so I told the whole story.

But before the close of the letter I want to say that Strasburg is surrounded by a very strong wall, and so is the city of Mainz, her neighbor. These twin sisters were, by Ancients, considered impregnable, but I presume they would yield quickly to-day to the modern implements of warfare. By the way, they did yield at last to the prolonged siege of the relentless German army. I would like to write you one letter, telling you about the influence upon the schools of Alsace and Lorraine, at the time they were taken. And if I get opportunity I will have Miss Gertrude help me and we will try to give you some interesting facts.

I must speak a word about the hop culture here. It is something wonderful. There are thousands and even millions of poles, as straight as arrows, piled and stacked all over the field. These poles are used in the cropping season for the culture of beans, hops and grapes. All three of these crops need to be supported by poles. In the tobacco fields we saw hundreds of boys and girls stripping off the lower leaves of the plants, leaving the larger top leaves for a later harvest. We noticed this particularly because it was so different from the custom in America. In our country the whole stock is cut and hung in an inverted manner on sticks to cure; but in the Orient they have time to take the slower process and grade their tobacco much more carefully. We could not help but think of the character of their products; their tobacco crop is smoked and puffed away into the pure air. The hop crop is converted into beer and swallowed by millions. The vintage is converted into the finest of wines, which assist the hop crop in filling drunkards' graves.

Yours sincerely,

Marie.

(To be continued.)

* * *

THE beginning of anxiety is the end of faith, and the beginning of true faith is the end of anxiety.—
George Muller.

The Q. & A. Department.

Please give the poem entitled, "Somebody's Darling."

Into a ward of the whitewashed halls,
Where the dead and dying lay,
Wounded by bayonets, shells and balls,
Somebody's darling was borne one day—
Somebody's darling, so young and so brave,
Wearing yet on his pale, sweet face,
Soon to be hid by the dust of the grave,
The lingering light of his boyhood's grace.

Matted and damp are the curls of gold,
Kissing the snow of the fair young brow,
Pale are the lips of delicate mould—
Somebody's darling is dying now.
Back from this beautiful blue-veined brow,
Brush all the wandering waves of gold;
Cross the hands on his bosom now—
Somebody's darling is still and cold.

Kiss him once for somebody's sake,
Murmur a prayer both soft and low;
One bright curl from its fair mates take—
They are somebody's pride you know;
Somebody's hand hath rested there—
Was it a mother's, soft and white?
And have the lips of a sister fair
Been baptized in their waves of light?

God knows best! he was somebody's love;
Somebody's heart enshrined him there;
Somebody waited his name above,
Night and morn, on the wings of prayer.
Somebody wept when he marched away,
Looking so handsome, brave and grand;
Somebody's kiss on his forehead lay,
Somebody clung to his parting hand.

Somebody's waiting and watching for him—
Yearning to hold him again to her heart;
And there he lies with his blue eyes dim,
And the smiling, childlike lips apart.
Tenderly bury the fair young dead,
Pausing to drop on his grave a tear;
Carve in the wooden slab at his head,
"Somebody's darling slumbers here."

* * *

Who discovered Australia, in what year and of what nationality was he?

R. H. Major, in 1872, alleged that Australia was known to the French prior to 1531. Manoel Godinho de Eredia, a Portuguese, is alleged to have discovered it in 1601. The Dutch also discovered it in March, 1606. Wm. Dampier landed in Australia in January, 1686.

*

Has the United States adopted any particular flower as a national emblem? If so, what is it?

No.

What would you suggest as a good way to remove warts?

It is said that one who is afflicted in this way should take an ordinary sun glass, focus the rays of the sun on the wart for thirty seconds; do this two or three times a day and the wart will disappear in a week or two.

*

Upon what ground does Russia justify her position?

Upon the ground of military and commercial necessity. Russia wants an open port in the Pacific at the end of her great railroad. Port Arthur filled the bill, hence Russia rented Port Arthur. The twenty-five year lease from China had an extension clause to ninety-nine years.

*

What is shimose?

It is a smokeless powder which is an invention of the Japanese. It is acknowledged to be, by actual test, five times stronger than English lyddite or French melinite. A shell exploded by lyddite or melinite bursts into fifteen or twenty pieces. If exploded by shimose it would burst into two thousand pieces.

*

Give the names of all the men who have served as Chief Justice of the United States since John Jay was appointed.

John Jay, 1789-1795; John Rutledge, 1795; Oliver Ellsworth, 1796-1800; John Marshall, 1801-1835; Roger B. Taney, 1836-64; Salmon P. Chase, 1864-73; Morrison R. Waite, 1874-88; Melville W. Fuller, 1888.

*

What city was destroyed by silence?

This is said to have been the fate of Amyclæ, of the Morea, near Sparta. The citizens had so often been panic-stricken by false reports that an enemy was coming that they passed a law forbidding any one to spread such a report. Consequently when the Spartans moved on the city no one dared give the alarm, and they easily conquered and destroyed it.

*

What is the value of a gold fifty-cent piece of 1871?

The United States government did not coin fractional parts of a dollar in gold, but they were made by jewelers for charms and spangles, in California. The circular gold fifty-cent piece of 1871, if uncirculated, is worth \$1.20; if in fine condition, \$1.00, and if in good condition, 75 cents. The octagonal fifty-cent piece of 1871 is worth from 75 cents to \$1.10.

MISCELLANEOUS

BIOGRAPHY OF A FOOL.

He didn't have time to chew
 The food that he had to eat,
 But he washed it into his throat
 As if time was a thing to beat.
 At breakfast and lunch and dinner
 'Twas a bite and a gulp and go—
 Oh, the crowd is so terribly eager,
 And a man has to hurry so!
 A bite and a gulp and away
 To the books and the ticker! A bite
 And a drink and a smoke and a seat
 At a card table half of the night;
 A pressure, a click and a pallor,
 A cloth-covered box and a song;
 A weary old fellow at forty,
 Who is deaf to the noise of the throng.

—Chicago Times-Herald.

SELECTED QUOTATIONS.

BY DALLAS B. KIRK.

Addison, Joseph (1672-1719).
 The post of honor is the private station.

Bacon, Francis (1561-1626).
 He that studies revenge keepeth his own wounds green.

Coleridge, Samuel T. (1772-1834).
 Earth, with her thousand voices, praises God.

Dryden, John (1631-1700).
 Errors, like straws, upon the surface flow;
 He who would search for pearls must dive below.

Emerson, Ralph W. (1803-1882).
 Beauty is the mark God sets upon virtue.

Franklin, Benjamin (1706-1790).
 Keep flax from fire, youth from gaming.

Goldsmith, Oliver (1728-1774).
 Learn the luxury of doing good.

Herbert, George (1593-1633).
 Only a sweet and virtuous soul,
 Like seasoned timber, never gives.

Irving, Washington (1783-1859).
 A tart temper never mellows with age, and a sharp
 tongue is the only edged tool that grows keener with
 constant use.

Johnson, Samuel (1709-1784).
 For we that live to please must please to live.

Keats, John (1796-1820).
 A thing of beauty is a joy forever.

Longfellow, Henry W. (1807-1882).
 Know how sublime a thing it is to suffer and be
 strong.

Milton, John (1608-1674).
 What though the field be lost? All is not lost.

Nelson, Horatio (1758-1805).

I thank God I have done my duty.

Ovid, Publius (B. C. 43-18 A. D.).

Boy, spare the whip and tightly grasp the reins.

Pope, Alexander (1688-1744).

'Tis education forms the common mind;
 Just as the twig is bent the tree's inclined.

Quarles, Francis (1592-1644).

Be wisely worldly, be not worldly wise.

Roscommon, Earl of (1633-1684).

Immodest words admit of no defense.
 For want of decency is want of sense.

Shakespeare, William (1564-1616).

It is a wise father that knows his own child.

Taylor, Henry (1800-1886).

The world knows nothing of its greatest men.

Uhland, Ludwig (1787-1862).

They sing of spring and love, the golden time they
 bless

Of freedom and of honor, of faith and holiness.

Virgil, Publius (70-19 B. C.).

Trust not too much to an enchanting face.

Wotton, Sir Henry (1568-1639).

Lord of himself, though not of lands;
 And having nothing yet hath all.

Xenophon, (444(?) - 355(?) B. C.).

Make such a happy choice as may render you happy
 during the future course of your life.

Young, Edward (1681-1765).

Procrastination is the thief of time.

Zinzendorf, Count (1700-1760).

That land is henceforth my country;
 Which most needs the Gospel.

Luthersburg, Pa.

* * *

THE FIRST SAW.

"WHAT a funny thing!" said little Tom, taking
 up his brother John's saw.

"It's only a saw, silly," said John.

"Why, don't you think it is a funny thing?" per-
 sisted Tom, as the saw worked backward and forward,
 separating the hard wood which no knife would cut.

"Oh, all carpenters have it," said John, disdain-
 fully.

Still little Tom watched and wondered. "But who
 made it first?" he said.

"I'll tell you," said his brother. "Long ago a
 Greek sculptor, called Dædalus, divided a piece of
 wood with a toothed bone of a serpent; and it an-
 swered so well that he imitated the teeth in iron, and
 so made the first saw."

And Tom's inquiring little mind was satisfied.—
Exchange.

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,

Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

climate, and located in a growing, resourceful
and prosperous community. Washington county,
Idaho, possesses these advantages to a fuller de-
gree than any other section of
the United States. Her fruit is
incomparable and includes ev-
ery variety known to horticul-
ture outside of the tropics.

HOMES

Her irrigated farms produce crops of hay, grain
and vegetables that are the marvel of farmers in
the middle West. Her
cattle, and horses and
sheep com- mand the
prices in world's
markets. Her forests
will make a lumberman's paradise. Her mines
of gold, silver and copper rank with the richest
discovered. To call her climate
"Italian" would be flattery to
Italy. Extreme heat, extreme
cold, cyclones and droughts are
unknown. The U. S. Weather
Bureau reports 336 sunny days in Idaho in
1904. Weiser, the county seat of Washington Co.,
is a modern little city of 3,000 pop., on the main
line of the Oregon Short Line Ry., owns its water
and electric light plant, has modern sewerage
and is the gateway to the stock, timber and min-
ing sections. Splendid business openings, and
great opportunities for farmers are offered. Don't
delay. Investigate! Write for illustrated book-
let and special information to Secretary Weiser
Commercial Club, Box V, Weiser, Idaho. 2473

resorts reached by the North-West-
ern Line. Sent postpaid on receipt
of 2 cents postage by W. B. Kniskern,
P. T. M., Chicago, Ills.

THE LAST WEST

You are familiar with the saying of Horace Greeley: "Go west, young man, and grow up with the country." The land now available in the Western States at a reasonable price is not worth while. We come to you with something that is worth while. "Save the best for the last" is an old saying, but we are proving it to you to-day, when we talk about the last "West."

A Harvest Scene in Canada.

For three years we have called to your attention Western Canada, where there are broad acres of fertile land ready for the plow. Many of the Brethren have heard our call, and are now enjoying the harvests.

We own and offer for sale thousands of acres of land in Manitoba, Assiniboia, Saskatchewan and Alberta. Our prices range from \$5.00 to \$20.00 per acre on easy terms. In some of our districts homesteads of 160 acres each can be obtained for \$10.00 and three years' residence.

Is this worth while to you? If so, write to-day for particulars.

Yesterday and Today.

The Chicago & North-Western Railway has issued a valuable and interesting compendium of railway history in the Northwest from the time when the Indians ceded the United States the last territory east of the Mississippi up to the present day. Over a hundred pages of historic matter concerning the various roads forming what is known as The North-Western Line, well printed in strong paper covers, postpaid for ten cents. W. B. Kniskern, P. T. M., Chicago.

Special Excursion Rates to Colorado, Utah and the Black Hills,

Via the North-Western Line. Beginning June 1st excursion tickets will be sold to Denver, Colorado Springs, Pueblo, Salt Lake City, Hot Springs, Deadwood, Lead and Custer, S. D., etc., good to return until October 31. A splendid opportunity is offered for an enjoyable vacation trip. Several fine trains via the North-Western Line daily. Apply to agents Chicago & North-Western R'y.

Epworth League Special Train, Chicago & North-Western R'y.

The Epworth League meets at Denver, Colo., July 5 to 9, and special through trains have been arranged for delegates and their friends. An excellent opportunity to make a tour of Colorado and the Far West with congenial company and at a minimum of expense. Special trains run through without change, arriving at Denver before the opening of the convention.

Special low rates for this occasion quoted upon application to any ticket agent of the Chicago & North-Western R'y. Send for itineraries and full information.

Summer Tourist Rates to the Beautiful Summer Resorts of Wisconsin and the Northwest,

Via the North-Western Line. Send 2-cent stamp for summer resort literature to W. B. Kniskern, Passenger Traffic Manager, Chicago. For rates, tickets, etc., apply to agents Chicago & North-Western R'y.

The Upper Peninsula Land Co.,

Limited

935 First Nat'l Bank Bldg., Chicago, Ill.

F. J. Merriam, Secretary and General Manager.

You have read of the Upper Peninsula of Michigan, and the settlement of the Brethren there. It is the best part of the whole Upper Peninsula. You'll miss it if you don't get in at the start. Now's the time to go up and see the country. Now's the time to buy yourself a home.

If you want to go up write me and I'll meet you somewhere on the road and go with you. If you have a party of three or more it can be made decidedly to your advantage. We can put you in a tent free, all you need being a blanket and food, readily had in the neighborhood. Separate tents for the women folks. Write to-day to the address below as to when you want to start for Rudyard and the Camp on the Pine river. You can't have that tent any time. Engage it now. It's free. There'll be skilled woodsmen there to show you the land and how to camp out the right way. Address:

HOWARD MILLER,
Elgin, Illinois.

The American Standard Revised Bible

The American Standard Revised Bible is more intelligible than any other version, because it substitutes modern equivalents for obsolete words, such as "chiel, marish, sith, collops, hozen, clouts," and a great many other words that are now out of use.

Words of the old version ordinarily misunderstood are replaced by others newer and better, such as "tradesmen" for "occupiers," "living" for "quick," "know" for "wot," "try" for "tempt," "umpire" for "daysman," "self-control" for "temperance," "food" for "meat."

"Holy Spirit" is always used for "Holy Ghost," "sheol" for "hell," pit and grave when the abode of the dead is intended; Jehovah for Lord and God wherever the name occurs in the original Hebrew.

Offensive things are described by inoffensive expressions. For example, in Genesis 43:30, "his bowels did yearn upon his brother" becomes "his heart yearned over his brother."

The spelling is in harmony with existing orthography. The punctuation is greatly improved.

The grammar is in close conformity with present usage.

Most important of all, the American Standard Revised Bible gives the exact meaning of the original better than any other version.

The Sunday School Times says it is "the standard translation of the Bible for the English-speaking world."

"The most important volume that American scholarship has ever produced."—Church Economist.

THE GOVERNMENT WILL RECLAIM 50,000 ACRES

Big Irrigating Ditch Near Reno, Nev., to be Opened Saturday, June 17.

[Special to the Record-Herald.]

SALT LAKE CITY, Utah, June 11.—Near Reno, Nev., next Saturday, exactly three years since the national irrigation act became law, the first of the government irrigation canals designed to transform the West will be flooded. In the presence of distinguished representatives of science, engineering, legislatures, state and federal, and a great throng of settlers the water will be let into a system of canals just completed by means of which 50,000 acres of Nevada's arid land will be reclaimed. The event marks an epoch, for it is only one item in a colossal plan of land improvement, the greatest the world has ever seen. It means the ultimate reclamation of 100,000,000 acres of arid land.

The portion of the Nevada project now completed is known as the Truckee-Carson system and consists of a canal thirty-one miles long to carry the water of the Truckee River to a mammoth storage reservoir on the Carson River having a capacity of 286,000 acre feet (an acre foot equals one acre one foot deep). Directly below this reservoir two canals having a combined capacity of 1,900 cubic feet per second will lead the water of the united streams out upon the plains, where 200 miles of small ditches will distribute it in all directions over an area of 50,000 acres.

The whole project hinges on the storage of flood waters. The engineers are using all the natural storage basins where the water is most readily impounded in the construction of dams. In the Nevada region there will be seven or eight such reservoirs, large and small. The largest of them is Lake Tahoe in California, which is fed by the ice-cold streams from the Sierras. This lake lies in the drainage basin of the Truckee River and millions of cubic feet of water can be dammed up in it to be let down as needed for irrigation.

The work of the Nevada project so far has been accomplished under the direction of Government Engineer L. H. Taylor and supervised by Frederick H. Newell, chief engineer of the reclamation service. For the initial part of the work in Nevada, \$2,740,000 of the reclamation fund was set aside by the Secretary of the Interior. When this sum is spent at least 100,000 acres will be supplied by canals.

The reclamation act provides that the farms in the Nevada project shall be forty acres each near the towns and eighty acres each elsewhere. The original cost of a homestead to the settler is about \$15—the amount necessary to file and record his claim. Before the title to the land passes to him, however, the government asks that he pay back the amount expended for reclamation, which in the Nevada project is \$26 per acre. The settler must reside upon his land, water it from the government ditches and pay the amount charged against his farm in ten equal annual installments.

◆◆◆

Stop Off at Reno, Nevada,

And investigate the irrigated Government land. Call on Mr. H. B. Maxson, U. S. Engineer, for information.

C. S. Morey Makes Remarkable Prediction in Regard to Beet Growing Here.

"Colorado as a beet sugar producing state will soon leave Michigan far in the rear, if the present developments continue."

This assertion was made this morning by C. S. Morey, head of the Morey-Boettcher syndicate. He has just returned from a trip to the East. While there he made arrangements for the transfer of one of the largest Michigan factories from Saginaw to Sterling, Colo. The new factory will have a capacity of 600 tons and will give employment to hundreds of men.

This will make the seventh beet sugar factory in the South Platte Valley owned by this syndicate.

HOMES FOR 1,000 FAMILIES

May be Found in the Beautiful Valleys
Along the

Oregon Short Line Railroad

IN SOUTHERN IDAHO

Where Crops Never Fail, because Farming
is Done by Irrigation.

Three crops of alfalfa hay are made each season. Fine timothy and clover are also grown. Wheat, rye, oats and barley also yield abundantly. Fruit growing is a very profitable industry.

The climate is healthy; winters short and mild. We solicit the homeseekers to come and investigate these valleys before locating elsewhere. Parties wishing to visit Idaho may also take advantage of the very low rates authorized to Portland and return on account of the Lewis and Clark Exposition, on which liberal stop-over privileges are allowed.

Exposition rates from some of the most Eastern points for tickets to Portland and return (not including trip through California), are as follows:

Omaha & Kansas City,	\$45.00
St. Paul & Minneapolis,	45.00
Chicago,	56.50

THE LIGHT OF TRUTH.

BY MARTHA SHEPARD LIPPINCOTT.

Only through the light of truth
Let your pathway go,
Then the way of righteousness
You shall learn to know.
God will guide you e'er aright,
If with truth you dwell,
And the pathway you should tread
Conscience then will tell.

Ne'er in aught try to deceive,
Better things to gain;
For deception only brings
Sorrow in its train,
And results that you desire
Do not come that way,
And your soul will realize
Deep regret some day.

Let the holy light of truth
Ever be your guide,
And your soul will find sweet peace,
Then whate'er betide.
Truth and love to lead the soul,
Ever guide aright,
Happiness you'll only find
Following their light.

Moorestown, N. J.

SEED THOUGHTS FOR THE HEART'S GARDEN.

BY JOSEPHINE HANNA.

Remorse gnaws not at a sound part.

*

Thoughts cannot run downward on an upward inclination.

*

Risk no foothold which will not bear up a good character.

*

Some who do not presume to deny God, refuse to recognize him.

*

Have Care to precede you if you would prevent it from following you.

Idleness can build air-castles, but it takes Industry to materialize and occupy them.

*

He who will patiently add little things together will finally have greatness for their sum.

*

Victory is but another name for overcoming, from which we often shrink, victory inconsistently to laud.

*

Not in the wisdom and glory of Solomon, but in the sinlessness and humiliation of Christ, may we find salvation.

*

If youth will sow wild oats, middle-age must reap them, and old-age limp over their stubble-ground; and they are in poor demand.

*

If the heights of which men dream were to become a reality, few have laid a foundation broad enough to maintain them.

*

Beware of affectation and ostentation: the owl may look wise and the turkey may strut, but the bird that almost invariably comes to mind at the sight of their counterparts, is the goose.

*

When a man sells his honor, we are prone to think he has sold it too cheaply; but we should bear in mind that quality has much to do with price, and that the true article is beyond price.

*

And now they say they're extracting gold—

Yes, gold from water of the sea;

I'm glad of this: life doesn't hold

Uncommon opportunity

For me;

But oh, the sea is full and free,—

Life overbrims with common things,

And wondrous opportunity

Its boundless wealth of treasure brings

To me.

Flora, Ind.

GREATEST DAM IN AMERICA.

BY GUY ELLIOTT MITCHELL.

THE most gigantic of the government irrigation constructions in progress is the Salt River or "Roosevelt" dam in Arizona, and considerable criticism has been made of the course of the Secretary of the Interior in setting aside between three and four million dollars for this project which will irrigate no public lands, but only those already in private ownership, vastly increasing, of course, their value. The work which the government will do under this project will double and quadruple land values, and in fact make much land that is now practically useless worth from \$30 to \$100 an acre. Some 200,000 acres will be irrigated under these works, and the artificial reservoir to be formed by the Roosevelt dam will be by far the largest in the United States, with the incredible capacity of nearly four hundred billion gallons. This is three times the capacity of the great Wachusett reservoir which is to supply Boston and twice that of the famous Croton dam of New York's new water works.

The criticism referred to of building government works to supply water to such a section as the Salt River Valley where the lands are all in private ownership, instead of going out onto the desert and reclaiming public lands, is one which will not hold upon second thought. The Salt River Valley has been a famous section of the arid west. Twenty years ago it was a vast, flat plain, skirted by mountains reflecting the wonderful colors and tints of the southwest, but nourishing only cactus and other desert plants. The Salt River cut its center, a sparkling, life-giving stream, and private capital undertook to utilize its waters for irrigation and build up a great community. Dams were built, canals were constructed, and thousands of acres were planted to oranges, lemons, figs, dates, raisins and wine grapes, almonds, pomegranates, and all the fruits and flowers of the semi-tropics, not to mention broad fields of emerald alfalfa where fat cattle stood knee-deep in the luxuriant growth. But the valley is to-day crippled and sick. The canal system laid out was based upon the heavy annual rainfalls which prevailed at that time, and sufficient data had not been gathered to show that the period was one of fat years and that the lean years of drouth would surely follow. They came, however, over the whole southwest, as can be seen by a study of the rainfall charts of that region, and the result has been that thousands of acres of orchard and farm have returned to aridity. The Old Man of the Desert came in and claimed back his own. It is simply a question then, in the Salt River Valley, and in some other sections, as to whether it is not as good or better policy for Uncle Sam to save the homes of several thousand

pioneers, who are perishing for want of water, as it is to reclaim new raw lands and put new settlers upon them.

From a Brook to a Torrent.

The flow of Salt River is variable in the extreme. At low water periods it runs something like one hundred cubic feet per second. In one great flood the river swept down the valley at the rate of 300,000 cubic feet per second. The twelfth annual report of the Geological Survey describes the flood of 1891 as follows, all of which ran uselessly to the sea for lack of storage:

"On February 17, the discharge was 835 cubic feet per second, increasing the next day to \$154,000 cubic feet and on the 19th to 276,000 cubic feet. This was followed by a second greater swell, until on the 24th a maximum of 300,000 cubic feet was reached."

The Roosevelt dam is to control and store such floods. About sixty miles from Phoenix, the Salt River enters a profound canyon, with lofty, precipitous walls and a narrow floor, in which is located the dam site. Above the dam the canyon opens into wide valleys, providing the most capacious reservoir in the west.

"It would probably be impossible to find anywhere in the arid region," said Government Engineer Arthur P. Davis, the projector of this magnificent enterprise, "a storage project in which all conditions are as favorable as in this one. The capacity of the reservoir in proportion to the dimensions of the dam is enormous and the lands to be watered are of remarkable fertility, with a climate which may be classed as almost semi-tropic."

Mr. Davis also made the important discovery that material for making good Portland cement and bricks lies immediately by the dam site. He states that the masonry dam now under construction will be absolutely permanent—"safe, solid and secure for all ages to come, a part of the everlasting hills of which it will become an integral part."

Finding that the prices bid by the cement manufacturers would add an increased burden of half a million or more dollars to the payments of the irrigators, the government constructed an immense cement mill and will itself manufacture the 200,000 or more barrels of cement needed for the dam. A splendid roadway, rivaling the mountain roads of the Incas, has been built from Phoenix to the dam, at a cost of over a hundred thousand dollars. The cost of the entire construction, three and a half million dollars, will be apportioned among the lands receiving the water, to be paid back to the government in ten annual installments, and no water user can hold more than 160 acres.

The River to Build its Own Dam.

An interesting feature of the construction work is the power canal which has already been built. The

regular flow of the river has been diverted above the dam site, and at that point is tumbled over the rocks, generating some 10,000 electrical horse power to be utilized in building the dam. It will be required day and night for drilling, moving great rocks, pumping, grinding rock and clinkers, mixing and handling cement and handling machinery. The river is thus being forced to erect its own dam. After the construction, this power, added to large additional power to be extracted from the heavy fall of the river below the dam site, will be electrically transmitted to lands not covered by the gravity canal, for pumping purposes and by this means fully 60,000 acres additional will be watered from the underground supply found throughout the Salt River Valley.

An ample spillway will provide an escape for excessive flood waters, and a tunnel driven through solid rock will enter the reservoir directly on its bottom to supplement the spillway and also to allow for the discharge of sediment from the reservoir.

The valley is already well provided with transportation by the Santa Fe and the Southern Pacific railroads and the exceptional climatic conditions insure an early market and high prices for the various products of agriculture and horticulture.

The drainage area of the Salt River and its tributaries aggregates some 12,000 square miles and some of the mountain peaks near the source pierce the sky at an altitude of 10,000 feet.

Washington, D. C.

* * *

A GIRL DRUNKARD.

THE superintendent of a New York Home recently related a story of her own experience in rescue work, so wonderful and so encouraging to wretched victims of sin that it ought to be made public. The story is in substantially her own language and is as follows:

"I was sent for one morning many years ago by one of the judges of the court, who had before him a girl of about sixteen years of age. The girl's father had caused her arrest and had appealed to the court to sentence her to some home as incorrigible.

"The history of the girl was this. At twelve years of age she had been put to service in the dining-room of a saloon as a waiter. Her duties required her to serve liquors, and she acquired a passion for drink and became a drunkard.

"I never saw a human being that loved liquor as she did. She could drink down a glass of clear whiskey with the greatest relish, and she had absolutely no control over her appetite. At sixteen she was a confirmed drunkard and a street walker. She was devoid of moral principle, and had a perfectly insane temper.

"The judge heard the case and sentenced her to the home of which I was the superintendent. When she learned her destiny she flew into an uncontrollable

rage. She screamed and fought and cursed like a demon. She had to be taken to the home by main force, and when she got there we were at our wits' end what to do with her. She was perfectly lawless, desperately ugly and her manner was more like a demon than a human being. We tried all sorts of treatment for her; we tried to win her by love; we tried to reason with her; then we tried punishing her—in fact, we exhausted our resources all to no purpose. For three years that girl kept our home in a turmoil. Nothing we could do had any effect upon her. She attended our gospel services, but to all appearances they had no influence over her.

"At the end of three years a change came over her. She began to pray and to believe in God. After we had her under control, we sent her out to service in a Christian family on a farm in a neighboring State. She was a small girl, not very strong, but she took hold of the heavy work of a servant's place in a country home with an amazing vim. It seemed as though she could not do enough for her employers.

"But the work was too much for her, and after the first year she returned to us quite worn out and broken down. Then she took up fancy work and became an expert. The finest kind of work seemed to come perfectly natural to her.

"When the term of her sentence expired, at twenty-one years of age, she left our home and supported herself by doing the fancy work learned in the home. She was then one of the most lovable, sweet mannered, kind-hearted, gentle girls that I ever knew. We all loved her, and she used to come and instruct the other girls in fancy work. She had grown to be a very handsome girl, with a fair complexion and a beautiful face.

"A young man out of an excellent family in our city became interested in her and finally married her and took her to his father's home, where she was admitted on equal terms with the other sons and daughters, of whom there were several. She became a favorite with them all, and the father-in-law speaks of her endearingly as his 'little girl.'

"You asked me if I knew of any cases of girls rising from a life of shame to a respectable womanhood, and my answer is this true story of a girl who is now the mother of a dear little girl, and who is one of the loveliest Christian characters of my acquaintance. It is one of the many evidences that there is no limit to the power and grace of God.

"Jesus is able to save to the uttermost all that come unto God by him. What a refuge the Lord is to every sinner who will flee to him for help."—*N. Y. Advocate.*

ALL the doors that lead inward to the secret place of the Most High are doors outward—out of self, out of smallness, out of wrong.—*George MacDonald.*

SKETCHED FROM LIFE.

BY CHARITY BRUBAKER.

Picture Number One.

"WELL, mother, I did so much want to stay at home to-day. I am just awfully tired of going to church every Sunday, and I don't believe I ever will like to go."

"Now, Frank, you need not try this again. This thing of begging to stay away from church might as well stop. I am not willing that you should miss preaching, and you well know what your father would say if he hears of this."

"But, mother, there are so few boys go, and the preacher only talks to grown folks."

"I tell you to hush your everlasting aggravation and go along and get ready. I am tired to death already and I'll tell your father if you say another word. Fine way you would grow up without preaching or anything to tell which day is Sunday."

Frank Sell meekly obeyed, yet his rebellious mind was busy. He did not understand why, if preaching did so much good, his parents had not changed some. They always went to church, and he had heard the preacher tell how parents should "train up" a child, and not "provoke" them. Now it was only a few weeks since he had heard the sermon on "Meekness in Conversation," yet so far neither sermon had changed things at their house, and Frank failed to see the benefit in going to church.

Mr. Sell was well-to-do, but was too busy with temporal things to cultivate that intimacy with his family, which is so helpful to growing children. He had taken time this morning to nail up a few boards, and do several other things he could never find time for during the week. Now when they start to the church Frank knows they will not get there on time. It may be this losing all the song and prayer, and not knowing the sermon text is one reason the sermons do so little good, but having been taught not to tell older people what to do, he just kept on thinking.

Neighbor Gleason spoke cheerfully to them, as was his custom, for they nearly always saw him about the place as they passed.

"Mother, why don't Old Gleason go to church?" asked Frank.

"Because he is an infidel, I think," said his mother.

"Why is he an infidel?" again Frank questioned.

"Because he don't have religion," the mother answered, feeling justified in saying this because she had never known of Mr. Gleason going to church since he had come to live with this son, yet she knew he was always ready to lend a helping hand.

They soon came to the church and Frank listened in vain for the singing or some sign that they were not very late, but just as they went into the room the

preacher was beginning the sermon and Frank could not tell what the text was nor where it was to be found. Thinking to attract as little attention as possible he slipped into one of the back benches with other small boys, while his parents proceeded well to the front, his father taking his usual corner seat.

The sermon continued unusually long, and as Frank noticed it was something about "Diligence in Christian Growth," he hoped his father would take these lessons, when lo! he saw his father was asleep.

Just at this time one of the small boys thought he would take a nap too, and when he snored louder than he had intended, Frank could not catch himself in time to suppress the laughter nearly every one heard. His mother's eyes were upon him immediately. He was very sorry but now that it was done there was nothing to do but to wait for what was to come.

When the service was over Frank's parents were soon ready to go home, and hardly waiting to leave the churchyard they began on Frank for cutting up in church. Turning to the mother, the father said, "It does seem to me that you would have that boy knowing by this time what he might do and what he had to do, but I suppose he is waiting for me to give him a lesson."

"Well, Pa, I just couldn't help it. Mother is not to blame, no matter what you say."

"What did you do it for? I'll not stand for a child of mine to disgrace me like that."

"Fred saw you asleep and he was trying to do like you were, but he snored louder than he meant to."

"And you just publicly made fun of your father. Well, I'll see if you do that again."

After reaching home Frank's mother thought they had scared him enough for that to be his punishment, but his father, still enraged, led the boy off to an unmerciful whipping, such as wounds the spirit of the child and makes him feel that father never could do enough to gain his love.

Needless to say Frank had little appetite for dinner, and he soon stole off alone to nurse his wounded spirit. Sitting among the bushes out near the garden fence, he did not notice the approach of company, nor know anyone was near until his best-loved chum, Earl Holden, came up to where he was.

"Hello! Frank, what are you doing here, you look like you had been to a funeral, what is the matter?"

Frank hesitated, then reluctantly told of the whole affair. Neither of the boys could say anything for some time.

At last Frank said, "I have made up my mind to be an infidel. Mr. Gleason is one and he treats boys as good as can be."

Earl was much surprised and lost no time in showing Frank his mistake. "You don't know what an infidel is, and I know that Mr. Gleason is not one," declared Earl.

"Well, he don't go to church and I don't like to go," said Frank, thinking by this time that he hated churchgoing.

"Now see here, Frank, Mr. Gleason has an army disease that keeps him at home so closely. I am sure that you will change your mind as to what you will be when you are old enough to see the difference in the lives of those who are real Christians and those who do not know the refining influence of God's love in their hearts."

After a little more talking the boys were off through the old orchard happy in new discoveries among the trees, and as we came up to the door where the folks were talking we heard the father say shamefacedly, "I see now why Frank shows no confidence in me, and I mean to try to set myself right with him."

Zionsville, Ind.

FROST AS A PURIFIER.

EVERY winter the newspapers have some "scientific" trash about the purifying influences of low temperatures, quoting the fact of the yellow fever being killed by a black frost, and making statements about the absence of malaria in winter, and even asserting that ice is pure, whatever the character of the water frozen.

To a certain extent the deductions are correct, although the premises are wrong. The germs of yellow fever may be killed by a frost—or to speak properly, there may be an atmospheric temperature at which these germs can not propagate. But the talk that all forms of disease arising from filth are rendered innocuous by cold weather is foolish. The worst forms of typhoid fever and smallpox, and other dirt diseases, flourish in cold regions, and are severe in our temperate regions in the severest winter weather. The statement that ice is a disinfectant, and a prophylactic as well as an antiseptic is ridiculous. The frozen water of the washtub is washtub ice still, and will have all its soapy detergent qualities when melted; and ice from the impure waters of foul streams or stagnant ponds will take up and hold mechanically, if not chemically, the dirty elements of the water. Freezing does not distill and purify—it merely solidifies.

Recently the writer purchased some fish that had been packed in ice. The fish, although hardly thirty-six hours from the water, were unbearable. An examination showed that the ice came from a foul source, and when melted the water gave off unpleasant odors. It is evident enough that the ice tainted the fish.

Persons who use ice in their drinking water meet with experiences of a similar character, although they may not recognize the nature of them at the time. So

long as the water is ice cold—above the normal perceptive sense of the tongue and palate—the flavor of the ice is not apparent, but when the ice is melted the water may be offensive to the smell and unpleasant to the taste. For this reason all the refrigerators which have an ice-water reservoir combined are failures. Nobody wants to drink—more than once—the melted ice. All our ice water tanks depend for their drinking supply upon water—good water—put in on the ice, and not upon the melting ice. And the best and only proper method of making ice water is to have the drinking water in pipes cooled by contact of pipes with ice on their outside, as beer drawers in summer and the managers of the ice water fountains in Central Park near the Terrace do.

There is only one method of getting pure ice, ice that is not offensive as water, and that is to have the ice from a pure supply. Probably the growing usefulness of the mechanical ice-making machines will eventually give us ice that is pure when it is ice and clear when it is water.—*Selected.*

THE LARGEST PRINTING MACHINE.

THE largest printing machine in the world, it is claimed, is the multiple-color printing apparatus now employed in the Edinburgh, Scotland, Linoleum Works. This wonderful device has two drums, each nearly twenty-seven feet in diameter, placed side by side, with a short interval between them, and each capable of being driven independently, and each drum is of sufficient size to carry a piece of linoleum two yards wide, with a gap between the ends of the pieces when fixed upon the periphery of the drum.

Parallel with the axis of the drums is a heavy bed like that of a planing machine, and on this traverses a table, carrying the framing on which the printing rollers are mounted, there being one roller for each color in the pattern. The rollers are one foot six inches wide, and print, therefore, but one-fourth of the width of the piece of linoleum at each revolution of the drums, each roller being adjusted at such a distance below the next above it that the color it applies falls properly into its place in the pattern printed by the first roller.

When a strip one foot six inches wide has been printed in this way, the full length of the piece of linoleum, the drum is stopped automatically with the gap between the ends of the piece opposite the printing rollers; the frame carrying the latter is then shifted one foot six inches literally, the drum again started, and a second one foot six inches width printed, and a third and fourth similar operation completes the printing over the two yards width. Each drum is driven by an independent high-speed engine.—*Manufacturer's Gazette.*

A SUGGESTION.

BY NANCY D. UNDERHILL.

IN reading an article on "Obedience" in a recent copy of the INGLENOOK, the question came to my mind, *To whom* shall Christian women render obedience? We learn that *in Christ* there is neither male nor female, but all are one—equal. We also learn that *in Christ* we are redeemed from the curse of the law. That curse which placed woman beneath her companion because of sin must necessarily have passed away when the penalty was paid and she was redeemed *in Christ*. When a criminal receives pardon, he (or she) is no longer under the penalty of the law, but is free. We learn also that *Christ is the head of the church*; and we are the members. So if he is the head of the body, why not render obedience *to him*?

If the husband is *in Christ*, as well as the wife, there need be no friction. But suppose the husband be a servant of the Evil One. He does not care to have his wife meet with the saints, though we are admonished in Christ not to forsake the assembling of ourselves together. He does not care to have Christ worshiped in his home, as in family worship, returning thanks at table, etc. He prefers to have his wife spend her time in *working*, so that *he* may accumulate more dollars. Shall the wife obey Christ, her spiritual head, or shall she be wholly submissive to Satan through his human agent, whom the elder of our church, perhaps, was instrumental in uniting together in marriage with a believer?

Here is a great inconsistency. Shall we continue to uphold it? Shall we give our sanction to the union of Christians with unbelievers, and then tell them they must be wholly submissive to their worldly companions? Paul, inspired by Christ, teaches us a better way. 2 Cor. 14: 15; 1 Cor. 6: 15. Paul, in admonishing wives to be subject to their husbands, in every case, save one (1 Cor. 7: 12-16), speaks to those whose husbands are in the Lord (Christians). In the exceptional case, he is careful to say that it is his own private judgment, and not the Lord's instruction. Yet his advice is good, but not intended to be arbitrary. Where the unconverted wives of Christian men are admonished *they* are referred to the law: because the law is for the unredeemed. 1 Cor. 14: 34.

In Col. 3: 18 Paul says, "Wives submit yourselves unto your own husbands, as it is fit *in the Lord*." It is evident that if the husbands are not "in the Lord" this has no application. Yet, Peter says that Christian wives should be subject to their unconverted husbands. * But it is only reasonable to suppose that Peter intended to convey the idea of peaceful subjection only so far as that obedience would be according to the will of God, for Peter himself, and the

other apostles, said, "We ought to obey God rather than man." Acts 5: 29.

A man owns a faithful animal which he drives along the public highway until, wishing to stop, he ties her to a giant cactus (or tree) by the roadside in the hot, sandy desert. Soon he sees Dolly stamping, snorting, pawing, rearing, plunging, as if trying to get away. Fearing she may break her halter, he rushes to her, and jerking her angrily, cries, "Whoa, Doll! If you'd stand still you wouldn't get hurt by the thorns." He does not see the coiled serpent hidden at the root of the tree to which poor Dollie is tied, and from whose deadly fangs she cannot extricate herself. When a woman loudly declares that she *must* do so and so, in order to protect herself and children, it sounds very unpleasant to us, but if we would only look carefully at the *root* of the matter, we would often find there, instead of the meek and lowly Jesus, the vile, slimy serpent of deceit and lust hidden where least expected. See 1 Tim. 5: 8.

Like poor, dumb Dollie, the *wife* is dumb concerning the real character of her life companion. She may groan and scold and do many unseemly things; but before crying, "Be obedient, loving and submissive, and the thorns won't hurt you," let us look at the root. Let us not teach our Savior's redeemed ones that the way to win Satan's ambassadors is to marry, serve and gratify them in their worldly desires; else by and by the Lord will demand of us why we have so misrepresented him, in proclaiming Satan's falsehood in Jesus' name. Because, ever since the patriarchal ages, God has taught us *not* to become united in marriage with those who were not his people. We see much written against the union of believers with unbelievers in the lodge, where they meet together a few hours occasionally; but how little do we see against the union of God's children with Christ's enemies (for, "he that gathereth not with me, scattereth abroad) for life, and the results for eternity. Whom shall we serve?

Shall we continue to point the menacing finger to the white covering which our sisters wear at prayer, crying, "The token of submission!" while the Lord through Paul plainly tells us that it is the token of *authority*,—of power? 1 Cor. 11: 10. Of whose power is it the token? If it is of *man's* authority, then it signifies *shame*; because it was obtained through sin. But we are told to do *all things* in the name and to the glory of Christ. If we wear the covering to signify *man's* glory, then we dishonor Christ. But the covering was given to signify *Christ's power* over sin and its results, whereby, hiding from view the physical head (man), we approach our spiritual head, Christ. The woman is the glory of man; but in Christ we hide *man's* glory, that Christ's power over sin may appear, and even as he hath covered our sins; so we cover our carnality and

glorify Christ. Thus the covering does *not* indicate submission to man, but it does indicate redemption in Christ.

Collbran, Colo.

SALT.

WE are apt to pay very little attention or thought to those things which are in most common use, and it is only when we are deprived of them that we feel how essential to our comfort they have been, and in some instances, that life itself is dependent upon them.

We breathe the air around us freely; we use water in large quantities with our food, and for cleansing purposes, seldom thinking of the consequences of the withdrawal of either. If the former were removed, death would instantly follow, and if the latter, death would be more slow, but quite as sure, and the suffering of the victim would be excruciating.

With these two common elements, so it is with salt. A man may be starved by avoiding those foods which contain salt and lime. The experiment has been tried on some of the lower animals, and though they appear well and eat with a relish for a time, they gradually lose their strength, become emaciated, and die. The reason of this you may know from your study of physiology. Any substance found in the body must be an ingredient of the food we eat, and as salt exists in all parts of the animal frame, the body cannot be properly nourished without it.

Farmers and stock-raisers know the value of salt, and find their horses, cattle and sheep in much better condition when regularly supplied with it. Any child who has gone to the barnyard fence with a lump of salt in his hand will remember with what delight the cow or horse ran to get it; and when the salt was put on the ground, how the creature would stand and lick the spot long after every sign of it had disappeared.

The deer in their native wilds search out salt cliffs, or basins, and by their constant trips leave well-worn paths, which sometimes betray them to the hunter. The people living in those regions call the basins salt licks.

The only use of salt, thus far mentioned, has been that of food, but it is quite as valuable to mankind in several other ways. Many kinds of fish, beef and pork are preserved by its use. Soda, which was formerly manufactured from certain plants, is now made almost exclusively from common salt. The process was invented by a Frenchman, and is a remarkable discovery. As soda is derived from salt, the latter may be considered the basis of the manufacture of soap and glass.

Many young readers of this paper will be able to tell why salt is used on car-tracks after a snow-storm or sleet, and why it is put on ice in an ice-cream

freezer. Nature has been very bountiful both with the supply and distribution of salt, it being found in most parts of the world. It is procured from wells, springs, salt lakes, sea water, and in the solid crystalline state, called rock salt.

China has many wells of remarkable depth, and considerable yield. The most important springs are in Onondaga county, New York, which supply half the domestic demand, and also export large quantities to Canada. The most of our fine table salt is derived from this source.

Those lakes without outlet are salt, the most important of which is the Great Salt Lake in Utah, fifty miles long and twenty miles wide, which contains twenty per cent common salt. A peculiar lake exists in Africa, which, at certain seasons of the year, is covered with a thick crust of pure salt, from one to two feet in thickness.

Salt is obtained from sea water, by evaporation, the water being placed in square pools, or brine pits, on the shore of the sea. The principal mines of rock salt are in the mountainous countries of Europe. Near a small town in Upper Austria is a mine with a world-wide reputation. It is more than a mile in length, and has a depth of 1,020 feet. Some of the excavated chambers are one hundred and fifty feet high. One of these has been fitted up as a chapel, and dedicated to St. Anthony—the altar, statues and desk being hewn from the mineral.

The pride of the miners, however, is the grand hall, the floor of which has been stained in imitation of mosaic; the pillars, also made of salt, supporting the arched ceiling, are beautifully stained. A handsome gallery surrounds the hall. Many leisure hours have the miners given to decorate this strange place, hundreds of feet below the surface of the earth; but they feel amply repaid when the Emperor of Austria and royal family pay them a visit.

On such occasions the hall and chapel are brilliantly illuminated with thousands of torches and lamps. The Emperor and family, escorted by a company of Guards and the Imperial Band, enter the chapel and hold a short service, then with music and dancing, the usual reception is given in honor of their ruler.—

THE LONGEST BRIDGE SPAN.

THE bridge with the longest span in the world is at present that which crosses the rushing waters of the Firth of Forth, near Edinburgh, Scotland. But the central span of the new bridge now building across the St. Lawrence at Quebec is eighteen hundred feet in length, ninety more than that of the Forth bridge. The total length of the latter, however, exceeds that of the Canadian structure, which is to be 4,220 feet.

THE HARM INSECTS DO.

BY JOHN S. TEETER.

INSECTS are found to be very destructive. Sometimes when they become numerous, their damage is serious. Often they completely destroy a whole crop.

There are many different kinds of insects. There are other small animals which are destructive, that are not really insects. We have, however, to confine ourselves to the class *Insecta*.

The order *Coleoptera*, which is under the class *Insecta*, are beetles. The Sugar Cane beetles are particularly destructive. Statistics show that the amount of damage one farmer suffered in Georgia, in one year, was two hundred thousand pounds of sugar. Another man estimated his loss at twenty-five hundred dollars for three years. These farmers both lived close together.

In an open spring, if the cane is not up by the time these insects are out, they bore into the stubble and eat the eyes of the plant; the eye of the stubble is the germinator of new life. By means of a trap lantern many of these insects are destroyed. The light of the lantern draws the beetles and below the lantern is a pan of fluid into which they drop and drown. This plan has been quite beneficial to those sections where they are bothered with this kind of insects. There is also a cane borer known to have destroyed thirty per cent of crops.

Corn is damaged a great deal through the South and East by what is called the corn borer. In some places a damage of twenty-five per cent has been realized. This insect bores through the stalk right above the ground, and then the least wind will break off the stalk.

The large specie of the grasshopper family is known to be quite destructive to crops. When they become numerous they do great damage. They have been known to annihilate whole crops. This insect thrives best in a warm climate.

The orange tree has a great enemy too. This is called the Hog Caterpillar; they work on the foliage of the trees. This insect has the greatest protective resemblance known. It fastens close and tight to the leaf. In the adult state it is the most beautiful butterfly in the South. When its wings are spread out it is about four or five inches from tip to tip. Orange trees have been seen completely bare of foliage caused by this insect.

The scale insect is also a great enemy that the orange tree has to encounter. The only way to destroy this insect is by spraying. They become very annoying sometimes to the orange grower.

The Pear Tree Oyster Scale is another insect on the same order of the orange tree scale. Whole orchards have died from the effects of this insect. Pear

trees used to be a thing of beauty in the South, but now pear orchards are becoming scarce. This is principally due to the disastrous effects of this scale. The peach tree is becoming a tree that we have to work on a good deal to keep its enemies down. There is a borer which gets into the roots and if not detected and taken from the tree, the tree soon becomes damaged enough that it begins to decline and finally dies.

By summing up the damage that insects do, we find that it is great.

Union Bridge, Md.

THE GRAY WOOLEN SOCK.

VARIOUS exclamations greeted Nell Erwin as she entered the schoolroom and drew out her work—a coarse, gray woolen sock.

It was "Fancy Friday" at Daisy Hill Seminary—something peculiar to the place. Three Fridays out of the month were spent in the customary elocutionary exercises; but the afternoon of the fourth was spent in a cozy, informal way, the girls—both day scholars and boarders—bringing their fancy work, and Madame Lane reading to them from some standard work.

On this particular Friday there was a brilliant display of fancy work. Helen Grant was embroidering a pair of slippers—splendid purple and yellow pansies; Lulu Fletcher, a sofa pillow—a cluster of lilies on cardinal satin; Katie Lee was at work on an elaborate standspread; Mary Morse was crocheting a fleecy, white shawl; Carrie Evans was making an applique bracket; a dozen or so girls were deep in the delightful mysteries of "crazy quilts"; and—but dear me! I have not time to enumerate all the beautiful things. Seats and desks were covered with a dazzling array of silks and worsteds.

So you see that it was no wonder that Nell's humble, gray sock created such a sensation. However, though she blushed a little at the pleasantries of her mates, she took her seat, and courageously set to work.

"Why, Nell, I thought you were going to bring that lovely foot-rest!" said Helen Grant. "You told me yesterday that you were going to finish it to-day. Have you it already done?"

"Oh, no."

"Then why under the sun didn't you bring it, instead of this solemn old sock?"

Nell blushed still redder. Then she said hesitatingly, "Well, you see girls, I did think I'd bring the foot-rest. In fact, I had it all done up in my workbag, and then I remembered that I would need a pair of scissors. So I went to mother's workbasket, and in rummaging around there I got an idea."

"An idea in a workbasket! How very remarkable! Now I shall know where to go when I am

obliged to write a composition, and can't think of any thing to say," said Maud Hasket.

"What I mean is this," said Nell, earnestly: "I found that workbasket full—yes, full to overflowing—with things to mend, make, and fix. There were Billy's mittens to mend, the baby's petticoats to be shortened, buttons to be sewed on Kitty's apron, a patch on Tom's jacket, and all for my dear little mother's one pair of tired hands. And all to be done this afternoon and evening. I tell you, girls, I felt ashamed when I looked at my own nonsensical piece of fancywork. And then and there I made up my mind to do something toward lessening the contents of that basket. So I seized this sock, for I remembered hearing mother say only a few days ago, that father needed a new pair. I'm not much of a hand at knitting, but I'll do all I can this afternoon, working on the leg, and when I get home to-night, mother will show me about fixing the heel."

There was a short silence.

Presently Maud said, "Well, girls, I dare say the most of us have mothers whose workbaskets are in the condition of the one Nell has described. I've no doubt that I can find one in my own home. There are six of us children—four younger than myself. It would take one woman's time to keep our little Ben in any thing like decent order. He is a veritable Peggotty for button-bursting. And sister Flo is almost as bad. She's a perfect tomboy. Tears regular barn-door holes in her apron."

"Well, it's pretty much the same at our house," observed Maggie Grey. "Of course there are not so many of us; but still, mother's sewing, mending, and darning about all the time."

"And mine, too," said Laura Harris. "It was only last evening that I heard father ask mother if she would go to the lecture with him; and she said she would like to very much, but couldn't go, because she had to patch Jack's trousers, so that he could wear them to school the next day. And I sat there, like an unfeeling wretch, working on a silly, good-for-nothing lamp-mat. And mother did look so tired and wistful, poor darling! Father seemed disappointed, too. Now, I might have offered to do the patching, and so have given her a chance to go. It would have done her so much good."

"Well, said Maud, briskly, "I guess we're all in the same fix. We have been going on and doing our own sweet wills; and I, for one, propose that we make a change. Suppose we all agree to go to our respective mother's mending-basket and get work from it for our next Fancy Friday."

"All right! We will!" chimed the others. Further conversation on the subject was put an end to by the entrance of Madame, Iliad in hand; and for the next hour the girls were regaled by the account of

Achilles dragging the body of Hector nine times around the walls of Troy.

"Four!" chimed the great clock in the hall.

"Young ladies, you are dismissed," said Madame, closing her book. "Next time, I think we will have a little prose instead of poetry. It will be a change, you know. Good afternoon."

"Prose instead of poetry!" Maud repeated, as they put on their wraps. "And we'll have the prose of sewing instead of its poetry; won't we?"

And Nell answered by a wave of the gray woolen sock. "You dear, old sock," she whispered, as she rolled it up, "how I did hate to bring you this afternoon! for I was so afraid the girls would make great fun. But it all turned out nicely, after all, and you had a mission, didn't you, you humble thing?"—*Pansy.*

HOW TO SPLIT A SHEET OF PAPER.

GET a piece of plate-glass and place on it a sheet of paper; then let the paper be thoroughly soaked. With care and a little dexterity the sheet can be split by the top surface being removed. But the best plan is to paste a piece of cloth or strong paper on each side of the sheet to be split.

When dry, violently, and without hesitation, pull the pieces asunder, when part of the sheet will be found to have adhered to one and part to the other. Soften the paste in water, and the pieces can be easily removed from the cloth. The process is generally demonstrated as a matter of curiosity, yet it can be utilized in various ways. If we want to paste in a scrapbook a newspaper article printed on both sides of the paper, and we possess only one copy, it is very convenient to know how to detach the one side from the other.

The paper when split, as may be imagined, is more transparent than it was before being subjected to the operation, and the printing ink is somewhat duller; otherwise the two pieces present the appearance of the original if again brought together.—*Straight Tips.*

THE COLDEST CITY IN THE WORLD.

IN the dead of winter many people are apt to think that they are living in the coldest city in the world. That distinction, however, doubtless belongs to Yakutsk, in Eastern Siberia. It is the capital of the province of that name, which, in most of its area of a million and a half of square miles is a bare desert, the soil of which is frozen to a great depth. There are about four hundred houses of European build in Yakutsk. They stand apart, the intervening spaces being occupied by winter yoorts, or huts, of the northern nomads, with earthen roofs, doors covered with hairy hides, and windows of ice.

HAWAIIAN GIRLS AT THE BATH.

HERE is a merry party of bright, blue-eyed, Hawaiian girls, going for their usual Saturday morning bath. They have just left their seminary home and each carries with her an old dress.

Let us follow them as they romp over the fields, gathering the guavas that grow on the bushes everywhere. Now we must pick our way more carefully, for the hillside is steep, and great, rough and jagged lava rocks bare their heads above the grass. But our barefoot Hawaiian girls seem neither to mind the steep descent nor the rugged rocks. Running up behind you and giving you the support of their strong arms they almost carry you down into the valley.

We come to a stone fence. This is also of the brown, porous, lava rocks. Here we pause till the tardy ones have come. Then with a great deal of fun and noise they jump over a low place in the wall. Each one gives her count as she goes, till the whole eighty-six have passed.

We now find ourselves in a pretty little glen. The kukin trees with their light, green leaves bend over the stream and drop their fruity nuts into its rocky bed. On our right the high rocky cliffs rise almost perpendicularly. But rugged as the cliffs are, the hardy ferns have found a footing away up in the air, and brighten the gloomy rocks with their feathery leaves.

The girls find boulders enough to afford them stepping stones across the stream.

Only a little farther up and we come to the prettiest spot of the glen. We are in an immense stone basin. And we stand gazing at the pretty little lake before us, at the waterfall tumbling over the high cliffs, at the rocks and ferns, and at the little river running away from the lake and winding its way through the rocks.

But while we have been gazing about our company have deserted us and we are alone. Where have they disappeared?

Beyond in the woods within each tree is a suspicious movement. Down there among the ferns a full skirt or a Mother Hubbard (only we say holoku) is spread to its full extent, while the owner beneath it removes her garments for a bathing dress.

Only a few moments more and from behind trees and bushes, rocks and holoku flock the bathers, now attired in the old dresses which they brought with them.

It is a pretty sight to watch these strong, gay girls plunge into the water. Watch yonder girl standing on a high rock. She shakes her braid of hair, allowing the glossy black waves to fall down her back. Then she throws her hands together above her head, and with one leap and dive she is out of sight. You shudder? How dare she plunge into those rocks, which

rear their heads here and there above the surface? But no danger; they seem familiar with every inch of the lake, and swim about like fish.

Here is another party carefully shaking out their tresses, and washing out their hair in the flowing water. Oh mermaids! when we see how bewitching you are we do not wonder that you in ages gone by lured many an unwary craft to destruction, while you combed your beautiful locks with your golden combs, and sang with your pitilessly beautiful voices.

Under the waterfall is a sight that would touch the heart of an artist. A number of our pretty, brown mermaids have seated themselves in careless grace upon the rocks beneath the falls, and too, are busily engaged in washing their long, raven locks in the spray tumbling upon their bare heads from the cliffs above.

But while we have lingered some have become tired of the water, and with their looks beseech you to begone. We best take the hint lest they find a less polite way of conveying their wishes.

We follow down the stream, enjoying, possibly, more than ever the poetry of our surroundings, and sit down beside the stone fence. After quite a wait, the noisy laughter and singing tells you the mermaids are coming. But lo, when they come in sight, the mermaids are no more; instead, it is a gay company of woodland nymphs. In this short interval every one has dexterously twined a long wreath of ferns, and hung it about her neck or around the crown of her broad-brimmed hat.—*Nettie Hammond, in School Visitor.*

A WISE DECISION.

YEARS ago, a young man, working his own way through college, took charge of a district school in Massachusetts during the winter term. Three boys especially engaged his attention and interest. They were bright, wide-awake lads, kept together in their classes, and were never tardy.

One night he asked them to remain after school was dismissed. They came up to the desk, and stood in a row, waiting, with some anxiety, to know why they had been kept.

"Boys," said the teacher, "I want you to go to college, all three of you."

"Go to college!" If he had said, "Go to Central Africa," they would not have been more astonished. The idea had never entered their minds.

"Yes," continued the teacher; "I know you are surprised, but you can do it as well as I. Go home, think it over, talk it over, and come to me again."

The three boys were poor. Their parents had all they could do to feed and clothe them decently, and allow them a term of schooling in the winter. One was the son of a shoemaker; another came from a

large family, and the farm that supported them was small and unproductive.

The boys stood still for a moment in pure amazement. Then they looked at each other, and around the old schoolhouse. The fire was going out in the box-stove. The frost was settling thick on the window pane. As the teacher took out his watch, the ticking sounded loud and distinct through the stillness of the room. Nothing more was said, though the four walked out together.

The third night after this conversation the boys asked the "master" to wait. Again the three stood at the desk; one spoke for all—"We've thought it over, sir, and we've talked it over, and we've decided to go."

"Good!" said the teacher. "A boy can do anything that he sets out to do, if it is right. You shall begin to study this winter with college in view."

Twenty years later, two of these boys shook hands together in the State capitol. One was clerk of the House for eight years, and afterwards its Speaker. The other was President of the Senate. The third boy amassed a fortune in business.

The shoemaker's son, who became Speaker of the House, made his own shoes that he wore in college, and was particularly proud of the boots in which he graduated—his own handiwork. "A better pair of French calf," he declares, "you never saw." He learned the trade from his father, and followed it through vacations. The other boys found work to do outside of term-time, and none of the three were helped by their parents during the college course.

The teacher who gave the first impulse to their intellectual life that winter became a judge in one of the New England cities, and died a few years ago.—*Christian Register.*

HOW TO PROVE THE EARTH'S MOTION.

TAKE a good-sized bowl, fill it nearly full of water, and place it upon the floor of a room which is not exposed to shaking or jarring from the street. Sprinkle over the surface of the water a coating of lycopodium powder, that can be obtained at almost any apothecary's. Then, upon the surface of this coating of powder, make with powdered charcoal a straight, black line, say an inch, or two inches in length.

Having made this little, black mark with the charcoal powder on the surface of the contents of the bowl, lay down upon the floor, close to the bowl, a stick or some other straight object so that it shall be exactly parallel with the mark. If the line happens to be parallel with a crack in the floor or with any stationary object in the room this will serve as well. Leave the bowl undisturbed for a few hours, and then observe the position of the black mark with reference

to the object that it was parallel with. It will be found to have moved about, and to have moved from east to west, this is to say, in that direction opposite that of the movement of the earth on its axis.

The earth, in simply revolving, has carried the water and everything else in the bowl around with it, but the powder on the surface has been left behind a little. The line will always be found to have moved from east to west, which is perfectly good proof that everything else has moved the other way.—*Selected.*

THE CANTON RIVER.

NOTHING can be more surprising or astonishing to a European than the appearance of the Canton River; for let him have traveled far and wide, naught can give him an idea of the scene but ocular demonstration. Myriads of boats float on the waters; some devoted to handicraft men of all descriptions, others to retailers of edibles, cooked and uncooked; boats laden with chests of tea piled one on the other, tier upon tier, until the side of the boat is level with the water's edge; mandarin boats which force their way authoritatively through the crowd; war junks at anchor; while here and there a European boat manned by sailors, who give vent to their excited feelings by uttering sundry divers ejaculations not particularly complimentary to the good seamanship of the natives nor expressive of kindness toward them.

Flower boats and others belonging to artisans, venders of food, peddlers, merchants, poultry, and sand pans, are wedged together in one solid mass, apparently impenetrable; while the air is filled and the ear stunned with the deafening sound of gongs and wind instruments, discoursing, most unearthly music; accompanied by the yelling, screaming, gabbling of hundreds of thousands of human tongues, producing a hodge-podge of sounds unrivalled and unequalled since the building of the Tower of Babel.

As there is no part of the world so densely populated as China, so there is no part of China so thickly populated as Canton—the population of the city is 1,000,000, and the denizens of the river, who habitually reside in their boats, are said to exceed 200,000.—*Bayard Taylor.*

ORIGIN OF "JINGO."

ACCORDING to a writer in the *Revue Universelle*, the word "Jingo" comes from the name of a famous Japanese Empress, known as Jingo-Kōgo. She lived seventeen centuries ago and opposed her husband in the punishment of one of his rebellious provinces, advocating instead a foreign war of conquest. She herself subsequently led an expedition against Korea, during which she gave birth to a child who is said to be the father of the present dynasty.

THE DOCTOR'S STORY.

"I WAS a full-fledged M. D. once, and never should have thought of adopting my present profession if it hadn't been for a queer accident when I first hung out my shingle.

"I had a rich neighbor, a man I was bound to propitiate; and the very first call I had, after days of waiting for patients who didn't come, was to his barn to see what was the matter with his sick mare. I cured the mare, and took in my shingle; for from that day to this I've never prescribed for a human being. I had won a reputation as a veterinary surgeon and had to stick to it. But that's neither here nor there. Only if you think animals can't show gratitude and affection, perhaps you'll change your mind.

"When I'd been in business a year or two, I sent for my brother Dick. He was a wonderful chap with all kinds of animals; and I thought perhaps I could work out of my part of it and leave that for him. I never did, for Dick's a cotton broker in New York now, and I should have to begin all over again to make a first-rate physician. But that's what I meant to be then.

"The very next day after Dick came I got a telegram from P. T. Barnum. I'd been down there once or twice to his own stables, and he had a good deal of faith in me. The dispatch was:

"'Hebe has hurt her foot. Come at once!'

"Hebe was a favorite elephant—a splendid creature, and worth a small fortune.

"Well, I confess I hesitated. I distrusted my own ability and dreaded the result. But Dick was determined to go, and go we did. When we got out of the cars, Barnum himself was there with a splendid pair of matched grays. He eyed me very dubiously. 'I'd forgotten you were such a little fellow,' he said in a discouraged tone. 'I'm afraid you can't help her.' His distrust put me on my mettle.

"'Mr. Barnum,' said I, getting into the carriage, 'if it comes to a hand-to-hand fight between Hebe and me, I don't believe an extra foot or two of height would help me any.'

"He laughed outright, and began telling me how the elephant was hurt. She had stepped on a nail or bit of iron, and it had penetrated the tender part of her foot. She was in intense agony and almost wild with the pain.

"Long before we reached the enclosure in which she was we could hear her piteous trumpeting; and when we entered we found her on three legs, swinging her hurt foot slowly backward and forward, and uttering long cries of anguish. Such dumb misery in her looks—poor thing!

"Even Dick quailed now. 'You can never get near her,' he whispered. 'She'll kill you sure.'

"Her keeper divined what he said. 'Don't be

afraid, sir,' he called out to me. 'Hebe's got sense.'

"I took my box of instruments from Mr. Barnum.

"'I like your pluck, my boy,' he said heartily; but I own that I felt rather queer and shaky as I went up to the huge beast.

"The men employed about the show came around us curiously, but at a respectfully and eminently safe distance, as I bent down to examine the foot.

"While I was doing so as gently as I could, I felt to my horror a light touch on my hair. It was as light as a woman's; but as I turned and saw the great trunk behind me it had an awful suggestiveness.

"'She's only curling your hair,' sang out the keeper. 'Don't mind her.'

"'I shall have to cut, and cut deep,' said I, by way of reply. He said a few words in some lingo which were evidently intended for the elephant's understanding only. Then he shouted with the utmost coolness, 'Cut away!'

"That man's faith inspired me. There he stood, absolutely unprotected, directly in front of the great creature, and quietly jabbered away to her as if this were an everyday occurrence.

"Well, I made one gash with my knife. I felt the grasp on my hair tighten perceptibly, yet not ungently. Cold drops of perspiration stood out all over me.

"'Shall I cut again?' I managed to call out.

"'Cut away!' came again the encouraging response.

"This stroke did the work. A great mass of fetid matter followed the passage of the knife; the abscess was lanced. We sprayed out the foot, packed it with oakum, and bound it up. The relief must have been immediate, for the grasp on my hair relaxed, the elephant drew a long, almost human sigh, and—well, I don't know what happened next, for I fainted dead away. Dick must have finished the business, and picked up me and my tools; I was as limp as a rag.

"It must have been a year and a half after this happened that I was called to Western Massachusetts to see some fancy horses. Barnum's circus happened to be there. You may be sure that I called to inquire for my distinguished patient.

"'Hebe's well and hearty, sir,' the keeper answered me, 'Come in and see her, she'll be glad to see you.'

"'Nonsense!' said I, though I confess I had a keen curiosity to see if she would know me, as I stepped into the tent.

"There she stood, the beauty, as well as ever. For a moment she looked at me indifferently, then steadily and with interest. She next reached out her trunk, and laid it caressingly first on my shoulder and then on my hair—how vividly her touch brought back to my mind the cold shivers I endured at my first introduction to her!—and then she slowly lifted up her

foot, now whole and healthy, and showed it to me. That's the sober truth!"—*Our Dumb Animals*.

CENTRAL AFRICAN LAKES DRYING UP.

OF hardly less importance than the rivers of the Congo are the lakes. Besides the larger and navigable lakes are hundreds of smaller ones, as well as thousands of shallow pools along the courses of the rivers, as those along the upper Luapula. It was that keen observer, M. Delcommune, who prognosticated that many of these lakes will eventually disappear. He contended that a combination of causes, chief among which being the dryness of the equatorial climate and the consequent evaporation of the water, will gradually bring about this result. By a succession of experiments, covering a period of more than two years, he discovered a diminution of the water of the Lualaba. This process of evaporation, incessantly continued for centuries, will completely absorb the water in the marshes and pools, and decrease the volume of the great rivers themselves. However, this need occasion no alarm. On the contrary, it is believed that it will aid materially the development of the country. Not only will it dry the pestiferous marshes, but it will also define the beds of the rivers, whose courses, because of the contraction of their channels, will thus be rendered simpler and more definite. By the disappearance of the pools and lagoons now to be found in the vicinity of the rivers, hundreds of thousands of acres of valuable arable lands will be reclaimed. And as this soil, formed of alluvial deposits, is exceedingly fertile, the benefits that will accrue therefrom are incalculable. The famous polders of Holland, and the lowlands of Egypt near the mouth of the Nile, demonstrate the possibilities of such a soil. But it will not be necessary to wait for the slow processes of nature. Vast areas can be drained by artificial means, and this, since the sun is forever assisting, can be done without great cost. The lands so drained will possess, besides their extraordinary fertility, other advantages, not the least of which is their accessibility.—*From "The Story of the Congo Free State,"* by Henry Wellington Wack.

TO TUNNEL MONT BLANC.

As the Simplon Tunnel nears completion the announcement is made that the French ministry of Public Works has created a commission to project plans for a tunnel through Mont Blanc on the line of a railway between Chamonix and Aosta. Chamonix is in Haute Savoie, France, forty miles south of Geneva, Switzerland, and Aosta is in Piedmont, Italy. The distance between the two places is about twenty-five miles. The proposed tunnel would begin at Chamonix

and end at Entreves, a distance of about eight miles and a half. This is over four miles shorter than the Simplon tunnel and it is believed that the difficulties encountered in the proposed borings would be less than those met with in the Simplon. For one thing, the rock gives no indications of subterranean reservoirs of water. The Dorea Baltea would furnish ample water power for the work. The elevation at Chamonix is 3,415 feet above sea level. At Entreves it is about a thousand feet higher. Mont Blanc is seventy miles southwest of the Simplon tunnel.

ORIGIN OF THE RED CROSS SOCIETY.

THE Red Cross Society, which is attracting much attention by its labors in alleviating suffering in the most cruel and protracted war between Russia and Japan, was suggested by the work of the "Christian Commission" in our Civil War. The Switzers, who were interested in the idea, called a meeting in Berne in August, 1864, and subsequently a convention, at which every civilized power in the world was represented. This convention formulated an international treaty of ten articles which are thus summarized:

The flag of the society—a red cross in a white field was to be respected wherever unfurled. It was to have care of the wounded and dead of both combatants in any battle. It had the right to secure the discharge and return to their homes of soldiers incapacitated by wounds or disease. It was to be the custodian of any aid given by either party. Its relief trains were to pass freely across hostile frontiers. All the provisions of the treaty related to conditions of war.

Within four months after the convention twelve European powers signed the articles, and now every power in the world, with the possible exception of Mexico and Brazil, is a party to the treaty. The United States suggested that the society should extend its work to the relief of suffering in time of peace as well as in the time of war. All the powers accepted this amendment, and now wherever the red cross in the white field is unfurled there is behind it the sympathy and support of Christendom.—*Geo. B. Griffith, in Arrow*.

SOMETIMES a fog will settle over a vessel's deck, yet leave the topmast clear. Then a sailor goes up aloft and gets a lookout which the helmsman on deck cannot get. So prayer sends the soul aloft, lifts it above the clouds in which our selfishness and egotism befog us, and gives us a chance to see which way to steer.—*Spurgeon*.

A MAN who does not know how to learn from his mistakes turns the best schoolmaster out of his life.—*Henry Ward Beecher*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglebook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

WHAT A PREACHER CAN DO.

It sometimes happens that ministers get the idea that the only way they can preach is from the pulpit; but it has been well said many a time that the daily walk preaches as loud as the sermons from the pulpit. Another way in which a minister can do a wonderful amount of good preaching has been clearly demonstrated by a certain Rev. J. O. Peck, of the Methodist church. He tells of his experience in the *Western Christian Advocate*. He has found by experience that one of the very best ways to do a lot of good preaching, and do it regularly, is to see that each and every one of his members gets the weekly visit of the church paper. That is not all the preaching they need, however, but he thinks that the paper makes such an effective assistant pastor. Besides, he considers the distribution of the church paper a vital part in his pastoral work, just as much as the conversion of souls and the building up the saints in holy living.

He considers that he is in duty bound to work just as hard in getting subscribers for the church paper as in working up revival meetings, and he finds that revival meetings are much more easily conducted among a people who have been reading the paper and are acquainted with the affairs of the church in general and the progress of mission work. Here is what he says:

"1. I took the paper into the pulpit. I opened it wide and showed it to the people. I expatiated upon its beauties, its benefits, its departments, its necessity to any member who would be an intelligent Methodist and know the current history of his church. I warmed with my theme and exhorted. I appealed to their loyalty; I excoriated the disloyalty that dropped the church papers and took outside papers, especially if they were cheap. I swept the whole keyboard of incentives to take the paper. Then, when the iron had been made hot by striking, I struck to weld it by taking

subscribers on the spot! I got all I could on Sunday as a religious work. I used blank cards often in the pews.

"2. I followed up this bombardment from the pulpit by a renewed attack at closer range in the prayer meeting. I repeated this effort in the prayer meeting at intervals. I always gained some at the close of a warm prayer meeting.

"3. I next put a clean copy of the paper into my pocket and started on my pastoral visitation each afternoon. By this means I made a list of all who ought to take the paper, but had not subscribed. With this list and the paper in my pocket, I began sharpshooting at close range. I went to the house, the store, the shop, the factory. I pulled out my paper and my list. I submitted the question. Most surrendered at once when thus individually appealed to. The few that hesitated I stayed with till they 'saw a great light' and subscribed! Only here and there an obtuse or stingy soul escaped.

"4. There are always a few poor souls who could not afford to take the paper. On Christmas or New Year I would state this fact to the public congregation, and ask the well-to-do to send a Christmas or New Year gift to these poor that would come every week in the year. This always met with a quick response.

"5. At the close of the revival each year I appealed to all new converts to take the church paper."

Now this was his plan. This was the way he did it. Others can do just as well as he. If he found it profitable in the Methodist church, why should it not be profitable in every other church? There may be some pastors that would have to be converted themselves to taking church papers first, because some of them think they are able to do all the work in the church without the assistance of the church papers. Some ministers do not even like to have the assistance of Sunday-school papers in the Sunday school. Some ministers even do not take the church papers because they are rather hard on some of their pet sins. Of course a man hates to be compelled to take a paper that tells him of his own sins and how to get rid of them. Some people find the same fault with the Bible. Some do not take more than one church paper, because they think one is enough and tells them all they need to know; but it takes three or four other papers to tell them about the markets.

Here is an example and a demonstration of what can be done by the ministers, for the congregation, for themselves, for the publishing interests and the church, for the missionary cause, and last and most for the benefit of souls that cannot be reached in any other way.

Now do not read this article and say it doesn't hit you. Well, it does unless you are doing all you can for the church papers. You say the members won't

take the papers; don't guess at it, try them. Give them an opportunity to know the value of church literature, clean reading, and valuable information; let them know how it unites us together as a church; how we can think and speak of each other's welfare; how it makes our interests common. You will not have finished your duty until every member has subscribed for the church papers, or you have sent us a reason why they have not.

Let every minister into whose hands this article may fall feel himself under obligations to see that his members are supplied with the literature of the church. If he should need any advice or instruction concerning how to present the matter to them, let him write us and we will be glad to assist in any way we can. We know the influence which the papers are already wielding, and if their circulation was doubled their influence would be twice as great.

The INGLENOOK ought to be in every home in the Brotherhood, and especially where there are young people. The advanced classes of your Sunday school ought to be supplied with it. Your Christian Workers' society ought to receive a number of copies each week, not only for distribution among its own members, but for presentation to those who may visit the society.

THE SUNDAY SCHOOL LIBRARIAN.

WE recognize the fact, in speaking of this subject, that not every Sunday school has need of this officer; but we could not say that a single one has no need of the office. The sooner the Sunday schools make use of a good course of side reading the better for the children and the better for the school. It is to be presumed that each Sunday school is well supplied with Bibles and Testaments, song books and hymn books, quarterlies and commentaries, charts and blackboards. The Sunday school that does not have these equipments remains willfully behind her opportunities. We shall speak in another chapter of the uses and abuses of these auxiliaries. But now, more particularly, to the work of the librarian.

Beside these helps that are regular and common to all Sunday schools, there should be an active, wide-awake member of the Sunday school selected and set apart to care for the literature of the school. A case should be provided and placed in some convenient apartment with sufficient capacity to contain the books as the library grows. It is not enough to have a library case, nor even to have it full of books, but to get results these books must be read by the teachers and pupils. The librarian, in making choice of the new books for the library, should not forget the wants and needs of every department in his school. He must remember that the teachers need a great deal of help in the way of Sunday-school pedagogy. They need

live, wide-awake books on teachers' meetings. They especially need books on Bible history and geography; books on systematic Bible study for the normal class of the Sunday school; books on missions for the Bible class; juvenile books for the little folks, of a deep moral tone, of a very practical nature incident to child life.

The librarian necessarily must be a lover of literature and a lover of children. It requires no little diplomacy to succeed in getting children to read these books systematically. The librarian should be provided with a record book. A record should be kept of every book, as to day and date when it leaves the library, by whom taken and date of return. Another record should be kept showing the number of books read by each member of the school. No books should be taken from the library by any person unless the librarian is absolutely sure that the one taking the book is perfectly responsible. These books are the property of the Sunday school, and public servants should be more careful of public property than even of their own property. The librarian should have the privilege occasionally of calling upon the school for a public collection for the purpose of getting new books. He should also keep himself in readiness to solicit for donations in money or books. It oftentimes occurs that in the neighborhood is some one who has books that could be spared from private libraries that would be exceedingly helpful in the Sunday-school library. When this department of the Sunday school is cared for as it should be you will notice a very decided improvement in the development of your scholars.

THE postoffice department has made a ruling regarding the opening of other people's mail which makes the same an offense punishable by a fine of \$200, regardless of the fact that it may have been done by mistake. It is not an infrequent occurrence for a business man to receive a letter in his box directed to some one other than himself, and but few ever look to see whether mail received really belongs to them. Therefore, in the future it will be a money-saving plan to scan all letters carefully. Where mail has been thus received and opened heretofore, all that has been necessary was to mark it "opened by mistake" and drop it back into the post office. That plan will not work. The postal regulations provide that in event a letter is opened by other than the party to whom it is addressed, the offender is to be fined \$200. Mistakes will not be considered sufficient excuse to exempt the offender.

SOME people never know what to do with their troubles except to drown them in sin. It seems a little queer that one should go to the devil to get comfort, but when sorrows come we always feel like going to those we know best.

Current Happenings

NORWAY.

THE immediate cause of the breach between the united kingdoms of Sweden and Norway was the veto by King Oscar of a bill passed by the Norwegian Legislature, which asked for an independent consular system for the country. King Oscar says he was right in vetoing the bill, and in a recent communication used these words: "It remains for Sweden and me, as King of the Union, to decide whether the attack made by Norway on the existing union shall lead to a legal dissolution of the Union. Let the present generation and posterity judge between me and the Norwegian people." The King seems to think that his oath of office would disallow his signing the bill, which probably is true. The Norwegian government claims no ill feeling against the kingdom, and has manifested it by asking his assistance in naming a successor; but some of the Norwegians are averse to giving the throne to a Prince of the House of Bernadotte. The Swedes continue in their ovations to King Oscar, and there is a strong sentiment in opposition to the action of the Norwegians. It seems now that the way is rather clear that Doctor Nansen, who is very popular with the republican party of Norway, will be offered the chief seat of the Norwegian republic. Nansen claims that there is no bitterness towards the Swedes on the part of the Norwegians, and that the Swedes will ultimately see that the present withdrawal is the best solution of the pending problems.

THE rebellion in Arabia against the authority of the Sultan begins to look very serious from his point of view. The warlike Arabs, who have never patiently tolerated the rule of Abdul Hamid, and who have grown tired of paying taxes three or four times over, have deliberately taken the capital by force. The loss of the town of Sanaa means a great deal to the Sultan of Turkey. Both armies have been reinforced; it seems that the holy cities of Mecca and Medina have been imperiled. The situation may yet involve the British in Arabia. Rumors already have it that the British flag has been hoisted in some towns near the Persian gulf. The day may not be far off when the prayers of thousands of Mohammedans and all the Christians will be answered.

CANADA has been very deeply stirred over the school question. In connection with the Provinces, the Catholic apostolic delegate, Mgr. Sbarretti, has been very bitter and radical in his actions, so much so that the Vatican authorities say that he will have

to be recalled. A considerable agitation is being raised by a book being circulated, called the "Parochial School," written by a Catholic priest, Father Jeremiah J. Crowley, of Chicago, in which he claims that the parochial school is a curse to the church and a menace to the nation. In Manitoba there has been a movement, threatening the repeal of the School Act of 1897, and the establishment of national schools only.

SEVEN of the largest battleships of the United States navy ploughed up the waters of the Atlantic Ocean, on May 6, in a spirited race. The squadron, consisting of the Missouri, Maine, Kearsarge, Kentucky, Iowa, Massachusetts, and the Alabama, under Admiral Robley D. Evans, was on its way from Pensacola, Florida, to Hampton Roads, Va., when Admiral Evans gave the signal and the ships were put into racing order. The race began at ten o'clock and continued eight hours. The Missouri drew ahead from the start and maintained the lead to the end. The order in which the ships finished and the number of miles each boat was ahead of the one next following are as follows: Missouri, seven; Maine, one; Kearsarge, two; Kentucky, three; Iowa, two; Alabama. The Alabama was sixteen miles behind the winner at the finish. The comparative slowness of the Massachusetts is not surprising, as she is one of the oldest battleships, but it was especially humiliating to the crew of the Alabama to be behind the ship which was admitted to be the slowest of the seven. The Missouri covered 126½ miles in the eight hours.

THE Governor of Vermont has already announced that Mrs. Rodgers will be hanged regardless of the plea of the women of that State.

THE Japs are anxiously awaiting the battle in Manchuria, where they expect to win the victory.

THE foundries of Jersey City and New York City have been tied up by a general strike for a twenty-five per cent raise in wages.

AT present there is a strong movement in Vermont against capital punishment for women. Plaintiffs ask for either right of suffrage or the right to be excused from capital punishment, on the ground of their imperfect civil rights. The women themselves prefer the franchise and accept its full responsibilities and obligations.

THE Princeton Theological Seminary, according to settlement, will receive one million seven hundred fifty thousand dollars from the estate of Mrs. Winthrop.

THE latest thing in the way of strikes is that the Swedish labor unions have notified the government that they will not go to war. If this society could be allowed to solicit memberships in Japan and Russia it might be a good thing. And then, after the strike has stopped all the wars, there ought to be a general strike all over the country to stop strikes; this would be a strikers' strike against strikes and strikers. Perhaps, then, we could live.

OPERATION of the government mint was discontinued for a time on account of the large amount of silver coin on hand.

THE Chinese boycott is making rapid progress. It is said that native papers refuse even to advertise American goods, and President Roosevelt has written a letter to Secretary Metcalf, of the Department of Commerce and Labor, asking that inspectors in the immigration service exercise greater care in the treatment of high-class Chinese immigrants. It is feared that our export trade of that country will be endangered by the exclusion act.

FRANK BIGELOW, of Milwaukee, got a ten-year sentence at hard labor for stealing \$1,500,000. This is too bad; that only nets him \$150,000 a year, or three times as much as the President gets. Of course that sentence will scare other embezzlers so badly that they would never think of undertaking such a thing.

THE Prime Minister of Greece, M. Delyannis, was stabbed as he was about to enter the Parliament at Athens, and died in half an hour. The assassin was protected by the policemen, and will accordingly suffer the penalty. Greece may be a little behind the times in some things, but she seems to know what some of the styles are in political circles.

PRESIDENT ROOSEVELT has been presented with an equestrian statuette of himself as colonel of the Rough Riders. It was the work of the sculptor MacMonnies.

SECRETARY HAY has returned from a very successful voyage to the Orient in search of health.

THE high latitudes seem to be too much for the Americans who are working on the Isthmian Canal. Many of them have been stricken with yellow fever.

THE two new special trains on the Pennsylvania railroad between New York and Chicago made their test trips in less than their eighteen-hour schedule, and the one bound for Chicago reached its destination two minutes ahead of schedule, in spite of a fifteen-minute delay caused by a hot box on the engine. The east-bound flyer reached New York three minutes ahead of schedule.

FAST trains seem to be the order of the day. The Lake Shore claims to have established a new record between Chicago and Buffalo. A train of four Pullmans is said to have made the distance of 526 miles in four hundred and fifty-three minutes. By the united efforts of these fast trains it is expected that ere long it will be possible to go from New York to San Francisco in 96 hours.

C. P. SHEA, President of the International Brotherhood of Teamsters, has troubles of his own. He has been the leader of the Chicago strike, and has had such absolute control of his loyal followers that he has succeeded in keeping them from work all summer, making them believe that they would get an advance in wages. Months of valuable time have passed and no prospect for peace. The workingmen are faced with the stern reality that winter is coming for which they will be illy prepared. And they are wanting work, but a great many of them have lost their positions by acting foolishly. They have now discovered that Shea cared more for his salary than he did for their families. The strike evil, like others, will hang itself in time.

AN order has been issued by the Post Office Department against prize contests being operated by newspapers or periodicals, through the mails, especially if the contests require the payment of a consideration in order to become a contestant, because it has a tendency to bolster up or stimulate some other line of business. In the latest rulings this payment of a consideration may be continued as a sum of money, the purchase of an article, the cutting of a coupon from an advertisement or any other publication, securing a slip or label or a subscription to a publication. All publications conducting such contests or carrying advertisements of such schemes are unmailable. It is considered that all contests in which the winners are to be selected by the decision of some person or persons, are lotteries according to the interpretation of the law because the award is dependent upon chance.

REPORTS from Fort De France, Martinique, told of increasing signs of activity in the Mount Pelee volcano.

HOME DEPARTMENT

PLANTING A TREE.

What does he plant who plants a tree?

He plants a friend of sun and sky;
He plants a flag of breezes free;
The shaft of beauty towering high;
He plants a home to heaven anigh
For song and mother-croon of bird,
In hushed and happy twilight heard—
The treble of heaven's harmony—
These things plants he who plants a tree.

What does he plant who plants a tree?

He plants cool shade and tender rain,
And seed and bud of days to be,
And years that fade and flush again;
He plants the glory of the plain;
He plants the forest's heritage;
The harvest of the coming age;
The joy that unborn eyes shall see—
These things plants he who plants a tree.

What does he plant who plants a tree?

He plants, in sap and leaves and wood
In love of home and loyalty,
And far-cast thought of civil good—
His blessing on the neighborhood,
Who in the hollow of his hand
Holds all the growth of all our land—
A nation's growth from sea to sea
Stirs in his heart who plants a tree.
—Richard Watson Gilder, in Maxwell's Talisman.

COUNTRY LIFE.

BY D. Z. ANGLE.

It has been said that God made the country and man made the town.

It shouldn't require great judgment to determine which was the superior workman. We concede there are many attractions and advantages in town or city life, and lots of people lead useful lives there. They do great and lasting good to the world and greatly enjoy and prefer their existence as inhabitants of the centers of trade and commerce. But life in the country is more free and independent, and is more conducive to health, long life and purity of character.

It is more healthful because the sky is bluer, the air is purer, the food and drink are fresher, more wholesome and thus more life-sustaining. Life in the country is longer on the average because the man or woman who labors there is oftener his own boss and not compelled to do work beyond his strength.

The country man is not subject to the numerous accidents often occurring in factories and mines which

kill people by the score. The rich farmer has more room for exercise than the man of leisure in town, who often overeats and drinks, is tired out with noise and social functions. "Man alone is vile." Therefore where persons are not crowded together their isolation enables them to commune and ponder with and on the perfect and faultless works of nature's God, and thereby gather inspiration to imitate in their lives the perfection, loveliness and usefulness of the good things God has made for us to see and use to his honor and glory.

"How doth the little busy bee
Improve each shining hour,
And gather honey all the day,
From every opening flower?"

The beehive, the home of industry, order and simplicity, so teaches the boys and girls to thus improve their time and use their talents for the general good of the race and an honest livelihood for themselves.

The dog, the horse, the ox, the sheep and swine, all help to make life interesting on the farm, and teach lessons of fidelity, honesty, simplicity and contentment that help much to give noble character, satisfaction, and wealth to those who spend their lives 'mid rural scenes.

Mt. Vernon, Ill.

MUST WIVES BE SELF-SUPPORTING?

AMERICAN women are ceasing to find men to marry them unless they are self-supporting. This is the startling deduction made by the United States bureau of labor in its last report. The marriage rate among women who work and among women with money is much higher than among women who are neither workers nor rich, and the disproportion is annually increasing.

All rich women, according to the statisticians, have opportunities to marry and generally speaking all working women have equal opportunities, but the women who must depend on servants to do household work and on their husbands to supply all the household income are being driven from the matrimonial field. Fewer than one-half of them marry now, and the percentage is steadily diminishing.

Nine per cent of the married women of the United States work for wages apart from the performance of their household duties. Twenty-three per cent add to the household income by taking boarders. More than one family in five has its children at work. More than twenty per cent of the earnings of the average Amer-

ican family comes from the labor of the wife and the children.

The old type of American who supported by his own earnings his wife and his children, whose home was his own and who occupied an independent place in the community, is disappearing. Marriage is becoming more and more a commercial partnership where the man and the wife pool their earnings, or a fashionable festivity where the fortune of the wife added to the income of the husband maintains a social establishment until divorce doth them part.—*New York World*.

* * *

WHEN SUCCESS IS A FAILURE.

WHEN you do not overtop your vocation; when you are not greater as a man than a lawyer, a merchant, a physician or a scientist.

When you are not a cleaner, finer, larger man on account of your life work.

When you have lost on your way up to your fortune your self-respect, your courage, your self-control or any other quality of manhood.

When it has made conscience an accuser, and shut the sunlight out of your life.

When the attainment of your ambition has blighted the aspirations and crushed the hopes of others.

When your highest brain cells have been crowded out of business by greed.

When all sympathy has been crushed out of your nature by your selfish devotion to your vocation.

When you plead that you never have time to cultivate your friendship, politeness or good manners.

When you have lived a double life and practiced double dealing.

When it brings you no message of culture, education, travel, or of opportunities to help others.

When it dwarfs, cramps or interferes with another's rights; when it blinds you to the interests of the man at the other end of the bargain.

When there is a dishonest or a deceitful dollar in your possession; when your fortune spells the ruin of widows and orphans, or the crushing of the opportunities of others.

When the hunger for more money, more land, more houses and bonds has grown to be your dominant passion.

* * *

COFFEE.

COFFEE has been used in the different cities of Europe for a little over three hundred years; and of course when our forefathers came over here, they brought it with them. The people of Turkey, in eastern Europe, had used it for some time before those in the western part paid any attention to it.

At first it seemed very odd to people who were not used to drinking any thing warm, to have coffee given

to them as hot as possible. But they were not long in finding that it was much better hot than cold. It is said that an English merchant, who had spent several years in Turkey, and while there had learned to like coffee, was the first to bring it to London.

He received his friends at his house every afternoon and gave them some of his new drink. They soon liked it so much that many others wished to try it. Then two men joined and started what was known as a coffee-house. Here, any man who chose to come in, could buy a cup of coffee, and sit and talk over the news. Soon many others of the same kind were started, also; so that the coffee-houses soon grew to be the places where men would expect to meet their friends.

And some of the greatest men met at these places every day, and others would go to hear them talk. But it was not thought proper for a lady to go to such a place, so that none of them could enjoy these pleasant afternoons. At first some people thought it very wrong to drink coffee, and there were many articles written upon the subject.

The coffee plant grows only in a warm climate. Much of it is raised in the West Indies and Central America, but the best comes from Arabia, a country in the southwestern part of Asia. It is a shrub of a very pretty shape, growing from five to twenty feet high, as the soil in which it is planted of course makes a difference in its growth. The leaves are a beautiful dark green, and very smooth and glossy. The flowers are small, but pure white, and they have a very sweet perfume; they grow in bunches around the stem at the root of the leaves.

From these the rich, red fruit grows which looks something like a small cranberry. When it becomes a very dark red, it is ready to pick. The tree looks very beautiful, either when the flowers are in full blossom, or when the fruit is ripe. After the fruit is picked, it is dried in the sun on large mats made for the purpose; then carefully cleaned and dried. Then it is ready for putting in bags and sending away.

As you may suppose, nothing but the seed is left after all this cleaning—it is only the seed out of the fruit that we have any use for.

Two of these grow in one berry, having their flat sides together. After it reaches us, it is roasted at the store, or else we buy it when green, and brown it ourselves. After this it is ground fine, and then you all know what happens to it afterwards.—*Selected*.

OPINION is not truth, but only truth filtered through the environment, the disposition, or the mood of the spectator.—*Wendell Phillips*.

* * *

HE who loves not lives not; he who lives by the Life cannot die.—*Raymond Lull*.

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER,

HARVEST.—Matt. 9:35-38.

For Sunday, July 9, 1905.

I. The Great Harvest.

1. The Field—the World, Matt. 13:38
2. The Few Laborers—Christians.

II. Pray and Work.

1. Jesus Did, Mark 6:46; John 5:17
2. Peter Did, Acts 10:9, 19-21
3. Paul Did, Acts 20:36
4. We Ought, Luke 10:2; John 4:38

III. Prayer Without Work is Failure.

1. Words are Cheap, James 2:15, 16
2. The Lord, Lords, Matt. 7:21
3. John Mark, Acts 15:38
4. Do We Fail?

- IV. 1. The Saved Must Preach to Unsaved, Acts 4:8
2. The Church Must Give Gospel to the World, Rom. 10:13-15
3. Why are We Not Up to Our Capacity?
4. Results—If Each Christian Prayed and Worked to Gather the Harvest.

Text.—Then saith he unto his disciples, the harvest truly is plenteous, but the laborers are few.—Matt. 9:37.

References.—Lam. 3:25; Luke 1:53; Isa. 43:6; Matt. 24:14; Psa. 44:3; 96:3; 18:49; Mark 13:10; 1 Cor. 3:6, 7; Rev. 14:6; Acts 13:2-4; 10:4; 2 Cor. 9:8.

The Field is the World.

What a vast harvest-field lay before Jesus. He saw the world with the millions of unsaved souls, and then he sent out his laborers to work and teach and preach for him. When he sent the seventy forth, he had almost as strong a force of laborers as we have to-day. The need of workers is everywhere sadly evident. We need them in our homes, Sunday schools, and churches, and we need them wherever there are poor, untaught outcasts. Let us pray for more laborers.

Men Need Christ.

The need of the heathen is indescribably great. Hundreds of millions are living in ignorance, steeped in superstition and degradation. Evils, cruel and desolating, are making fearful ravages among them. No one who has seen the actual conditions can question that they are without God and also without hope. Only the religion of Jesus Christ has a regenerating power that transforms the entire life.

God Prepares the Way for Workers.

Sixty-five years ago the burden of public and united prayer for missions was that God would open the doors of the nations to the preaching of the Gospel. In those days Japan was sealed up; 1,500 miles of

solid wall shut in China from the outside world; the islands were held by cannibals and Africa was not explored; a wall of idolatry and prejudice surrounded these nations with here and there a small breach. Now the entire wall is down, with here and there a fragment standing to oppose our advance.

The Year 1858.

During this one year, doors were opened giving access to one thousand millions of the human race. In that year Great Britain, after 200 years of exclusion, made a treaty with Japan. In the same year China, by her treaty of Tientsin, threw open not only her ports but her interior, and provided that any Chinese subject might embrace the Christian faith. In that year India was transferred from the East India Company to the British crown, and David Livingstone sailed a second time for Africa to open a path for missionaries. A way was also opened into Hindustan; Mexico, Central America and Italy also got ready for Protestant teaching in this year. Of this year we might say:

"O where are kings and empires now
Of old that went and came?
But, Lord, thy church is praying yet
A thousand years the same."

Idlers.

We have read of a church whose annual report read thus: "Number added to the church last year by baptism, none; number added by letter, none. Number dismissed by letter, five; members who have died, three; number expelled, three." Then when it came to the financial statement we read, "Amount raised for home missions, nothing; amount raised for foreign missions, nothing," and then the report closed with the words, "Pray for us brethren, that we may be faithful unto the end"; a prayer easily answered it would seem, for the end is surely not far off. When will we learn that the blessing is withheld from those who are at ease in Zion and that those who "sow sparingly shall reap sparingly"?

Skilled Laborers.

Rev. Millard said his church had given much money to missions, but no missionaries. So they began to pray that God would raise up from their sons and daughters those who pleased him and send them abroad to preach his Gospel. After some time he learned that the young man of most brilliant promise in his entire church was fitting himself to go to China, and one of the best girls among the Sunday-school

teachers would accompany him as his wife. Then he felt like saying, "Not these, O Lord! they are our best." But he realized that in this way God answered their prayers. Christ wants the best.

Love.

Somebody says, "Anybody may be saved if some saint can be found to love him enough." A missionary said to two girls who were leaving for the foreign field, "If you would win many souls to Christ you must love those you work for. It is not enough to pity and desire to do them good. In spite of repulsive habits, dullness and degradation, you must love them and to do that you must keep very near to the heart of infinite love."

Pray for Missions.

If there is one who does not believe in missions, let him read some books on missions and then pray for some of the workers who are doing all they can. Let him pray for the untaught people, pray for the Holy Spirit to convict them of sin and bring them to the Savior. Pray that God will send out laborers, and incline his people to give generously. Anyone, praying earnestly for missions, will become an active worker.

It is Unfair.

We enjoy living in this land of freedom among religious people; but we should be the more anxious to do something for our poorer brothers and sisters. We have been sitting at the table of our Lord, feasting upon the good things which he purchased with his blood, while 800,000,000 Lazaruses have lain outside our gates and died there as though there had never been a Christ. Let us act fair and square in this matter.

General Topics.

1. Essay. Is this church doing her full duty in the mission field?
2. Recitation of The Open Door. (See page 164 in "Rex Christus.")
3. Discuss the great famine. (On page 187 in "Rex Christus.")
4. We must pray more earnestly for our missionaries. Luke 10: 2; Romans 1: 9.

EMPLOYMENT BUREAU.

Workers.

We are so glad that this department has been fitly named. As we read letter after letter asking for circulars, for information in regard to the books, the holding of meetings, organization of a Circle and many other matters, we realize that we are all workers together with God. Sister K. Mae Rowland, from Clearspring, Md., sends two names with the hope that there were more. Brother Charles O. Beery, who is

now preaching at Tyrone, says, "We must have something to draw and to hold the young people to the church," so he wants circulars and he is an experienced worker. Sister Mamie Sink, of Lenox, Iowa, asks for circulars. She is doing mission work at that place and wants to interest the boys and girls. And so they come one after another and we are glad and take courage, trusting God for the outcome of these efforts.

Home Reading.

Brother Cyrus Wallick, of Wolcott, Ind., says, "My wife and I are continuing our reading, slowly. We are now reading 'New Acts of the Apostles.' 'Do Not Say' ought to awaken a lively and active interest in missionary work. 'Modern Apostles' and 'In the Tiger Jungle' we found very interesting. Portions of these our children listened to with interest. 'New Acts of the Apostles' I consider one of the most interesting and valuable books I have ever read."

Vacation.

Sometimes Jesus went to the mountain side or into the desert place to rest awhile. Then he returned again to his work. Do not get so far away from your church work during vacation that you cannot readily take it up again when you return. And what of us who take no vacation, but simply keep working all the year round? Most of us cheerfully "keep a-goin'," knowing well that it is best for us. And we want to keep reading these missionary books and keep up our interest in the Christian Workers' meetings. We can have a happy summer, working for Christ and the church.

Invite Souls to Come to Jesus.

S. D. Gordon tells how at the funeral of a young girl, the minister was asked if she was a Christian. He replied that he did not know; he had felt moved, weeks ago, to speak to her, but had not. Her Sunday-school teacher and her mother answered in the same way. The Holy Spirit had been trying to get the use of the lips of these three persons to speak the invitation to that girl, and they would not let him. God has only you and me to send as his messengers and if we refuse, his message is not delivered. In our meetings we should do all in our power to win souls to decide for Christ.

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XXXIV.

Lucerne, Switzerland.

Dear Mr. Maxwell:—

As I told you in my last letter I used all my space in describing the wonderful clock at Strasburg, and I think I shall not use any more space on that city, but pass on to the next. Our journey lay through a country, not only strangely beautiful from a scenic standpoint, but one that is replete with history. Miss Gertrude is working on a letter for you about Alsace and Lorraine, but as the letter must go out to-day I go on with the journey.

After leaving Strasburg the first point I shall note is the little insignificant town of Worms. This place has been almost immortalized by the presence and work of the great reformer, Martin Luther. It is to be remembered that he was born and raised in Germany, the son of a slate-cutter; received an early education, and graduated while yet in his youth; delivered lectures on the physics and ethics of Aristotle. Against the wishes of his family he became a monk, afterwards a priest, and was finally called to the University of Wittenburg as professor of Philosophy. About five years after his graduation he went to Rome on business with the Pope. He returned to Wittenburg and took the chair of Theology. About this time Luther began to see the corruption of the church in its fullness and decided, by the help of God, to make such needed reforms as were possible. He wrote ninety-five theses and tacked them to the door of the church which immediately condemned him as a heretic. He was summoned to Rome but did not go. His writings were burned. He wrote more. The Diet at Worms was called in 1521 to which he was summoned by Charles V. This is where he made the celebrated speech of his life which he concluded with these words: "Ich kann nicht anders. Hier stehe ich. Gott helfe mir. Amen." I have told you this much of the history of this great man, not that you haven't heard of it before, not that I am writing biographies, but to show you what a historic country we are visiting.

Roscoe and Oscar have something again that they are very desirous that I should write, thinking it will be of interest to the men and boys. At Ludwigshafen we saw a unique car switch. It was unlike anything, so the boys say, that we have in America, and yet we think the Americans could profit greatly by adopting their methods. The train stops on the track at the station, very similar to the way ours do, but the track is so arranged that sections of it are movable, by means of which they are able to take any coach from the train by pulling it sidewise on one of these switches. It is done in a moment; the track replaced; the train coupled, and it goes on its journey. Our custom, as you know in America is, that the engine makes several trips up and down the track, shifting cars on flying switches, jeopardizing the lives of the brakemen, switchmen, and the public in general, besides a loss of time and the loss of fuel. When all these things are taken into account we think that a great lesson could be learned by the railroad world.

At Basel we crossed the line into Switzerland, and of course have to turn our baggage over to a government officer for him to ransack. We are thus continually reminded that we should have nothing in our possession, except what we have a right to possess. It would be good if we could form a habit of being ready for examination at any time.

As we cross the line into Switzerland we appreciate the fact that we are again in a republic and enjoy a free government. And we, too, remember how the freedom of this country was bought. As we came through the mountain pass, it did not require any great amount of imagination to see the great Austrian army standing there like an impregnable wall, closing the only gateway that the hardy mountaineers of Switzerland possessed, and they were actually shut off from the world. You remember that their freedom depended upon the recapture of the pass. At the decisive moment, when it was plainly seen by the officers of the army that their doom was an unconditional surrender, Arnold Winkelried, a mountaineer, in whose veins coursed the blood of a true patriot, announced to his men that he was ready to make the sacrifice necessary to buy the freedom of the nation. His proposed plan was to mount his horse and rush madly into the phalanx of Austrian spears and thereby sever their strength. At that moment his followers had promised to follow closely behind and take the pass, while the Austrians were in panic. The plan was a success.

" 'Make way for liberty!' he cried;
Made way for liberty and died."

It is said that, when he rushed into the front, ten spears pierced his body through and through, and that he fell among his faithful followers like a falling tree that had been severed from the stump. The sacrifice that he made spurred every soldier in the army of Switzerland to die for his country if necessary. They rushed violently through the opening made by the loss of the ten spears and in a few moments a hand-to-hand fight gained liberty and freedom for the little republic which to-day lies among the snow-capped Alps and enjoys a free republican government.

This is the country of William Tell, of whom we may have something to say in another letter. We are having the greatest time of our lives. Yours sincerely,

Marie.

(To be continued.)

LOVE, Wisdom, Truth—how may we live and not dwell on these, how write to any purpose and not revolve about them? When we would speak of Religion, of Freedom, of Life and Art and Nature, we shall yet miss the essential if we keep not these in view; and where they converge—these three—there is liberty, there is peace, and there dwells the soul serene.

—Stanton Kirkham Davis.

The Q. & A. Department.

What was the cause of the riot in New Orleans, Sept. 14, 1874?

The riot was the result of a mass meeting of 5,000 citizens, who sent a messenger to Governor Wm. P. Kellogg declaring that he was a usurper and ordering him to turn over the state government to John McEnery, his opponent in the election of November 4, 1872. Upon Governor Kellogg's refusal to receive their message a call was issued to the people to arm themselves and drive out the usurpers. In the resulting clash at the river, at the end of Canal Street, at 4 P. M., between the state militia and police on one side and the insurgents on the other, the latter were victorious and installed McEnery as governor. President Grant sent United States troops under General Emory to New Orleans, and McEnery surrendered the state government to him and he reinstated Governor Kellogg. About twenty-six persons were killed and over fifty wounded in the riot.

*

What nationality are the Creoles and where was their native home or country before coming to America?

In the West Indies or Spanish America a Creole is a native descended from European (properly Spanish) ancestors as distinguished from immigrants of European blood, and from the aborigines, negroes and natives of mixed blood, Indian and European, or European and negro. Loosely the name Creole is applied to a person born in the country, but of a race not indigenous to it, irrespective of color. In Louisiana a Creole was originally a native descended from French ancestors who had settled there; later, any native of French or Spanish descent by either parent, or a person belonging to the French-speaking native portion of the white race. The name Creole is also applied to a native-born negro as distinguished from a negro brought from Africa.

*

How are mirrors made?

Mirrors are mostly made now by spraying the back of the glass with a solution of pure silver. This is painted over with brown or other dark paint that dries at once, so that the mirrors are ready for use the next day.

*

What per cent of the American people live to be 90 years old or over?

The United States census of 1900 showed 23,992 persons from 90 to 94 years old; 6,266 from 95 to 99 years old; 3,504 aged 100 years and over; or about .044 per cent of the total population of 75,004,575 at that time.

What are the dates of calls for troops during the Civil War, and the number enlisted at each call?

April 15, 1861, call for 75,000 men for three months; 91,816 enlisted. May 3, 1861, call for 500,000 men for six months, one, two and three years; 700,680 enlisted. July 2, 1862, for 300,000 men for three years; 421,465 enlisted. August 4, 1862, for 300,000 men for nine months; 87,588 enlisted. June 15, 1863, for six months, 16,361. October 17, 1863, including drafted men, and call of Feb. 1, 1864, for 500,000 for three years; 317,092. March 14, 1864, for 200,000 men for three years; 259,515. Militia for 100 days, mustered in between April 23 and July 18, 1864, 83,612. July 18, 1864, for 500,000 men for one, two, three and four years; 211,752. Other troops furnished by States and territories, 182,357. Troops raised by special authority in 1862, 15,007.

*

Is the president of the United States allowed any extra money to bear his expenses in addition to his salary of \$50,000 a year?

Yes, in addition to his salary the President is allowed over \$75,000 a year for expenses. His secretary receives \$5,000; two assistant secretaries, each \$3,000; one executive clerk, \$2,500; one gets \$2,000, two clerks each \$2,000; seven get \$1,800 each, three get \$1,600 each; his steward and chief doorkeeper each get \$1,800. There are eight doorkeepers at \$1,200 each; four messengers at \$2,100, and four at \$900 each; a fireman and laborer at \$600. The President is also allowed a large sum for incidental expenses, such as stationery, carpets and the care of his stables, and he is given allowances for repairs and refurnishing the White House, for fuel, for the greenhouse, for gas, matches, etc.

*

What is the color of pure water?

It appears to be colorless in thin layers, but when looked at in large masses, water is blue. This is seen in the middle of the ocean and deep lakes. Pure water is blue, but ocean water near the land is greenish, and this becomes tinged with brown or yellow along the coasts where the waves stir up the mud from the bottom, or wear away the earthy matter from the shore.

*

What are the Rigolets that the L. and N. Railroad speaks of somewhere near New Orleans?

The Rigolets is the name of a strait in Eastern Louisiana, the outlet of Lake Pontchartrain into Lake Borgue and the Gulf of Mexico.

MISCELLANEOUS

THE SYMPATHETIC STRIKE.

"So you're going to strike? Haven't I paid you good wages?"

"Yes."

"Haven't I treated you squarely for years?"

"Yes."

"Then why do you want to injure my business by striking?"

"You want us to deliver goods to the 'struck' houses."

"I have to sell all the goods I can in order to pay the good wages you are getting."

"Well, we're sorry, but we refuse to deliver goods to those houses."

"Will you want to work for me again when the strike is over?"

"Yes, I suppose so. We've got no kick on you personally."

"Will you expect me to pay you the same wages you are now getting?"

"Certainly, if we do, our work satisfactorily."

"After you have caused me a severe financial loss by striking?"

"Well, we're sorry to hurt your business."

"Could you blame me if I refused to take any of you back after you've done all you can to hurt me?"
—*Chicago Daily Tribune.*

DRAW BIG SALARIES.

THE salaries (or listes civiles, as they are termed in diplomatic nomenclature) of the monarchs of Europe are given from official statistics from an Italian paper as being the following:

The czar of Russia, \$7,603,000.

The emperor of Austro-Hungary, \$4,650,000.

The king of Prussia, \$4,000,000.

The king of Italy, \$3,006,000.

The king of England, \$2,939,000.

The king of Spain, \$1,900,000.

The prince regent of Bavaria, \$1,080,000.

The king of Belgium, \$882,400.

The queen of the Netherlands, \$546,000.

The king of Sweden, \$371,964.

The king of Denmark, \$329,000.

The king of Greece, \$265,000.

The king of Servia, \$240,000.

The grand duke of Luxembourg, \$40,000.

It is to be taken into account that these large sums

paid to monarchs are intended to cover proportionately large expenses peculiar to royalty, and that not unfrequently the rulers find it pretty hard to make both ends meet.

RUM'S VICTIMS.

AN exchange furnishes the following list of victims in our own land, not speaking of the much larger wreckage elsewhere:

2,500 smothered babies.

5,000 suicides.

10,000 murderers.

60,000 fallen girls.

100,000 paupers.

3,000 murdered wives.

7,000 murders.

40,000 widowed mothers.

100,000 orphaned children.

100,000 insane.

100,000 criminals.

100,000 drunkards who die yearly.

100,000 boys who take the place of the dying.

Untold crimes, misery, woe, want, weeping, wailing, war, shame, disgrace, disease, degradation, debauchery, destruction, death, riot, revelry, ruin and \$2,000,000,000 in cash.—*Living Water.*

PROPOSED NEW STATE.

ACCORDING to reports a bill will be presented at the next session of Congress having for its object the creation of a new State out of portions of Tennessee, Kentucky and Virginia. The territory which it is proposed to join is the old stronghold of Southern loyalists during the civil war, and is Republican in sentiment. It was from this region that "Parson" Brownlow, the famous Union governor of Tennessee, came. The new State would include East Tennessee, Southeastern Kentucky, and Southwest Virginia and is now represented by three Republican Congressmen. But aside from partisan considerations the region is said to have always been out of sympathy with the other sections of the three States. The partisan consideration, however, will have to be relied upon to carry the measure through Congress.

THE tobacco bill of the United States is estimated at eight hundred million dollars per year.

SPECIAL BARGAINS

LOWER PRICES THAN EVER BEFORE NAMED FOR THESE GOODS

Dear Reader:

Take advantage of these special reduced prices. Send your order to us and it will have prompt attention and shipment made without delay.

These are standard staple goods of guaranteed quality made of first class material by experienced mechanics and are recognized as articles that have always sold for more money than the special bargain prices we have named in this advertisement.

We cannot promise any definite period that we will be able to maintain these prices and for this reason we particularly urge to send your order at once.

ABSOLUTE SATISFACTION OR YOUR MONEY BACK

\$3.40

No 1988. All the latest improvements. Boiler is thoroughly well made of heavy galvanized iron, 22 inches long, 13 inches wide and 12 inches deep, inside measurements. The clothes are placed in the cylinder and washed by the action of the steam. Prints and gingham can be washed in from five to eight minutes. White flannel in five minutes; red flannel in about one minute; lace curtains in from ten to fifteen minutes. No washboard rubbing is necessary, and clothes will last twice as long. In washing it is not necessary to turn all the while. You turn the cylinder one or two minutes, then go about your other work for a while, then turn the cylinder a minute or two again. Does not wear the clothes or pull off the buttons. Remember, the clothes are not boiled, but cleaned by steam. A heavy tin cover fits closely on the top of this machine, which closely confines the steam. When crated for shipment it weighs about 80 pounds. Price, each. \$3.40
With Faucet 3.69

IRON WAGONS.

New Steel Gear Wagon with New Improvements.

This wagon has no equal on the market for beauty, strength and durability. It is entirely constructed of steel with baked enamel gearing, giving a beautiful black luster. The rear brackets are securely attached to the axle. Three bracket arms extend up to receive the bed on front axle. Two bracket arms extend out from the bolster to which the circle arms secured to the tongue are pivoted. The bed is made of sheet iron, with round corners and wooden bottom, with wide battens. All the above described improvements make the wagon in every respect a superior one.

\$4.89

Leavitt's V Shaped Blade Dehorning Clipper is no doubt the most powerful instrument for dehorning cattle, made. The handles do not go far enough apart in opening the blades full to prevent the operator having ample purchase power, enough to clip any large horn, with perfect ease to the operator. As it has two cutting blades it cuts both sides of the horn, and does not crush the horn as is the case with most clippers, but you get a nice smooth cut every time. Clipper is very simple, easily taken apart, you are not compelled to remove handles to take out knives when you desire to grind. Easily adjusted and cleaned. Every clipper is thoroughly tested before sent out, and we will not replace blades broken through carelessness or twisting or prying when cutting. We have this clipper in two sizes. Large size will cut any horn up to 3 1/2 inches. Special size will cut any horn up to 3 inches; will do for ordinary cattle.

AN OLD-FASHIONED REMEDY

Prepared in the old-fashioned way of honesty of purpose
with an unbroken record of success is

Dr. Peter's Blood Vitalizer

Solomon said: There is nothing new under the sun. The human system is very much the same to-day as it was over a century ago, when this famous herb remedy first came into prominent notice as a system-builder and health restorer. It has been doing this grand work of healing men and women ever since. No case has been so bad, no ailment so serious but what the **Blood Vitalizer** has done good.

If you have become discouraged at heart and broken in spirit owing to your un-availing efforts at finding relief, do not despair. Take hope from the experience of others, who have found health and strength in this plain old remedy.

The Secret of its Success

Is based on a principle as old as the hills; it strikes at the root of the disease by eliminating impure and waste matter from the system. Having purified and enriched the blood, the vital organs are again in a position to do the work which nature requires; the result is health—sound, robust health.

Do not inquire at the drug store for **Dr. Peter's Blood Vitalizer**. It is not a shelf-worn drug store medicine. It comes fresh from the laboratory, charged with the essence of health, and is supplied direct to the people through special agents. For further particulars address the sole proprietors,

DR. PETER FAHRNEY & SONS CO.,

112-118 South Hoyne Avenue,

CHICAGO, ILL.

A Delightful and Profitable California Home for Brethren

As heretofore announced in the Inglenook there is now forming, on the banks of the beautiful Sacramento River, in Glenn County, California, in the heart of the Sacramento Valley, a Colony of German Baptist Brethren.

Feb. 21, 1905, a party of Brethren composed of S. W. Funk, of Glendora, J. Overholtzer, of Colton, Wm. Platt, of Charter Oak (Ministers), T. M. Calvert, M. P. Custer (deacons), M. N. Overholtzer, F. L. Hepner, E. O. Overholtzer, of Covina, Cal., L. S. Ober, of Laotta, Ind., together with a number of friends, including J. P. Funk, of Charter Oak, and C. R. Greider, of Los Angeles, left Southern California on a trip to investigate the land under the Sacramento Valley Land Company's Canal system of irrigation just completed.

Ten of the party were old Californians who have had considerable experience in irrigating, fruit growing and farming in Southern and some in Central California, and are acquainted with the resources, climatic conditions, etc., of this country.

The party spent several days thoroughly investigating the water rights, character of soil, climate, health conditions, etc., in Glenn and Colusa Counties, and were well convinced that the richness of the soil, unfailing and cheap water supply, reasonable prices of land, transportation facilities, cool, pure, soft water for drinking, pleasant and healthful climate, etc., would insure a safe investment and deserve recommendation to others for settlement.

The party selected the Packer ranch of 6,600 acres, as a location, and secured an option at prices ranging from \$25 to \$100 per acre, including water right, according to distance, west from the River, character of soil and drainage. The party bought almost 800 acres, selecting from the cheapest to the highest price.

This tract runs about three and one-half miles west from the new town site of the Brethren, which is located $3\frac{1}{2}$ miles north of Princeton near the banks of the Sacramento, amidst large oak trees. It is about 80 miles north of Sacramento City, the capital of the State.

All the water that is needed for any kind of farming or fruit growing is furnished by the Company for \$1.00 per acre per year, and the Company keeps up the ditches. The water can be had almost any day in the year.

"This is an opportunity that perhaps has never before been offered in California or in any other part of the United States." A number of those who have purchased will soon move to their new location and others are purchasing, and in a short time this tract will all be settled by the Brethren and their friends, especially by those from the eastern States who desire to do general farming in California.

This is certainly an opportunity to eastern people, as they can reap the benefit of the many years of experience these old Californians have had in irrigating and farming in California.

Wm. Platt and J. Overholtzer, two ministers, have

already moved to Princeton, Colusa County, Cal. They will gladly answer any inquiries and welcome those who come to investigate this country with a view of locating. Any of this party will also gladly answer inquiries regarding the new Colony.

A town site will soon be laid out and in the near future there will be a school, post office, stores and preaching services.

There is a trading vessel which comes up the River once a week and will take produce of all kinds in exchange for groceries and pay cash. With the advantages here and the conditions well adapted to general farming, there is no doubt but what one of the largest congregations of the Brethren in California will be located on this tract in the near future, and those desiring to take advantage of this opportunity should do so as soon as possible.

We have a climate that is no doubt equal to any valley of any consequence, for health and agreeableness. There is an occasional case of malaria in the lower and undrained lands of the county where water stands, but as the lands are becoming more thoroughly drained, this has almost entirely disappeared. For throat and lung trouble our climate is excellent. The weather is a little warmer than near the coast in Southern and Northern California, but not so warm as Riverside, Redlands, San Bernardino, etc.

The continual flowing water of the great Sacramento River directly from Mt. Shasta and the Mountains add greatly to the health of the country.

Any one desiring to see this tract will go to Colusa Junction, thence to Colusa on the Narrow Gauge, and, by notifying the Farmers and Merchants Bank of Colusa, they will be taken direct to the Tract in automobiles free of charge.

This is the land where the great oak and sycamore trees grow. The river banks are covered with wild grape and blackberry vines entwined amidst the large trees.

The river abounds in trout, salmon, bass and other delicious fish. The soil is rich sediment, 20 to 60 feet deep. It will produce 10 to 15 tons of alfalfa, 10 to 15 tons of peaches, pears or prunes. Oranges ripen there four weeks in advance of those of Southern California and always command higher prices for that reason. The present crop of wheat and barley will pay 10 per cent on \$100 an acre. It has the best supply of water for irrigation in all the west. I am a native of California. I have been actively engaged in developing California lands for 30 years. I am familiar with every large ranch and every section of California, and I know the Packer Ranch to be the best ranch of equal size in California. Its location is on the banks of California's largest river, where steamboats regularly ply. Its climate and its soil renders it ideal. Its productiveness is certain, not guess work.

Illustrated catalogues will be sent to any address free.

C. M. WOOSTER, President,
Sacramento Valley Land Company,

648 Market St., San Francisco, Cal.

SPECIAL ANNOUNCEMENT

No. 2

No We do not intend to buy up all Chicago—we just buy our share of the bargain offers for the benefit of our customers and co operators. Did

you notice announcement No. 1? Read it again. The ALBRIGHT MUSIC CO., publishers, page 2, Inglenook, June 13.

Yes We have purchased the entire mail order clothing business of KRAMER & CO., Clark and Monroe Sts., Chicago, Ill. Established, 1893. Names and customers, 100,000. Clothing orders, 20,417. Naturally, this is no small addition to our already large clothing department. We are now as well equipped to furnish fine tailoring and substantial clothing of every style as any company in the city. We are the world's largest plain clothing makers. Samples and catalogue free.

VICTOR MEDICAL ASSOCIATION,

S. F. SANGER, Secy.

SOUTHBEND, IND.

The Reedley Tract

The Gem of the San Joaquin Valley.

Is destined to be the home of many Brethren. Those settled here are well satisfied and are advising others to come.

The undersigned expects to be at the Annual Meeting at Bristol, Tenn., and will be pleased to meet the brethren, and talk with them about the Reedley Country. My headquarters will be at the Union Pacific Office, Annual Meeting grounds, Bristol, Tenn.

Elder D. L. Forney, late Missionary from India, has just purchased land near Reedley. Other leading brethren will locate soon.

Write for booklet and full information.

Address:

O. D. LYON,

Reedley, Fresno Co., California.

Yesterday and Today.

The Chicago & North-Western Railway has issued a valuable and interesting compendium of railway history in the Northwest from the time when the Indians ceded the United States the last territory east of the Mississippi up to the present day. Over a hundred pages of historic matter concerning the various roads forming what is known as The North-Western Line, well printed in strong paper covers, postpaid for ten cents. **W. B. Kniskern, P. T. M., Chicago.**

Special Excursion Rates to Colorado, Utah and the Black Hills,

Via the North-Western Line. Beginning June 1st excursion tickets will be sold to Denver, Colorado Springs, Pueblo, Salt Lake City, Hot Springs, Deadwood, Lead and Custer, S. D., etc., good to return until October 31. A splendid opportunity is offered for an enjoyable vacation trip. Several fine trains via the North-Western Line daily. Apply to agents Chicago & North-Western R'y.

Epworth League Special Train, Chicago & North-Western R'y.

The Epworth League meets at Denver, Colo., July 5 to 9, and special through trains have been arranged for delegates and their friends. An excellent opportunity to make a tour of Colorado and the Far West with congenial company and at a minimum of expense. Special trains run through without change, arriving at Denver before the opening of the convention.

Special low rates for this occasion quoted upon application to any ticket agent of the Chicago & North-Western R'y. Send for itineraries and full information.

Summer Tourist Rates to the Beautiful Summer Resorts of Wisconsin and the Northwest,

Via the North-Western Line. Send 2-cent stamp for summer resort literature to **W. B. Kniskern, Passenger Traffic Manager, Chicago.** For rates; tickets, etc., apply to agents Chicago & North-Western R'y.

The Upper Peninsula Land Co.,

Limited

935 First Nat'l Bank Bldg., Chicago, Ill.

F. J. Merriam, Secretary and General Manager.

You have read of the Upper Peninsula of Michigan, and the settlement of the Brethren there. It is the best part of the whole Upper Peninsula. You'll miss it if you don't get in at the start. Now's the time to go up and see the country. Now's the time to buy yourself a home.

If you want to go up write me and I'll meet you somewhere on the road and go with you. If you have a party of three or more it can be made decidedly to your advantage. We can put you in a tent free, all you need being a blanket and food, readily had in the neighborhood. Separate tents for the women folks. Write to-day to the address below as to when you want to start for Rudyard and the Camp on the Pine river. You can't have that tent any time. Engage it now. It's free. There'll be skilled woodsmen there to show you the land and how to camp out the right way. Address:

HOWARD MILLER,
Elgin, Illinois.

The American Standard Revised Bible

The American Standard Revised Bible is more intelligible than any other version, because it substitutes modern equivalents for obsolete words, such as "chieftain," "marsh," "sith," "collops," "hozen," "clouts," and a great many other words that are now out of use.

Words of the old version ordinarily misunderstood are replaced by others newer and better, such as "tradesmen" for "occupiers," "living" for "quick," "know" for "wot," "try" for "tempt," "umpire" for "daysman," "self-control" for "temperance," "food" for "meat."

"Holy Spirit" is always used for "Holy Ghost," "sheol" for "hell," pit and grave when the abode of the dead is intended; Jehovah for Lord and God wherever the name occurs in the original Hebrew.

Offensive things are described by inoffensive expressions. For example, in Genesis 43:30, "his bowels did yearn upon his brother" becomes "his heart yearned over his brother."

The spelling is in harmony with existing orthography. The punctuation is greatly improved.

The grammar is in close conformity with present usage.

Most important of all, the American Standard Revised Bible gives the exact meaning of the original better than any other version.

The Sunday School Times says it is "the standard translation of the Bible for the English-speaking world."

"The most important volume that American scholarship has ever produced."—Church Economist.
